leū-cō-çȳ-thæm'-ĭ-a, leū-cō-çȳ-thēm'-ĭ-a, *s.* [Gr. λευκός (*leukos*) = white, κύτος (*kutos*) = a hollow, and αἷμα (*haima*) = blood.]

Pathol.: Great hypertrophy of the spleen, with loss of red corpuscles of the blood, and enormous increase of the white corpuscles.

leu-cō-ē-thĭ-ŏp'-ĭc, *a.* [Gr. λευκός (*leukos*) = white, αἰθίοψ (*aithiops*) = an Ethiopian, a black.] Of or pertaining to a leucoethiops, or albino. Pertaining to leucopathy.

leū-cō-ē'-thĭ-ŏps, *s.* [Gr. λευκός (*leukos*) = white, and αἰθίοψ (*aithiops*) = an Ethiopian, a black.] An albino (q.v.).

leū-cō-găl'-lōl, *s.* [Gr. λευκός (*leukos*) = white, and (*pyro*)*gallol.*]

Chem.: $C_{15}H_{10}Cl_{10}O_{12}$, or $C_{18}H_{10}Cl_{12}O_{14}$. A compound formed by the action of chlorine, at low temperatures on pyrogallol, in presence of acetic acid.

leū-cō'-jŭm, leū-cō'-ĭ-ŭm, *s.* [Gr. λευκός (*leukos*) = white, and ἴον (*ion*) = a violet. Named from the colour of the flower.]

Bot.: Snowflake, a genus of Amaryllidaceæ, tribe Amarylleæ. It has a six-parted, bell-shaped perianth. *Leucojum æstivum*, the Summer Snowflake, is found in wet meadows in Britain. The bulb of *L. vernum* is emetic.

leū'-cō-līne, [Eng. *leuc(ine)*; *ol(ein)*, and suff. *-ine.*]

Chem.: C_9H_7N. An oily organic base, isomeric with chinoline, extracted from crude naphthaline. It was formerly thought to be identical with chinoline, but subsequent researches have proved that it differs in many of its reactions, especially in its behaviour with iodide of amyl.

leŭ-cō-lĭn'-ĭc, *a.* [Lat. *leucolin(e)*, and Eng. suff. *-ic.*] (See the compound.)

leucolinic-acid, *s.*

Chem.: $C_9H_9NO_3$. An acid obtained by oxydising leucoline sulphate with potassium permanganate. It crystallizes in colourless needles, melting at 162°; slightly soluble in water; very soluble in alcohol and ether, from which it crystallizes with a faint coloration due to a slight oxydation. It is somewhat volatile in a stream of aqueous vapour, to which it imparts an aromatic odour. Heated above its melting point, it is partially decomposed; heated to redness with soda-lime, it yields aniline, together with ammonia. Its salts are all very soluble, excepting the plumbic, ferric, and mercurous salts.

leū'-cō-līte, *s.* [Gr. λευκός (*leukos*) = white, and λίθος (*lithos*) = stone.]

Mineralogy:

1. The same as DIPYRE (q.v.).
2. The same as PYCNITE (q.v.)

leū-cō'-ma, *s.* [Gr. λεύκωμα (*leukōma*) = (1) anything whitened, (2) (see def.).]

Path.: A white spot on the eye, a thickening of the cornea; cataract (q.v.). [ALBUGO.]

leū-cō-măn'-gan-īte, *s.* [Gr. λευκός (*leukos*) = white, and Eng. *manganite.*]

Min.: A snow-white mineral from Rabenstein, near Gwiesel, Bavaria. Occurs in broad radiated folia, closely aggregated. Contains protoxides of manganese and iron, with some alkalis and water. Fuses easily before the blowpipe.

leū'-cōne, *s.* [Eng. *leuc(in)*; *-one.*]

Chem.: $Si_4H_6O_5$. A white substance, obtained by the decomposition of silicone $Si_4H_4O_3$, under the influence of light and water. (*Watts: Dict. Chem.*, iii. 584.)

leū-cō'-nēs, *s. pl.* [Gr. λευκώνες (*leukōnes*), pl. of λευκών (*leukon*) = a grove of white poplars(?).]

Zool.: A family of Calcispongiæ. They have a complicated water canal system.

leū-cŏn'-ĭc, *a.* [Eng. *leuc(in)*, and (*croc*)*onic.*] (See the compound.)

leuconic-acid, *s.*

Chem.: $C_5H_8O_9$. Oxycroconic acid. A tribasic acid obtained by oxidizing barium croconate with chlorine or nitric acid, and decomposing the resulting barium leucouate with sulphuric acid. It is a colourless syrup, which, when heated above 100°, turns yellow, and is converted into croconic acid. Its salts are very unstable, being readily converted into croconates, especially in presence of alkalis.

leū-cō-păth'-ĭ-a, leū-cŏp'-a-thȳ, *s.* [Gr. λευκός (*leukos*) = white, and πάθος (*pathos*) = suffering.] The condition of an albino; albinism.

Leū-cō-pē'-trĭ-ans, *s. pl.* [For etym. see definition.]

Church Hist.: A fanatical Eastern sect. said to have been founded by one Leucopetrus, towards the end of the twelfth century. They professed to believe in a double Trinity, refrained from marriage, rejected the sacraments and all external worship, placing the essence of religion in private prayer. On this they relied as a means of expelling the demon which, they asserted, dwelt in every person's heart. (*McClintock & Strong.*)

leū-cō-pĕt'-rīne, leū-cō-pĕt'-rīte, *s.* [Gr. λευκός (*leukos*) = white, and πέτρος (*petros*) = rock. Named after the German locality, Weissenfels = white rock.]

Min.: Occurs as a layer six inches to two feet thick, in a lignite bed. Aspect loam-like, but with a shining wax-like streak. By distillation of the lignite the whole of the mineral passes over as a butter-like mass, which, on analysis, gave the formula C55H110O. Soluble in hot absolute alcohol and ether, and crystallizes in pearly hexagonal plates from the solution. Melts at 50°.

leū'-cō-phāne, leū-cŏph'-a-nīte, *s.* [Gr. λευκός (*leukos*) = white, and φαίνομαι (*phainomai*) = to appear; Ger. *leukophan.*]

Min.: A mineral species occurring in tabular crystals, nearly rectangular. Formerly regarded as orthorhombic, but, both on optical and crystallographic grounds, now referred to the monoclinic system. Cleavage basal, perfect; in another direction inclined 126° 25′ to the base, imperfect. Usually massive. Hardness, 3·5 to 4; sp. gr. 2·974; lustre, vitreous; colour, pale dirty green and wine-yellow. Powder white, phosphorescent when heated, also electric. Compos.: a silicate of glucina, lime, and soda, with some fluorine. Heated in a closed tube whitens and phosphoresces. Occurs in albitic syenite on the island of Lamoe, Langesundfiord, Norway.

leū-cō-phā'-sĭ-a, *s.* [Gr. λευκός (*leukos*) = white, and φάσις (*phasis*) = an appearance.]

Entom.: A genus of Butterflies, family Papilionidæ, sub-family Pieridi. *Leucophasia sinapis* is a small white species, with spotless white wings, only the tip of the forewings being clouded with a blackish line. It is found in woods in Europe.

leū-cō-phlĕg'-ma-çy, leū-cō-phlĕg-mā'-sĭ-a, *s.* [Gr. λευκοφλεγμασία (*leukophlegmasia*), from λευκός (*leukos*) = white, and φλέγμα (*phlegma*) = phlegm.]

Path.: A tendency to a dropsical state, characterized by paleness, flabbiness, or redundancy of serum in the blood.

"Spirits produce debility, flatulency, fevers, *leucophlegmacy*, and dropsies."—*Arbuthnot: On Aliments.*

leū-cō-phlĕg-măt'-ĭc, *a.* [Eng. *leucophlegma(cy)*; *t* connective, and suff. *-ic.*] Pertaining to leucophlegmacy; affected with leucophlegmacy.

"Asthmatick persons have voracious appetites, and for want of a right sanguification are *leucophlegmatic.*"—*Arbuthnot: On Aliments.*

leū-cōph-rȳ'-ĭ-na, *s. pl.* [Mod. Lat. *leucophry(s)*; Lat. neut. pl. adj. suff. *-ina.*]

Zool.: A family of Infusoria. The body is depressed, oval, or oblong, densely covered with cells, arranged in regular rows; mouth absent.

leū'-cō-phrȳs, *s.* [Gr. λευκός (*leukos*) = white, and ὀφρύς (*ophrus*) = the eyebrow.]

* 1. *Ornith.:* A sub-genus of Pyrgita, found in Africa.

2. *Zool.:* The typical genus of the family Leucophryina (q.v.).

leū'-cō-phȳll, *s.* [Gr. λευκός (*leukos*) = white, and φύλλον (*phullon*) = a leaf.]

Chem.: A colourless substance said to exist in those parts of plants which are capable of turning green.

leū-cŏp'-ō-gŏn, *s.* [Gr. λευκός (*leukos*) = white, and πώγων (*pōgōn*) = the beard. From the white hairs with which the limb of the corolla is bearded.]

Bot.: A genus of Epacridaceæ, tribe Styphelieæ. *Leucopogon Richei*, an Australian plant, there called the Native Currant, is a dense shrub, four to seven feet high, growing on the sea-coast, and bearing small white berries.

leū-cŏp'-ўr-īte, *s.* [Gr. λευκός (*leukos*) = white, and Eng. *pyrites;* Ger. *leukopyrit.*]

Min.: An orthorhombic mineral resembling Arsenopyrite (q.v.) in form. Cleavage, perfect in one direction; also massive. Hardness, 5 to 5·5; sp. gr. 6·2 to 7·43; lustre, metallic; colour, silver-white or steel-gray; streak, grayish-black; fracture, uneven; brittle. Compos.: arsenic, 66·8; iron, 33·2, corresponding to the formula, Fe_2As_3. Found in serpentine at Reichenstein, Silesia, and in crystals at Geyer, Saxony. These, however, present a composition intermediate between this species and arsenopyrite (q.v.).

leū-cō-ro-sŏl'-ĭc, *a.* [Gr. λευκός (*leukos*) = white, and Eng. *rosolic.*] (See the compound.)

leucorosolic-acid, *s.* [Rosolic-acid.]

leū-cŏr-rhœ'-ą, *s.* [Gr. λευκός (*leukos*) = white, and ῥέω (*rheō*) = to flow.]

Path.: A discharge from the vagina, commonly called whites.

leū-cō'-sĭ-ą, *s.* [Gr. λεύκωσις (*leukōsis*) = anything white.]

Zool.: The typical genus of the family Leucosiadæ (q.v.).

leū-cō-sī'-ą-dæ, *s. pl.* [Mod. Lat. *leucos(ia);* Lat. fem. pl. adj. suff. *-idæ.*]

Zool.: A family of Crustaceans. They have the joints as if they were soldered together into one piece, forming a small, hollow, enamelled lid, to protect the eggs. (*Woodward.*)

leū-cō'-sĭ-ąn, *s.* [Mod. Lat. *leucosi(a);* Eng. suff. *-an.*]

Zool.: A crustacean of the family Leucosiadæ.

Leū-cŏ-thē'-ą, *s.* [Gr. Λευκοθέα (*Leukothea*) = the white goddess: λευκός (*leukos*) = white, and θεά = a goddess.]

1. *Mythol.:* A name given to Ino, after she was changed into a sea-goddess.

2. *Astron.:* [Asteroid, 35].

* **leū-cō'-thĭ-ŏps,** *s.* [Leucoethiops.]

leū'-cō-tīle, *s.* [Gr. λευκός (*leukos*) = white, and τίλος (*tilos*) = fibre.]

Min.: A fibrous mineral grouped on serpentine; cleavage, parallel and perpendicular to the long direction. From its optical character is probably orthorhombic. Lustre, silky; colour, greenish-white. Compos.: silica, 28·98; alumina, 6·99; sesquioxide of iron, 8·16; magnesia, 29·78; lime, 7·37; soda, 1·32; water, 17·29. Found at Reichenstein, Silesia.

leū-cō-tūr'-ĭc, *a.* [Gr. λευκός (*leukos*) = white; *t* connect., and Eng. *uric.*] (See the compound.)

leucoturic-acid, *s.*

Chem.: $C_6H_4N_4O_5$. Laurent's Oximide. A monobasic acid, formed by boiling to a syrup an aqueous solution of alloxanic acid, and adding cold water. It is a white crystalline powder, insoluble in cold water, but soluble in boiling water, from which it crystallizes on cooling. It dissolves in the alkalis and is precipitated by acids. It is not decomposed by boiling with concentrated nitric acid.

* **leū'-coŭs,** *a.* [Gr. λευκός (*leukos*) = white.] White; a term applied to albinos.

leū-cŏx'-ēne, *s.* [Gr. λευκός (*leukos*) = white, and ξενός (*xenos*) = stranger.]

Min.: A name given by Gümbel to the white decomposition product of ilmenite (*Brit. Mus. Cat.*), or menaccanite (*Dana*), often observed in hornblendic rocks. Lasaulx regards this as identical with his Titanomorphite (q.v.), but this is disputed by other mineralogists.

leugh, *pret. of v.* Laughed. (*Scotch.*)

"Graceless Ham *leugh* at his dad."
Burns: Ordination.

leuk, *v.t. & i.* [Look.] (*Scotch.*)

* **leuke,** *a.* [Luke, *a.*]

* **leūke'-nĕss,** *s.* [Lukeness.]

leūk-hæ'-mĭc, *a.* [Gr. λευκός (*leukos*) = white; αἷμα (*haima*) = blood, and Eng. suff. *-ic.*]

Anat.: Of or belonging to white blood—*i.e.*, having only white corpuscles. (*Rossiter.*)

* **le-va-cion,** *s.* [Levation.]

* **le-val-to,** *s.* [Lavolta.]

lĕv'-ąnt, lē-vănt', *a. & s.* [Ital. *levante* = the east wind, the country lying toward or in the east; from Lat. *levans,* pr. par. of *levo* = to raise, the reference being to the rising of the sun; Fr. *levant;* Sp. & Port. *levante.*]

A. *As adjective* (pron. **lĕv'-ąnt**):

1. *Ord. Lang.:* Eastern.

"Forth rush the *levant,* and the ponent winds,
Eurus and Zephyr." *Milton: P. L.,* x. 704.

2. *Geol.:* Rising; a term applied to the fourth series of the Appalachian Palæozoic strata, called in New York, the Medina group, and of equivalent age to the May Hill Sandstone of England. It signifies metaphorically the sunrise period of the Palæozoic day. Maximum thickness, about 2,200 feet. There are few organic remains, chiefly marine shells and fucoids. (*Prof. H. D. Rogers: Geology of Pennsylvania.*)

B. *As substantive* (pron. **lē-vănt'**):

1. A name given to those countries, and more especially to the coasts of those countries lying on the eastern part of the Mediterranean and the neighbouring seas, as Turkey, Greece, Egypt, Asia Minor, Syria, &c.

"My voiage to the Ilands of Candia and Chio in the *Levant.*"—*Hackluyt: Voyages,* ii. 92.

2. An easterly wind blowing up the Mediterranean.

"They are called *Levants* both from their course, as blowing from the East where the sun rises, and also from their freshening and rising higher as the sun rises."—*Sir Henry Sheere: Lord Halifax's Miscell.,* p. 34.

¶ *Levant and couchant:*

Law: [Couchant, ¶].

Levant-sponge, *s.* [Turkey-sponge.]

lĕ-vănt', *s.* [Probably the same as Levant, *a.*] A land-spring. (*Provincial.*)

lĕ-vănt' (1), *v.i.* [Sp. *levantar* = to raise; *levantar el campo* = to break up camp; *levantar la casa* = to break up house.] To decamp, to run away.

lĕ-vănt' (2), *v.t.* [Etym. doubtful.] To tan, to curry.

"There was also much valuable machinery used for rolling, scouring, and *levanting.*"—*Standard,* Oct. 7, 1881.

lĕ-vănt'-ĕr (1), *s.* [Eng. *levant,* a.; *-er.*] A levant; an easterly wind blowing up the Mediterranean.

† **lĕ-vănt'-ĕr** (2), *s.* [Eng. *levant,* v.; *-er.*] One who levants; one who decamps without paying his debts; one who bets and decamps without paying; a welsher.

lĕ-vănt'-ĭne, lĕv'-ąnt-īne, *a. & s.* [Eng. *levant,* a.; *-ine.*]

A. *As adjective:*

1. *Ord. Lang.:* Of or pertaining to the Levant.

"Those Ausonia claims,
Levantine regions these." *Cowper: Task,* iii. 583.

2. *Fabric:* Distinguishing the particular kind of cloth known as levantine.

B. *As substantive:*

I. *Ordinary Language:*

1. A native of the Levant.

2. A vessel belonging to the Levant.

II. *Fabric:* A particular kind of silk cloth.

* **lĕ-vär'-ĭ fā'-cĭ-ăs (c as sh),** *s.* [Lat. = that you cause to be levied.]

Law: A writ of execution at common law, executed by the sheriff upon the goods and lands of a debtor. It issued from county courts and other inferior courts, but has now been completely superseded by the writ of elegit (q.v.).

* **lĕ-vā'-tion,** *s.* [Lat. *levatio,* from *levatus,* pa. par. of *levo* = to raise.] The act of raising or elevating; elevation.

"In the tyme of the *leuacion* of y^e sacrement, he laught."—*Fabyan: Chronicle,* vol. I., ch. cx.

lĕ-vā'-tŏr (pl. **lĕv-ą-tōr'-ēs**), *s.* [Lat. = a lifter, from *levo* = to lighten, to lift up.]

1. *Surg.:* A lever for raising a depressed portion of the skull. It belongs to the trephine case.

"It will be safer to raise it up with your *levator,* when it is hut lightly retained in some part."—*Wiseman: Surgery.*

2. *Anat.:* That which raises. Used specially of muscles. There are a *levator anguli oris,* a *levator anguli scapulæ,* a *levator palati,* and ten others, besides *levatores costarum* and *levatores longiores costarum.*

* **lēve** (1), *v.t.* A shortened form of Believe (q.v.).

* **lēve** (2), *v.* [Live, *v.*]

* **lēve** (3), *v.* [Leave, *v.*]

* **lēve,** *s.* [Leave, *s.*]

* **lēve,** *a.* [Lief.]

* **leve-ccl,** *s.* [Levesell.]

lĕv'-ee, *s.* [Fr. *levée* = a levy, &c., prop. the fem. of the pa. par. of *lever* = to raise.] [Levy.]

I. *Ordinary Language:*

* 1. The act or time of rising.

"I got to the seacoast time enough to be at the sun's *levee.*"—*Gray: Letter to Mr. Nicholls.*

2. A morning reception held by a sovereign, prince, or personage of high rank; especially the state receptions held by the sovereign, to which are admitted all whose rank, position, or office, entitles them to such distinction. It differs from a drawing-room in the fact that to the latter ladies, as well as gentlemen, are admitted, while to the former gentlemen only are admitted. In the United States the term is applied to any assemblage of guests, generally one held in the evening.

"He chides the tardiness of every post, . . .
Flies to the *levee,* and, received with grace,
Kneels, kisses hands, and shines again in place."
Cowper: Retirement, 480.

3. A quay or pier; a landing place for vessels. (*Southern and Western U. S.*)

II. *Hydraul. Engin.:* An embankment to restrain water, and of a magnitude such as those of the Mississippi, the Ganges, Holland, and the Po.

"All the large towns on the river have a *levee.*"—*H. A. Murray: Land of the Slave & the Free,* ch. viii.

¶ *Levée en masse:* [Levy, *s.*].

lĕv'-ee, *v.t.* [Levee, *s.*]

* 1. *Ord. Lang.:* To attend the levees of; to court at levees.

2. *Hydraul. Engin.:* To embank: as, To *levee* a river.

lĕv'-el, * **lev-ell,** * **liv-el,** *s. & a.* [O. Fr. *livel, liveau* (Fr. *niveau*), from Lat. *libella* = a level, dimin. of *libra* = a level, a balance; Ital. *livello, livella;* Port. *livel, nivel;* Sp. *nivel.*]

A. *As substantive:*

I. *Ordinary Language:*

1. *Literally:*

(1) That which is level; a surface without inequalities; a plane.

¶ A line or surface, every point in which is equally distant from the centre of the earth, is a true level; a line or surface which is parallel to or coincident with the plane of the horizon is an apparent level.

(2) The line of direction in which a missile is aimed or sent.

"As if that name,
Shot from the deadly *level* of a gun,
Did murder her." *Shakesp.: Romeo & Juliet,* iii. 3.

(3) In the same sense as II. 2.

"If the plumb-line hang just upon the perpendicular, when the *level* is set flat down upon the work, the work is level."—*Moxon: Mechanical Exercises.*

2. *Figuratively:*

(1) A state of equality or equal elevation with something else.

"The time is uot far off when we shall he upon the *level.*"—*Atterbury: To Pope.*

(2) The natural position or state which belongs to anything: as, He has found his *level.*

3. The usual or ordinary height, elevation, rate, or standard.

"His later productions fall below the *level* of his early essays."—*Stewart: Of the Human Mind,* ch. v., pt. ii., § 2.

4. A state of feeling or thought.

"Our hearts, in glad surprise,
To higher *levels* rise."
Longfellow: Santa Filomena.

* 5. A rule, plan, scheme, or motive.

"Be the fair *level* of thy actions laid,
As temp'rance wills." *Prior: Solomon,* iii. 48.

II. *Technically:*

1. *Mining:*

(1) A horizontal gallery or passage in a mine. The workings at different depths are said to be at the different *levels*—the 50 or 60 fathom *level,* and so on.

(2) An adit or drift forming a drain for water. A level which opens to the surface at the side of a valley is called a day-level, and

forms a means of natural drainage without pumping. A drowned or blind level is a drainage-gallery which has the form of an inverted siphon. A dip-head level is the one which proceeds from the foot of the engine-shaft right and left, and from which the rooms diverge.

(3) A gutter for water to run in.

2. *Surv. & Engin.:* An instrument for indicating a horizontal line, or determining the position as to horizontality of an object or surface to which it is applied, and then determining the true level, or the difference of rise or fall between two or more places, for various purposes of architecture, engineering, drainage, &c. There are numerous descriptions of *levels*, varying in form, size, arrangement, or construction, according to the purpose for which each is intended: as, for instance, the carpenter's, mason's, gunner's, or surveyor's levels, the mercurial, water, and spirit levels, &c. All may be divided into three classes:—

(1) The simplest, such as the mason's or carpenter's level, in which the vertical line is determined by a plumb line, and the horizontal by a line perpendicular to it.

(2) Those in which the horizontal line is determined by the surface of a fluid at rest: as in the water and mercurial levels.

(3) Those in which the horizontal line is determined by a bubble of air floating in a fluid contained in a glass tube: as a spirit level.

B. *As adjective:*

1. Horizontal; parallel to or coincident with the plane of the horizon.

"Her *level* rays, like golden bars,
Lie on the landscape green."
Longfellow: Endymion.

2. Even or on a level with any thing else; in the same line or of the same height as something else; not higher or lower.

"The setting sun now beams more mildly bright,
The shadows lengthening with the *level* light."
Beattie: Past. 2.

3. Having no inequalities; not having any part higher than another; not rising or falling; flat.

"See the revolution of the times
Make mountains *level*."
Shakesp.: 2 *Henry IV.*, iii. 1.

4. Having no gradations or difference of superiority or degree; equal in rank or degree; on an equality.

* 5. Exactly fitted; agreeing; accordant.

"And every thing lies *level* to our wish."
Shakesp.: 2 *Henry IV.*, iv. 4.

* **C.** *As adv.:* Direct, straight.

"It shall as *level* to your judgment pierce
As day does to your eye."
Shakesp.: Hamlet, iv. 2.

¶ (1) *To do one's level best:* To put forth all one's exertions.

(2) *To have one's head level:* To possess a well-balanced mind. (*American.*)

* **level-coil,** *s.* An old Christmas game, in which each player hunted the other from his seat, the loser giving up his seat to the winner; hence, riotous sport of any kind. (*Ben Jonson.*)

level-lines, *s. pl.*

Shipbuild.: Lines representing the boundaries of sections drawn at different heights and parallel with the keel. Water-lines are drawn parallel with the line of flotation or the true horizontal. When the ship floats on an even keel, the *level-lines* and water-lines coincide.

lĕv'-ĕl, ***lĕv'-ĕll,** *v.t. & i.* [Level, *s.*]

A. *Transitive:*

I. *Literally:*

1. To make horizontal; to reduce to a horizontal plane.

2. To bring to the same level or height with another.

"Less bright the moon,
But opposite in *level'd* west was set."
Milton: P. L., vii. 376.

3. To make smooth or even; to remove the inequalities of surface in; to reduce to an even or flat surface.

"With unresisted might the monarch reigns;
He *levels* mountains, and he raises plains."
Dryden: Sigismonda & Guiscardo, 283.

4 To lay flat; to make level with the ground.

"Oaths divine the willing nations bound,
Ne'er to return, till our victorious pow'rs
Had *level'd* with the dust the Theban tow'rs."
Wilkie: Epigoniad, bk. i.

5. To point in taking aim; to raise or depress, so as to point direct to an object; to direct straight at an object.

"Another sign, and to the aim
Levelled at once their muskets came."
Scott: Rokeby, v. 28.

II. *Figuratively:*

1. To reduce or bring to an equality of state, rank, condition, or degree.

"Reason can never assent to the admission of those brutish appetites which would over-run the soul, and *level* its superior with its inferior faculties."—*Decay of Piety.*

2. To aim; to direct.

"Revenge, from some baneful corner, shall *level* a tale of dishonour at them."—*Sterne: Tristram Shandy*, ch. xii.

* 3. To lay or point out exactly.

"To limit and *levell* out the direct way from vice to virtue."—*Milton: Doct. of Divorce*, bk. ii., ch. xiv.

4. To adopt; to accommodate; to proportion.

* **B.** *Intransitive:*

I. *Literally:*

1. To aim or point a gun, &c., in a direct line with a mark: as, He *levelled* at the mark.

2. To be in a direct line or in the same direction with something.

II. *Figuratively:*

1. To aim; to direct the aim or purpose.

"Ambitious York did *level* at my crown."
Shakesp.: 3 *Henry VI.*, ii. 2.

2. To conjecture; to guess at.

"She *levelled* at our purposes."
Shakesp.: Antony & Cleopatra, v. 2.

3. To accord; to agree; to suit.

"Such accommodation and resort
As *levels* with her breeding."
Shakesp.: Othello, i. 3.

¶ 1. *To level up:* To raise that which is lower to a level or equality with that which is higher; specif., to raise persons of a lower class to an equality with those of a higher. The expression *level up* was first used by Lord Mayo in opposing Mr. Gladstone's Bill for the disestablishment and disendowment of the Irish Church. He proposed to *level up* the Roman Catholic priests and the Presbyterian ministers, by establishing and endowing them, so as to produce in another way the religious equality at which Mr. Gladstone aimed.

2. *To level down:* To lower or reduce to the same level or status; to disestablish and disendow. [¶ 1.]

* **lēve'-lĕss,** *a.* [Leaveless.]

* **lĕv'-ĕl-ĭşm,** *s.* [Eng. *level*; *-ism.*] The act, principle, or theory of reducing distinctions in society to an equality.

lĕv'-ĕl-lĕr, *s.* [Eng. *level*, v.; *-er.*]

I. *Ordinary Language:*

1. One who or that which levels.

2. One who wishes to destroy all social distinctions; a socialist.

"Mingled with that multitude of fanatics and *levellers*."—*Macaulay: Hist. Eng.*, ch. xv.

3. A billiard-table foot having a screw adjustment for height, in order to level the table.

4. An earth-scraper for levelling a site.

II. *Hist.:* One of a party in the army of the Long Parliament about 1647 who wished to destroy all distinctions of rank and title and establish social equality throughout the kingdom. Cromwell put them down in 1649, imprisoning their leader Lilburn.

"The *levellers* were angry with him for instituting a privileged class."—*Macaulay: Hist. Eng.*, ch. i.

lĕv'-ĕl-lĭng, *pr. par., a., & s.* [Level, *v.*]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As substantive:*

1. The act of making level or reducing to a level; the act of pulling down to the ground.

"It seems impossible to reconcile this account with the statements respecting the *levelling* of his house."—*Lewis: Cred. Early Roman Hist.* (1855), ii. 135.

2. The act or process of ascertaining the level or height of any place, point, or spot.

levelling-block, *s.* A levelling platform, consisting of large iron plates laid together and secured. The respective plates may be 8 or 10 feet long, 5 or 6 wide, and 6 inches thick. They are completely covered with holes, about 1½ inches in diameter and 4 or 5 inches apart from centre to centre. The mould of a given frame having been laid on the levelling-block, the figure of the moulding edge is marked on it with chalk, and iron pins are stuck in the holes, so that when the iron rib is made to touch those pins it will have the proper form. In order the more easily to produce any required figure, the heads of the pins are furnished with eccentric discs or cams, by the shifting and turning of which the figure of the frame can be adjusted with great precision. Each disc has several centre-holes, any one of which can be fitted on the pin. The iron bar of the frame, having been raised to a bright orange heat in a reverberatory furnace, called a reheating furnace, is taken out by the smiths, laid on the levelling-block, and rapidly beat by means of tongs, hammers, mallets, and levers, so as to lie touching the heads of the pins.

levelling-rod, *s.* The same as Level-ling-staff (q.v.).

levelling-staff, *s.* An instrument, one form of which consists of two strips 6½ feet long, united by a longitudinal tenon and mortise so as to slide on each other and extend to a length of 12 feet. The divisions are in feet, inches, and fractions, and count from the bottom. A cross-piece or vane slides on the staff, and has an aperture to enable the staff graduations to be read.

levelling-stand, *s.*

Photog.: An instrument used to support a glass plate in a horizontal position, so that it shall retain developing or other fluids upon its upper surface. Its usual form is a tripod, of suitable height to stand in the developing-trough, with three adjusting-screws by which the operation of levelling is accomplished.

* **lĕv'-ĕl-lў,** *adv.* [Eng. *level*; *-ly.*] In a level manner; evenly.

"Neither would praises and actions appear so *levelly* concurrent in many other of the Grecians, as they do in these."—*Hobbes: Thucydides*, bk. ii.

lĕv'-ĕl-nĕss, *s.* [Eng. *level*; *-ness.*] The quality or state of being level; evenness; equality of surface or height.

"The river Tiber is expressed lying along, for so you must remember to draw rivers, to express their *levelness* with the earth."—*Peacham: On Drawing.*

* **lĕv'-ĕn** (1), *s.* [Leaven, *s.*]

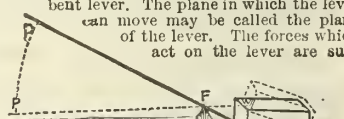
lĕv'-ĕn (2), *s.* [Levin.]

lĕv'-ĕn (3), *s.* [Lawn.] A lawn; an open space between woods.

"And see not ye that braid, braid road,
That lies across that lily *leven*?"
Scott: Thomas the Rhymer, 2.

lē'-vẽr (1), ***lē'-voŭr,** *s.* [Fr. *leveur* = a raiser or lifter; also *levier* = a lever, from Lat. *levatorem*, accus. of *levator* = a lifter, from *levatus*, pa. par. of *levo* = to lift, to make light; *levis* = light.]

1. *Mech.:* A bar of wood, metal, or other rigid substance, having a fixed point (or fulcrum), and used to overcome a certain resistance (or weight) at some part of the bar by means of a force (or power) applied at another part. The parts of the lever into which the fulcrum divides it are called the arms of the lever. When the arms are in the same straight line the lever is called a straight lever; in other cases it is called a bent lever. The plane in which the lever can move may be called the plane of the lever. The forces which act on the lever are supposed to act in the plane of the lever. Levers are sometimes divided into three classes, according to the positions of the points of application of the power and the weight with respect to the fulcrum. In the first class the power and the weight act on opposite sides of the fulcrum. In the second class the power and the weight act on the same side of the fulcrum, the weight being the nearer to the fulcrum. In the third class the power and the weight act on the same side of the fulcrum, the power being the nearer to the fulcrum. Thus we may say briefly that the three classes have respectively the fulcrum, the weight, and the power in the middle position. The following are examples of levers of the first class: a crowbar used to raise a heavy weight, a poker used to raise coals in a grate, the brake of a pump. In scissors, shears,



Lever.
W. Weight. F. Fulcrum. P. Power.

nippers, and pincers we have examples of a double lever of the first class. The oar of a boat furnishes an example of a lever of the second class. The fulcrum is at the blade of the oar in the water; the power is applied by the hand; the weight is applied at the row-lock. A pair of nutcrackers is a double lever of the second class. A pair of tongs used to hold a coal is a double lever of the third class. The fulcrum is the pivot on which the two parts of the instrument turn; the power is the pressure applied by the hand; the weight is the resistance of the coal at the end of the tongs. An example of the third class of lever is seen in the human forearm employed to raise an object taken in the hand. The fulcrum is at the elbow; the power is exerted by a muscle which comes from the upper part of the arm, and is inserted in the forearm near the elbow; the weight is the object raised in the hand. (*Todhunter: Mechanics for Beginners*, ch. xi.)

2. *Horology:*

(1) A form of escapement. [LEVER-ESCAPEMENT.]

(2) A watch having a lever-escapement; a lever watch.

3. *Dentistry:*

(1) A tool for extracting stumps.

(2) A turnkey (q.v.).

4. *Surg.:* An obstetric instrument, curved at its extremity, and having a fenestra. It is used in extracting the head of a child; a vectis.

5. *Fig.:* That which exerts great power.

lever-brace, *s.* A carpenter's hand-brace.

lever-engine, *s.* The same as GRASSHOPPER-ENGINE (q.v.).

lever-escapement, *s.*

Horol.: A form of escapement in which the lever vibrates on a centre and carries the pallets (or anchor), and its forked end alternately engages with and is engaged by a ruby pin attached to a disc on the balance-arbor. The lever or fork, having the impulse given to it from the wheel, and then striking against the ruby pin, gives the motion to the balance from which it was disengaged, till brought back by the hair-spring; the ruby pin then strikes the fork and disengages the wheel, thus allowing it to go on. This causes two distinct beats.

lever-hoist, *s.*

Mech.: A contrivance for converting a reciprocating circular into a continuous rectilinear motion.

lever-jack, *s.* A form of hoist having a lever, post, and pawl, in which the lever engages with a rack. [LIFTING-JACK.]

lever-obstetric, *s.*

Surg.: [LEVER, II. 4].

lever-press, *s.* One of the simplest and most evident forms of pressing apparatus. It assumes many forms: cider-presses, lard or tallow squeezers, and cheese-presses, are constructed to obtain pressure by a lever, which is depressed by a suspended weight, by tackle, or by a screw.

lever-punch, *s.* A punch operated by the rolling motion of two cam-faced levers which are drawn together by a screw.

lever-valve, *s.* A safety-valve kept in its seat by the pressure of a lever with an adjustable weigbt, the invention of Dr. Papin of Blois. In locomotives a spring is used at the end of the lever instead of a weight, the pressure being regulated by a screw and indicated on a brass plate.

lever-watch, *s.* A watch having a lever escapement.

lever (2), *s.* [A corruption of *louvre* (q.v.).]

lever-boards, *s. pl.* [LOUVRE-BOARDS.]

***lē'-vĕr,** *a. & adv.* [LIEF.]

A. *As adj.:* More agreeable, more pleasant; dearer.

B. *As adv.:* More willingly, more gladly; rather.

"We had *lever* to dry them so should he fall."
Song of Roland, 353.

lē'-vĕr, *v.t.* [LEVER (1), *s.*] To act upon or force with a lever.

"I put a paddle in his mouth to *lever* it open."—*Sydney Morning Herald*, Oct. 24, 1881.

lē'-vĕr-age (**age** as **ĭj**), *s.* [Eng. *lever* (1), *-age.*]

1. The action of a lever; that arrangement of parts by which lever power is gained.

2. The mechanical power gained by the use of a lever.

3. *Fig.:* Great advantage or power; as the *leverage* of the press.

lev'-ĕr-ĕt, *lyv-er-et, *s.* [O. Fr. *levrault*, from Lat. *leporem*, accus. of *lepus* = a hare; Fr. *levrette*, dimin. of *lièvre* (O. Fr. *levre*) = a hare.] A hare in its first year; a young hare.

"As when two skilful hounds the *leveret* wind . . .
Now lost, now seen, they intercept his way,
And from the herd still turn the flying prey."
Pope: Homer; Iliad x. 427.

lev-er-ock, * lev-er-ook, lav-er-ock, *s.* [LAVEROCK.] A lark (q.v.).

"The smaller birds have their particular seasons; as, the *leverook*."—*Walton: Angler.*

lē'-vĕr-wood, *s.* [Eng. *lever*, and *wood.*]

Bot.: Ostrya virginica.

*** leve-sell, * leve-cel, * lef-sal, * lefe-sale,** *s.* [A.S. *leáf* = leaf, and *sal, sel* = a room, a hall; Sw. *löfsal;* Da. *løvsal* = a but of branches with foliage on.]

1. A lattice; a lattice-window.

"The gay *levesell* at the tauerne is signe of the win that is in celler."—*Chaucer: Persones Tale.*

2. A pent-house; a projecting roof over a door, window, &c.

3. An open shed.

*** lĕv'-ĕt,** *s.* [Fr. *lever* = to raise, to arouse.]

Mil.: The morning call on the trumpet, by which soldiers are aroused; a reveille

"He that led the cavalcade
Wore a sowgelder's flagellet,
Ou which he blew as strong a *levet*,
As well-fee'd lawyer on his breviat."
Butler: Hudibras, ii. 2.

lĕv'-ĭ-a-ble, * lĕv'-ĕ-a-ble, *a.* [Eng. *levy*, v.; *-able.*] Capable of being levied or collected; that may be assessed and levied.

"The sum which any had agreed to pay, and were not brought in, to be *leviable* by course of law."—*Baker: Henry VII.* (an. 1508).

lĕ-vī'-a-thăn, *s.* [Low Lat., from Heb. לִוְיָתָן (*livyathan*) = leviathan (see def.), לָוָה (*livyah*) a garland, a wreath; leviathan then = the wreathed animal, from twisting itself into wreaths or folds.]

lē'-vĭr, *s.* [Lat., cogn. with Sansc. *dévar*; Gr. δαήρ (*daēr*) = a husband's brother, a brother-in-law.]

Anthrop.: One upon whom devolves the obligation of marrying the widow of, and thus begetting issue to, a deceased brother or near relation.

"In the earliest age the *levir* had no alteruative but to take the widow; indeed she was his wife without any form of marriage."—*J. F. McLennan: Studies in Ancient History*, p. 162.

lē'-vĭr-āte, *s. & a.* [Fr. *lévirat.*] [LEVIR.]

A. *As substantive:*

1. *Jewish Hist.:* The Mosaic law binding the brother of a man dying without issue to marry the widow (Deut. xxv. 5). Where there were several brothers, the lot probably fell to the eldest; failing brothers, the marriage was in honour incumbent on the nearest kinsman (Ruth iii. iv.). The only exception was in the case of the high-priest, who was bound to marry a virgin (Levit. xxi. 13, 14). The first-born son of the second marriage was considered the son of the deceased, "that his name be not put out of Israel" (Deut. xxv. 6). This law was not strictly obligatory; but the man who refused to obey it was publicly disbonoured (Deut. xxv. 7-10). How ancient the custom was among the Jews may be seen from the case of Tamar (Gen. xxviii. 6-30). It still exists among Jews in the East; in the West they are, of course, bound by the marriage laws of the country in which they reside. The levirate is mentioned by the Synoptists as giving rise to a question proposed to Jesus by the Sadducees concerning the resurrection (Matt. xxii. 23-33; Mark xii. 18-27; Luke xx. 27-38).

2. *Anthrop.:* (See extract).

"The system of *Levirate*, under which, at a man's death, his wife or wives pass to his brother, is, I think, more intimately connected with the rights of property than with polyandry. This custom is widely distributed. It is found, for instance, among the Mougols (*Wuttke's Ges. der Mensch.*, i. 223) and Kaffirs (*Arbousset: Tour*, pp. 88, 138), and in Yucatan (*Bancroft: Native Races*, ii. 671). 'When an elder brother dies,' says Livingstone (*Travels*, p. 185), 'the same thing occurs in respect of his wives; the brother next in age takes them, as among the Jews, and the children that may be born of those women he calls his brothers also.' In India among the Nairs, 'a man always takes to wife, by the custom called Sagai, his elder brother's widow' (*Dalton: Des. Ethn. Bengal*, p. 138). Among the Pacific Islanders, Mr. Brenchley mentions that in Erromango 'the wives of deceased brothers fall to the eldest surviving brother' (*Cruise of the Curacoa*, p. 319). Similar statements have been made also as regards some of the Negro tribes, the Mexicans, Samoans, New Zealanders, and Khyeus."—*Lubbock: Orig. of Civilisation* (1882), pp. 141, 142.

B. *As adj.:* Pertaining to, observing, or in any way connected with the system of marriage described under A.

"Provision is made for the rights of succession of the *Levirate* union."—*J. F. McLennan: Studies in Ancient History*, p. 161.

lĕv-ĭ-răt'-ĭc-al, *a.* [Eng. *levirat(e); -ical.*] The same as LEVIRATE, *a.* (q.v.).

*** lĕv'-ĭ-tāte,** *v.t. & i.* [LEVITATION.]

A. *Trans.:* To make buoyant, so as to float in the air; a term used by spiritualists.

B. *Intrans.* : To become light or buoyant, so as to float in the air.

"A provision, distinguishingly calculated for the same purpose of *levitation*."—*Paley: Natural Theology*, ch. xii., § 4.

lĕv-ĭ-tā'-tion, *s.* [Lat. *levitas* (genit. *levitatis*), from *levis* = light.]

* 1. The act of making light; lightness, buoyancy.

2. Among spiritualists a name given to the alleged phenomenon of bodies naturally heavier than air becoming buoyant, and floating in the atmosphere.

Lē'-vīte, *s.* [Lat. pl. *Levitæ*; Gr. pl. Λευῖται (*Leuïtai*); Heb. pl. לְוִיִּם (*levim*) = Levites, from לֵוִי (*Levi*) = (1) a joining, (2) Levi; Eng., &c. suff. *-ite.*]

1. *Scrip. Hist., &c.* (*Pl.*) : The descendants of Levi, one of the twelve sons of Jacob (Gen. xxix. 34). Moses and Aaron were of Levite extraction (Exod. ii. 1-10, iv. 14), and when the descendants of Aaron were formally set apart to perpetuate the priesthood, the other Levites were designated as a sacred caste to assist in the work of the sanctuary (Num. iii. 5-13, xvii. 2-8). The chief branches of the Levites were the Kohathites, the Gershomites, and the Merarites (Num. iii., iv.). To these separate functions were assigned, the more important being entrusted to the Kohathites, among whom were Moses and Aaron (1 Chron. vi. 1-3). The Levites took office at 25 years old (Num. viii. 24, 25), or at 30, and had to resign at 50 (Num. iv. 3, 23, 30-39, 43-47). They were consecrated to their office (Num. viii. 5-26). They were to have no tribal territory: Jehovah was to be their inheritance (Num. xviii. 20, xxvi. 62; Deut. x. 9. xviii. 2, Josh. xviii. 7). But special cities were to be assigned to them, so scattered over the country as to enable them to render ecclesiastical and spiritual service to all the tribes (Josh. xxi.).

The six cities of refuge were all Levitical cities (Num. xxxv. 1-8).

They were to be supported by tithes, but themselves were to pay tithes to the priesthood (Num. xviii. 21-24, 26-32; Neh. x. 37). The Levites obtained much respect under Moses and Joshua. At the time of the judges their social position greatly declined (Judges xviii.) They revived under Samuel, but declined under Saul; David reorganised them, assigning 24,000 to assist the priests, 4,000 to be musicians, 4,000 to be gatekeepers, and 6,000 for other duties (1 Chron. xxiii.-xxvi.). The religious schism which followed on the revolt of the ten tribes superseded the Levites over the whole kingdom of Israel, on which multitudes of them removed to Judah (2 Chron. xi. 13, 14, xiii. 9), exerting a great influence, spiritual, social, and political, through every subsequent change, till the destruction of Jerusalem under Titus. The office of the Levites made them the intellectual as well as the spiritual caste.

The only mention of Levites in the New Testament is in the Parable of the Good Samaritan (Luke x. 33).

* 2. *Fig.* : In the latter part of the seventeenth century a wandering curate or a nobleman's or gentleman's chaplain, looked ou as one of the servants, was often called a Levite, in allusion to Judges xviii. Dryden, in his *Absalom & Achitophel*, applies the name Levites to the Puritan clergy who lost their benefices in 1662 through the provisions of the Act of Uniformity.

Lĕ-vĭt'-ĭc-ăl, * **Lĕ-vĭt'-ĭc,** *a.* [Lat. *Leviticus*, from Gr. Λευϊτικός (*Leuitikos*), from Λευίτης (*Leuitēs*) = a Levite (q.v.); Fr. *lévitique.*]

"That this traditional service was not *Levitically* correct needs no proof."—*W. Robertson Smith: Old Test. in Jewish Church*, lect. viii, p. 228.

Lĕ-vĭt'-ĭ-cŭs, *s.* [Lat. *Leviticus* (Vulgate); Gr. Λευϊτικόν (*Leuïtikon*).]

Old Test. Canon: The third book of the Pentateuch and of the Old Testament, in the Hebrew Bible named וַיִּקְרָא (*Vaiyiqra*) = "And called," from its first two words. It prescribes laws regarding sacrifices (ch. i.-vii.), narrates the consecration of Aaron and his sons as priests (viii. ix.), with the deaths of Nadab and Abihu (x. 20), draws distinctions between clean and unclean animals (xi.), makes regulations as to purification after childbirth (xii.), from leprosy, &c. (xiii., xiv., xv.), the great day of atonement, &c. (xvi., xvii.), marriages, &c. (xviii.-xx.) and priestly duties (xxi.-xxii.), the great festivals (xxiii.), tabernacle worship, &c. (xxiv.), social arrangements (xxv.), and vows and tithes (xxvii.). Intercalated into these is a chapter, which makes Divine promises to the people if they observe the several laws, and denouncing vengeance on them if they disobey (xxvi.; cf. with Deut. xxviii.).

The integrity of the work is admitted by most critics, though rationalists contend that the Levitical legislation did not originate till 1,000 years after Moses, and was not carried out till after the building of the second temple. One of them contends that Ezckiel was the author of Leviticus xxvi, and probably of xviii.-xx., and that xviii.-xxvii. form a section by themselves distinct from the remainder of the book, and written in the same circle, though not by the same hand. The rest of Leviticus is attributed to priests during or after the captivity. A few passages may, it is stated, have been later than the rest, but all must have been in their place before the issue of the Samaritan Pentateuch B.C. about 338, for it has them just as we find them now.

The best commentary on the book of Leviticus is the Epistle to the Hebrews, and the other New Testament books. Carrying out the teaching of Heb. ix., x., &c., the Christian Church believes that nearly every sacrifice or other ceremony typified the sacrifice of Christ and at his death "waxed old," and was "ready to vanish away" (Heb. viii. 13).

lĕv'-ȳne, lĕv'-ȳn-ĭte, *s.* [Named by Brewster, after the mineralogist and crystallographer, A. Lévy; suff. *-ine*, *-ite* (*Min.*).]

Min. : A mineral belonging to the Zeolite group. Crystallization regarded as rhombohedral, and twinned as in chabasite, but Becker, who has made a minute study of this mineral, as well as of chabasite, has come to the conclusion that the well-known optical anomalies of these minerals are referable to a complicated twinning of individual crystals belonging to the triclinic system. Hardness, 4-4·5; sp. gr. 2·09-2·16. Lustre, vitreous; colourless, white to grayish; transparent to translucent. Compos.: a hydrated silicate of alumina, lime, soda, and potash, represented by the formula $3SiO_2Al_2O_3(Ca{\cdot}Na{\cdot}K)O_3{+}4HO$. Leyden-battery, *s.*

Elect.: A number of Leyden jars connected externally by resting on a metallic surface, and internally by rods and wires.

Leyden-jar, Leyden-phial,

Elect.: A glass bottle having its interior coated with tin foil or filled with thin leaves of copper or of gold leaf. The outside is also coated with tin foil up to a certain distance from the neck. The neck has a cork, through which passes a brass rod terminating at one end in a knob, and communicating with the metal in the interior. The inner coating is called the internal, and the outer one the external armature or coating. It is charged by connecting one of the armatures with the ground and the other with the source of electricity. If the haud grasps the external coating while the knob is presented to the conductor of the machine, positive electricity accumulates on the iuner, and negative electricity on the outer coating. If, on the contrary, the jar be held by the knob and the outer coating be presented to the machine, positive electricity is accumulated on the outer, and negative on the inner coating.

lia-fǡil, *s.* [Gael. = stone of destiny: *lia* = stone, and *fail* (for *faidheil*) = fate, destiny.] (See extract.) [JACOB'S-STONE.]

"The *lia fàil*, or, as some call it, the *liag fàil*, or *leug fàil*, was the fatal chair on which the supreme kings of Ireland were inaugurated in the days of Druidism. From Ireland it was conveyed to Dunstaffnage in Scotland; thence, about the year 842, to Scone, by Kenneth II.; and, lastly, in 1300 by Edward I. to Westminster, where it still remains. How the *lia fàil* came to Scotland, whether by theft, fraud, or violence, is not ascertained. It is said to have possessed extraordinary virtues till the time of our Saviour's birth. Some time after its arrival in Scotland, a superstitious belief became attached to it—that wherever the stone should be found, some one of the race should reign. This persuasion is not so old as the times of Druidism."—*Armstrong: Gaelic Dictionary.*

*** lī'-ard** (*d* silent), *s.* [Fr.] A French farthing.

lī'-art, * ly-art, *a.* [LIARD, *a.*]

Lī'-as, *s.* [By some considered a corruption of the English word *layers*, or *iyers*, referring to the visible stratification of the rock. But Mahn and Skeat think that the Fr. *liais* = the rocks in question, was the origin of the English word. Littré, on the other hand, derives the Fr. *lias* from the English term, though saying that some consider it to have come from Bas Breton *liach* = dolmen. The English word *lias* was first a provincial one, adopted by geologists, who gave it universal currency.]

1. *Geol.*: A formation situated at the base of the Oolite, with which it is sometimes combined. It consists of thin beds of blue or gray limestone, becoming light-brown when weathered. These are separated by dark-coloured, narrow, argillaccous partings, so that quarries of the rock seen from a distanee look striped and ribbon-like. It has been divided in England into Upper, Middle, and Lower. Most of its fossils are marine, though there is in it an insect-limestone. Huge Enaliosaurians, specially Ichthyosaurs and Plesiosaurs, reach their maximum development in it; they are believed to have been marine. Of fishes 117 are known from Britain alone; of molluscs 937, the Cephalopods being 207, two-thirds of them Ammonites. Particular species of the last genus have been used to divide it into zones. From the abundance of the Oyster genus, Gryphæa, it has been sometimes called the Gryphite limestone. Pentacrinites flourished. The plants are chiefly cycads and conifers. The Lias runs diagonally across England from Yorkshire to Devon and Dorsetshire. It extends to France and Germany.

2. *Comm., &c.*: Liassic clays are used for brickmaking. They are also burnt for lime and for hydraulic cement; liassic limestones are called eement stones and are burnt for hydraulic lime. (*Rutley.*)

lī-bā'-tion, *s.* [Fr., from Lat. *libationem*, accus. of *libatio* = a libation, from *libatus*, pa. par. of *libo* = to sip, to pour out; Gr. λείβω (*leibō*); Sp. *libacion* Ital. *libazione.*]

1. *Compar. Religions:* A sacrifice, by an actual drink offering, by pouring liquids—usually oil or wine—on the ground in honour of a divinity, or by the combiuation of both methods. In classic times bloody sacrifices were usually accompanied by libations, which always formed part of the religious ceremonies at the conclusion of a treaty of peace; hence the Greek σπονδαί = a solemn treaty, from σπένδω = to offer a libation. (Cf. Virg., *Æn.* v. 77; xii. 174). Sometimes libations were independent acts of worship (*Il.* xvi. 233); and they found a place in convivial gatherings and banquets (Virg., *Æn.* i. 734–38; *Georg.* ii. 101; Hor., *Carm.* IV. v. 31–34; Ovid, *Fasti*, ii. 637). Libations were usually of unmixed wine (ἔνσπονδος = *merum*), but sometimes of milk, honey, and other fluids, either pure or diluted with water (Plin., *H.N.* xiv. 19). The word "libation" does not occur in the A.V., but clear traces of the practice may be found. "Jacob set up . . . a pillar of stone, and he poured a drink offering thereon and he poured oil thereon" (Gen. xxxv. 14). "Strong wine" was ordained "to be poured unto the Lord for a drink offering" (Numb. xxviii. 7); and Jeremiah (xix. 13) charges it against the people of Jerusalem and the kings of Judah "that they have poured out drink offerings unto other gods," and to "the queen of heaven" (xliv. 17, 19, 25).

"In this idea of a god eternally insatiable, joined to the hunger such restless nomads must often have suffered, is to be found the first cause of *libation*, of offering, of sacrifice."—*R. Heath: Edgar Quinet*, p. 284.

2. The wine or other liquor so poured out.

lī'-bel, * ly-bell, *s.* [Lat. *libellus* = a little book or writing; dimin. of *liber* = a book; Fr. *libelle*; Ital. & Port. *libello*; Sp. *libelo.*]

I. *Ordinary Language:*

*** 1.** Originally any little book or writing; a declaration, a certificate.

"Yyue ye to hir a *libel* of forsakyng."—*Wyclifte: Matthew* v. 31.

2. A defamatory writing, print, picture, or publication of any kind, containing any statements or representations maliciously made, and tending to bring any person into ridicule or contempt, or expose him to public hatred or obloquy; any obscene, blasphemous, or seditious publication whether in writing, print, signs, or pictures.

"Of a nature very similar to challenges, are *libels*, *libelli famosi*, which, taken in their largest and most extensive sense, signify any writings, pictures or the like, of an immoral or illegal tendency; but, in the sense under which we are now to consider them, are malicious defamations of any person, and especially a magistrate, made public by either printing, writing, signs, or pictures, in order to provoke him to wrath, or expose him to public hatred, contempt, or ridicule. The communication of a *libel* to any one person is a publicatiou in the eye of the law: and therefore the sending an abusive private letter to a man is as much a *libel* as if it were opeuly printed, for it equally teuds to a breach of the peace. For the same reason it is immaterial at commou law, with respect to the essence of a *libel*, whether the matter of it be true or false; since the provocation, and not the falsity, is the thing to be punished criminally, though, doubtless, the falsehood of it may, independently of any statutory provision, aggravate its guilt, and enhance its punishment."—*Blackstone: Comment.*, bk. iv., ch. 11.

3. The act, or crime of publishing a libel: as, To be charged with *libel.*

II. *Eng. Eccles. & Scots Law:* The summons, or similar writ, commencing a suit, and containing the plaintiff's allegations.

A. *Transitive:*

1. *Ord. Lang.*: To publish a libel upon; to hold up to public contempt, derision, or hatred by the publication of any libellous writing, print, picture, &c.; to lampoon.

"The despot of Leadenhall Street was *libelled* in prose and verse."—*Macaulay: Hist. Eng.*, ch. xviii.

2. *Law:* To exhibit a charge against; as against a clergyman for unbecoming conduct.

B. *Intrans.:* To spread libels or defamatory publications or statements.

"What's this, but *libelling* against the senate,
And blazoning our injustice everywhere?"
Shakesp.: Titus Andronicus, iv. 4.

8. Not too strict, harsh, or severe; free: as, a *liberal* interpretation of a law.

* 9. Licentious, loose, lax, dissolute; free to excess.

II. *Politics:* A name given to that party in the state which is in favour of reform and advancement. (Opposed to the Conservative party.) [B.]

B. *As subst.:* One who advocates progress and reform, especially in the direction of conferring greater power upon the people; an advocate of Liberalism.

¶ The designation "Liberal," applied to an English party is said to have been derived from the *Liberal*, a periodical set on foot by Lord Byron and his friends. Both political parties are named with tacit reference to an irresistible movement towards democracy which has long been in progress in Britain, as it was in the ancient Roman republic. The Conservatives, dreading the effect of this democratic current on the time-honoured institutions of the country, make it their main object to conserve them. With this view they arrest forward movement when they can, and, when this is impracticable, attempt to retard the rate of progress. The Liberal party, on the contrary, little or nothing fearing the results of change, help the movement instead of attempting to stem or to lessen its progress. The Liberal party consists of two great sections or wings, generally in co-operation though sometimes in antagonism. These are the Whigs and the Radicals, the former seeking to remove the more obnoxious defects in the institutions of the country, with the view of ensuring their stability; the latter, on the contrary, desiring to root some of them up instead of increasing their efficiency. For example, the Whigs are in favour of the Established Churches, the House of Lords, and the throne, whilst the more advanced of the Radicals would abolish all the three. The strength of the Whig party is in the middle classes, that of the Radicals among the artizans. After about forty years' exclusion from office, the Liberals reached it in 1830. From that time till this they have been in power under Earl Grey from Nov. 22, 1830, and Viscount Melbourne from July 18, 1834, to Dec. 26, 1834; under Viscount Melbourne again from April 18, 1835, to Sept. 6, 1841; under Lord John Russell from July 6, 1846, to Feb. 27, 1852; under the Earl of Aberdeen from Dec. 28, 1852, and Lord Palmerston from Feb. 10, 1855, to Feb. 28, 1858; under Lord Palmerston again from June 18, 1859, and Earl Russell from Nov. 6, 1865, to July 6, 1866; and under Mr. Gladstone from Dec. 9, 1868, to Feb. 21, 1874, and again from April 28, 1880, till 1885. In August, 1892, Mr. Gladstone again returned to office, from which he retired, on account of ill health, in the spring of 1894, being succeeded by Lord Rosebery.

¶ Obvious compounds: *Liberal-hearted, liberal-minded, liberal-souled*, &c.

Liberation Society, *s.* The name popularly given to a society which was formed in 1844 under the title of the British Anti-State-Church Association, an appellation changed in 1853 for that which now obtains, the Society for the Liberation of Religion from State-Patronage and Control. It is "based on the principle that," in its opinion, "national establishments of religion are (1) unjust, (2) politically mischievous, (3) injurious to the Churches established, and (4) that they also hinder the progress of religion." It aims at (1) the abrogation of all laws and usages which inflict disability or confer privilege on ecclesiastical grounds upon any subject of the realm; (2) the discontinuance of all payments from public funds and of all compulsory exactions for religious purposes; and (3) *after an equitable satisfaction of existing interests* (the italics are those of the Society), the application to other than ecclesiastical purposes of the national property now devoted to the uses of the Church of England and the Church of Scotland, and, concurreutly therewith, the liberation of those Churches from State-control. While prosecuting these aims, it neither expresses any opinion upon, nor seeks to effect any alteration in, the doctrines, formularies, or internal government of the Churches now established. Its revenue in 1883–4, derived from subscriptions and other sources, was £8,898; its expenditure £8,541. The number of subscribers in England, Wales, Scotland, and Ireland was about 11,000.

lĭb'-ĕr-ā-tŏr, *s.* [Lat., from *liberatus*, pa. par. of *libero.*] One who liberates or frees; a deliverer.

* **lĭb'-ĕr-ā-tŏr-ў,** *a.* [Eng. *liberator*; *-y.*] Tending to liberate or set free.

Liberian-hippopotamus, *s.*

Zool.: Hippopotamus minor, a small species described by Dr. S. G. Morton (*Proc. Acad. Nat. Sci.*, Philadel., Feb., 1844), from the notes of Dr. Goheen, colonial physician at Monrovia, and from two crania which that gentleman sent to America. In 1850 (*ib.*, 1850, pp. 231–39) Dr. Morton proposed to call it *H. liberiensis*, the name by which it is now generally known, though "it was proposed to make a new genus of it under the name of Chœropsis." (*Van Hoeven.*) It has but two incisors in the lower jaw; the posterior molars are only partially protruded, and rise obliquely like those of the elephant and mastodon. It varies in weight from four hundred to seven hundred pounds.

lĭb-ĕr-ō-, *pref.* [Lat. *libero* = to set free.] (For def. see etym.)

† **libero-motor,** *a.* Letting out or liberating nerve force. (*H. Spencer.*)

lĭb-ĕr-tār'-ĭ-an, *a.* & *s.* [Eng. *libert(y)*; *-arian.*]

A. *As adj.:* Pertaining to liberty or free-will, inculcating the doctrine that the human will is free as opposed to the teaching that it is impelled by necessity to a certain course of action.

"He has in particular made the *libertarian* position clearer by the apt choice of technical terms."—*Athenæum*, Dec. 20, 1884, p. 800.

B. *As subst.:* One who accepts the doctrine that human will is free. [FREE-WILL, NECESSITY.]

"The very objection of incomprehensibility by which the fatalist had thought to triumph over the *libertarian*."—*Hamilton: Discussions*, p. 620.

lĭb-ĕr-tār'-ĭ-an-ĭşm, *s.* [Eng. *libertarian*; *-ism.*] The doctrines or principles of libertarians.

"A growing *libertinage*, which disposed them to think lightly of the Christian faith."—*Warburton: Sermons*, vol. ix., ser. 13.

lĭb'-ĕr-tīne, *s.* & *a.* [Lat. *libertinus* = (a.) pertaining to a freedman, (s.) a freedman: from *libertus* = a freedman: *liber*, free; Fr. *libertin*; Sp., Port., & Ital. *libertino.*]

A. *As substantive:*

I. *Ordinary Language:*

*1. A freedman; one manumitted or set free from slavery.

"Some persons are forbidden to be accusers; others on the score of their condition, as *libertines* against their patrons."—*Aylife: Parergon.*

*2. A freethinker.

"It is too probable that our modern *libertines*, deists, and theists took occasion from the scandalous contentions of Christians among many changes, to disbelieve all."—*A Discourse of Logomachus.* (1711.)

3. One free in his moral practice, especially with women; a debauchee, a profligate, a licentious person.

"Though a *libertine*, he won the hearts of the Puritans."—*Macaulay: Hist. Eng.*, vol. i., ch. ii.

4. One free from restraint; one who is unconfined.

"When he speaks,
The air, a charter'd *libertine*, is still."
Shakesp.: Henry V., i. 1.

5. A freeman of a corporate town or city.

II. *Technically:*

1. *Church Hist.:* A Flemish sect of Antinomians, who called themselves "Spirituals." They passed into France, where they were patronised by Margaret of Navarre, sister of Francis I. They held that, as God was the author of all human actions, no human action could be evil; that religion consisted in union with God by contemplation, and that any one who had attained to this could act as he pleased. Calvin wrote strongly against them. (*Blunt.*)

2. *Script.:* The word occurs but once in the New Testament—"The synagogue of the *Libertines*" (Acts vi. 9). Its meaning has given rise to much discussion; but the most probable explanation is that the *Libertines* were Jews who, having been taken prisoners by Pompey and other Roman generals in the Syrian wars, had been reduced to slavery, but, having been emancipated, returned to Palestine. (Cf. Tac. *Ann.* ii. 85; Hor. *Sat.* i. 4, 143; Juv. *Sat.* iii. 14.)

B. *As adjective:*

*1. Freethinking, latitudinarian.

"The said *libertine* doctrines do more contradict the doctriues of the Gospel than the doctrines of the Papists about the same."—*Baxter: Catholic Theology*, pt. iii., p. 289.

2. Loose, licentious, profligate, lewd, debauched, dissolute: as, a *libertine* life.

lĭb'-ĕr-tĭn-ĭşm, *s.* [Eng. *libertin(e); -ism.*]

*1. The quality or state of being a freedman.

*2. Irreligiousness, freethougbt; looseness of morality.

"Even modest heathens would hiss this *libertinism* off the stage."—*Bp. Hall: Cases of Conscience*, Dec. 4, ch. ii.

3. Loose, licentious, or dissolute conduct; profligacy, licentiousness, lewdness, grossness, debauchery.

"Tales were told about his *libertinism* which went on growing till they became too absurd for the credulity even of party spirit."—*Macaulay: Hist. Eng.*, ch. xx.

lĭb'-ĕr-tў, *lĭb-er-te, *lĭb-er-tee, *s.* [Fr. *liberté*; from Lat. *libertatem*; accus. of *libertas* = liberty: *liber* = free; Ital. *libertà*; Port. *liberdade*; Sp. *libertad.*]

I. *Ordinary Language:*

1. The quality or state of being free; exemption from restraint; freedom; power of actiug according to one's will.

"And methought while she *liberty* sung,
'Twas *liberty* only to hear."
Cowper: Morning Dream.

2. The power of an agent to do or to leave undone any particular action, according to the determination of his mind or judgment; freedom of will; freedom from constraint in will or volition. (*Locke: Essay*, bk. ii., ch. xxi., § 8.)

3. Permission granted, as by a superior to an inferior, to do any act, which the latter might not do without such permission; leave, licence.

4. Privileges or immunities enjoyed by prescription or by grant; franchise.

5. A place or district within which certain privileges, immunities, or franchises are enjoyed.

"The bells of all the parishes of the city and *liberties* were ringing."—*Macaulay: Hist. Eng.*, ch. viii.

6. Permission to go or move about within certain limits, as in a place of confinement; a certain degree of freedom of movement.

7. The limits within which freedom of movement is allowed: as, the *liberties* of a prison.

8. Conduct, behaviour or speech on the part of one person towards another, such as is not warranted by their relative positions in society, rank, age, &c.; a slight breach of decorum or courtesy.

9. Freedom or exemption from occupation or engagements; leisure; the state of being disengaged: as, Are you at *liberty?*

*10. Licentiousness, libertinism.

"Lust and *liberty*
Creep in the minds and marrows of our youth."
Shakesp.: Timon of Athens, iv. 1.

II. *Manége:* A curve or arch in that part of the bit placed in the mouth of a horse, to afford room for the tongue of the animal.

¶ (1) *At liberty:* Disengaged; not occupied.

(2) *Cap of liberty:* A cap or hat worn as a symbol of liberty, as in ancient times manumitted slaves wore the Phrygian cap as a token of their having been set free. In modern days a red cap worn by French revolutionists.

(3) *Civil liberty:* A state of freedom or liberty, abridged only by the restrictions and regulations established under the form of laws for the protection and interests of the nation, society, or state. It is a state of exemption from the arbitrary will of others, secured by established laws, by which each member is protected against injury on the part of others.

(4) *Liberty of the press:*

(*a*) *Ord. Lang.:* The free right and power to publish whatever one pleases, subject only to punishment for abuse of that freedom by publishing anything mischievous, hurtful, or libellous, to the public or to individuals.

(*b*) *Eng.:* After the Reformation, the crown assumed the right, which the church had previously exercised, of prohibiting the printing of all works but such as should be first seen and allowed. The newspaper press, originating in the reign of James I., was subjected to the royal licenser, and, though the fall of the Star Chamber, in 1641, augured well for the liberty of the press, parliament did not affect a spirit of toleration, and Milton, in his *Areopagitica*, branded the suppression of truth by the licenser as the slaying of an immortality rather than a life. The Licensing Act (13 and 14 Charles II.) placed the entire control of printing in the government. Authors and printers of obnoxious works were hanged, mutilated, and their productions burned by the hangman. The freedom of the press was not theoretically established till parliament, in 1695, refused to renew the Licensing Act. Henceforth, every writing could be freely published, but at the risk of a rigorous execution of the undefined law of libel. To speak ill of the government was a crime, and the first aim and use of free discussion was prohibited by law. Hence arose a long series of conflicts between the courts and the press, virtually brought to an end in 1831 by the failure of the Attorney-General to convict Cobbett. Liberty of the press has always been enjoyed in the United States.

Liberty Bell: The old bell of Independence Hall, Philadelphia, which was rung on the passage of the Declaration of Independence.

(5) *Liberty-pole:* A flag-staff surrounded with the symbols of liberty. (*American.*)

(6) *Moral liberty:* That liberty of choice which is essential to moral responsibility. [Free-will.]

(7) *Natural liberty:* A state of exemption from the restraint or control of others, and the institutions of civil life. The power to act or do as one pleases, subject only to the laws of nature.

"The *natural liberty* of man, is to be free from any superior power on earth, and not to be under the will or legislative authority of man, but to have only the law of nature for his rule."—*Locke: Of Government*, bk. ii., ch. iv., § 22.

(8) *Political liberty:* The liberty or freedom of a nation; exemption of a nation from any unjust abridgement of its rights and independence by another nation.

(9) *Religious liberty:* The free right to hold what opinions one pleases in religious matters, and to worship the Deity according to the dictates of conscience, free from external control.

¶ The words *liberty* and *freedom* are often used interchangeably. Properly speaking, however, *liberty* hints at previous restraint: *freedom* does not; hence, a slave is set at *liberty*, not at *freedom*, whilst a rude man expresses his sentiments, not with too much *liberty*, but with too much *freedom.*

lĭ-bĕth'-ĕn-ītc, *s.* [Named after the locality where first observed, Libethen; suff. *-ite* (*Min.*); Ger. *Libethenit.*]

Min.: An orthorhombic (Schrauf says monoclinic, or "pseudo-orthorhombic") mineral, occurring mostly in crystals, rarely globular or compact. lĭ-bŏ-çē'-drŭs, *s.* [Gr. λιβάς (*libas*), λίβος (*libos*) = a tear, and κέδρος (*kedros*) = a cedar.]

Bot.: A genus of Coniferæ. *Libocedrus Doniana* is the Kawa of New Zealand. Its beautifully-grained and heavy wood would be well adapted for picture frames. (*Loudon.*)

lĭ'-brą, *s.* [Lat. = a balance. So named because when the sun enters Libra the days and nights are equal like the scales of a balance.]

Astron.: The Balance.

(1) One of the twelve ancient zodiacal constellations. It is surrounded by the constellations Scorpio, Ophiuchus, Virgo, Centaurus, and Lupus. It contains no stars of the first magnitude.

(2) The seventh sign of the Zodiac, symbol ♎. Owing to the precession of the equinoxes it now contains the constellation Virgo. The sun enters it about Sept. 23.

***lī-brąl,** *a.* [Lat. *libralis*, from *libra* = a pound weight.] Of a pound weight; weighing a pound.

lī-brär'-ĭ-ąn, *s.* [Lat. *librarius* = (s.) a transcriber of books; (a.) of or pertaining to books: *liber* = a book; Fr. *libraire*; Sp. *librero*; Ital. *librajo* = a bookseller.]

*1. One who transcribes or copies books.

"Charybdis thrice swallows and thrice refunds the waves; this must be understood of regular tides. There are indeed but two tides a day, but this is the error of the *librarians*."—*Broome: On the Odyssey.*

2. One who has charge of a library; the keeper of a library or collection of books.

"It probably contained some illuminated MSS., as the *librarian* had the keeping of the colours too."—*Walpole: Anecdotes of Painting*, vol. i., ch. i.

lī-brär'-ĭ-an-shĭp, *s.* [Eng. *librarian; -ship.*] The office, post, or position of a librarian.

lī'-brą-rў, *li-brai-rie, *li-bra-rie, *s.* [Fr. *librairie*, from Lat. *librarium*, neut. sing. of *librarius* = pertaining to books: *liber* = a book; orig. the bark of a tree, that being the

earliest writing material; Sp. & Ital. *libreria;* Port. *livraria.*]

1. A collection of books, whether belonging to a private person, an institution, or the nation.

"Bale, the antiquary, makes mention of a merchant that bought two noble *libraries* about these times for forty shillings."—*Strype: Mem. Henry VIII* (an. 1545).

2. A room or set of rooms set apart for a collection of books, manuscripts, &c. (*P. Holland: Plinie*, bk. xxxv., ch. ii.)

¶ It is stated that there was a library in the Memnonium at Thebes in the fourteenth century B.C. Layard and his successors disentombed libraries, or their equivalents, collections of inscribed cylinders, from the sites of old Assyrian palaces. Kirjath-sepher, the old name of Debir, means the "City of Book(s)" (Judges i. 11). Pisistratus founded a public library at Athens about 540 B.C. Strabo says that the first private library was that of Aristotle, B.C. 334. Ptolemy I. (Soter) founded the celebrated Alexandrian Library in the Serapeum about 298 B.C.; it was partially destroyed by fire in the Egyptian contest carried on by Julius Cæsar, B.C. 47. It is said to have been burnt by the Caliph Omar, A.D. 640. A fine library of 200,000 volumes, collected by Attalus I. King of Pergamos, about 197 B.C., came into the possession of the Romans on the death of Attalus III., B.C. 133, he having nominated them heirs to his kingdom. Of modern libraries, the National Library of Paris, with 2,370,000 volumes and pamphlets, and the British Museum Library, 1,550,000 volumes, stand first. The Royal Library, of Munich, and the Imperial Library, of St. Petersburg, have each over 1,000,000 volumes. The Library of the Vatican ranks among the most valuable of European libraries. In the United States the Government Library, at Washington, for which a magnificent building has been erected, promises before many years to equal the great European libraries in importance. The Public Library of Boston has now considerably over 600,000 volumes. Other fine libraries are the Philadelphia Library, the oldest in the country, the Astor and Lenox Libraries of New York, and various others.

*** library-keeper,** *s.* A librarian.

"A *library-keeper*, who is likewise to be an apothecary, druggist, and keeper of instruments, engines, &c." —*Cowley: Advancement of Experimental Philosophy.*

*** lī'-brāte,** *v.t. & i.* [Lat. *libratus*, pa. par. of *libro* = to balance; *libra* = a balance.]

A. *Trans.:* To balance, to poise, to hold in equipoise.

B. *Intrans.:* To be in equipoise; to move as a balance.

lī-brā'-tion, *s.* [Lat. *libratio*, from *libratus*, pa. par. of *libro* = to balance; *libra* = a balance; Fr. *libration;* Sp. *libracion;* Ital. *librazione.*]

* **I.** *Ordinary Language:*

1. The act of balancing, or placing or holding in equipoise. (*H. More: Immortality of the Soul*, bk. ii., ch. x.)

2. The state of being balanced or in equipoise.

"Their pinions still
In loose *librations* stretched, to trust the void
Trembling refuse." *Thomson: Spring*, 743.

II. *Astron.:* A real or apparent motion of a heavenly body like that of a balance when approaching a state of rest. (Used especially of the moon.) [¶] (*Boyle: Works*, iv. 98.)

¶ 1. *Libration in latitude:*

Astron. (*Of the moon*): A small variation in the precise part of the moon presented to us. The moon always presents the same hemisphere to us, but as her axis varies from the plane of her orbit by an angle of 1° 30′ 10·8″, her two poles lean alternately to and from the earth. When the north pole leans towards the earth we see a little more of the region surrounding it; when turned away we see less; this variation constitutes the libration in latitude.

2. *Libration in longitude:*

Astron. (*Of the moon*): A slight variation at different times in the amount of the eastern or western edge of the moon seen. This arises from the fact that the angular velocity of the moon on her axis is not quite the same as that of her angular velocity in her orbit. This was first discovered by Hevelius in 1647.

3. *Diurnal libration, Parallactic vibration:*

Astron. (*Of the moon*): A slight variation in the aspect of the moon, arising from the fact that, owing to the diurnal motion of the earth, we view the moon at its rising or setting, in different circumstances, according to the latitude of the earth at the spot where the observer stands. It brings into view at the moon's rising and setting, on the upper limb, or whenever the moon bas parallax, a little more than a hemisphere.

lī'-brą-tōr-ў, *a.* [Eng. *librat(e); -ory.*] Balaucing; balanced; moving like a balance; oscillating.

"Maraldi discovers the *libratory* motion of the nodes of Jupiter s second satellite."—*Chambers: Astronomy*, p. 772.

lī-brĕt'-tĭst, *s.* [Eng. *librett(o); -ist.*] One who writes a libretto; one who composes words for an opera, oratorio, &c.

"The original work of the *librettist* is truly remarkable, even among such productions." — *Pall Mall Gazette*, Jan. 23, 1884.

lĭ-brĕt'-tō, *s.* [Ital. = a little book; dimin. of *libro* = a book.]

Music:

I. A book containing the words of an opera, oratorio, or similar musical work.

2. The words of an opera, oratorio, &c.

"Concerning the literary merit of the original *libretto* this is no place to speak, since the question does not arise."—*Daily Telegraph*, Jan. 30, 1882.

lī'-brĭ-form, *a.* [Lat. *liber* (genit. *libri*), and *forma* = shape.] (See the compounds.)

libriform-cells, *s. pl.*

Bot.: Cells like those existing in liber (q.v.).

libriform-fibres, *s. pl.*

Bot.: Fibres like those of liber; simple, bast-like wood-fibres. (*Thomé.*)

Lĭb'-ў-ąn, *a.* [Lat. *Libyus.*]

1. Of or pertaining to Libya, the ancient name of a large district in the north of Africa; hence sometimes used for Africa itself.

"We drank the *Libyan* sun to sleep."
Tennyson: Dream of Fair Women, 145.

2. Applied to a group of languages, spoken by tribes inhabiting the mountainous parts of Barbary.

lĭ-bў-thē'-ą, *s.* [Gr. Λίβυς (*Libus*) = Libyan, and *θέα* (*thĕa*) = aspect. (*Agassiz.*)]

Entom.: The typical genus of the sub-family Libytheinæ (q.v.). The males only have the two fore claws very short and broad. The upper wings are very angular.

lĭb-ў-thē-ī'-næ, *s. pl.* [Mod. Lat. *libythe(a);* Lat. pl. fem. adj. suff. *-inæ.*]

Entom.: A sub-family of Butterflies, family Erycinidæ. They have very long palpi. There is only one genus. Species are found in the South of Europe, in Asia, Africa, and America.

*** lī-cär'-ĭ-ą,** *s.* [Native name.]

Bot.: An old doubtful genus of Lauraceæ, now made a synonym of Dicypellium. *Licaria guianensis* is the Bois de Rose (Rosewood of Guiana).

līçe, *s. pl.* [Louse.]

*** lice-bane,** *s.* "A plant." (*Johnson.*) Not identified.

¶ *Beggars' lice:*

Bot.: An American name for *Cynoglossum Morisoni.*

lī'-çençe, lī'-çençe, * li-cens, * ly-cence, *s.* [Fr. *licence*, from Lat. *licentia* = power or freedom to act; *licens*, pr. par. of *licet* = it is allowed or allowable; Sp. *licensia;* Ital. *licenzia.*]

1. Authority, leave, or permission to do or forbear any act; liberty, freedom.

"When he had geuen hym *lycence*, Paule stode on the steppes, and beckened with his hande to the people."—*Acts* xxi. (1551.)

2. Leave or permission granted by the proper authority to do any act, or to carry on any business or profession: as, a *licence* to preach, a *licence* to sell intoxicating drinks.

3. A document containing such permission or authority: as, To take out a *licence* for a dog.

4. Excess of liberty; exorbitant or undue freedom; abuse of freedom or liberty; licentiousness. (*Milton: Sonnet* xi.)

5. In art, poetry, music, &c., applied to that deviation from the ordinary rules or mode of treatment enforced by a particular school, or adopted as the result of peculiar education; the liberty taken by an artist in deviating from the strict rules of his art. (*Irving: Goldsmith*, ch. xxviii.)

*** lī'-çen-są-ble,** *a.* [Eng. *licens(e); -able.*] That may or can be licensed or legally permitted.

lī'-çençe, lī'-çençe, *v.t.* [License, *s.*]

1. To give authority, leave, or permission to do any act or carry on any business, profession, &c.; to authorize by a legal grant of permission; to give a licence to.

"King Stephen *licenced* each of them to build so manie [castles] as they listed upon their owne demeasnes."—*Holinshed: Desc. of Eng.*, bk. ii., ch. xiv.

* 2. To dismiss; to send or put away.

lī'-çensed, *pa. par.* or *a.* [License, *v.*]

1. Having a license; permitted by authority.

"The reasons of your *licencet* pamphlet are good."—*Milton: Colasterion*, p. 349.

2. Tolerated, allowed.

"What from our master's interests thus we draw,
Is but a *licensed* theft that 'scapes the law."
Pope: Homer; Iliad xxiv. 534.

licensed-house, *s.* A public-house; a house having a spirit licence, as distinguished from a beerhouse.

licensed-victualler, *s.* The keeper of a public house, inn, &c., holding a licence to sell spirits, wines, beer, &c.

*** lī-çens-ēē',** *s.* [Eng. *licens(e); -ee.*] One to whom a license is granted; the holder of a licence.

lī'-çens-ẽr, * lī'-çenç-ẽr, *s.* [Eng. *licens(e); -er.*] One who grants licence, leave, or authority; one legally authorized to grant licences; especially applied to an official by whom all books, &c., had to be approved before publication. (*Milton: Colasterion*, p. 346.)

¶ *Licenser of Plays:* In June, 1737, the powers long before exercised by the Lord Chamberlain, aided by the Master and Yeoman of the Revels, were legalized by the passing of a special Act, called the Licensing Act. This set aside the posts of Master and Yeoman of the Revels, and, confirming the power exercised by the Lord Chamberlain, nominated his deputy as the Licenser of Play-houses and Examiner of Plays.

lī'-çens-ĭng, *pr. par.* or *particip. adj.* [License, *v.*]

Licensing Acts, *s. pl.*

Law:

1. [*Licenser of Plays*].

2. (*Pl.*): Acts passed to regulate the granting of licences for the sale of intoxicating liquors.

*** lī'-çen-sure (s** as **sh),** *s.* [Eng. *licens(e); -ure.*] The act of licensing.

lī-çĕn'-ti-ąte (ti as **shĭ), li-cen-ti-at,** *s. & a.* [Low Lat. *licentiatus*, pa. par. of *licentio* = to license, from Lat. *licentia* = licence (q.v); Ital. *licenziato;* Sp. *licenciado.*]

A. *As substantive:*

I. One who has licence or authority to follow any particular art, business, or profession.

2. On the continent a degree at the Universities between the baccalaureate and the doctorate, which must be taken by a candidate for the latter; also the person who has taken such degree. (*Aylife: Parergon.*)

* 3. One who uses his freedom to excess; an abuser of liberty; one who behaves in a licentious manner or with too great freedom.

"What is this but . . . to profess ourselves not libertines, but *licentiates* of disorder?"—*Bp. Hall: Sermons; Christian Liberty Laid Forth.*

* **B.** *As adj.:* Licentious, free. (*Hall: Satires*, I. iv. 29.)

Licentiate of Theology: A title granted only by King's College, London, and the University of Durham. It is not a degree, but a status, and implies any fair theological attainments.

*** lī-çĕn'-ti-āte (ti** as **shĭ),** *v.t.* To permit, to authorize; to give a grant or licence to; to encourage by licence. (*L'Estrange.*)

*** lī-çĕn-ti-ā'-tion (ti** as **shĭ),** *s.* [Licentiate, *v.*] The act of licentiating or licensing.

lī-çĕn'-tious, *a.* [Fr. *licencieux*, from Lat. *licentiosus* = full of licence, from *licentia* = licence; Sp. *licencioso;* Ital. *licenzioso.*]

* I. Passing due bounds or limits; using too much licence or freedom; excessive. (*Spenser: F. Q.*, V. v. 25.)

* 2. Breaking through all restraint; uncontrollable. (*Roscommon*, in *Todd.*)

3. Unrestrained by law, morality, or religious feelings; dissolute, profligate, loose, wanton, sensual, immoral.

"Too many, Lord, abuse thy grace,
In this *licentious* day."
Cowper: Olney Hymns, lx.

lī-çĕn'-tious-lў, *adv.* [Eng. *licentious; -ly.*] In a licentious manner; without restraint; dissolutely, wantonly.

"So strange diversitie there was in that armie, both *licentiously* to commit all enormities, and patiently to abide all corrections."—*Savile: Tacitus; Historie*, p. 153.

lī-çĕn'-tious-nĕss, *s.* [Eng. *licentious; -ness.*] The quality or state of being licentious; want of restraint; licence, dissoluteness, profligacy.

"[He] had notoriously tolerated among his soldiers a *licentiousness*, not only shocking to humanity, but also incompatible with discipline."—*Macaulay: Hist. Eng.*, ch. xii.

***lĭch, *liche,** *s.* [A.S. *lic* = the body; cogn. with Dut. *lijk* = a corpse; Icel. *lik* = a living body; Dan. *lig* = a corpse; Sw. *lik;* Goth. *leik;* Ger. *leiche;* O. H. Ger. *lih.*] A body, especially a dead body; a corpse.

"The armure he ded on his *liche*."
Kyng Alisaunder.

lich-fowl, *s.* [Lich-owl.]

lich-gate, *s.*

1. A churchyard gate with a porch, under which a bier may be rested while the introductory portion of the burial service is being read; a corpse-gate.

2. The path by which a corpse is borne to the church. (*Prov.*)

lich-owl, litch-owl, *s.*

Folk-lore: The screech-owl, probably *Strix flammea.* White (*Nat. Hist. Selborne*, lett. xv.) says "White owls also often scream horribly as they fly along; from this screaming probably arose the common people's imaginary species of screech-owl, which they superstitiously think attends the wiudows of dying persons." From the earliest ages the owl has been regarded as uncanny (Plin., *H. N.*, x. 12, xi. 39). Ovid speaks of it as announcing coming evil (*Met.*, v. 549, 550); and in Virgil (*Æn.* iv. 462, 463) the owl is one of the evil omens that betoken the sad fate of Dido. Shakespeare, especially in *Macbeth*, makes use of the common superstition again and again. Waterton (*Essays in Nat. Hist.* (1871), p. 273) gives an amusing account of the protection he extended to owls, and the countless woes which his faithful housekeeper declared would inevitably follow such rash conduct.

"The shrieking *litch-owl* that doth never cry,
But boding death."
Drayton: The Owl.

*** lich-road,** *s.* [Lich-way.]

*** lich-stone,** *s.* The stone in the lich-gate (q.v.), on which the bier or coffin was rested.

*** lich-wake, * liche-wake, * lyk-wake,** *s.* The act or practice of waking or watching by a dead body. [Wake, *s.*]

* *Lich-wake dirge:* A dirge sung during the act of waking or watching by a dead body. (*Tylor: Prim. Cult.*, i. 495.)

*** lich-way, * lich-road,** *s.* The path by which a corpse is borne to the church.

*** lich,** *a.* [Like, *a.*]

lī'-cha-dæ, *s. pl.* [Mod. Lat. *lichas* (genit. *lichades*); Lat. fem. pl. adj. suff. *-adæ.*]

Palæont.: A family of Trilobites containing only the genus Lichas (q.v.).

lī'-chăs, *s.* [Gr. λιχάς (*lichas*), genit. λιχάδος (*lichados*) = (1) the space between the forefingers; (2) a steep, sheer cliff.]

Palæont.: The typical genus of the family Lichadæ. The head is very convex; the thorax has eleven segments with grooved pleuræ; the crust is tuberculated. Found in the Silurian.

lī'-chĕn, lĭch'-ĕn, *s.* [Gr. λειχήν (*leichēn*) = tree-moss; a blight, a canker.]

1. *Bot.* A cryptogamic plant belonging to the order Lichenaceæ, or the alliance Lichenales (q.v.).

¶ The Cup-lichen, or Cup-moss, is *Cenomyce pyxidata;* the Dog-lichen, *Peltidea canina;* the Horsehair or Trechair-lichen, *Cornicularia jubata;* Lungwort-lichen, *Sticta pulmonaria;* Stone-lichen, *Parmelia parietina;* the Writtenlichen, *Opegrapha scripta.*

2. *Pathol.:* A papular inflammatory eruption of the skin. The varieties are *lichen simplex, l. circumscriptus, l. gyratus,* &c.

*** lichen-islandicus,** *s.*

Bot., Pharm., &c.: An old name for Iceland moss (q.v.). See also Cetraria.

lichen-starch, *s.* [Lichenin.]

lī-chĕn-ā'-çē-æ, lī-chĕn-ā'-çē-ī, *s. pl.* [Mod. Lat. *lichen;* Lat. fem. pl. adj. suff. *-aceæ*, or masc. *-acci.*]

1. *Botany:*

(1) *Of the form* Lichenaceæ: An order of plants generally made identical with the alliance Lichenales of Lindley, both, however, now being reduced to an order of Fungales. They are akin to Ascomycetous Fungi, and have, like them, either a second form of fruit (stylospores), contained in distinct cysts (pycnidia) or minute bodies variously borne which are supposed to have the power of impregnation. From fungi in general they are distinguished by deriving their nourishment not from the medium in which they grow but from the surrounding atmosphere; by their slow development and long endurance; and by their producing gonidia, which in certain circumstances are reproductive. Berkeley, &c., divide them into Angiocarpei, which have the fruit contracted like a Sphæria; and Gymnocarpei, which have the fruit expanded like Peziza.

(2) *Of the form* Lichenacei: The name given by Nylander not to the whole Lichen order, or alliance, but to a section of it, containing species which are not gelatinous. He divides it into (1) Epiconoidei, in which the spores ultimately dust the shields, as Calicium; (2) Cladonioidei, having a stem-shaped thallus; (3) Ramalodei, having a shrubby thallus, as Usnei; (4) Phyllodei, having a leafy thallus, as Parmelia; (5) Placodei, having a crustaceous thallus, as Lecidea; and (6) Pyrenodei, having a capsule-like fruit. (*Berkeley*, &c.) [Lichenales.]

2. *Palæont.:* Lichens first appear in the Miocene.

lī-chĕn-ā'-lēs, *s. pl.* [Mod. Lat. *lichen;* Lat. fem. pl. adj. suff. *-ales.*]

Bot.: An alliance of Thallogens established by Lindley. It consists of cellular flowerless plants, nourished through their whole surface by the medium in which they vegetate, living in air propagated by spores usually enclosed in asci, and always having green gonidia in their thallus. They are perennial plants, often spreading over the surface of the earth or rocks or trees in dry places in the form of a lobed and foliaceous, or hard and crustaceous, or leprous thallus. Some reach great elevations on mountain slopes, and they approach more nearly than any other plants to the pole. Many are used for dyeing. Fée estimated the known genera at 58, and the species at 2,400. Lindley, leaving the Lichenales like a single order, divided it into Coniothalameæ, Idiothalameæ, Gasterothalameæ, and Hymenothalameæ. He believed it should be divided into three orders—Graphidaceæ, Collemaceæ, and Parmeliaceæ.

lī'-chened, lĭch'-ened, *a.* [Eng. *lichen; -ed.*] Relating to lichens; covered or coloured with lichen.

"While gleamed each *lichened* oak and giant pine
On the far side of swarthy Apennine."
Macaulay: Pompeii.

lī-chĕn'-ĭc, lĭch-ĕn'-ĭc, *a.* [Eng. *lichen; -ic.*] Relating to, contained, or derived from lichens (q.v.).

lichenic-acid, *s.*

Chem.: The same as Fumaric-acid (q.v.).

lī'-chĕn-ĭn, lĭch'-ĕn-ĭn, *s.* [Eng. *lichen; -in.*]

Chem.: $(C_6H_{10}O_5)_{10}$. The starch or dextrin occurring in Iceland moss and in many lichens. It is extracted by boiling water, and forms on cooling, a colourless jelly, which is coloured yellow, brown, and sometimes greenish, by solution of iodine. Boiled with dilute acids, it is converted into a fermentable sugar.

lī-chĕn-ŏg'-ra-phĕr, lĭch-ĕn-ŏg'-ra-phĕr, *s.* [Eng. *lichenograph(y); -er.*] The same as Lichenographist (q.v.).

lī-chĕn-ō-grăph'-ĭc, lĭch-ĕn-ō-grăph'-ĭc, lī-chĕn-ō-grăph'-ĭc-al, lĭch-ĕn-ō-grăph'-ĭc-al, *a.* [Eng. *lichen;* o connective, and *graphic, graphical.*] Pertaining or relating to lichenography.

lī-chĕn-ŏg'-ra-phĭst, lĭch-ĕn-ŏg'-ra-phĭst, *s.* [Eng. *lichenograph(y); -ist.*] One who is skilled in lichenography; one who writes descriptions of lichens.

lī-chĕn-ŏg'-ra-phў, lĭch-ĕn-ŏg'-ra-phў, *s.* [Gr. λειχήν (*leichēn*) = a lichen, and γράφω (*graphō*) = to write.] That branch of science which deals with the natural history of licheus; a description of lichens.

lī'-chĕn-ōĭd, *a.* [Gr. λειχήν (*leichen*) = a lichen, and εἶδος (*eidos*) = form, appearance.] Having the appearance, or partaking of the nature of a lichen.

"Frond *lichenoid*, crust-like, rooting beneath."—*Berkeley: Cryptog. Botany*, § 163.

lī-chĕn-ō-lŏg'-ĭc-al, lĭch-ĕn-ō-lŏg'-ĭc-al, *a.* [Eng. *lichenolog(y); -cal.*] Of or pertaining to lichenology.

"A *lichenological* flora, comprising about half the number of our own species."—*Berkeley: Cryptog. Botany*, § 453.

lī-chĕn-ŏl'-ō-ġў, lĭch-ĕn-ŏl'-ō-ġў, *s.* [Gr. λειχήν (*leichēn*) = a lichen, and λόγος (*logos*) = a discourse.] A treatise on lichens; that branch of botany which deals with the description and classification of lichens.

lī'-chĕn-oŭs, lĭch'-ĕn-oŭs, *a.* [Eng. *lichen; -ous.*]

1. *Bot.:* Pertaining to, resembling, covered with, or abounding in lichens.

"Like that of a fine flower against a *lichenous* branch."—*G. Eliot: Daniel Deronda*, ch. xxxvi.

2. *Med.:* Characteristic of, belonging to, or resembling the eruptive skin-disease called lichen (q.v.).

lī-chęn-stē-ăr'-ĭc, lĭch-ęn-stē-ăr'-ĭc, *a.* [Eng. *lichen*, and *stearic.*] (See the compound.)

lichenstearic-acid, *s.*

Chem.: $C_{11}H_{24}O_3$. A fatty substance occurring in Iceland moss. It is extracted with alcoholic potash, and separated from the decoction by the addition of dilute hydrochloric-acid. Purified by animal charcoal, it crystallizes from alcohol in delicate laminæ of pearly lustre. It has a rancid bitter taste, melts at 120°, and is not volatile. It forms well-marked salts with the alkalis and metals, some of which are crystalline.

lī-çhī', *s.* [Leechee.]

lī-chī'-na, *s.* [From Gr. λειχήν (*leichēn*) = a tree-moss, a lichen.]

Bot.: The typical genus of the tribe Lichineæ (q.v.). The frond is cartilaginous, smooth, dichotomous, the apothecia at the end of the branches. The species were formerly regarded as sea-weeds from growing on the sea-shore near the high-water mark.

lī-chĭn'-ĕ-æ, *s. pl.* [Mod. Lat. *lichin(a);* Lat. fem. pl. adj. suff. *-eæ.*]

Bot.: A family or tribe of Angiocarpous Lichens, having a branched thallus of a gelatinous texture, very soft when wet, but cartilaginous when dry. Fructification closed, apothecia and spermagonia formed in the substance at the ends of the branches. Common genera, Lichina and Ephebe.

licht, *s.* [Light, *s.*] (*Scotch.*)

licht, *a.* [Light, *a.*] (*Scotch.*)

lĭcht-ęn-steĭn'-ĭ-ą, *s.* [Named after M. Von Lichtenstein, a Professor of Medicine in Berlin and a celebrated botanist.]

Bot.: A genus of Umbelliferæ, family Seselinidæ. The Hottentots prepare an intoxicating beverage from the roots of *Leichtensteinia pyrethrifolia.*

lĭcht'-lў (*ch* guttural), **licht-lie,** *v.t.* [Light, *a.*] To make light of, to undervalue, to despise.

lĭch'-wāle, *s.* [A.S. *lic* = a form, figure, shape, flesh, substance, body, and *wala, wela* = weal (?).]

Bot.: Lithospermum officinale.

lĭch'-wŏrt, *s.* [A.S. *lic* = a body, and *wyrt, wurt* = an herb, a plant.]

Bot.: Parietaria officinalis.

lĭç-ĭ-nī'-næ, *s. pl.* [Mod. Lat. *licin(us);* Lat. fem. pl. adj. suff. *-inæ.*]

Entom.: A sub-family of Carabidæ.

li-çĭ'-nŭs, *s.* [Lat. = bent or turned upward.] *Entom.:* The typical genus of the sub-family Licininæ. Two species are British.

*** lĭç'-ĭt, * lys-ytte,** *a.* [Lat. *licitus*, from *licet* = it is allowed or allowable; Fr. *licite;* Sp. & Ital. *licito.*] Lawful, legal, allowed.

"And the kynge demaunded of them if it were a thynge *lysytte* and lawfull to beleue."—*Berners: Froissart; Cronycle*, ii. 628.

*** lĭç-ĭ-tā'-tion,** *s.* [Lat. *licitatio*, from *licitatus*, pa. par. of *licitor* = to bid for a thing; *liceo* = to put up to auction.] The act of exposing for sale to the highest bidder.

*** lĭç'-ĭt-lў,** *adv.* [Eng. *licit; -ly.*] In a licit or lawful manner; lawfully, legally.

*** lĭç'-ĭt-nĕss,** *s.* [Eng. *licit; -ness.*] The quality or state of being licit, lawful, or legal; lawfulness.

lĭck, * lick-en, * lik-ken, *v.t.* [A.S. *liccian;* cogn. with Dut. *likken;* Goth. *laigon* (in the comp. *bi-laigon*); Ger. *lecken;* Russ. *lizati;* Lat. *lingo;* Gr. λείχω (*leichō*); Sanse. *lih.* From the same root come *lecher, lickerish* (q.v.).]

1. To pass over with the tongue; to draw or pass the tongue over.

"But with a piteous and perpetual moan,
And a quick desolate cry, *licking* the hand
Which answered not with a caress—he died."
Byron: Darkness.

2. To lap up with the tongue; to take in with the tongue: as, A cat *licks* milk.

* 3. To scrape, to wipe.

"Seeing her, began to *lick* it off with her fingers."—*The Whimsical Jester* (1784), p. 31.

* **liēg'-ēr,** *s.* [LEDGER, LEGER.]

* **lī'-ęn,** *pa. par.* of *v.* [LIE (2) *v.*]

lī'-ęn, *s.* [Fr. = a band or tie, from Lat. *ligamen*, from *ligo* = to tie, to bind.]

Law: A legal claim on or upon property; a legal right in one person to detain the goods of another until some claim of the former against the latter has been satisfied.

"A *lien* may be either particular or general; the former is where the claim of retainer is made upon the goods themselves, in respect of which the debt arises, a claim which the law favours. The other, or general *lien*, is where goods are retained in respect of a general balance of account, which is less favoured. Thus a trainer who has a horse given to him to train, has a *lien* for his charges of keep and training; and in general, when the goods are delivered to a person to

be improved or altered in character, this right arises; as when cloth is delivered to a tailor to convert into clothes; or corn to a miller to be returned in the shape of flour. The right may, however, be regulated by special agreement, and then its operation will depend upon the particular terms of the contract; but in the absence of express contract, the law implies a *lien* wherever the usage of trade or the previous dealings of the parties give ground for such an implication. Although, as has been said, general *liens* are not favoured by law, yet in some cases they have become allowed and established by usage, as in the case of attorneys upon the title-deeds and documents of their clients; and factors, warehousemen, and others, upon goods confided to them in the ordinary course of business; all of whom have a *lien* for the amount of the general balance due to them in their several capacities."—*Blackstone: Comment.*, bk. ii., ch. 17.

lien of a covenant, *s.*

Law: The commencement of a covenant, containing the names of the covenanters and covenantees, and the character of the covenant, whether joint or several. (*Wharton.*)

li-ĕn-tĕr'-ĭc, *a.* [Eng *lienter(y); -ic.*] Of or pertaining to a lientery. (*Grew: Musæum.*)

lī'-ĕn-tĕr-y, *s.* [Gr. λεῖον (*leion*) = smooth, and ἔντερον (*enteron*) = an intestine; Fr. *lienterie.*]

Pathol.: A species of diarrhœa or looseness, in which the food passes rapidly through the bowels undigested, and nearly in the same condition as it was when taken into the stomach; lubricity of the intestines. (*Mayne.*)

***lī'-ĕr (1), * lȳ'-ĕr,** *s.* [Lias.]

ly'-ĕr (2), *s.* [Eng. *lie* (?), v.; *-er.*] One who lies down; one who hides or conceals himself. (Now only used as in the extract.)

lieu-tĕn'-ant-shĭp (lieu as **lū),** *s.* [Eng. *lieutenant; -ship.*] The rank or office of a lieutenant; lieutenancy.

lĭēve, *a.* [Lief.]

lĭēv'-rīte, *s.* [Named by Werner after the discoverer Lelièvre; Ger. *lievrit.*]

Min.: A mineral crystallizing in the orthorhombic system, and also found massive. Prism faces striated longitudinally. Hardness, 5·5 to 6; sp. gr. 3·7 to 4·2; lustre, submetallic; colour, iron-black; streak, black, sometimes greenish; opaque. Compos.: variable, probably because of impurities present, but essentially a silicate of the proto- and sesquioxides of iron, and lime, with sometimes manganese and some water. First found in Elba, where it occurs in large and well-formed crystals, subsequently at other localities, but mostly massive.

lĭf, lĭēf, lôof, *s.* [Arab. *lif.*]

Bot., &c.: The fibres binding the petioles of the Date-palm together. They are used for ropes.

līfe, * lif, * lyf, * lyfe (pl. **līves, * lyves),** *s.* [A.S. *lif* (genit. *lifes*, dat. *life*; pl. *lifas*); cogn. with Icel. *lif, lifi*; Dan. *liv*; Sw. *lif*; O. H. Ger. *lip, leip* = life; Ger. *leib*; Dut. *lijf* = the body.] [Live.]

life-boat, *s.*

Naut.: A boat "specially constructed for saving life in storms and heavy seas, when ordinary open boats could not attempt to do so, except at imminent peril or certain death to those within them." The qualities necessary in a life-boat may be thus summed up: Extra buoyancy, self-discharge of water, ballasting, self-righting, stability, speed, stowage-room, and strength of build. Greathead, a boat-builder of South Shields, England, is credited with the invention of the life-boat, and a committee formed at South Shields awarded him a premium for the best model, on the

lines of which a boat was built and launched in 1790. But a patent had been granted in 1785 to a Mr. Lukin, a coach-builder of Long Acre, for what he called an "unimmergible boat," thus anticipating Greathead by some four or five years. In 1828 the Life-boat Institution adopted a plan for fitting life-boats, proposed by Mr. Palmer, M.P., for South Essex, and continued to use it till they introduced the self-righting principle in 1852. In the United States the heavy English life-boat has been superseded at many of the life-saving stations by the light surf-boat of American invention, built of cedar, and fitted with cork fenders and with air chambers at the ends. The life-saving service in this country is supported by the Government. The first life-boat station was established at Cohasset, Massachusetts, in 1807. The whole coast is now divided into 12 districts, with stations at all perilous points. On the Atlantic coast they average about 5 miles apart.

"The *life-boat* of the Institution may now be truly designated an *omnium gatherum*, and cannot be looked on as any one man's design or invention."—*Lewis: Hist. Life-boat* (2nd ed.), p. 36.

¶ *National Life-boat Institution:* This institution came into existence as the Royal National Institution for the Preservation of Life from Shipwreck. It owed its being to the late Sir W. Hillary, Bart., who published a powerful appeal to the nation on the subject in 1823, and on March 4, 1824, a public meeting was held at the London Tavern, and the Society was founded with George IV. as its patron. The title was altered in 1854, and in 1860 the society was incorporated under its new title, The Royal National Life-boat Institution for the Preservation of Life from Shipwreck. The number of lives saved through its instrumentality in 1884 was 792, making a total up to Dec. 31 of that year of 31,355 since its foundation.

* **I.** *Ord. Lang.:* Anything which binds, ties, or unites one thing to another; a bond, a tie.

"No common *ligament* that binds
The various textures of their minds."
Swift: Progress of Marriage.

II. *Technically:*

1. *Anat.:* Short bands of strong white glistening fibres by which the bones are

bound together. A typical example is the *ligamentum nuchæ*, extending from the spine of the occipital bone to that of the seventh cervical vertebra, binding together the bones of the neck, and analogous to a highly important elastic ligament in the lower animals. The ligaments in the human body are very numerous, and all have distinctive names.

"A *ligament*, or sinew, is of a nature between gristles and nerves."—*P. Fletcher: Purple Island*, ch. ii. (Note 4.)

2. *Zool* (*Pl.*): Two appliances, one external and one internal, for holding together the valves of a conchiferous mollusc. The external ligament, or the ligament properly so called, is a horny substance similar to the epidermis which covers the valves. It is generally attached to the ridges on the posterior hinge-margins, behind the umboues, and is stretched by the closing of the valves. The internal ligament, called also the cartilage, is lodged in furrows formed by the ligamental plates, or in pits along the hinge-line. It is composed of elastic fibres perpendicular to the surfaces between which it is contained, and is slightly iridescent when broken. It is compressed when the valves are shut. The two ligaments are not always equally developed: thus, the external one is large in the Unionidæ, as is the internal one in Mactra and Mya. (*S. P. Woodward.*)

lĭg-a-mĕn'-tal, lĭg-a-mĕn'-toŭs, *a.* [Eng. *ligament*; *-al*, *-ous.*] Composed of, or of the nature of a ligament; binding.

"The urachos or *ligamental* passage derived from the bottom of the bladder."—*Browne: Vulgar Errours*, bk. v., ch. v.

lĭ'-gan, *s.* [A contr. of Lat. *ligamen* = a band, a tie, from *ligo* = to bind, to tie.] Goods sunk in the sea, but having a buoy or cork attached to them, so that they may be found again.

lĭ-gā'-tion, *s.* [Lat. *ligatio*, from *ligatus*, pa. par. of *ligo* = to biud.]

1. The act or process of binding.

2. The state of being bound.

"This *ligation* of senses proceeds from an inhibition of spirits."—*Burton: Anatomy of Melancholy*, p. 24.

3. That which binds; a bond, a ligature.

4. A place where anything is tied or bound.

lĭg-a-tū'-ra, *s.* [Lat.] [LIGATURE, II. 1.]

lĭg'-a-ture, *s.* [Fr., from Lat. *ligatura* = a binding, a bandage.]

I. *Ordinary Language:*

*1. The act of binding.

"Any stoppage of the circulation will produce a dropsy, as by strong *ligature* or compression."—*Arbuthnot: On Diet.*

2. That which binds; a bond, a ligament, a bandage.

"He deluded us by philters, *ligatures*, charmes, ungrounded amulets, characters, and many superstitious vaies in the cure of common diseases."—*Browne: Vulgar Errours*, bk. i., ch. xi.

*3. The state of being bound.

*4. Stiffness: as, of a joint.

*5. Impotence caused by magic.

*6. Closeness of texture; density.

"Sand and gravel grounds easily admit of heat and moisture, for which they are not much the better, because they let it pass too soon, and contract no *ligature*."—*Mortimer: Husbandry.*

II. *Technically:*

1. *Music:* A passage of two or more notes sung to a single syllable. (*W. S. Nochetio*, in *Grove's Dict.*)

2. *Print.:* Two or more letters cast on one shank: as, ff, ffi, &c. They are now confined to those letters already mentioned, to some diphthongs and the &, which is derived from & the logotype of Lat. *et* = and.

3. *Surgical:*

(1) A thread to tie arteries or veins.

(2) A wire cord or thread used in removing tumours. [ECRASEUR.]

(3) The bandage used for phlebotomy.

ligature-carrier, *s.* A surgical instrument with a bent stem for passing a ligature around an artery which is to be ligatured, a bone which is to be divided by a chain-saw, or other object which is to be cut. In the absence of special instruments therefore, the duty is performed by a curved needle carrying a thread.

ligature-tier, *s.* An instrument to carry flax or silk thread, or silver wire, for tying off arteries, aneurisms, tumours, polypi, or piles.

***lĭg'-a-tured,** *a.* [Eng. *ligatur(e)*; *-ed.*] Connected, tied, or fastened with a ligature.

lĭ-gē'-a, *s.* [From *Ligea*, a nymph, one of the attendants of Cyrene.]

Entom.: A genus of moths, the typical one of the family Ligidæ (q.v.).

***li-geance, *li-gean-cy,** *s.* [ALLEGIANCE.]

***ligge,** *v.i.* [LIE (2), v.]

ligge-ment, *s.* [LEDGEMENT.]

lĭg'-gĕr, *s.* [LEDGER.]

1. The horizontal timber of a scaffolding; a ledger.

2. A line with a float and bait laid for night fishing; a ledger-line.

light (*gh* silent), ***ligt, *lygt, *lyht,** *s.* & *a.* [A.S. *leóht* = light; *lihtan*, *lihtan* = to shine; cogn. with Dut. *licht*; Ger. *licht*; O. H. Ger. *liuhta*; Goth. *liuhath*. The *-t* is a suffix. Cf. Icel. *ljós* = light; *logi* = a flame; Scotch *lowe*; Lat. *lux* (genit. *lucis*), *lumen* = light; Gr. λευκός (*leukos*) = white; Gael. *leus* = light, &c.]

A. *As substantive:*

I. *Ordinary Language:*

1. *Literally:*

(1) In the same sense as II. 5.

"*Light* travels from the sun at the rate of twelve millions of miles a minute."—*Paley: Natural Theology*, ch. xxi.

(2) That from which light issues; that which renders other objects or bodies clear, distinct, or visible to the eye of the observer, such as the sun, the moon, a candle, &c.

"Then he called for a *light*, and sprang in and fell down before Paul."—*Acts* xvi. 29.

(3) That state of things in which objects are or become visible; the physical conditions or phenomena determining the visibility of objects; the phenomena constituting day.

"God called the *light* day, and the darkness he called night."—*Genesis* i. 5.

(4) That by which light is admitted into a place otherwise devoid of light, as a window, an opening in a wall. [II. 1.]

2. *Figuratively:*

(1) That which illuminates or enlightens; that which is a source of mental, moral, or religious enlightenment; a guide. (Of persons and things.)

"You have known better *lights* and guides than these."
Wordsworth: Excursion, bk. iv.

(2) A person who is eminent or conspicuous for some great quality; a model, an example.

(3) The state of being public or open to view; publicity; public or general knowledge.

"Why am I asked what next shall see the *light*?
Heavens! was I born for nothing but to write."
Pope: Prol. to Satires, 271.

(4) Explanation; that which serves to make clear, plain, or free from doubt or difficulty in a subject.

"Thus one part of the sacred text could not fail to give *light* unto another."—*Locke: Essay on St. Paul's Epistles.*

(5) The point of view from which or in which anything is looked at or regarded; aspect.

"In truth, our ancestors saw him in the worst of all *lights*."—*Macaulay: Hist. Eng.*, ch. xi.

(6) Knowledge, enlightenment.

"*Light*, true *light*, in the mind is, or can be nothing else but the evidence of the truth of any proposition."—*Locke: Human Understanding*, bk. iv., ch. xix.

II. *Technically:*

1. *Arch.:* An opening between the mullions of a window; a compartment of a window.

"And for the house he made windows of narrow *lights*."—1 *Kings* vi. 4.

2. *Art:*

(1) That quality which expresses atmospheric luminosity in a picture.

(2) The manner in which the light strikes upon an object or picture.

(3) That part of a picture which is represented as receiving the rays direct from a luminous source.

3. *Law:* The right which a person has to the access of the rays of the sun to his windows free from any obstruction on the part of his neighbours.

"Likewise to erect a house or other building so near to mine, that it obstructs my ancient *lights* and windows, is a nuisance of a similar nature."—*Blackstone: Comment.*, bk. iii., ch. 8.

4. *Nautical:*

(1) A burning lamp, cluster of lamps, or beacon fire, serving as a warning or guide to mariners arriving off a coast or in the neighbourhood of dangerous rocks or shoals. [LIGHTHOUSE.] It is usually displayed from a tower, called a lighthouse, and has several variations, incident to the mode of production or emission and direction, and to the visible characteristics by which the mariner distinguishes one light from another when arriving off a coast, so as to ascertain his geographical position, and his bearings as to his port or course. [See FIXED, FLASHING, FLOATING, INTERMITTENT, and REVOLVING LIGHT.]

(2) Lights carried by ships as a safeguard against collision. At sea, sailing ships carry a red light on the port, and a green light on the starboard side. Steamers carry, in addition, a white masthead light. All vessels at anchor carry a white light simply.

5. *Optics:* The natural agent which, by acting on the retina, excites in us the sensation of vision. Two leading hypotheses regarding its nature have been formed: the one the emission or corpuscular theory, which, though supported by the great name of Sir Isaac Newton, has been abandoned [EMISSION], and the other the undulatory theory, which now obtains. The latter assumes the existence everywhere through the universe, or the portion of it with which we are connected, of an extremely subtle elastic medium, called luminiferous ether, the undulations of which constitute light, and when they impinge upon the retina produce vision. The particles agitated are not transmitted, but only the disturbance. The movements are held to be strictly analogous to the undulations of the atmosphere which produce and convey sound; or, as the word undulation imports, those of the ocean in producing waves. Several methods of calculating the velocity with which light is transmitted are known. By one, the size of the minute circle through which the aberration of light makes stars apparently revolve is carefully noted, and the relative proportion of the earth's velocity in her orbit to that of light arriving from the stars ascertained. The result is that light is found to move about a hundred thousand times as fast as the earth, which gives the velocity about 190,000 miles per second. By another, observation is made of the time in which light actually arrives at the eye from one of Jupiter's satellites at the commencement or the close of an occultation as compared with their calculated times. It is found that 8′ 18″ are required for light to travel over half the earth's orbit, which gives, as in the former case, about 190,000 miles per second for its velocity. The velocity is also measured directly, by two instrumental methods devised respectively by Foucault and Fizeau, with the same results. The great sources of light are the sun, the fixed stars (other suns), bodies in a state of ignition, electricity, &c. The bodies sending forth rays or pencils of light are called luminous [PENCIL-RAY]; those through which it passes easily, transparent or diaphanous; those through which it passes less easily, translucent; and those through which it cannot pass at all, opaque. When a ray meets the surface of a body, it may be refracted and decomposed [REFRACTION, SPECTROSCOPE, SPECTRUM] or reflected [REFLECTION]. When it encounters an opaque body it casts a shadow. Admitted into a dark chamber through a small aperture to fall on a screen, the rays make images of external objects reversed. The illuminating power on any surface is inversely as the square of the distance from the source of light. This may be measured by a photometer (q.v.). Light may be diffracted [DIFFRACTION], it may be polarized [POLARIZATION]. An abundant supply of it is essential to the healthy growth of man, the inferior animals, and plants.

6. *Pyrotech.* (*Pl.*): Pieces formed by pressing an inflammable composition, which burns with a white or coloured light, into cases of large diameter or shallow vessels; such are Bengal-lights, blue-lights, &c.

7. *Shipbuilding:* An opening in the deck or side of a vessel, as deck-light, &c.

B. *As adjective:*

1. Bright, clear, not dark, not obscure: as, a *light* room.

2. Not of a deep or intense shade or colour; not dark in colour; fair.

"We have no colour which more resembles the air than white, and by consequence no colour which is *lighter*."—*Dryden: Dufresnoy; Art of Painting*, § 330.

¶ (1) *Northern lights:* [Aurora Borealis].

"*Lightheel'd* Mercuries." *Byron: Beppo*, xvi.

* 2. *Fig.:* Loose in character; dissolute. (*Halliwell.*)

light'-hŏuse (*gh* silent), *s.* [Eng. *light*, s., and *house.*] A lofty tower or other structure, erected at the entrance of a harbour, or at some important or dangerous part of a coast, and having a strong light at the top, to guide vessels and warn them of danger. Originally they were lighted up with fires, but now oil, gas, and, in a few cases, electricity are used, the power of the light being increased by the adoption of glass reflectors, lenses, and prisms. [CATOPTRIC, DIOPTRIC.]

Lighthouse Board, *s.* A branch of the United States Treasury Department charged with the supervision of our lighthouse system. It consists of three civilians, three naval officers and three army officers (of the Corps of Engineers).

light'-ĭng (*gh* silent), *pr. par.*, *a.* & *s.* [LIGHT (1), *v.*]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As substantive:*

1. *Ord. Lang.:* The act of igniting or illuminating with a light.

2. *Metal.:* Heating metal and allowing it to cool gradually; annealing. The term is especially applied to the heating after hammering or rolling, to restore ductility.

light'-keep-ĕr (*gh* silent), *s.* [Eng. *light* (1), *s.*, and *keeper.*] The keeper of a lighthouse.

* **light'-lĕgged** (*gh* silent), *a.* [Eng. *light*, a., and *legged.*] Active, nimble, light-footed.

"*Lightlegged* Pas has got the middle space."—*Sidney.*

light'-lĕss (*gh* silent), *a.* [Eng. *light*, s.; *less.*] Destitute of light; not giving light; dark.

"The *lightless* fire,
Which, in pale embers hid, lurks to aspire."
Shakesp.: Rape of Lucrece, 4.

light'-lў (*gh* silent), * **ligt-li,** *adv.* [Eng. *light*, a.; *-ly.*]

1. Without weight.

2. Without deep impression; slightly.

"The soft ideas of the cheerful note,
Lightly received, were easily forgot."
Prior. (*Todd.*)

3. Not grievously; slightly.

"He *lightly* afflicted the land of Zebulun and the land of Naphtali."—*Isaiah* ix. 1.

4. Easily; without much meaning or importance; in a light, trifling manner.

"One while he would speak *lightly* of his babes."
Wordsworth: Excursion, bk. i.

5. Readily, easily; without sufficient cause or reason.

"With tears not *lightly* shed."
Shakesp.: Titus Andronicus, ii. 3.

6. Without careful thought or consideration

"The speech of a minister in replying to the words of a toast cannot be so *lightly* criticised."—*Times*, Nov. 10, 1875.

7. Nimbly, easily, swiftly.

"Bowling *lightly* along the smooth road to Millcote."
—*C. Bronte: Jane Eyre*, ch. xxiv.

8. Without dejection; cheerfully, gaily.

"Seeming to bear it *lightly*."
Shakesp.: Antony & Cleopatra, iv. 14.

9. Not chastely; wantonly, frivolously; with levity: as, To behave *lightly.*

10. Not highly; not as of importance or moment.

"I weigh it *lightly*."
Shakesp.: Richard III., iii. 1.

* **11.** Commonly, usually, generally.

"Short summers *lightly* have a forward spring."
Shakesp.: Richard III., iii. 1.

light'-lў (*gh* silent), *v.t.* [LIGHTLY, *adv.*] To slight; to treat slightingly, or with contempt or neglect. (*Scotch.*)

"It's best no to *lightly* them that have that character."—*Scott: Waverley*, ch. lxvi.

* **light'-măn** (*gh* silent), *s.* [Eng. *light* (1) s., and *man.*] A linkman (q.v.).

light'-mĭnd-ĕd (*gh* silent), *a.* [Eng. *light* and *minded.*] Unsettled in mind; fickle, unsteady, volatile, frivolous, mercurial, hasty of judgment.

"He that is hasty to give credit is *lightminded*."
—*Ecclus.* xix. 4.

light'-nĕss (*gh* silent) (1) *s.* [Eng. *light*, s.; *-ness.*] The quality or state of being light; freedom from or absence of darkness; fairness; absence of intensity of colour.

"Darke was that place, but after *lightnesse*
I sawe a lite." *Chaucer: Assembly of Fowls.*

light'-nĕss (*gh* silent) (2), *s.* [Eng. *light*, a.; *-ness.*]

I. *Ordinary Language:*

1. The quality or state of being light; want of weight; levity.

2. The quality of not being burdensome, oppressive, or grievous.

3. Agility, activity, nimbleness.

"Such is the *lightness* of you common men."
Shakesp.: 3 Henry VI., iii. 1.

* 5. Wantonness, levity, unchastity, light conduct.

"Can it be
That modesty may more betray our sense
Than woman's *lightness*?"
Shakesp.: Measure for Measure, ii. 2.

* 6. Want of thought or care; thoughtlessness.

"He that negotiates between God and man,
As God's ambassador, the grand concerns
Of judgement and of mercy, should beware
Of *lightness* in his speech." *Cowper: Task*, ii. 466.

* 7. Mental derangement.

8. Giddiness, dizziness.

II. *Art:* Freedom from heaviness or clumsiness.

¶ *Volatility*, *flightiness*, and *giddiness* are degrees of *lightness*, which rise in signification on one another; *volatility* being more than *lightness*, and the others more than *volatility*: *lightness* and *volatility* are defects as they relate to age; those only who ought to be serious or grave are said to be *light* or *volatile.*

light'-nĭng (*gh* silent), *s.* [Eng. *lighten* (1), *v.*; *-ing.*]

I. *Ordinary Language:*

1. *Lit.:* In the same sense as II.

"High on his helm celestial *lightnings* play,
His beamy shield emits a living ray."
Pope: Homer; Iliad v. 5.

* 2. *Fig.:* A sudden flashing or brightening up; a flash.

"The mimic fires of ocean glow,
Those *lightnings* of the wave."
Scott: Lord of the Isles, i. 21.

II. *Elect. & Meteor.:* The dazzling light emitted by a large spark darting from clouds charged with electricity. In the lower regions of the atmosphere it is white, in the upper one somewhat violet, as is the spark of an electrical machine in a vacuum. It does not uniformly take the zigzag form conventionally represented. The writer has seen it descend to the earth in a bluish stream by a series of curves. Again, he has seen it like a sharp and rugged antler standing upright, and across it a line of gleaming circles like a series of huge golden coins or a string of illuminated beads, and other forms. In the upper regions of the sky, where the air is rarefied, it tends to take the form of sheet-lightning, sometimes called heat lightning; in the lower regions it beeomes more concentrated and moves in lines. As a rule lightning strikes objects from above, though occasionally ascending lightning has been seen. The loftiest buildings are most in danger from its effects, and so are tall trees, especially oaks and elms; the resin of pines, interfering with their efficiency as conductors, makes them more safe. When it sinks deeply into the ground, it sometimes vitrifies the rocks, producing fulgurites. [FULGURITE.] Light travels with such speed that a flash is seen the instaut it occurs. Thnuder, which is simply the noise of the explosion, takes about five secouds to travel a mile, hence the distance of any flash, followed by thunder, may be calculated. If a mile distant, the danger is but slight.

lightning-arrester, *s.*

Teleg.: A contrivance used in telegraphy for guarding against passage of atmospheric electricity through the instruments. The line wires are attached to a plate of brass, usually serrated on the under side. This plate rests upon auother plate connected with

the grounnd, the two being separated by a thin layer of insulating material.

lightning-conductor, *s.*

Elect. & Mech.: An appliance designed to protect a building and its inmates against destruction or damage by lightning. It was invented by Benjamin Franklin in 1755. In general an iron rod rises vertically from the roof of the building which it is designed to protect. Its height is from six to ten feet, its thickness at the base two or three inches. Its top is of platinum or gilded copper. From the rod runs a wire cord, or a bar of iron, to the ground, terminating in general in ramifications eighteen to twenty-one feet below the surface, in many cases in a well. Contrary to the popular opinion, the electric movement along the lightning-conductor and rod is from the grouud to the sky, not from the sky to the grouud. It tends to neutralise the contrary electricity of passing thunder-clouds, and prevent them from flashing their lightning forth; if not potent enough to do this, and the rod is itself struck, it conducts the electricity to the ground. Metallic roofs, gutters, &c., should be connected with the lightning-rod, otherwise lateral discharges may occur. A lightning-rod protects an area on the roof having a radius of twice its height.

lightning-discharger, *s.*

Teleg.: A contrivance to protect telegraphic apparatus from the effects of atmospheric electricity passing over the wires.

* **lightning-glance,** *s.* A very rapid glance or flash of the eye.

lightning-rod, *s.*

Elect. & Mech.: A rod in contact with a lightning-conductor (q.v.).

lightning-spectrum, *s.*

Optics, &c.: The spectrum of a lightning-flash.

lightning-tube, *s.* [Fulgurite.]

light'-rôom (*gh* silent), *s.* [Eng. *light*, and *room.*]

Naut.: A small chamber next to, or isolated from, the magazine. The latter receives its light through a glass partition between the two chambers.

lights (*gh* silent), *s. pl.* [Light, *a.*] The organs of breathing, called in man lungs (q.v.).

light'-shĭp, *s.* A vessel with a warning light moored in a position where the depth of the water or the nature of the bottom would render the building of a lightbouse unadvisable or impracticable.

* **līght'-sŏme** (*gh* silent), * **light-sum,** *a.* [Eng. *light*, *a.*; *-some.*]

1. Lumiuous, light, not dark, not obscure, bright.

2. Gay, cheerful. airy, exhilarating.

* **līght'-sŏme-lў** (*gh* silent), *adv.* [Eng. *light-some*; *-ness.*] In a lightsome manner.

"He foretelleth Christ more *lightsomely* and lively than all the rest."—*Raleigh: Hist. World*, bk. ii., ch. xvii., § 8.

* **līght'-sŏme-nĕss** (*gh* silent), *s.* [Eng. *light-some*; *-ness.*]

1. The quality or state of being lightsome; luminosity, brightness, absence of darkness.

"It is to our atmosphere that the variety of colours, which are painted on the skies, the *lightsomeness* of our air and the twilight, are owing."—*Cheyne: Philosophical Principles.*

2. Cheerfulness, gaiety, merriment, levity.

light'-wood (*gh* silent), *s.* [Eng. *light*, *a.*, and *wood.*]

Bot.: (1) *Acacia Melanoxylon*; (2) *Ceratopetalum Agallochum.*

* **līght'-ў** (*gh* silent), *a.* [Eng. *light*, *s.*; *-y.*] Full of light.

"If thin yghe be symple, al thi bodi schal be *lighty.*"—*Wycliffe: Luke* xi.

lĭg'-ĭ-dæ, *s. pl.* [Mod. Lat. *lig(ea)*; Lat. fem. pl. adj. suff. *-idæ.*]

Entom.: A family of Moths, group or tribe Geometrina. The antennæ are slightly pubescent in both sexes, the abdomen rather slender, the anterior wings oblong narrow, the posterior ones rounded. Only one British species.

lign (*g* silent), *a.* [Lignum.] Possessed of wood, woody. (Used only in the subjoined compound.)

lign-aloes, *s. pl.*

1. The fragrant wood of *Aloexylum Agallochum.* (*Numbers* xxiv. 6.) [Agalloch.]

2. *Aquilaria Agallocha.*

* **lignage** (as līn'-ĭj), *s.* [Lineage.]

* **ligne,** * **lignee,** *s.*]Fr.] Lineage, descent. (*Chaucer.*)

lĭg'-nĕ-ŏŭs, *a.* [Lat. *ligneus* = wooden, from *lignum* = wood; Ital. *ligneo.*] Made or consisting of wood; resembling or of the nature of wood; woodeu.

"It may be they, being of a more *ligneous* nature, will incorporate with the tree itself."—*Bacon: Nat. Hist.*, § 504.

* **lĭg-nĭf'-ĕr-oŭs,** *a.* [Lat. *lignifer* = producing wood; *lignum* = wood; *fero* = to bear; and Eng. adj. suff. *-ous*; Fr. *lignifere.*] Producing or yielding wood.

* **lĭg-nĭ-fĭ-cā'-tion,** *s.* [Lat. *lignum* = wood, and *facio* = to make; Fr. *lignification.*] The act or process of lignifying; the state of becoming lignified; the state or process of becoming converted iuto wood or a ligneous substance.

* **lĭg'-nĭ-form,** *a.* [Lat. *lignum* = wood, and *forma* = form, appearance; Fr. *ligniforme.*] Resembling wood; of the appearance of wood.

* **lĭg'-nĭ-fў,** *v.t.* & *i.* [Lat. *lignum* = wood; Eng. suff. *-fy*; Fr. *se lignifier.*]

A. *Trans.:* To convert or change into wood or a ligneous substance.

B. *Intrans.:* To become converted into wood.

lĭg'-nĭn, lĭg'-nĭne, *s.* [Lat. *lig(num)* = wood; *-in*; *-ine.*]

Chem.: A substance at one time considered to be allied to cellulose, but now regarded as identical with it. It is the form of cellulose which exists in the state of greatest aggregation, and is represented by woody fibre generally. [Cellulose.]

* **lĭg-nĭ-pĕr'-doŭs,** *a.* [Lat. *lignum* = wood; *perdo* = to destroy, and Eng. adj. suff. *-ous.*] Destructive of wood. (Applied to certain insects.)

lĭg'-nīte, *s.* [Mod. Lat. *lignites*; from *lignum* = wood, and suff. *-ites* (*Min.*).]

Min. & Geol.: Wood-coal; fossil-wood, generally of tertiary age, couverted into a kiud of coal. It is usually dull or brownish-black, and has not the glistening lustre of carboniferous coal. Occasionally it is pitch black. As the name lignite implies, it, as a rule, retains the form and aspect of the original wood. It contains a larger proportion of hydrogen than wood does. If decomposition go on, it discharges carburetted hydrogeu and becomes changed into comuou or bituminous coal. The plants constituting it are mostly exogens, and therefore more highly organised thau the cryptogams of the carboniferous coal. There are beds of enormous area in several of the Western States, though rarely thick enough to be of much value as coal producers.

lĭg-nĭt'-ĭc, *a.* [Eng. *lignit(e)*; *-ic.*] Containing or resembling liguite; of the nature of lignite.

lignitic-series, *s.*

Geol.: A term applied in North America to a series of beds resting on Cretaceous rocks, and overlaid by Eocene. Probably it is the uppermost member of the American Cretaceous formation.

lĭg-nĭt-ĭf'-ĕr-oŭs, *a.* [Eng. *lignite*; Lat. *fero* = to bear, to produce, and Eng. adj. suff. *-ous.*] Producing or containing lignite.

lĭg'-nō-ĭn, *s.* [Prob. from Lat. *lignum* = wood; o connective, and suff. *-in* (*Chem.*).]

Chem.: $C_{20}H_{23}O_8$ (?). A brown substance obtained by Reichal from Huauaco cinchona bark.

lĭg'-nōne, *s.* [Lat. *lign(um)* = wood; Eng. suff. *-one.*]

Chem.: Xylite. A body supposed to exist in crude wood-naphtha, but now believed to be a mixture of methylic alcohol, acetone and acetate of methyl.

* **lĭg'-nōse,** *a.* [Lat. *lignosus*, from *lignum* = wood.] Ligneous.

lĭg-nō-sŭl-phŭr'-ĭc, *a.* [Lat. *lign(um)* = wood; *o* connective, aud Eng *sulphuric.*] (See the compound.)

lignosulphuric-acid, *s.*

Chem.: Sulpholignic acid. An acid containing the elements of cellulose and sulphuric acid. It is prepared by adding gradually concentrated sulpburic acid to half its weight of lint, or linen torn into fine shreds; triturating in a mortar, neutralising with chalk, aud filtering. It has not been investigated.

* **lĭg'-noŭs,** *a.* [Lat. *lignosus*, from *lignum* = wood; Fr. *ligneux.*] The same as Ligneous (q.v.).

lĭg'-nŭm, *s.* [Lat.]

Bot.: Wood; that part of arborescent plants which contains the alburnum and the duramen.

LIGNUM.

lignum-aloes, *s. pl.* The same as Lign-aloes (q.v.).

lignum-colubrinum, *s.*

1. *Bot.: Strychnos ligustrina*; also other trees of the same genus.

2. *Phar.:* A drug prepared from *Strychnos ligustrina.*

lignum Rhodium, *s.*

Botany:

1. The wood of *Amyris balsamifera*, a Jamaican tree.

2. *Convolvulus floridus*, and *C. scoparius.*

lignum-vitæ, *s.*

Bot. & Comm.: The wood of *Guiacum officinale.* It is a very hard aud heavy wood, brought from Cuba and other West Indian Islands. When first cut it is soft and easily worked, but on exposure to the air it becomes much harder. It is cross-grained, and contains gum guiacum (q.v.). The wood is used for makiug machinery and for rollers, presses, mills, pestles, mortars, sheaves for ships' blocks, skittle-balls, &c. (*Weale*, &c.)

¶ *Lignum Vitæ of New Zealand:*

Bot.: The Aki, *Metrosideros buxifolia*, one of the Myrtaceæ. It is a giant climber.

lĭg'-ŭ-la, (pl. **lĭg'-ŭ-læ**), *s.* [Lat. (for *lingula*) = a strap; dimin. of *lingua* = a tongue.]

Bot.: The same as Ligule (q.v.).

lĭg'-ŭ-late, lĭg'-ŭ-lāt-ĕd, *a.* [Lat. *ligula* = a strap, a band.] [Ligula.]

* 1. *Ord. Lang.:* Like a strap or band.

2. *Bot.:* Strap-shaped; narrow, moderately long, with the two opposite margins parallel. Often used of the flowers of the ray in a compound plant; or of flowers having a monopetalous corolla slit on one side aud opened flat as the Dandelion Lilac.

"One of the *ligulate* flowers or florets of *Cichorium Intybus.*"—*Balfour: Botany*, § 911.

lĭg'-ule, lĭg'-ŭ-la (pl. **lĭg'-ŭles, lĭg'-ŭ-læ**), *s.* [Fr., from Lat. *ligula* = a strap, a band.]

1. *Anat.:* A thin lamina occupying the angle between the cerebellum and the rectiform body of the *medulla oblongata* in the brain.

2. *Botany:*

(1) A peculiar membranous process at the top of the sheath beneath the blade of a grass.

"Ending in a membranous process or *ligule.*"—*Balfour: Botany*, § 161.

(2) One of the rays of a composite plant.

(3) (*Pl., chiefly of the form* ligulæ): Horns additional to others in the corona of some plants.

3. *Entom.:* The upper flexible portion of the labrum in the mouth of the mandibulate orders of insects.

lĭg'-ŭ-lĭ-flŏr'-æ, *s. pl.* [Lat. *ligula* (q.v.), and *flos* (genit. *floris*) = a flower.]

Bot.: A sub-order of Asteraceæ (Composites). The corollas are slit or ligulate. It is divided into the tribes Scolymeæ, Lampsaneæ, Hyoserideæ, Hypochærideæ, Scorzonereæ, Lactuceæ, and Hieracieæ (q.v.). Called also Cichoraceæ (q.v.).

lĭg'-ŭ-lĭf'-lŏr-oŭs, *a.* [Lat. *ligula* (q.v.); *flos* (genit. *floris*) = a flower, and Eng. suff. *-ous.*]

Bot.: Having only ligulate flowers in the capitulum.

lĭg'-ŭ-lĭn, *s.* [Eng., &c., *ligu(strum)*; *l* connective, and *-in.*]

Chem.: A crimson colouring substance obtained from *Ligustrum vulgare.* It is soluble in water and alcohol, but insoluble in ether. It does not contain nitrogen.

Li-guŏr'-i-an, Li-gŏr'-i-an, Li-guŏr'-ist, *s.* & *a.* [For etym. see def.]

A. *As substantive:*

Ch. Hist. (Pl.): A popular name for the Redemptorists (q.v.), derived from their founder St. Alphonsus Maria de' Liguori.

"The members of which are commonly known in some countries as *Ligorians.*"—*Addis & Arnold: Cath. Dict.*, p. 710.

B. *As adj.:* Belonging to or in any way connected with the Redemptorists or St. Alphonsus Liguori. Chiefly employed in the term Liguorian-theology.

Liguorian-theology, *s.*

Ch. Hist.: The same as LIGUORIANISM (q.v.).

Li-guŏr'-i-an-ĭşm, *s.* [For etym. see extract.]

Ch. Hist.: (See extract). [PROBABILISM.]

"The name *Liguorianism* has been popularly given in the present century to a particular school of moral and devotional theology in the Roman Catholic Church by the controversial opponents of that school, whether themselves Roman Catholics or not. It is derived from the name of one of its principal and most influential exponents, Alfonso Maria de' Liguori, a theologian, saint, and doctor of the Roman Church. In strictness the term is not accurate, for Liguori was in no sense the founder of the school, nor did he innovate upon, develope, or exaggerate its principles and maxims."—*Dr. Lee,* in *Encyc. Brit.* (ed 9th), xiv. 634.

* **lĭg'-ure,** *s.* [Low Lat. *ligurius,* from λιγύριον, λιγγούριον, λιγκούριον, λυγκούριον (*ligurion, linggurion, lingkurion, lungkourion*), from λύγκος οὖρον (*lungkos ouron*) = lynx's urine, from the belief that it was composed of the urine of lynxes.] A kind of precious stone, worn in the breastplate of the Jewish high-priest.

"The third row a *ligure,* an agate, and an amethyst."—*Exodus* xxviii. 19.

Li-gür'-i-an, *a.* [For etym. see def.] Coming from or belonging to the district of Italy anciently known as Liguria.

Ligurian-bee, *s.*

Entom.: Apis ligustica, common in Italy and Greece. It is this species which Virgil celebrated (*Georgic* iv.).

lĭ'-gu-rite, *s.* [Named after **Liguria,** the ancient name for a part of Italy.]

Min.: An apple-green variety of Sphene (q.v.), found at Stura, in the Apeunines.

lĭ-gŭs'-tĭ-cŭm, *s.* [So named because some of the species are found in what was the ancient Liguria.]

Bot.: Lovage; a genus of umbelliferous plants, family Seseliuidæ. Twenty species are known. Two species are cultivated as salad plants, *L. officinale,* common in the south of Europe, and *L. scoticum,* the Scottish Lovage, a native of the sea coasts, and eaten, raw or boiled, by the Shetlanders. The flavor is aromatic, but acrid and nauseous to strangers. *L. officinale,* has a strong, peculiar odor, but is used as a salad.

lĭ-gŭs'-tĭn, *s.* [Eng., &c., *ligustr(um); -in.*]

Chem.: A yellow, bitter extract obtained from the leaves of *Ligustrum vulgare.* It strikes a deep indigo-blue colour with strong sulphuric acid.

lĭ-gŭs'-trŭm, *s.* [Lat.]

Bot.: Privet: a genus of Oleaceæ, tribe Oleæ. The calyx and corolla are four-cleft, the berries two-celled, each cell one to two-seeded. Ten are known. *Ligustrum vulgare* (Common Privet), has elliptic, lanceolate evergreen leaves in compact panicles of small white flowers, followed by black globose berries. Often planted for fences, as it bears clipping. Flowers June and July. Found appareutly wild in the south of Scotland, Ireland, and perhaps in England; natnralized in Scotland. The berries yield a rose-dye and a bland oil used in Germany for cooking. In Belgium the dried and powdered twigs are used for tanning.

lĭ-gyr'-ŭs (yr as ir), *s.* [Gr. λιγυρός (*liguros*) = clear, whistling, shrill, sharp.]

Entom.: A genus of Lamellicorn Beetles, family Scarabeidæ, sub-family Dynastinæ. *Ligyrus bituberculatus* feeds on sugar cane, and is sometimes destructive to the crop in Demerara.

* **lĭk'-a-ble,** *a.* [LIKEABLE.]

* **lĭk'-a-ble-nĕss,** *s.* [LIKEABLENESS.]

like, * liche, * lik, * lyk, * lyche, * ilicho, ylche, *a., adv., & s.* [A.S. *lic,* in comp. *gelic;* cogn. with Dut. *ge-lijk* = like; Icel. *líkr, glíkr;* Dan. *lig;* Sw. *lik;* Goth. *ga-leiks;* Ger. *gleich;* M. H. Ger. *ge-lích;* O. H. Ger. *ka-lih.* Cf. also Gr. τηλίκος (*tēlikos*) = of such an age, such; Lat. *talis* = such; Russ. *tolikŭ* = such. From the same root as A.S. *lic* = a body. [LICH.] O. Sax. & Icel. *lik.*] [EACH, SUCH, WHICH.]

A. *As adjective:*

1. Resembling; having resemblance; of the same appearance or form; similar, alike: as, He is very *like* his brother.

2. Equal in quantity, quality, or degree; same; exactly corresponding.

"*Like* strength is felt from hope and from despair."
Pope: Homer; Iliad xv. 852.

3. Correspouding in character, nature, or disposition. (*Shakesp.: Julius Cæsar,* v. 4.)

* 4. Having an appearance indicative of something; giving reason for a certain belief or expectation; probable, likely.

"'Tis *like* to be loud weather."
Shakesp.: Winter's Tale, iii. 3.

lī'-lạc, * **li-lach,** *s.* & *a.* [Sp. *lilac, lila;* Ital. *lilà;* Turk. *leilâk;* cf. Pers. *lilaj, lilanj, lilang* = the indigo plant.]

A. *As substantive:*

Bot.: The genus Syringa, and specially *S. vulgaris.* It has simple leaves, and very fragrant pale violet or purple flowers, in beautiful thyrsoid terminal panicles. It was introduced into Great Britain from Persia and Turkey about 1597. It has been introduced into this country and is widely cultivated in our gardens, as a favorite flowering plant. It has valuable febrifugal qualities, owing to the presence in it of lilacine (q.v.). The wood yields, by distillation, a fragrant oil. The Chinese Lilac has larger flowers, but with less odor.

¶ African lilac is *Melia Azedarach;* Australian lilac (1) *Hardenbergia monophylla,* (2) *Prostanthera violacea;* Indian lilac, *Melia semperflorens;* and Persian lilac, *Syringa persica.*

B. *As adj.:* Of the colour of lilac; pale dull violet, a little mixed with white.

lī'-lạ-çĭne, *s.* [Eng. *lilac; -ine.*]

Chem.: Syringine. An alkaloid extracted from the bark, the buds, and the leaves of the lilac, *Syringa vulgaris.* It is obtained in the form of radiate needles, which are solnble in water and in alcohol, bnt insoluble in ether. It possesses a taste which is at the same time sweet, bitter, uauseous, and astringent. It dissolves in concentrated sulphuric acid, forming a yellowish-green solntion, which gradually changes to violet-blne; on diluting with water it takes an amethyst colonr. Lilacine is little known in England, but in the south of Europe it is considered an unfailing remedy for the intermittent fever which prevails in marshy and insalubrious districts.

lī'-lạ-līte, *s.* [Etym. doubtful.]

Min.: The same as LEPIDOLITE (q.v.).

Lĭl-ĭ-ā'-çē-æ, *s. pl.* [Lat. *lili(um);* fem. pl. adj. suff. *-aceæ.*]

Bot.: Lilyworts; an order of Endogens founded by Linnæus in 1751, and still retained. It is the typical order of the alliance Liliales. It consists of herbaceous plants, shrubs, or trees, with bulbs, tubers, rhizomes, or fibrous roots; leaves generally narrow, with parallel veins; flowers large and showy, to small and green, with all intermediate gradations; calyx and corolla confounded, both coloured, sometimes cohering into a tube; stamens six, inverted into the perianth; the anthers opening inwards; ovary free, three celled; fruit succulent, dry, or capsular. Seeds one above another, in one or two rows. Many of the species are very beantiful. They are widely diffused, being, however, more common in temperate than in tropical countries; those belonging to the latter region being often arborescent. Some are eaten; many yield fibres capable of being spun; others are used medicinally; some yield resins, some are poisonous. (*Lindley.*) Known genera 170, species abont 1,500. (*Sir Joseph Hooker.*) Lindley divides the order into eleven tribes: Tulipeæ, Hemerocalleæ, Aloineæ, Scilleæ, Conantheræ, Anthericeæ, Aphyllantheæ. Wachendorfeæ, Asparageæ, Aspidistreæ, and Ophiopogoneæ. This order contains many of our finest garden and green-house flowers, such as lilies, tulips, dog's tooth violet, tuberose, lily of the valley, hyacinth, and others useful for food, medicine, &c.

lĭl-ĭ-ā'-çē-oŭs (or **ceous as shŭs**), *a.* [Lat. *liliaceus,* from *lilium* = a lily.] Pertaining to lilies or the Liliaceæ; like a lily.

lĭl-ĭ-ăl, *a.* [LILIALES.]

Bot.: Of or belonging to the alliance Liliales, the typical order Liliaceæ, or its typical genus Lilium.

lĭl-ĭ-ā'-lēs, *s. pl.* [Masc. and fem. pl. of Mod. Lat. *lilial(is),* from *lilium* = a lily.]

Bot.: The Lilial alliance. It consists of hypogynous, bisexual, hexapetaloid endogens, with copious albumen. Lindley includes under it the orders Gilliesiaceæ, Melanthaceæ, Liliaceæ, and Pontederaceæ (q.v.).

lĭl-ĭ-ē'-æ, *s. pl.* [Lat. *lili(um);* fem. pl. adj. suff. *-eæ.*]

Bot.: A tribe of Liliaceæ, type Lilium. The styles are combined or the stigma sessile, the capsule loculicidal, the testa various, the radicle next the hilum. British genera: Scilla, Muscari, Ornithogalum, Allium, Gagea, Lloydia, Fritillaria, with two more—Tulipa doubtful, and Lilium only naturalised.

* **lĭl'-ĭed,** * **lĭl'-lĭed,** *a.* [Eng. *lily; -ed.*] Full of or covered with lilies.

"Nymphs and shepherds dance no more
By sandy Ladon's *lilied* banks." *Milton: Arcades.*

Lĭl'-ĭ-pŭt, Lĭl'-lĭ-pŭt, *s.* & *a.* [See def.]

A. *As subst.:* The name of an imaginary country in Swift's *Gulliver's Travels,* the inhabitants of which were pigmies.

"Watchful against impending harms
All *Lilliput* cried out, 'To arms!'"
Lloyd: Charity; A Fragment.

B. *As adj.:* Liliputian.

Lĭl-ĭ-pū'-tian, Lĭl-lĭ-pū'-tian, *a.* & *s.* [Eng. *Liliput; -ian.*]

A. *As adj.:* Of or pertaining to Liliput; pigmy, small, pigmean.

B. *As substantive:*

1. A native of Liliput (q.v.).

2. A person of very diminutive size; a pigmy.

Lĭl'-ĭth, *s.* [Heb. לִילִית (*lilith*) = properly the nightly one, the name of a female night-spirit that wanders about in the deserts (cf. Matt. xii. 43), and which the seer represents as taking up its permanent abode in Edom. (*Newman: Heb. Lex.*)]

1. *Ord. Lang.:* A word transliterated and adopted from the Hebrew by Henderson, following the example of Aquila, Van der Palm, and de Wette. The LXX. translate it by ὀνοκένταυροι (*onokentauroi*), the Vulgate by *lamia,* and most moderns by "screech-owl." Bochart, Gesenius, Rosenmüller, and Hitzig, are of the same opinion as Newman. [Etym.] (See also *Cheyne: Proph. of Isaiah,* xxxiv. 14.) [LAMIA, ¶.]

"There also the *lilith* shall rest,
And find for herself a place of repose."
E. Henderson: Isaiah xxxiv. 14.

2. *Folk-lore:* According to Talmudic tradition, Lilith was Adam's first wife, who for her refractory conduct was transformed into a demon endowed with power to injure and destroy infants unprotected by the necessary amulet. (*Hershon: Talmudic Misc.,* p. 9.) (See also Buxtorf, *Lex. Talm.,* s.v.; Burton, *Anat. Mel.* (ed. 1881), p. 116.) [LAMIA.]

"It was *Lilith,* the wife of Adam, . . .
Not a drop of her blood was human,
But she was made like a soft sweet woman."
D. G. Rossetti: Eden Bower.

lĭl'-ĭ-ŭm, *s.* [Lat. *lilium;* Gr. λείριον (*leirion*) = a lily.]

Bot.: A genus of Liliaceæ, tribe Tulipeæ (*Lindley*), the typical genus of the tribe Lilieæ (*Sir J. Hooker*). Bulb of many imbricated fleshy scales; leaves all cauline, not sheathing, alternate or whorled; flowers few or many, large, solitary, erect, or drooping; perianth-segments free, caducous, erect below, recurved or revolute above; nectary median elongate; stamens hypogynous or in the base of the segments; filaments subulate; anthers versatile, bursting inwards; ovary six-grooved; style terete; stigma obtuse. Fruit capsular, erect, seeds many, in two series. Known species forty, all from the north temperate zone. *Lilium Martagon,* the Martagon or Turk's cap lily, which has pale purple or white flowers, is naturalised in Surrey; its native country is Continental Europe. *L. pyrenaicum* is a garden escape in Devonshire. About fifty three species, with many varieties, are cultivated in gardens. Many are hardy enough to thrive in almost any situation, even under the shade of trees.

¶ *Lilium candidum* is the White or Bourbon lily; it was brought in 1596 from the Levant; *L. croceum,* the Yellow lily, brought the same year from Germany; *L. japonicum,* the Japan lily, introduced from China in 1804. *L. chalcedonicum* [LILY, 2], the Scarlet Martagon lily, brought from the Levant in 1596; *L. pomponium,* the Scarlet Pompone lily, introduced from Siberia in 1629; *L. bulbiferum* is the Bulb-bearing or Orange lily, brought from Italy in 1596. *L. superbum,* the Superb Martagon lily, introduced from North America in 1738: and *L. tigrinum,* the Tiger or Tiger-spotted lily from China in 1804. The finest of all is a Japanese species, *L. auratum* introduced into gardens from Japan in 1860. It is two to five feet high, the flowers, which are white with purple blotches, being sometimes a foot across. The smell is perceived at a distauce. The bulbs of *L. wallichianum,* an Indian species, have demulcent properties, and are used in pectoral complaiuts. *L. pomponium* is cultivated in Kamtchatka for its roots, which are roasted and eaten.

lĭll, *s.* [Etym. doubtful.] One of the holes of a wind-instrument. (*Scotch.*)

* **lĭll,** *v.i.* & *t.* [LOLL.]

lĭll'-ite, *s.* [Named by Reuss after Von Lill; suff. *-ite* (*Min.*).]

Min.: An earthy mineral resembling glauconite (q.v.), of a blackish-green colour. Hardness, 2; sp. gr. 3·043. Analysis yielded: silica, 32·48; sesqui- and protoxide of iron, 54·95; water, 10·20; carbonate of lime, 1·96; sulphide of iron, 0·63 = 100·22. Found at Przibram, Bohemia. Grouped as a sub-species by Dana under Jollyte (q.v.).

lĭl-lĭ-bŭl-lĕr'-ō, lĭl-lĭ-bŭr-lĕr'-ō, *s.* [Said to have been a word of distiuction used by the Irish Papists in their massacres of the Protestants in 1641.] The refrain and name of a song, written by Lord Wharton, which contributed in no little degree to the revolution of 1688.

Lima-bean, *s.*

Bot.: *Phaseolus lunatus.*

Lima-wood, *s.* [Brazil (1), A.]

lĭ'-mą (2), *s.* [Lat. *lima* = a file.]

Zool.: A genus of Molluscs, family Ostreidæ. The shell is equivalve, compressed, obliquely oval; the anterior side gaping, the posterior one rounded, usually close; the umbones apart, eared; the hinge area triangular; the cartilage-pit central. The animal has the mantle margins separate. Lima is either free or spins a byssus. Twenty recent species are known, and two hundred fossil. The former from Norway, Britain, India, &c., the latter from the Trias, if not from the Carboniferous, period onward.

lī-mā'-çĕ-oŭs (or **ceous** as **shŭs**), *a.* [Lat. *limaceus* = slimy, from *limax* (q.v.).]

Zool.: Of or pertaining to the genus Limax, or slugs.

lī-măç'-ĭ-dæ, *s. pl.* [Lat. *timax*, genit. *limac(is)* (q.v.), and fem. pl. adj. suff. *-idæ.*]

Zool.: Slugs. A family of gasteropodous molluscs, order Pulmonifera, sectiou Inopercula-lata. The shell is small or rudimentary, usually internal or partially concealed by the mantle. The animal elongated, the body and foot not distinct from each other. The head and tentacles retractile, the tentacles four, the upper pair supporting eyes. The mantle small, shield-shaped. Abundant in the United States and elsewhere.

lī'-mą-çĭn, *s.* [Lat. *limax*, genit. *limac(is)* = a snail; *-in.*]

Chem.: A substance obtained as a white earthy mass from the garden-snail. It is soluble in hot water and alcohol, and is precipitated with tannic acid.

lī-mą-çī'-ną, *s.* [Fem. sing. of Mod. Lat. *limacinus*, from Lat. *limax* = a slug, a snail.]

Zool.: The typical genus of the family Limacinidæ (q.v.). The shell is subglobose, sinistral, spiral, umbilicated. No operculum. Animal with expanded fins. Two known recent species from the Arctic and the Antarctic seas.

lī-mą-çĭn'-ĭ-dæ, *s. pl.* [Mod. Lat. *limacin(a);* Lat. fem. pl. adj. suff. *-idæ.*]

Zool.: A family of Molluscs, order Pteropoda. The shell, which is sinistral, is minute, spiral, sometimes operculate. The animal with fins attached to the sides of the mouth.

lī-mą-cō'-dēs, *s.* [Lat. *limax*, genit. *limac(is)* = a snail; *-odes*, from Gr. εἶδος (*eidos*) = form.]

Entom.: The typical genus of the family Limacodidæ (q.v.). *Limacodes testudo* is British.

lī-mą-cō'-dĭ-dæ, *s. pl.* [Lat. *limacod(es);* fem. pl. adj. suff. *-idæ.*]

Entom.: A family of Lepidoptera, sometimes called Cochleopodidæ. It is of the tribe Bombycina. The antennæ are not pectinated. The wings rather short and broad with long fringes. The larva smooth, oniciform, with no perceptible legs. The species are wide spread.

lī'-mą-dæ, *s.* [Mod. Lat. *lim(a);* Lat. fem. pl. adj. suff. *-idæ.*]

Zool.: A family of conchiferous molluscs, by some separated from Ostreidæ, with which it is generally united.

* **li-maile,** *s.* [Fr. *limaille.*] A mass of filings of any metal.

* **lī-mā'-tion,** *s.* [Lat. *limatus*, pa. par. of *limo* = to file; *lima* = a file.] The act of filing or polishing.

* **lī'-mą-tŭre,** *s.* [Lat. *limatura*, from *limaturus*, fut. par. of *limo* = to file.]

1. The act of filing.

2. Filings of any metal; the particles rubbed off by a file.

lī'-măx, *s.* [Lat. = a slug, a snail.]

Zool.: Slug. The typical genus of the family Limacidæ (q.v.). The shell is internal, oblong, flat, or slightly concave beneath the nucleus posterior. Animal with a foot pointed and keeled behind the mantle. Shield-shaped, with granulated or concentric striæ. Known recent species fifty-one from Europe, and one fossil from the Eocene.

lĭm'-băch-īte, *s.* [Named after the place where found, Limbach; suff. *-ite* (*Min.*).]

Min.: A grayish- to greenish-white massive mineral with greasy lustre. Sp. gr. 2·395. Compos.: a hydrated silicate of alumina and magnesia, represented by the formula $3MgO2SiO_2 + Al_2O_3SiO_2 + 2HO$. Found at Limbach, Saxony, occupying cavities in serpentine.

lĭm'-băt, *s.* [Etym. doubtful.] A cooling periodical wind, blowiug in the isle of Cyprus from the north-west from eight a.m. to the middle of the day or later.

lĭm'-bāte, *a.* [Lat. *limbatus*, from *limbus* = a border, an edge.]

Botany:

1. The same as Bordered (q.v.).

2. Having an expanded end.

* **lĭm'-bĕck,** * **lĭm'-bĕc,** *s.* [A contraction of *alembic* (q.v.).]

1. *Chem.:* A still.

"What potions have I drunk of syren tears,
Distilled from *limbecks*, foul as hell within."
Shakesp.: Sonnet 118.

2. *Her.:* [Distillatory].

* **lĭm'-bĕck,** * **lim-bec,** *v.t.* [Limbec, *s.*] To strain or pass through a limbeck.

limbed (*b* silent), *a.* [Eng. *limb* (1), *s.*; *-ed.*] Having limbs: sometimes used absolutely, but more commonly in compositiou, as large-*limbed*, long-*limbed*, &c.

"Innumerous living creatures, perfect forms,
Limbed and full grown." *Milton: P. L.*, vii. 456.

lĭm'-bĕr, *a.* [Allied to *limp* (q.v.).] Flexible, easily bent, pliable, pliant, yielding, lithe.

"Those waved their *limber* fans
For wings." *Milton: P. L.*, vii. 476.

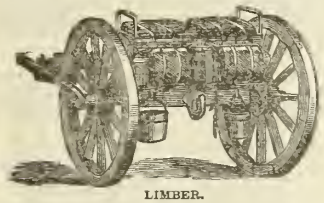
lĭm'-bĕr, * **lĭm'-mĕr,** *s.* [Properly *limmer*, which is a plural form, from Icel. *limar* = boughs, pl. of *lim* = foliage.]

I. *Ord. Lang.* (*Pl.*): The shafts or thills of a vehicle.

II. *Technically:*

1. *Ordnance:* The detachable part of a gun-carriage mounted on the two fore-wheels, and to which the horses are attached. The gun is limbered up when the trail of the gun-carriage proper is lifted up and looped over the pintle-hook of the limber, in order for marching. The term limber is also applied to the fore-carriage of the ammunition-waggon to which the caisson or tumbril is connected. Limbers differ in construction with the purpose and

positions of the guns; as—the casemate-limber; the field-gun limber, with an ammunition



LIMBER.

box; the garrison-gun limber; the limber with shafts; the pole-limber; the siege-carriage limber; the battery-waggon limber.

2. *Shipwright.:* A passage on each side of the keelson for bilge-water.

limber-board, *s.*

Shipbuild.: A plank reaching from the keelson to the limber-strake, and merely butting against the bulkheads, so as to be easily taken up to expose the limbers.

limber-chain, *s.*

1. *Naut.:* A chain passing through the limber-holes of a vessel by which they may be cleared of dirt that chokes them.

2. *Artillery:* A keep chain which goes round the pintle and confines the trail to the limber, preventing its flying off the limber-hook.

limber-chest, *s.* The ammunition or tool chest belonging to the limber of an artillery-carriage of any description. Those of the gun-carriage and caisson are fitted np as ammunition-chests, while those of the forge and battery waggon contain respectively tools and stores for blacksmiths' and for carriage-makers' and saddlers' use.

limber-holes, *s. pl.*

Shipbuild.: Holes through the floor-timbers on each side of the keelson, to allow the passage of bilge-water. The row of holes constitutes the limber-passage.

limber-hook, *s.*

Artillery: The hook on the limber to which the trail of the gun is attached.

limber-passage, *s.* [LIMBER-HOLE.]

limber-strake, *s.*

Shipbuild.: That strake of the inner skin which is nearest to the keelson. A space between it and the latter is called the limber, and forms a passage for bilge-water.

limbering-up hoop, *s.*

Artillery: A stirrup-handle on the trail of a gun by which the piece is moved in limbering and unlimbering.

***lim'-bĕr** (1), *v.t.* [LIMBER, *a.*] To make limber or pliant.

"Her stiff hams . . . are now *limbered*."—*Richardson: Clarissa*, iii. 356.

lĭm'-bĕr (2), *v.t.* or *i.* [LIMBER, *s.*]

Ordnance: To attach the limber to. (Said of a gun, and generally followed by *up*.) (More commonly used intransitively.)

lĭm'-bĕr-nĕss, *s.* [Eng. *limber*, *a.*; *-ness.*] The quality or state of being limber; flexibleness.

"The *limberness* of them [the sides of a bladder] would permit the air to accommodate itself and the bladder to the figure of a cylindrical vessel."—*Boyle: Works*, iii. 268.

lĭm'-bĕrs, *s. pl.* [LIMBER, *s.*, I.]

lĭm'-bĭ-lite, *s.* [Named from the locality where found, Limburg.]

Min.: Usually regarded as an altered condition of chrysolite (q.v.) by oxidation of the iron, but Rosenbusch is of opinion that it is the result of the alteration of the vitreous portion of a rock, such as he has named Limburgite (q.v.). Occurs in a dolerite at Limburg, Baden.

***limb'-lĕss** (*b* silent), *a.* [Eng. *limb*; *-less.*] Destitute of or without limbs.

"This poor bleeding *limbless* trunk, which gladly I would divide among them."
Massinger: Renegado, iv. 1.

lĭm'-bō, *s.* [Properly the ablative of Lat. *limbus* = edge, border, the full phrase being *in limbo patrum*; Ital. *limbo.*] [LIMBUS.]

1. Any place of misery; hell.

"Oh, what a sympathy of woe is this?
As far from help as *limbo* is from bliss!"
Shakesp.: Titus Andronicus, iii. 1.

2. A prison; a place of confinement. (*Slang.*)

3. The same as LIMBUS (q.v.).

"As to the condition of the soul between death and the resurrection, Islâm has no authoritative teaching; the general opinion is that there is a *limbo* somewhere or other in which the spirits of the good repose, while those of the wicked are imprisoned elsewhere in a foul dungeon to await their doom."—*Palmer: The Qur'an*, i. lxii.

Limbo of Infants, *s.* The English rendering of *Limbus Infantium* (q.v.).

"The existence of the *Limbo of Infants* has never been defined by the Church."—*Addis & Arnold: Cath. Dict.*, p. 519.

Limbo of the Fathers, *s.* The English rendering of *Limbus Patrum* (q.v.).

"Estius thinks it was to the spirits in the *Limbo of the Fathers*, as well as to those in Purgatory, that Christ preached."—*Addis & Arnold: Cath. Dict.*, p. 518.

lĭm-bŏr'-ĭ-a, *s.* [From Lat. *limbus* = a border; fem. pl. adj. suff. *-oria* (?).]

Bot.: The typical genus of the family Limboridæ (q.v.). It is not British.

lĭm-bŏr'-ĭ-dæ, lĭm-bŏr-ĭ-ē'-æ, *s. pl.* [Mod. Lat. *limbori(a)*; fem. pl. adj. suff. *-(i)dæ*, *-eæ.*]

Bot.: A family of Angiocarpous or close-fruited Lichens, tribe Idiothalameæ. There are rounded apothecia, closed in by a carbonaceous special perithecium, finally bursting in various ways, and containing a somewhat waxy nucleus, which grows hard. (*Griffith & Henfrey.*)

lĭm'-bŭs, *s.* [LIMBO.]

Scholastic Theology: The edge or utmost limit of hell, the abode of souls to whom the merits of Jesus could not be applied, through no fault of their own. Dante's description (*Inferno*, iv.) is quite consonant with scholastic teaching on the matter. Limbus is distinguished, as—

(1) *Limbus Patrum*, said to be the abode of those who died before the coming of Jesus Christ, and consequently before he "opened the kingdom of heaven to all believers." The expression "Abraham's bosom" (Luke xvi. 23) is supposed to designate this place; and some theologians see an allusion to it in the preaching "unto the spirits in prison" (1 Pet. iii. 19).

"The ancient ideas have even held their place on into Christian thought, in pictures like that of the *Limbus Patrum*, the Hades where Christ descended to set free the patriarchs."—*Tylor: Primitive Culture* (1873), ii. 83.

(2) *Limbus Infantium*, defined as the abode of infants, to whom the merits of the Redemption could not be applied, because they died without baptism either of water or of blood, and were too young to supplement the loss of the sacrament by *baptismum in voto*, which is an "ardent desire of receiving baptism of water, joined with perfect charity." Many opinions have been held as to the state of infants in Limbus, some believing them free from the *pœna sensus*, while St. Augustine went so far as to teach that they suffered the actual pains of hell. The common opinion of theologians of the present day is that they enjoy natural happiness, while some believe that they may be admitted into heaven itself through the uncovenanted mercies of Almighty God.

lime (1), ***liim, *lym, *lyme,** *s.* [A.S. *lím* = bitumen, cement; cogn. with Dut. *lijm* = glue, lime; Icel. *lím* = glue, lime, chalk; Dan. *liim* = glue; Sw. *lim* = glue; Ger. *leim* = glue; M. H. Ger. *lîm* = birdlime; Lat. *limus* = mud, slime.]

I. *Ord. Lang.:* A viscous substance smeared on twigs for the purpose of catching birds; birdlime (q.v.).

"Poor bird! thou'dst never fear the net or *lime*."
Shakesp.: Macbeth, iv. 2.

II. *Technically:*

1. *Chem.:* [CALCIUM OXIDE].

2. *Geol., &c.:* The chief states in which lime occurs in geological strata are the carbonate, the phosphate, and the sulphate of lime. (For the origin of the lime itself, see LIMESTONE.) Phosphate of lime may come from bone, from coprolites, &c.; sulphate of lime is less clearly organic.

"And higan a strong castel of *lym* and off ston."
Robert of Gloucester, p. 127.

3. *Pharm.:* Lime, but only in the form of *Liquor Calcis*, is sometimes given internally as an antacid. Externally applied it acts as a caustic.

4. *Sugar-manuf.:* Lime-water used in clarifying coarse sugar.

¶ Lime-alumina garnet = *Grossularite*; Lime-and-soda mesotype = *mesolite*, a member of the Mesotype group; Lime-arsenate = *Pharmacolite*; Lime-borate = *Bechilite*; Lime-borosilicate = *Datolite*; Lime-carbonate = *Aragonite* and *Calcite* (q.v.); Lime-felspar = *Anorthite*; Lime-fluate, Lime-fluoride = *Fluorite*; Lime-harmotome = *Phillipsite*; Lime-mesotype = a member of the Mesotype group (q.v.); Lime-nitrate = *Nitrocalcite* (q.v.); Lime-oxalate = *Whewellite*; Lime-oligoclase = *Hafnefiordite*; Lime-phosphate = *Apatite*; Lime-silicate = *Wollastonite*; Lime-soda felspar = *Labradorite*; Lime-sulphate = *Anhydrite* and *Gypsum*; Lime-titanate = *Perofskite*; Lime-tungstate = *Scheelite*, and Lime-uranite = *Autunite* (q.v.).

lime-burner, *s.* One who burns limestone in a limekiln to make lime.

*** lime-fingered,** *a.* Thievish.

"False, *lime-fingered* servants."—*Bp. Hall: Works*, v. 195.

lime-floor, *s.* A floor of lime-mortar, spread, beaten, and rubbed smooth.

lime-light, *s.* A light produced by projecting jets of ignited hydrogen and oxygen upon a ball of lime, making it incandescent. Invented by Lieutenant Drummond, who first applied it in the focus of a paraboloid for geodetic purposes.

lime-machine, *s.*

Gas-making: A machine in which gas is purified by passing through lime.

lime-malachite, *s.*

Min.: A variety of Malachite (q.v.), containing carbonate of lime and some water; from Lauterberg, Harz, Germany.

lime-paste, *s.* The cream of lime, produced by slaking with water.

lime-pit, *s.* A limestone quarry.

lime-plant, *s.*

Bot.: The May-apple, *Podophyllum peltatum.* (*Ogilvie.*)

lime-powder, *s.* The decrepitated lime produced by air-slaking.

lime-rod, *s.* A twig smeared over with bird-lime.

"The currier and the *lime-rod* are the death of the fowle." *Breton: Fantasticks.*

lime-screen, *s.* A sifter for separating lime powdered by slaking from the lumps.

lime-sink, *s.* A round hole or depression in the ground in limestone districts.

lime-spreader, *s.* A travelling box with perforated bottom, or other contrivance, for distributing powdered lime over land as a manure.

lime-twig, *s.*

1. *Lit.:* A twig smeared with bird-lime, used to catch birds.

2. *Fig.:* A snare, a trap.

"I knew the foul enchanter, though disguised,
Entered the very *lime-twigs* of his spells."
Milton: Comus, 646.

*** lime-twig,** *v.t.* To entangle, to ensnare.

lime-wash, *s.* A coating given with lime-water; white-wash.

lime-water, *s.* A solution of lime in 700 parts of cold water. It is tonic, astringent, and antacid.

lime-wavellite, *s.*

Min.: A name given to a mineral occurring in radiated spherical and hemispherical groups of acicular crystals in a phosphorite-breccia. Sp. gr. 2·45; lustre, feeble; colour, white. Eliminating impurities, Kosmann regards the composition as a hydrated phosphate of alumina and lime, containing lime, 14·86; alumina, 35·65; phosphoric-acid, 28·39; water, 21·09. Found with phosphorite at Dehrn and other places in Nassau.

lime (2), *s.* [A corrupt. of *line*, itself a corrupt. of *lind*, from A.S. *lind* = the linden-tree (q.v.).]

Bot.: The genus Tilia (q.v.), whose species are natives of North America, Asia, and Europe. *T. americana*, or *T. glabra*, is a common species in the United States, a grace-

ful umbrageous tree, with larger leaves than *T. europæa*, the European species. It is often planted in streets as a shade tree, and *Unter den Linden*, the principal street of Berlin, is named from it. In the more western and southern parts of this country there are other species of Lime or Linden. [Tilia.] The Lime-tree grows to a great size in Europe. The honey made from it is considered very fine. The sap yields a kind of sugar. The bark is made into ropes and mats, and formerly was used for writing-tablets. The wood is soft, light, smooth, close-grained, suitable for carving. It is not much attacked by worms. It is made into light bowls, dishes, boxes for apothecaries, and dressers for shoemakers. The twigs are manufactured into baskets and cradles.

lime hawk-moth, *s.*

Entom.: Smerinthus tiliæ, one of the commonest of the Hawk-moths. It owes its popular name to the fact that the larva feeds on the leaves of the lime-tree.

lime (3), *s.* [Fr., from Pers. *limá*, *limún* = a lemon, a citron; Arab. *limeh* = a lime.] [Lemon.]

Botany:

1. *Citrus acida.*

2. *Citrus limetta*, more fully called the Sweet Lime. It grows about eight feet high, with a crooked trunk and many-diffused branches armed with prickles. The leaves are ovate-lanceolate, nearly entire. The fruit, which is greenish-yellow, is almost globular, except that there is a protuberanee at the top; the surface is regular; shining rind. It is about an inch-and-a-half in diameter. The juice is very acid. There are various cultivated varieties. Some believe it a variety of *Citrus medica*, the Citron (q.v.).

¶ *Wild-lime.*

Bot.: Atalantia monophylla.

lime-juice, *s.* The juice of the lime, used for the same purposes as lemon-juice (q.v.).

lime-juicer, *s.* (See extract.)

"They would not go on a *lime-juicer*, they said, for anything. (By *lime-juicer* is meant an ocean-going ship, so called because the crew have salt meat served out to them, and lime-juice withhit against scurvy.")—*Pall Mall Gazette*, Aug. 26, 1884.

***lime** (4), ***lyemme,** *s.* [Leam, *s.*] A thong, strap, or string to lead a dog; a leash.

lime, *v.t.* [Lime (1), *s.*]

* 1. To smear with bird-lime.

"Myself have *lim'd* a hush for her."
Shakesp.: 2 Henry VI., i. 3.

* 2. To ensnare, to catch, to entangle, as a bird with bird-lime.

"Birds never *limed* no secret bushes fear."
Shakesp.: Rape of Lucrece, 88.

* 3. To ensnare in any way.

"Oh *limed* soul, that, struggling to be free,
Art more engaged." *Shakesp.: Hamlet*, iii. 3.

* 4. To cement.

"Who gave his blood to *lime* the stones together."
Shakesp.: 3 Henry VI., v. 1.

5. To manure with lime; to spread lime over.

"All sorts of pease love *limed* or marled land."—*Mortimer: Husbandry.*

***limed,** *a.* [Fr. *limer*; Lat. *limo* = to polish.] Polished. (*Chaucer: House of Fame*, iii.)

***lime'-hound,** *s.* [Eng. *lime* (4), and *hound.*] A hound used in boar-hunting; a limmer; so called from the leash in which he was led. (*Massinger: Bashful Lover*, i. 1.)

lime'-kiln (or **ln** as **l**), *s.* [Eng. *lime* (1), s., and *kiln.*] A kiln in which limestone is calciued and reduced to lime.

"The counter gate is as hateful to me as the reek of a *limekiln*."—*Shakesp.: Merry Wives of Windsor*, ii. 3.

Li-mĕn'-ē-an, *a.* & *s.* [See def.]

A. *As adj.:* Of or pertaining to Lima, or its inhabitants, in Peru.

B. *As subst.:* A native or inhabitant of Lima.

li-mĕn-ī'-tis, *s.* [Gr. λιμενίτης (*limenitēs*) = of the harbour, harbour-guarding, from λίμην (*limēn*) = a harbour.]

Entom.: A genus of Butterflies, family Nymphalidæ, sub-family Nymphalinæ. *Limenitis sybilla* is the White Admiral Butterfly. [Admiral C. 2.] *L. camilla* is from Continental Europe. Various other species are found in America, India, &c.

***lim'-ĕr,** ***lym-ere,** *s.* [Eng. *lime* (4), *s.*; *-er.*] The same as Limehound (q.v.).

"Many relaies and *limers*." *Chaucer: Dreame.*

lime'-stone, *s.* [Eng. *lime*, and *stone.*]

Geol.: A general name for all rocks the basis of which is carbonate of lime. It is not generally pure, but has in it alumina, silica, &c. In regions such as Auvergne and Tuscany, in which extinct volcanoes exist, hundreds of springs, both cold and thermal, rise to the surface, bringing up from the subterranean depths carbonate of lime. The quantity thus transferred to the surface in the course of ages is enormous, and manifold streams and rivers carry it into the sea. Molluscs withdraw it for their shells, corals for their reefs, and in due time the upheaval of the sea-bed eonverts it into a terrestrial limestone rock. Metamorphic action can destroy it, and there is little limestone in rocks which have undergone such a change. When what used to be called primitive, now crystalline or metamorphic, limestone is found in such beds, it is probably of organic origin. Modern limestones are often eomposed entirely of organic remains or are studded thickly with them. Thus Crinoidal or Encrinital Limestone is composed chiefly of Encrinites, chalk of Foraminifers, Nummulitic Limestone of Nummulites, and Leith a Kalk of the Tertiary of a Nullipore. Sometimes limestone may be breeciated, concretionary, compact, magnesian, &c.

lime'-tree, *s.* [Lime (3).]

li-mĕt'-tic, *a.* [Mod. Lat. (*Citrus*) *limetti(a)*; *-ic.*]

limettic-acid, *s.*

Chem.: $C_{11}H_8O_6$. An acid produced by the action of potassium bichromate on oil of lime or oil of rosemary. It is a colourless, crystalline substance, soluble in alcohol, and volatilizes when heated.

lime'-wort, *s.* [Eng. *lime*, and *wort.*]

Bot.: A species of Dianthus. (*Ogilvie.*)

li-mĭe'-ō-læ, *s. pl.* [Lat., pl. of *limicola* = one who dwells in the mud: *limus* = lime, mud, and *colo* = to inhabit.]

Zool.: Mud-worms, a tribe of Annelids, order Oligochæta. It contains two families, Sæuuridæ and Naididæ.

lim'-ĭng, *pr. pa., a., & s.* [Lime, *v.*]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As substantive:*

I. *Ord. Lang.:* The act of covering with lime or birdlime.

II. *Technically:*

1. *Agric.:* The act of manuring or dressing with lime.

2. *Bleaching:* Slaked lime thinned with water.

3. *Leather-man.:* The operation of steeping hides in lime-water or milk of lime, to remove the hair. The action of the lime is to dissolve the hair sheath and form a soap with the fat of the hide. Also called unhairing.

lim'-it, *s.* [Fr. *limite*; fr. Lat. *limitem*, accus. of *limes* = a boundary; akin to *limen* = a threshold; Sp., Port., & Ital. *limite.*]

I. *Ordinary Language:*

1. That which limits, bounds, or circumscribes; a bound, a boundary, a border; the utmost extent: as, the *limits* of a town.

2. A restraint, a bound.

"Grief dallied with nor law nor *limit* knows."
Shakesp.: Rape of Lucrece, 1,120.

* 3. *Pl.:* [¶].

* 4. A limb.

5. The full time; the full extent.

"The *limit* of your lives is out."
Shakesp.: Richard III., iii. 3.

B. *Technically:*

1. *Logic & Metaph.:* A distinguishing characteristic; a differeutia.

2. *Math.:* A quantity towards which a varying quantity may approach to within less than any assignable quantity, but which it cannot pass. Thus, the quantity $a^2 + 2ax^2$ varies with x, or it is a function of x, and approximates towards a^2 in value, as x is diminished, and may, by giving a suitable value to x, be made to differ from a^2 by less than any assignable quantity. Hence a^2 is, properly speaking, a limit of the expression, which in this case may be found by making $x = 0$.

¶ *Limits of a prison*, or *limits:* A certain limited space or extent of ground round a prison, in which a prisoner has liberty to go and come.

lim'-it, ***lym-yte,** *v.t. & i.* [Fr. *limiter*; from *limite* = a limit; Ital. *limitare*; Sp. & Port. *limitas*; Lat. *limito*; from *limes* (genit. *limitis*) = a limit (q.v.).]

A. *Transitive:*

1. To set a limit or bound to; to bound.

"We wish remov'd what standeth in our light,
And Nature blame for *limiting* our sight."
Waller: In Answer of Suckling's Verses.

2. To confine within certain bounds; to circumscribe, to restrain.

"*Limit* each leader to his several charge."
Shakesp.: Richard III., v. 3.

3. To confine or restrain to a certain point or signification; to settle definitely; to apply exclusively: as, To *limit* the meaning of a word.

* **B.** *Intrans.:* To exercise any function, as begging, within certain limits. [Limiter.]

* **lĭm'-ĭt-a-ble,** *a.* [Eng. *limit*; *-able.*] That may or can be limited, bounded, or restrained; capable of limitation.

* **lĭm-ĭ-tān'-ĕ-oŭs,** *a.* [Lat. *limitaneus*; from *limes* (genit. *limitis*) = a limit.] Pertaining to limits or bounds.

* **lĭm-ĭ-tār'-ĭ-an,** *a.* & *s.* [Lat. *limitaris.*]

A. *As adj.:* Tending to limit or circumscribe.

B. *As subst.:* One who limits; specif., one who holds the doctrine that a part only of the human race will be saved. Opposed to Universalist (q.v.).

* **lĭm'-ĭt-a-rў,** *a.* & *s.* [Lat. *limitaris*, from *limes* (genit. *limitis*) = a limit.]

A. *As adjective:*

1. Placed or stationed at the limits or boundaries. (*Milton: P. L.*, iv. 971.)

2. Limited; circumscribed in extent.

3. Limited or circumscribed in power or authority.

"What no inferior *limitary* king.
Could in a length of years to ripeness bring."
Pitt: First Hymn of Callimachus to Jupiter.

B. *As substantive:*

1. A district lying at the limits or on the borders of another country; a borderland.

"In the time of the Romans this county, because a *limitary*, did abound with fortifications."—*Fuller: Worthies; Cumberland.*

2. The same as Limiter (2) (q.v.).

"Great were the sums of money which the diligence of the *limitaries* brought in."—*Heylin: Life of Laud*, p. 210.

lim'-ĭ-tāte, *s.* [Lat. *limitatus*, pa. par. of *limito* = to inclose within boundaries, to limit.]

Bot.: Bounded by a markedly distinct line.

lĭm-ĭ-tā'-tion, ***lim-it-a-ci-oun,** *s.* [Fr., from Lat. *limitationem*, accus. of *limitatio* = a limiting, a limit; from *limitatus*, pa. par. of *limito* = to limit; Sp. *limitacion*; Ital. *limitazione.*]

I. *Ordinary Language:*

1. The act of limiting, bounding, or circumscribing.

2. The state of being limited, bounded, or circumscribed.

"I despair, how this *limitation* of Adam's empire to his liue and posterity, will help us to one heir."—*Locke.*

3. That which limits; that which restrains or confines within limits; a restraining condition; a qualifying conception.

"To exclude any *limitation* or diminution of these so geueral terms."—*Barrow: Sermons*, vol. iii., ser. 32.

* 4. The right to beg or exercise their functions within certain limits, possessed by friars; the act of exercising such functions; the district in which a friar was licensed to beg.

"As he goth in this *limitacioun*."
Chaucer: C. T., 6,462.

* 5. An appointed time.

"You have stood your *limitation*."
Shakesp.: Coriolanus, ii., 3.

II. *Law:* A certain limited time fixed by law within which an action must be brought.

"Also a man may plead the statutes of *limitation* in bar; or the time limited by certain acts of Parliament, beyond which no plaintiff can lay his cause of action. As in an action for money secured by a mortgage, or otherwise charged upon land, or for rent on a lease by deed, or on a bond or other speciality, that the claim had not accrued on plaintiff, or those under whom he claims, within twenty years."—*Blackstone: Comment.*, bk. iii., ch. 11.

¶ lĭm′-ĭ-tā-tĭve, *a.* [As if from a Lat. *limitativus*, from *limitatus*, pa. par. of *limito* = to limit (q.v.); Fr. *limitatif.*] Limiting.

"By the very constitution of thought, object and subject co-exist in it as mutally *limitative*."—*Brit. Quart. Review*, vol. lvii., p. 63 (1873).

lĭm′-ĭt-ĕd, *pa. par., a. & s.* [Limit, *v.*]

A. *As pa. par.:* (See the verb).

B. *As adjective:*

1. Confined within limits; circumscribed.

2. Narrow, circumscribed.

3. Circumscribed in power or authority; not absolute. [Limited Monarchy.]

*4. Appointed, fixed.

5. *Railroad:* Restricted as to the amount or the quality of its carrying allowance, or as to the time occupied in its journey, as a *limited* train or express.

C. *As subst.:* A limited express-train. (*U.S. Colloq.*)

¶ (1) *Limited administration:*

Law: A special and temporary administration of certain specific effects of a testator or intestate granted under varying circumstances.

(2) *Limited liability:* Liability is said to be limited when the persons liable are bound under clearly-defined conditions. The phrase is chiefly used in connection with joint-stock companies, and here it means that the members or shareholders shall not be called upon, under any circumstances, to contribute more than the amount of the shares for which they have subscribed. If the debts of such a company, when wound up, amount to more than the resources of the company can meet, the creditors must bear the loss.

(3) *Limited monarchy:* A monarchy in which the power of the sovereign is not absolute, but is constitutionally limited, usually by assemblages of the nobility, clergy, and elected representatives of the people. The sovereignty is a headship more or less real; it is not an autocracy.

(4) *Limited problem:*

Math.: A problem admitting of only one solution, or of a determinate number of solutions.

***lĭm′-ĭt-ĕd-lў,** *adv.* [Eng. *limited; -ly.*] In a limited manner or degree; with limitations.

***lĭm′-ĭt-ĕd-nĕss,** *s.* [Eng. *limited; -ness.*] The quality or state of being limited.

lĭm′-ĭt-ĕr, *lim-it-our, *lim-it-or, *lym-at-our, *s.* [Eng. *limit; -er, -or.*]

1. One who or that which limits, binds, or circumscribes.

"A law so good and moral, the *limiter* of sin."—*Milton: Tetrachordon.*

*2. A friar who was licensed to beg or to exercise his functions within certain limits.

"Ther walketh now the *limitour* himself."
Chaucer: C. T., 6,460.

lĭm′-ĭt-lĕss, *a.* [Eng. *limit; -less.*] Having no limit or bound; unlimited, unbounded, infinite, immense.

"Through the great groves of oak to the skirts of the *limitless* prairie." *Longfellow: Evangeline.*

***lĭm-ĭt-our,** *s.* [Limiter.]

lĭm′-ĭts, *s. pl.* [Limit, *s.*, I. 3.]

lĭm′-ma, *s.* [Gr. λεῖμμα (*leimma*) = what is left, a remnant; λείπω (*leipō*) = to leave.]

Music:

1. The diatonic semitone.

2. [Diesis.]

lĭm′-mĕr (1), *s.* [Limber, *s.*]

1. A shaft or thill of a vehicle.

2. A shaft-horse. (*Prov.*)

lĭm′-mĕr (2), *leam-er, *lym-ere, *s.* [Fr. *limier;* O. Fr. *liemer.*] [Learn, *s.*, Lime (4), *s.*]

*1. The same as Limehound (q.v.).

*2. A dog got between a hound and a mastiff; a mongrel.

*3. A low, base, worthless fellow; a scoundrel.

4. A woman of loose manners, a jade. (*Scotch.*)

***lĭm′-mĕr,** *a.* [Limber, *a.*]

limn (n silent), ***lymn,** *v.t.* [A contr. of *luminer*, which is short for *enluminer*, from O. Fr. *enluminer* = to illuminate, from Lat. *illumino.*] To paint or draw; spec., to paint in water colours; to illuminate a book or manuscript; to depict.

"For there by magic skill, I wis,
Form of each thing that living is
Was *limned* in proper dye."
Scott: Bridal of Triermain, iii., 37.

lĭm-nā′-dĭ-a, *s.* [From Gr. λιμνάς (*limnas*), genit. λιμνάδος (*limnados*) = marshy.]

Zool.: A genus of Phyllopods. The body is enclosed in an oval bivalve carapace, feet leaf-like, eighteen to thirty. It lives in freshwater.

lĭm-næ′-a, lĭm-næ′-ŭs, *s.* [Gr. λιμναῖος (*limnaios*) = marshy, from λίμνη (*limnē*) = a marsh.]

Zool.: Pond-snail; the typical genus of the family Limnæidæ. The shell is spiral, more or less elongated, thin, and translucent, the body-whorl large, the aperture rounded in front, the columella obliquely twisted. Animal with a short, broad head, tentacles compressed, lingual teeth, about 110 rows. Recent species ninety, from Europe, Madeira, India, China, and North America; fossil seventy, from the Wealden onward. *Limnæa stagnalis* feeds chiefly on animal substances, *L. peregra* on green fresh-water algæ.

lĭm-næ′-a-dæ, *s. pl.* [Limnæidæ.]

lĭm′-næ-ĭd, *s.* [Limnæidæ.]

Zool.: A mollusc of the family Limnæidæ (q.v.).

"The *Limnæids* inhabit fresh-water in all parts of the world."—*S. P. Woodward: Mollusca* (ed. 1875), p. 300.

lĭm-næ′-ĭ-dæ, lĭm-næ′-a-dæ, *s. pl.* [Mod. Lat. *limnæ(a)*; Lat. fem. pl. adj. suff. *-idæ, -adæ.*]

Zool.: Limnæids; a family of gasteropodous Mollusca, order Pulmonifera, section Inoperculata. The shell is thin and horn-coloured, capable of containing the whole animal when retracted, the aperture simple, the lip sharp, the apex somewhat eroded. The animal with a short, dilated muzzle, two tentacles, eyes sessile at their inner bases, the mouth with an upper mandible, the teeth in a helix. Found in fresh water in all parts of the world. Known genera: Limnæa, Chilinia, Physa, Ancylus, and Planorbis.

lĭm′-nănth, *s.* [Gr. λίμνη (*limnē*) = a marsh, and ἄνθος (*anthos*) = a blossom, a plant.]

Bot.: A plant of the genus Limnanthes, or of the tribe Limnantheæ.

lĭm-năn′-thē-æ, *s. pl.* [Mod. Lat. *limnanth(es)*; Lat. fem. pl. adj. suff. *-eæ.*]

Bot.: Limnanths, a tribe of Tropæolaceæ, with regular flowers and erect ovules.

lĭm-năn′-thĕ-mŭm, *s.* [Gr. λίμνη (*limnē*) = a marsh, and ἄνθεμον (*anthemon*) = a flower.]

Bot.: A genus of Gentianaceæ, tribe Menyantheæ. It consists of perennial water-herbs, with alternate or opposite floating peltate or cordate leaves, sessile umbels of yellow flowers, a five-parted calyx, a rotate corolla, with five to eight erose segments, five to eight stamens, a disc of five to eight hypogynous glands, and a one-celled irregularly-bursting capsule, few or many-seeded. *Limnanthemum* (formerly *Villarsia*) *nymphæoides* is British; found wild in still waters in the south of England, continental Europe, and Asia. *L. cristatum*, a Cashmere plant, is said to increase the milk of the cows which feed on it.

lĭm-năn′-thēs, *s.* [Limnanth.]

Bot.: The typical genus of the tribe Limnantheæ (q.v.). The leaves of *Limnanthes Douglasii* taste like those of the Indian Cress, *Tropæolum majus.*

lĭm-na-tor′-nĭs, *s.* [Gr. λίμνη (*limnē*) = a marsh, and ὄρνις (*ornis*) = a bird.]

Palæont.: A fossil incessorial bird, allied to the Hoopoe. It is from the Miocene.

lĭm′-nĕr, *s.* [A contr. of *luminour*, short form of *enluminour*; O. Fr. *enlumineur*, from *enluminer* = to illuminate.] One who limns, a painter or artist; spec., one who painted portraits or illuminated.

"He [William Collet] became the best illuminer or limner of our age."—*Fuller: Worthies; Cambridge.*

lĭm′-nīte, *s.* [Gr. λίμνη (*limnē*) = a marsh.]

Min.: A hydrated sesquioxide of iron, formerly included in the species limonite (q.v.), but separated by Dana because of its difference in composition. Occurs massive, and in stalactites. In physical characters resembles limonite, but in the darker kinds the colour is more yellowish-brown, and in the lighter, rust-yellow. Var. 1, lustre pitch-like; colour brownish-black. Var. 2, ochreous; colour yellow. Compos. . sesquioxide of iron 74·8; water 25·2, corresponding to the formula $Fe_2O_3 3HO$.

lĭm-nō′-bĭ-a, *s.* [Gr. λίμνη (*limnē*) = a marsh, and βίος (*bios*) = life.]

Entom.: A genus of two-winged insects, family Tipulidæ. More than fifty species are British.

lĭm-nŏg′-ў-ŏn, *s.* [Gr. λίμνη (*limnē*) = a marsh, and κύων (*kuōn*) = a dog.]

Palæont.: A genus of Hyænodontidæ (?), from the American Eocene.

lĭm-nō-fē′-lĭs, *s.* [Gr. λίμνη (*limnē*) = a marsh, and Lat. *felis* = a cat.]

Palæont.: A fossil cat from the Middle Eocene of America; the oldest known representative of the family Felidæ.

lĭm-nō-hў′-ĭ-dæ, *s. pl.* [Mod. Lat. *limnohy(us)*; Lat. fem. pl. adj. suff. *-idæ.*]

Palæont.: A family of North American Eocene mammals, founded by Prof. Marsh. They are believed to be allied to the Tapirs and to the Palæotheridæ.

lĭm-nō-hў′-ŭs, *s.* [Gr. λίμνη (*limnē*) = a marsh, and ὗς (*hus*), genit. ὑός (*huos*) = a swine.]

Palæont.: The typical genus of the family Limnohyidæ (q.v.).

lĭm-nō-phĭ′-lĭ-dæ, *s. pl.* [Mod. Lat. *limnophil(us)*; Lat. fem. pl. adj. suff. *-idæ.*]

Entom.: A family of Trichoptera, division Inæqnipalpia. The maxillary palpi of the males are three-jointed, those of the females five-jointed. There are many species, several being British. The cases of the larvæ are various.

lĭm-nŏph′-ĭ-lŭs, *s.* [Gr. λίμνη (*limnē*) = a marsh, and φιλέω (*phileō*) = to love.]

Entom.: The typical genus of the family Limnophilidæ (q.v.).

lĭm′-nō-phĭs, *s.* [Gr. λίμνη (*limnē*) = a marsh, and ὄφις (*ophis*) = a snake.]

Palæont.: A genus of serpents, apparently of the family Boidæ, but smaller than the Great Boas. From the Eocene of North America.

lĭm-nŏr′-ĭ-a, *s.* [Lat. *limne*, from Gr. λίμνη (*limnē*) = a lake, and fem. sing. adj. suff. *-oria* (?).]

Zool.: A genus of cursorial isopod Crustaceans, family Asellidæ. *Limnoria terebrans*, a small animal about one-sixth of an inch in length, does much damage by boring into the woodwork of piers, &c.

lĭm-nō-thĕr′-ĭ-dæ, *s. pl.* [Mod. Lat. *limnother(ium)*; Lat. fem. pl. adj. suff. *-idæ.*]

Palæont.: A family of fossil Quadrumana, apparently allied to the Lemurs and to the Marmosets. They had forty teeth. Found in the Eocene of North America.

lĭm-nō-thĕr′-ĭ-ŭm, *s.* [Gr. λίμνη (*limnē*) = a marsh, and θηρίον (*thērion*) = a wild animal.]

Palæont.: The typical genus of the family Limnotheridæ (q.v.).

lī-mō-dŏr′-ĭ-dæ, *s. pl.* [Mod. Lat. *limodor(um)*; Lat. fem. pl. adj. suff. *-idæ.*]

Bot.: A family of Orchids, tribe Arethuseæ.

lī-mŏd′-ō-rŭm, *s.* [Lat., from Gr. λιμόδορον (*limodoron*) = a wild plant.]

Bot.: The typical genus of the family Limodoridæ (q.v.). *Limodorum abortivum* is a leafless, erect, terrestrial orchid, found in the southern and central parts of Continental Europe.

lĭ-mōges′ (ges as zh), *s.* [See def.] A kind of surface enamelling, which represents gems by the use of small globules of transparent colour over silver tinsel. It takes its name from Limoges in France, where it was brought to perfection in the fifteenth century. The name Limoges is also applied to a variety of earthenware known by its glaze.

lĭ-mō'-nĭ-ą, *s.* [Arab. *lymoun* = the citron.]

Bot.: A genus of Aurantiaceæ (q.v.). *Limonia monophylla* is a small, thorny tree, growing in India, with a berry like a lime, but only the size of a small nutmeg. The root of *Limonia acidissima*, which grows on dry hills in India, is said by Atkinson to be purgative and sudorific, suitable to be used in colic, the leaves in epilepsy, and the dried fruit as a tonic and disinfectant. Prof. Watt says that the wood, which is very hard, close-grained, and yellowish white, might be used for turning.

lĭm'-ō-nĭn, *s.* [Mod. Lat. *limon(ia)*; suff. *-in* (*Chem.*).]

Chem.: The bitter principle contained in the pips of the orange and lemon. It forms small crystals, easily soluble in alcohol and acetic acid, and melts at 124°.

lī'-mŏn-īte, *s.* [Gr. λειμών (*leimōn*) = meadow; suff. *-ite.* (*Min.*).]

Min.: A hydrated sesquioxide of iron occurring in stalactitic, botryoidal, or mammillary forms, having a more or less fibrous structure; more frequently earthy. Hardness, 5 to 5·5; sp. gr. 3·6 to 4. Lustre, silky, sometimes subnuctallic, dull, or earthy. Colour of fractured surfaces, various shades of dark brown; exterior sometimes black, and shining like varnish. Earthy varieties, brownish to ochre-yellow. Streak, yellowish-brown. Dana divides it thus: Var. 1. Compact; lustre, submetallic to silky, often stalactitic, botryoidal, &c. Var. 2. Ochreous or earthy; colour, brownish- to ochre-yellow. Var. 3. Bog ore; occurring in marshy places, often replacing the substance of wood, leaves, nuts, &c. Var. 4. Brown clay-ironstone, the brownish-yellow streak of which distinguishes it from the clay-ironstone of hæmatite and siderite (q.v.). This variety is sometimes (*a*) pisolitic, being an aggregation of small pea-like concretions or larger ellipsoidal forms (Ger. *Bohnerz* = bean ore), or (*b*) oolitic. Compos.: sesquioxide of iron, 85·6; water, 14·4; corresponding to the formula $2Fe_2O_3 3HO$. Occurs, in the secondary or later deposits, in beds associated with various other minerals, and often with manganese ores; also as a recent marsh deposit. Derived from the alteration of other iron ores or of minerals containing protoxide of iron. One of the most important ores of iron. Occurs frequently as pseudomorphs of many other mineral species.

lī-mŏp'-sĭs, *s.* [Gr. λιμός (*limos*) = hunger, and ὄψις (*opsis*) = appearance.]

Zool. & Palæont.: A genus of Arcadæ. The shell is orbicular, convex, slightly oblique, ligamental area with a cartilage-pit in the centre; hinge with two equal series of transverse teeth. Recent species, four, from Britain, Japan, and the Red Sea; fossil, thirty-six, from the Bath Oolite onward. (*S. P. Woodward.*)

lī-mō'-są, *s.* [Fem. sing. of Lat. *limosus* = full of mud, muddy; *limus* = slime, mud.]

Ornith.: A genus of Wading Birds, sub-order Longirostres. The bill is very long, either straight or inclining a little upwards, flattened and dilated towards the top, tarsus longer than the middle toe, hinder one very small. *Limosa melanura* is the Godwit (q.v.).

***lī'-mōse,** *a.* [Lat. *limosus.*] The same as Limous (q.v.).

lī-mō-sĕl'-ą, *s.* [Dimin. of Lat. *limosus* = full of mud.] [Limosa.]

Bot.: Mudwort; a genus of Scrophulariaceæ, tribe Sibthorpeæ. It consists of very small, tufted, creeping, glabrous, annual, aquatic herbs, with narrow leaves, fascicled at the nodes; minute axillary, solitary flowers; a campanulate, five-lobed calyx; a subcampanulate, five-cleft corolla, with a short limb; four stamens with the anther-cells confluent; a globose, two-valved capsule, ultimately one-celled. *Limosella aquatica*, a plant with narrow, oblong, lanceolate leaves, and pink or white flowers, is found occasionally at the edges of ponds.

lī-mō-sī'-næ, *s. pl.* [Mod. Lat. *limos(a)*; Lat. fem. pl. adj. suff. *-inæ.*]

Ornith.: A sub-family of Scolopacidæ, containing the Godwits.

lī-mō'-sĭs, *s.* [Gr. λιμός (*limos*) = hunger.]

Med.: A ravenous appetite caused by discase.

*** lī'-moŭs,** *a.* [Lat. *limosus*, from *limus* = slime.] Muddy, slimy.

"That country became a gained country by the muddy and *limous* matter brought down by the Nilus, which settled by degrees unto a firm land."—*Browne: Vulgar Errours*, bk. vi., ch. i.

lĭmp, *v.i.* [Etym. doubtful; cf. A.S. *lemphealt* = limp-halting, lame; Low Ger. *lumpen* = to limp.]

1. *Lit.:* To halt; to walk lamely.

"Why does the world report that Kate doth *limp*?"—*Shakesp.: Taming of the Shrew*, ii. 1.

2. To halt; not to run smoothly.

"Lengthened many a *limping* verse."—*Eustace: Italy*, vol. iv. (Append.)

lĭmp, *s.* [Limp, *v.*] The act or state of limping or walking lamely.

lĭmp, *a.* [Ital. *limpa* = limpness, weakness.]

1. Flexible, pliant; wanting stiffness; flaccid.

2. Flabby.

"The chub eats waterish, and the flesh of him is not firm, *limp*, and tasteless."—*Walton: Angler.*

*** lĭmp'-ard,** *s.* [Eng. *limp*, v; *-ard.*] One who limps; a limper.

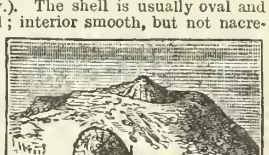
"What could that gouty *limpard* have done with so fine a dog?"—*Urquhart: Rabelais*, bk. i., ch. xxxix.

lĭmp'-ĕr, *s.* [Eng. *limp*, v.; *-er.*] One who limps.

lĭm'-pĕt, * lem-pet, * lym-pyne, *s.* [O. Fr. *lempette, lempine* (not recorded), from Lat. *lepad-*, crude form of *lepas* (cf. Sp. *lepada*) = a limpet. (*Skeat.*)]

Zoology:

1. *Sing.:* A popular name for any of the prosobranchiate gasteropods of the family Patellidæ and (more properly) of the genus Patella (q.v.). The shell is usually oval and tent-shaped; interior smooth, but not nacreous: the outside rough or with radiating ribs; the margin sometimes spiny. Limpets are world-wide in their distribution. They are vegetable feeders, and inhabit rocks between tide-marks, returning to the same place after feeding, and adhering so firmly that it requires a great effort to detach them from their resting-place, which is worn into a smooth concavity beneath the foot of the animal. *Patella vulgata* or *vulgaris*, the Common or Rock Limpet, is universally distributed around the British and Irish Coasts, and ranges along the Atlantic shores of Europe. It is much used by fishermen for bait, and in the north of Ireland, especially in times of scarcity, for food. Vast quantities fall a prey to sea and shore birds. The oyster-catcher (*Hæmatopus ostralegus*) is exceedingly dexterous in detaching these molluscs from the rocks, and scooping the animals from their shells.



Limpets.

"Men and boys clung to its base like *limpets* to a rock."—*Pall Mall Gazette*, July 22, 1884.

2. *Pl.:* The family Patellidæ, or, more strictly, the genus Patella (q.v.).

lĭm'-pĭd, *a.* [Fr. *limpide*, from Lat. *limpidus*, allied to *lympha* = water; Gr. λάμπω (*lampō*) = to shine; Gr. λαμπρός (*lampros*) = bright; Ital. *limpido*; Sp. *limpio.*]

1. Clear, bright, transparent, lucid, pellucid.

"The Green Sea wave, whose waters gleam, *Limpid.*" *Moore: Fire-Worshippers.*

* 2. Clear, open, frank, sincere.

"And *limpid* truth that looks the very soul."—*Thomson: Liberty*, i. 12.

lĭm-pĭd'-ĭ-tў, *s.* [Fr. *limpidité*, from *limpide*; Ital. *limpidità.*] The quality or state of being limpid; limpidness.

lĭm'-pĭd-nĕss, *s.* [Eng. *limpid*; *-ness.*] Clearness, transparency, pureness.

lĭmp'-ĭng, *pr. par.* or *a.* [Limp, *v.*]

lĭmp'-ĭng-lў, *adv.* [Eng. *limping*; *-ly.*] In a limping, halting, or lame manner; with a limp.

*** lĭmp'-ĭng-nĕss,** *s.* [Eng. *limping*; *-ness.*] The quality or state of being limping or lame; lameness.

"The *limpingness* of my lord."—*Richardson: Sir C. Grandison*, vi. 376.

lĭm'-u-lŏid, *s.* & *a.* [Mod. Lat. *limul(us)* (q.v.), and Gr. εἶδος (*eidos*) = form.]

A. *As substantive:*

Zool.: A recent or fossil crustacean, allied to Limulus.

B. *As adj.:* Resembling, or in any way connected with Limulus (q.v.).

"This ancient *Limuloid* Crustacean."—*Nicholson: Palæont.*, i. 385.

lĭm'-u-lŭs, *s.* [Lat. *limulus* = somewhat askance, dimin. of *limus* or *limis* = sidelong, askance.]

1. *Zool.:* A genus of Crustaceans, containing the King-crabs. [King-crab.] It is the only genus of the Crustaceous order Xyphosura, as also of the subdivision of the same name.

2. *Palæont.:* Apparently in the Upper Jurassic slates of Solenhofen, also in the Cretaceous and Tertiary beds.

lĭm'-ў, * lym-ie, *a.* [Eng. *lime* (1), s.; *-y.*]

1. Viscous, sticky, tenacious, glutinous.

"For striving more, the more in laces strong
Himself he tied, and wrapt his winges twain
In *limy* snares the euhtle loops along."
Spenser: Muiopotmos, 429.

2. Containing lime.

"A human skull covered with the skin, having been buried in some *limy* soil, was tanned, or turned into a kind of leather."—*Grey: Museum.*

3. Of the nature of lime; resembling lime.

*** lĭn,** *v.i.* & *t.* [A.S. *linnan*; Icel *linna.*] [Blin.]

A. *Intransitive:*

1. To cease, to stop, to give over.

* 2. To yield.

*** B.** *Trans.:* To cease, to give over.

"The spawner, when the time serveth generation, followeth after the male, and never *linneth* picking and johbing at his hellie with her muzzle."—*P. Holland: Plinie*, bk. ix., ch. i.

lĭn, lўn, *s.* [Gael. *linne*; Wel. *llyn*; Ir. *linn* = a pool; A.S. *hlinna* = a brook; Icel. *lind* = a well.]

1. A spring, a mere, a pool, espec. one under a waterfall; the source of a river or stream.

"Toothy, tripping down from Terwin's rushy *lin*."
Drayton: Poly-Olbion, s. 5.

2. A waterfall, a cascade.

3. A precipice, a ravine.

lī-nā'-çē-æ, lī'-nē-æ, *s. pl.* [Lat. *lin(um)* (q.v.); fem. pl. adj. suff. *-aceæ, -eæ.*]

Bot.: Flaxworts: an order of hypogynous Exogens, alliance Geraniales. It consists of annual or perennial small plants, sometimes tending to shrubbiness, with leaves alternate or opposite, rarely whorled, simple, entire, without stipules, sometimes with two glands; flowers very fugitive, white, yellow, or blue; sepals three, four, or five, imbricated in æstivation, persistent; petals the same number, unguiculate, twisted in æstivation; stamens as many as the petals, but with little teeth in the hypogynous ring from which they spring: ovary with as many cells as the sepals, rarely fewer, but divided by spurious dissepiments; styles equal in number to the cells; stigmas capitate, seeds in each cell of the fruit, single, compressed, and inverted. Fourteen genera and 135 species known, from Europe, the North of Africa, and several other localities.

*** lin-age,** *s.* [Lineage.]

lĭn-ą-lō'-ą, *s.* [Native name.] A Mexican wood, from which a fragrant oil, used in perfumery, is extracted.

lĭn'-ą-mĕnt, *s.* [Lat. *linamentum*, from *linum* = flax.]

Surg.: A tent for a wound; lint.

lī-năr'-ĭ-ą, *s.* [Fem. of Lat. *linarius* = a linen weaver, from *linum* = flax, which these plants resemble.]

Bot.: A genus of Scrophulariaceæ, tribe Antirrhineæ. It consists of herbs, or rarely of shrubs, with opposite whorls or alternate leaves, a personate corolla, with the tube spurred, the upper lip erect, the lower with the mid-lobe smallest, the palate sometimes closing the throat; stamens four fertile, the fifth wanting or rudimentary; the stigma

notched or two-lobed; capsule ovoid or globose, dehiscing by simple or toothed pores; seeds angled or rugose. A hundred species are known, from Europe and Western Asia. Six are British—*Linaria spuria*, *L. Elatine*, *L. vulgaris*, *L. Pelisseriana*, *L. repens*, and *L. minor*. The flowers of *L. vulgaris* yield a yellow dye, and a decoction of them is said to be useful in chronic skin diseases. Boiled in milk the plant has been used for killing flies. *L. cirrhosa*, and *L. ramosissima*, are anti-subscorbutic, and are given in India in diabetes. *L. Elatine* is said to be bitter and purgative.

lĭn'-ar-īte, *s.* [Named after the locality where first observed, Linares; suff. *-ite* (*Min.*).]

Min.: A hydrated sulphate of lead and copper. Formula, $PbOSO_3 + CuOHO$. Crystallization, monoclinic. Hardness, 2·5; sp. gr. 5·3 to 5·45; lustre, vitreous. Colour, deep sky-blue; streak, paler. Brittle. Formerly occurred at Linares, Spain; since found, in the finest crystals known, at Roughten-Gill, Cumberland, also at Leadhills, Lanarkshire.

lĭnch, *s.* [A.S. *hlinc* = a ridge of land left unploughed; a balk.] A ledge; a right-angled projection.

lĭnch'-pĭn, * lĭns-pĭn, *s.* [A.S. *lynis* = an axle-tree; cogn. with Dut. *luns* = a linchpin; Low Ger. *lunse;* Ger. *lünse.*] A pin passing vertically through a mortise near the end of the spindle or arm of an axle, and serving to hold the wheel on the spindle. With thimble-ekein waggons, a nut takes the place of the linchpin.

"But if the rogue have gone a cup too far
Left out his *linchpin*, or forgot his tar,
It suffers interruption and delay."
Cowper: Expostulation, 441.

Lĭn'-cōln (ln as **n),** *s.* [See def.] The name of a county and city in the east of England.

Lincoln-green, *s.*

1. A kind of cloth formerly made at Lincoln.

"The sounds increase, and now are seen
Four mounted squires in *Lincoln-green*."
Scott: Lady of the Lake, v. 17.

2. The colour of such cloth.

lĭn'-cōln-īte (ln as **n),** *s.* [Named from Levi Lincoln, governor of Massachusetts; suff. *-ite* (*Min.*).]

Min.: The same as HEULANDITE (q.v.).

*** lĭnc'-ture,** *s.* [Lat. *lincturus*, fut. par. of *lingo* = to lick.]

Med.: A medicine or preparation taken by licking.

"Confections, treacle, mithridate, eclegmes or *linctures*."—*Burton: Anat. of Melancholy*, p. 317.

*** lĭnc'-tŭs,** *s.* [Lat.]

Med.: The same as LINCTURE (q.v.).

*** lĭnd, * lĭnde,** *s.* [LINDEN.]

*** Lĭn-dăb'-rĭ-dēş,** *s.* [See def.]

1. The heroine in the romance of the *Myrror of Knighthood.*

2. A mistress, a concubine.

lĭn-dăck'-ĕr-īte, *s.* [Named after Lindacker, who analysed it; suff. *-ite* (*Min.*).]

Min.: An orthorhombic mineral occurring in rosette-like groups of oblong rhombic tables, also in reniform masses. Hardness, 2 to 2·5. Lustre, vitreous. Colour, verdigris to apple-green; streak, paler. Compos.: arsenic acid, 28·58; sulphuric acid, 6·44; oxide of copper, 36·34; oxide of nickel, 16·15; protoxide of iron, 2·90; water, 9·32, corresponding to the formula, $2(CuO)_3AsO_5 + (NiO)_2SO_3 + 7HO$. Found near Joachimsthal, Bohemia.

lĭn'-dĕn, *s.* [The adjectival termination from A.S. & Mid. Eng. *lind* = the lime-tree; Dan., Sw., & Icel. *lind;* Ger. & Dut. *linde.*]

Bot., &c.: The lime-tree, *Tilia europœa.* [LIME (2).]

"Carved its framework out of *linden*."
Longfellow: Hiawatha, xi.

lĭn'-dĕn-blôomş, *s.* [Eng. *linden*, and *blooms.*]

Bot.: The name given by Lindley to the order Tiliaceæ (q.v.).

lĭn-dĕr'-nĭ-a, *s.* [Named after Lindern, a Swiss botanist.]

Bot.: The typical genus of the sub-tribe Linderniæ (q.v.). *Lindernia pyxidaria* is a small annual with pale pink or white flowers, found in continental Europe.

lĭn-dĕr-nĭ-ē'-æ, *s. pl.* [Mod. Lat. *lindernī(a);* Lat. fem. pl. adj. suff. *-eæ.*]

Bot.: A sub-tribe of Scrophulariaceæ, tribe Gratioleæ.

lĭn'-dĭ-a, *s.* [Fem. of Lat. *Lindius* = of or belonging to Lindus, now Liudo, a town in Rhodes (?).]

Zool.: A genue of Rotifera. It has a vermiform body, rounded iu front, uo rotary organ, cilia, or eye, and a tail-like foot with two conical short segmeuts at the end.

lĭn'-dĭ-form, *a.* [Mod. Lat. *lindi(a)* (q.v.), and Lat. *forma* = form.]

Zool.: Of the form possessed by the rotifers of the genus Lindia (q.v.). (Used of larvæ.)

lĭnd'-leў-a, *s.* [Named after John Lindley, Ph.D., F.R.S., Prof. of botany in University College, London, and author of many botanical works.]

Bot.: A genus of Rosaceæ, tribe or family Quillaiæ or Quillaiadæ. *Lindleya mespiloides* is a pretty dwarf evergreen tree with large white flowers, as sweet-scented as those of the hawthorn. It is wild in Oaxaca. It may be grafted in the common thorn or the larger kiuds of cotoncaster. (*Paxton.*)

lĭnd'-şæ-a, *s.* [Named after Mr. Lindsay, an English writer on the germination of mosses.]

Bot.: The typical genus of the subtribe Lindsæeæ (q.v.). The sorus is inframarginal, contiuuous; the indusium linear, parallel to the margiu of the leaf, free outside. Veins dichotomous.

lĭnd-şæ'-ē-æ, *s. pl.* [Mod. Lat. *lindsæ(a);* Lat. fem. pl. adj. suff. *-eæ.*]

Bot.: A subtribe of Polypodiaceons Ferns with iudnsiate sori.

lĭnd'-şaў-īte, *s.* [Named by N. Nordenskiöld. Etym. donbtful, but prob. after one Lindsay; suff. *-ite* (*Min.*).]

Min.: A mineral belonging to the species Anorthite, and regarded as an altered Lepolite. It is found in large crystals at Orijärfoi, Finland. Hardness, 3·5; sp. gr. 2·796 to 2·83. Colonr, on the exterior, black. [ANORTHITE, LEPOLITE.]

līne (1), * lyne (1), *s.* [A.S. *line* = a cord, froiu Lat. *linea* = a string of hemp or flax, from *lineus* = hempen; *linum* = flax; Fr. *ligne;* Ital. & Sp. *linea;* Port. *linha;* Dan. *linie, line;* Sw. *linie, lina.*]

21. *Visual line:* [LINE, *s.*, II. 3].

line-engraving, *s.* A name given to a method of engraving on steel and copper plates, by which all the effects are produced by lines cut into the plate by the graver. It differs from etching, in which also the effects are produced by lines, in the method of producing them. In the latter the lines are scratched upon a preparation on the surface of the plate, and bitten in with acid.

line-formation, *s.*

Mil.: The disposition of soldiers on a wide front and shallow depth as compared with columnar formations with narrow front and great depth. It was first extensively used by Frederick the Great, battalions being in three ranks but in line. He moved in columns of companies across the enemy's front, and wheeled into line opposite his flank in order to attack. French formations were always more or less columnar for attack, but in the early Napoleonic wars the columns were at deploying interval, so as to form line if required for defence. British formations formerly were usually line in two ranks, both for attack and defence. After the campaign of 1870–71, both formations, for attacking purposes, were abandoned, the line being too slow, the column too dense to advance without loss under the fire of breechloaders, and an "attack formation," not dense and yet deep, was substituted.

line-pin, *s.*

Bricklaying: A pin used by bricklayers to hold the line by which the bricks are laid. Its pointed end is forced into a mortar-joint of the building.

line-rocket, *s.*

Pyrotech.: A small rocket made to run along an extended wire or line.

line-winder, *s.* A reel for a clothes-line, a chalk-line, a log-line, &c.

line-wire, *s.*

Teleg.: The wire connecting stations. They are usually of iron, on account of its comparative cheapness and its tenacity, which allows a long reach between posts.

line (2), * **lin,** * **lyne** (2), *s.* [A.S. *lin*, from Lat. *linum* = flax.] [LINEN.]

* 1. *Ord. Lang.:* Flax, linen.

linga-purana, *s.*

Hindoo Liter.: A purana (q.v.) in which the worship of the linga is advocated.

"Unless this pillar is what is represented in the *linga-purana,* I do not know what it is."—*Fergusson: Tree & Serpent Worship,* p. 208.

lĭn'-găm, lĭn'-gą, *s.* [Mahratta, &c. *linga,* from Sansc. *lingam* = (1) a mark, (2) the male organ of generation, (3) gender.]

Compar. Relig.: The male generative organ, worshipped by the Hindoos as the emblem and even personification of Siva, to whose worship the temple of Elephanta, the chief place of this cult, is dedicated. [GROVE, PHALLUS-WORSHIP, NATURE-WORSHIP.] It is a small conical stone, placed on a pedestal. Adoration of the lingam is probably of Turanian origin, though now constituting a part of Aryan worship in India.

"Nothing is more common than to connect the worship of the *lingam* with the impurities with which the Hindu religion is only too justly reproached. This, however, is a mistake. The worship of Siva is too severe, too stern, for the softer emotions of love, and all his temples are quite free from any allusion to it."—*Fergusson: Tree & Serpent Worship,* p. 76.

lĭn-gā'-yat, *s.* [Mahratta, &c.] A Hindoo sect whose object of worship is the lingam. They are common in Western and Southern India.

"His awl and *lingel* in a thong."
Drayton: Pastorals, ecl. iv.

3. A thong of leather.

*** lĭn'-ġençe,** *s.* [Lat. *lingens,* pr. par. of *lingo* = to lick.] A medicine or preparation to be taken by licking; a lincture.

lĭn'-gĕr, * lin-gre, *v.i. & t.* [Mid. Eng. *lengen* = to stay, to linger, from A.S. *lengan* = to put off, to prolong, from *lang* = long, frequent. suff. *-er;* Icel. *lengja* = to lengthen, from *langr* = long; Ger. *verlängern* = to prolong, from *lang* = long; Dut. *verlengen* = to prolong, *lengen* = to lengthen.]

A. *Intransitive:*

1. To delay, to loiter, to wait, to tarry, to remain; to be slow in moving.

"And while he *lingered,* the men laid hold upon his hand."—*Genesis* xix. 16.

2. To remain inactive in expectation of something.

"We have *lingered* about a match between Ann Page and my cousin Slender."—*Shakesp.: Merry Wives of Windsor,* iii. 2.

* 3. To be slow in deciding; to hesitate; to be in suspense.

4. To remain long in any state; to be protracted: as, a *lingering* illness.

*** B.** *Transitive:*

1. To delay, to put off, to defer.

"She *lingers* my desires."
Shakesp.: Midsummer Night's Dream, i. 1.

2. To spend wearily, to protract.

"Far from gay cities and the ways of men,
I *linger* life; nor to the court repair."
Pope: Homer; Odyssey xiv., 411.

lĭn'-gĕr-ĕr, *s.* [Eng. *linger; -er.*] One who lingers or delays.

"The viewless *lingerer,* hence, at eveuing, sees
From rock-hewn steps the sail between the trees."
Wordsworth: Descriptive Sketches.

lĭn'-gĕr-ĭng, *pr. par. & a.* [LINGER.]

A. *As pr. par.:* (See the verb).

B. *As adjective:*

1. Delaying, tardy, loitering, slow.

"With fiercer shouts his *lingering* troops he fires."
Pope: Homer; Iliad bk. xvii., 194.

2. Remaining as loth to depart.

"No vernal blooms their torpid rocks array,
But winter *lingering* chills the lap of May."
Goldsmith: Traveller.

3. Drawn out in time; protracted, slow: as, a *lingering* disease.

4. Slow in taking effect: as, a *lingering* poison.

lĭn'-gĕr-ĭng-lў, *adv.* [Eng. *lingering; -ly.*] In a lingering manner; slowly, tediously.

"Unless chronical diseases do *lingeringly* destroy it."—*Boyle: Works,* i. 368.

*** lĭn'-gĕr-lў,** *adv.* [Eng. *linger; -ly.*] Lingeringly.

"She sang the refrain very low, very *lingerly.*"—*C. Brontë: Jane Eyre,* ch. iii.

*** lĭn'-gĕt, * lĭn'-gŏt,** *s.* [Fr. *lingot.*] [INGOT.] An iron mould for casting metals; a small mass of metal; an ingot.

"Iron *lingots* quenched with vinegar."—*Camden: Remaines (Monie).*

Lĭng'-ĭsm, *s.* [For etym. see def.]

Therap.: The system introduced by Peter Henry Ling, a Swedish poet (1776-1830), with a view to the physical and moral improve-

ment of the human race. It consists of physical exercises, joined with the study of music and poetry. (*Larousse.*)

lĭn'-gle, *s.* [LINGEL.]

lĭn'-gō, *s.* [Port., from Lat. *lingua* = a tongue.] A tongue, language, speech, dialect.

"I wished to learn something respecting the mysterious Romany *lingo*, so little known."—*Daily Telegraph*, Sept. 29, 1883.

lĭn-guạ (gu as gw), *s.* [Lat.]

Entom.: A tongue formed by a development of the central portion of the ligula. It is very distinct in bees.

lĭn-guā'-cious (gu as gw), *a.* [Lat. *linguax* (genit. *linguacis*), from *lingua* = a tongue.] Fond of using the tongue; talkative, loquacious.

***lĭn-guạ-dĕn'-tạl (gu as gw),** *a.* & *s.* [Lat. *lingua* = the tongue; *dens* (genit. *dentis*) = a tooth, and Eng. adj. suff. *-al.*]

A. *As adj.:* Formed or uttered by the joint action of the tongue and teeth, as the letters *d* and *t*.

B. *As subst.:* A sound or letter formed or uttered by the joint action of the tongue and teeth.

"The *linguadentals*, th, dh, he will soon learn."—*Holder: Elem. of Speech.*

***lĭn'-guạ-form (gu as gw),** *s.* [LINGUIFORM.]

lĭn'-guạ frănk'-cạ (gu as gw), *s.* [Ital. = a free tongue.] A tongue which will enable one to be intelligible over a wide extent of country, even though it may not be the language of the districts over which he passes. The Hindustani is a lingua franca; it is intelligible over India, though there are at least twelve other widely spoken languages there, with many minor ones or dialects.

"That clear, simple, graceful, flexible, and all-expressive Urdu speech, which is even now the *lingua franca* of most parts of India, and the special favourite of the ruling race."—*Beames: Comp. Gram. Aryan Lang. of India* (1872), i. 121.

lĭn'-gual (gu as gw), *a.* & *s.* [As if from a Lat. *lingualis*, from *lingua* = the tongue.]

A. *As adjective:*

1. Of or pertaining to the tongue: as, the *lingual* nerves.

2. Formed by the meane of the tongue.

"We get at once the *lingual* sound."—*Beames: Comp. Gram. Aryan Lang.* (1872), i. 217.

B. *As subst.:* A letter or sound produced by means of the tongue: as *sh, zh.*

"The connection between dentals and cerebrals rests on the principle . . . that these two classes of sound are really the weaker and stronger branches respectively of one and the same group, which, as being produced by the instrumentality of the tongue, may be comprehended under the general name of *linguals*."—*Beames: Comp. Gram. Aryan Lang.* (1872), i. 219.

lingual-artery, *s.*

Anat.: A branch of the external carotid, which supplies the under surface of the tongue, and, meeting its fellow on the opposite side, unites at the tip of the tongue to form the ranine artery.

lingual-ribbon, *s.*

Zool.: One of the names for the masticatory apparatus in Gasteropodous Molluscs. Called also the Tongue, Odontophore, or Radula (q.v.).

lingual-teeth, *s. pl.*

Zool.: Amber-coloured, glossy, and translucent recurved spines on the muscular "lingua" or tongue of certain molluscs, as Trochus, Cypræa, &c.

lĭn-guăt'-ụ-lạ (gu as gw), *s.* [Fem. dimin. of Lat. *linguatus* = gifted with a tongue.]

Zool.: The typical genus of the order Linguatuliua (q.v.).

lĭn-guăt-ụ-lī'-nạ (gu as gw), *s.* [Mod. Lat. *linguatul(a)*; Lat. neut. pl. adj. suff. *-ina.*]

Zool.: An order of Arachnida. The animals are so vermiform that they have sometimes been placed with the intestinal worms, but in the immature state they resemble Acari, except that the legs are only four. The male is much smaller than the female. They are ringed and flattened, with a mouth furnished with a horny ring and two horny hooks, one on each side. They are parasitic in the frontal sinuses and lungs of various mammals, and in the lungs of some reptiles. About twenty species have been described, the best known being *Pentastoma tæniodes*, which infects the dog and the wolf.

lĭn'-guĕt, *s.* [Fr.]

1. A tongue; a languet.

2. The picce of a sword-hilt which turns down over the mouth-piece of a scabbard.

lĭn'-guĭ-form, *lĭn'-guạ-form (gu as gw), *s.* [Lat. *lingua* = a tongue and *forma* = form, shape, appearance.] Having the form or shape of a tongue.

lĭn'-guĭst (gu as gw), *s.* [Lat. *lingu(a)* = a tongue; Eng. suff. *-ist.*]

1. One who is skilled in languages; one who can speak several languages.

"He was a *linguist*, a mathematician, and a poet."—*Macaulay: Hist. Eng.*, ch. xiii.

*2. A master of language or convereation; one skilled in tongue-fence.

† **lĭn'-guĭst-ĕr (gu as gw),** *s.* [Eng. *linguist; -er.*] One who dabbles in linguistics; a linguist, a philologer.

"He who writes to be read does not write for *linguisters*."—*J. R. Lowell*, in *Annandale.*

lĭn-guĭs'-tĭc, lĭn-guĭs'-tĭc-ạl (gu as gw), *a.* [Eng. *linguist; -ic, -ical.*] Of or pertaining to language or linguistics.

"The philologist justly assigns these tongues a low position in the *linguistic* scale."—*Brinton: Myths of the New World*, ch. i.

lĭn-guĭs'-tĭcs (gu ae gw), *s.* [LINGUISTIC.] The science of languages, or of the comparative grammar and etymology of words.

"The science of American *linguistics* is still in its infancy."—*Brinton: Myths of the New World*, ch. i.

lĭn'-gu-lạ, *s.* [Lat. = a strap, a little tongue, from *lingua* = a tongue, which the shell resembles.]

Zool. & Palæont.: The typical genus of the family Lingulidæ (q.v.). The shell is oblong, compressed, obliquely gaping at each end. Recent species, sixteen, from India, the Eastern Islands, Australia, Polynesia, and the West of America. Fossil ninety-one from the Lower Silurian till now. Lingulæ existed in the British seas as late as the Coralline Crag.

lingula-flags, *s. pl.*

Geol.: Micaceous flagstones and slates, 5,000 feet in thickness, of Upper Cambrian age, lying just below the Tremadoc slates in North Wales, and palæontologically the equivalent of Barrande's primordial zone. In 1846 Mr. E. Davis discovered in them the Lingula (now removed to the genus Lingulella), from which they are named. About forty fossils are found in the Lingula slates, only four of which continue in the Tremadoc rocks. Besides *Lingulella Davisii*, there are a Phyllopod Crustacean (*Hymenocaris vermicauda*), and a trilobite (*Olenus micrurus*). Ashy tuffs are interstratified with the Lingula beds. (*Lyell.*)

lĭn'-gu-lāte, *a.* [Lat. *lingulatus*, from *lingula* = a strap, dimin. of *lingua* = a tongue.] Shaped like the tongue or a strap; ligulate, linguiform.

lĭn-gū'-lĭ-dæ, *s. pl.* [Mod. Lat. *lingul(a)*; Lat. fem. pl. adj. suff. *-idæ.*]

Zool. & Palæont.: A family of Brachiopoda. The shell oblong or orbicular, subequivalve, attached by a pedicle passing out between the valves; texture horny, minutely tubular. Animal with a highly vascular mantle, fringed with horny setæ, oral arms, thick, fleshy, spiral. Genera, Lingula and Obolus.

lĭng'-wŏrt, *s.* [Eng. *ling* and *wort.*]

Bot.: An unidentified plant. Johnson simply defines it as "an herb."

lĭng'-ў (1), *a.* [Prob. connected with *long* (q.v.).]

1. Tall, limber, flexible. (*Prov.*)

2. Active, strong; able to bear fatigue.

***lĭng'-ў** (2), *a.* [Eng. *ling* (2); *-y.*] Heathy, heathery.

"His cell was upon a *lingy* moor."—*Ward: England's Reformation*, p. 396.

lĭn-hāy', *s.* [Etym. doubtful.] A shed open at the sides, commonly used to run waggons and carts into when they are not in use. The word is also applied to a similar shed erected for occasional shelter for cattle on exposed pastures.

"Home-side of the *linhay*, and under the ashen hedge-row."—*R. D. Blackmore: Lorna Doone*, ch. iii.

***lĭ-nĭg'-ĕr-oŭs,** *a.* [Lat. *linum* = flax, hemp; *gero* = to carry, and Eng. adj. suff. *-ous.*] Bearing or producing flax or linen.

lĭn'-ĭ-mĕnt, *s.* [Fr., from Lat. *linimentum* = an ointment, from *lino* = to smear; Ital., Port., & Sp. *linimento.*]

Med.: A soft or thin ointment; a substance or preparation thinner than an ointment but thicker than oil. A stimulating preparation for external application. Garrod enumerates eixteen linimenta (liniments) as used in British practice. They are: *linimentum aconiti, l. ammoniæ, l. camphoræ, l. saponis*, &c.

lĭ'-nĭn, *s.* [Lat., &c. *lin(um)* (q.v.); Eng. suff. *-in.*]

Chem.: A crystallizable substance obtained from *Linum catharticum*, commonly known as Purging flax. It is extracted with ether, from which it separates as white crystals of a silky lustre. It dissolves in alcohol, and is persistently bitter.

lĭn'-ĭng, *pr. par., a., & s.* [LINE, *v.*]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As substantive:*

I. *Ordinary Language:*

1. The act of covering on the inside.

2. The act of ranging, as a body of men, in a line aloug or by the side of anything.

3. The covering of the inside of anything, as of a dress, a box, &c.

"The fold in the gristle of the nose is covered with a *lining*, which differs from the facing of the tongue."—*Grew: Cosmologia.*

4. That which is within; contents.

"The *lining* of his coffers shall make coats."
Shakesp.: Richard II., i. 4.

II. *Technically:*

1. *Hydraul. Engin.:* Puddle laid on the sides of a canal, to prevent the percolation of water.

2. *Join.:* Inside boarding; in contradistinction to outside sheathing or boxing, called casing. A covering of an interior surface, such as the boxing of window-shutters, the facings on each side of a doorway, &c.

3. *Metall.:* The fixing or protecting stuff on the boshes of a puddling-furnace; the inside surface material of a blast-furnace (q.v.).

lĭnk (1), *s.* [A.S. *hlence, hlenca*; cogn. with Icel. *hlekkr* = a link; Dan. *lanke* = a chain, a fetter; Sw. *länk* = a link; Ger. *gelenk* = a joint, a link, a ring; *lenken* = to turn, to bend; connected with A.S. *h'inc* = a ridge, a balk; *kring* = a ring.]

I. *Ordinary Language:*

1. *Literally:*

(1) A short connecting piece of circular or other equivalent shape, as one of the oval rings or divisions of a chain.

"Cracking ten thousand curbs
Of more strong *links* asunder, than can ever
Appear in your impediment."
Shakesp.: Coriolanus, i. 1.

(2) Anything doubled and closed together, like a link.

"Make a *link* of horse-hair very strong, and fasten it to the end of the stick that springs."—*Mortimer: Husbandry.*

(3) (*Pl.*): A chain.

"Nor airless dungeon, nor strong *links* of iron
Can be retentive to the strength of spirits."
Shakesp.: Julius Cæsar, i. 3.

* (4) A sausage; so called because they are made in a continuous chain.

"Plenty of *links*, chitterlings and puddings."—*Urquhart: Rabelais*, bk. i. ch. iii.

2. *Figuratively:*

(1) Anything which connects; a bond.

"I feel
The *link* of nature draw me."
Milton: P. L., ix. 914.

(2) Anything which servce to conuect one thing or one part of a thing with another; any componeut part of a connected series.

"The proof is not a conclusion which lies at the end of a chain of reasoning, of which chain each instance of contrivance is only a *link*, and of which, if one *link* fail, the whole fails."—*Paley: Nat. Theol.*, ch. vi.

* (3) A series.

"I have here only chosen this single *link* of martyrs."—*Addison: On the Christian Religion.*

3. A winding or meandering of a river. (*Scotch.*)

II. *Technically:*

1. *Mach.:* A short connecting bar with a bearing in each end, for transmitting motion from one rod or lever to another.

2. *Surv.:* The length of one section of Gunter's chain, 7·92 inches, the 100th part of 66 feet; 10,000 square links make a statute acre.

3. *Steam Engin.:* The link-motion (q.v.).

link-lever, *s.*

Rail. Engin.: The reversing lever of a locomotive.

link-motion, *s.*

Steam Engin.: Gear by which the valve is operated in locomotives and similar engines. It acts as a variable cut-off, or reverses the steam, or renders the valve inactive, as may be required. It consists of two eccentrics and their rods, one for the forward and the other for the backward eccentric: the outer ends of the rods are connected by a slot link (hence the name), and the end of the valve-rod works in the slot. The steam-valves are partially opened, quickly closed again, so that the admission of steam ceases some time before the termination of the stroke, and the steam, being cut off, is worked expansively. The nearer the slide is to the middle of the slot, the quicker is the cut-off.

link-work, *s.* Work in which motion is communicated by connecting pieces.

link-worming, *s.*

Navt.: Worming a cable by chains inserted in the interstices of the strands.

lĭnk (2), *** lĭnck,** *s.* [A corrupt. of *lint*, as in *lintstock* or *linstock* (q.v.).] A torch made of tow and pitch, or of combustible splinters, such as of pitch-pine.

"Nymphidius supposing the souldiers had called him, went thither himselfe without torches and *lincles*."—*Savile: Tacitus; Hist.*, p. 10.

lĭnk (I), *v.t. & i.* [Link (1), *s.*]

A. *Transitive:*

1. To connect together, as with a link or chain; to couple.

"With *linked* thunderbolts
Transfix us to the bottom of this gulph."
Milton: P. L., i. 328.

2. To join together or unite in concord, confederacy, or contract.

"If with a lady of so high resolve,
As is fair Margaret, he be *link'd* in love."
Shakesp.: 1 *Henry VI.*, v. 5.

3. To connect as concomitant or mutually dependent.

4. To connect in a regular series of consequences.

* **B.** *Intrans.:* To be joined or united; to be connected.

"I were loth
To *link* with him that were not lawful chosen."
Shakesp.: 3 *Henry VI.*, iii. 3.

lĭnk (2), *v.i.* [Etym. doubtful.] To walk or trip along quickly. (*Scotch.*)

"[She] coost her duddies to the wark,
And *linkit* at it in her sark!"
Burns: Tam O'Shanter.

† lĭnk'-bŏy, lĭnk'-măn, *s.* [Eng. *link* (2), s., and *boy*, or *man*.] A boy or man who carries a link or torch to light foot passengers at night or in a fog.

"Though thou art tempted by the *linkman's* call,
Yet trust him not along the lonely wall."
Gay: Trivia, iii. 139.

lĭnks, *s. pl.* [A.S. *hlinc* = a ridge, a balk of land left unploughed; a linch.] Flat, sandy ground on the sea-shore, covered with bent, furze, &c., and frequently used for the game of golf. Used here to denote the field where golf is played without regard to such location or surroundings.

linn, *s.* [Lin, *s.*] A waterfall, a precipice.

"Whyles owre a *linn* the burnie plays,
As thro' the glen it wimpl't."
Burns: Halloween.

Lĭn-næ'-a, *s.* [Named by Dr. J. Gronovius after Linnæus, with the sanction of the great botanist himself, who preferred having his name attached not to a showy plant, but to this lowly Northern flower.]

Bot.: A genus of Caprifoliaceæ, tribe Loniceræ. The calyx limb is five-cleft; the corolla campanulate, five-cleft, with equal segments; the stamens four, didynamous; the fruit a dry, three-celled berry, one cell only having a perfect seed. Only known species, *Linnæa borealis*. It is a small plant, with twisting, filiform-branched stems; opposite, broadly-ovate, stalked leaves; axillary peduncles of two, three, or four flowers, rarely fruiting. It is a Northern plant, found wild in Britain in fir forests, in plantations in the middle and east of Scotland; doubtfully indigenous elsewhere. Abroad it occurs from Lapland to Northern Italy, Arctic Asia, and North America.

Lĭn-næ'-an, Lĭn-nē'-an, *a.* [After *Linnæus.*] Of or pertaining to Linnæus; invented or introduced by Linnæus.

Linnæan Society, *s.* A society founded to carry out those botanical and zoological investigations, with regard to which Linnæus, in his *Systema Naturæ*, had led the way. It was founded in 1788, and incorporated on March 26, 1802. In 1791 it began to publish *Transactions*.

Linnæan-system, *s.*

Bot.: The sexual system of botany introduced by Linnæus, which, though unequalled for the aid it affords in finding the name of a flower, yet labours under the fatal defect that it is purely artificial. Previous to his time, Jung, rector of the gymnasium at Hamburgh, who died in 1657, had introduced the Latin botanical nomenclature. Tournefort, who died in 1708, had been the first to classify plants into strictly defined genera. It remained for Linnæus to arrange them, and define the several genera and species scientifically. He divided the vegetable kingdom into twenty-four classes. The first eleven were founded on the number of stamens. They were: Monandria, Diandria, Triandria, Tetrandria, Pentandria, Hexandria, Heptandria, Octandria, Enneandria, Decandria, and Dodecandria; the twelfth and thirteenth, Icosandria and Polyandria, on their number and insertion; the fourteenth and fifteenth, Didynamia and Tetradynamia, on their number and relative lengths; the sixteenth to the eighteenth, Monadelphia, Diadelphia, and Polyadelphia, on the way in which they are combined; the nineteenth, Syngenesia, on the aggregation of the flowers; the twentieth, Gynandria, on the abnormal situation of the stamens; the twenty-first to the twenty-third, Monœcia, Diœcia, and Polygamia, on the existence, more or less, of unisexual flowers; and the twenty-fourth, Cryptogamia, grouping together all plants of concealed nuptials, in other words, all flowerless plants. As a rule, the orders were founded on the number of pistils; hence the words Monogynia, Digynia, Trigyia, &c. In other cases, when the classes were not founded on the number of stameus, Pentandria and Decandria, &c., were used as orders. For the orders of the exceptional classes, Tetradynamia and Polygamia, see these words. Linnæus himself, in his *Philosophia Botanica*, published in 1751, laid the foundation of a Natural System by establishing sixty-eight orders of plants linked together according to what he believed their proper affinities.

Lĭn-næ'-īte, *s.* [Named after Linnæus by Haidinger; suff. *-ite* (*Min.*); Ger. *Linneit.*]

Min.: An isometric mineral, occurring in two varieties: (1) cupriferous, to which Haidinger's name was originally given; and (2) a nickeliferous variety. Cleavage, cubic. Found in octahedrons and also massive. Hardness, 5·5; sp. gr. 4·8 to 5; lustre, metallic; colour, steel-gray; streak, blackish-gray; fracture, uneven. Compos.: variable, but represented by the formula $2CoS + CoS_2$, which equals sulphur 42·0, cobalt 58·0. The cobalt is frequently partly replaced by nickel or copper. Found in gneiss at Bastnaes, Sweden, and at Siegen, Prussia.

LINNET.

lĭn'-nĕt (1), * lyne, *s.* [Fr. *linotte* = a linnet, from *lin*, Lat. *linum* = flax, so called from its feeding on the seed of flax and hemp; Ger. *leinfinke* = a flax-finch.] [Linnwhite.]

Ornithology:

1. *Sing.:* *Fringilla cannabina* (Linn.), the *Linota cannabina* of more recent ornithologists, a very common and well known song-bird, frequenting all Europe south of 64°, and in Asia extending to Turkestan. It is a winter visitor to Egypt and Abyssinia, and is found in great numbers in Barbary, the Canaries, and Madeira. It frequents open places, preferring commons and fields of furze. In autumn and winter the plumage is brown; in the breeding season, the breast and head of both sexes becomes a crimson-red, varying only in degree. The (later) generic and specific names have reference to the fondness of the bird for the seeds of flax and hemp. It is popularly known, according to its sex and the season of the year, as the Red, Gray, or Brown Linnet.

"Perchance the patron of his vow
Some artless *linnet* sings."
Shenstone: Valentine's Day.

2. *Pl.:* The genus Linota (q.v.).

lĭn'-nĕt (2), *s.* [A corrupt. of Fr. *lunette.*] (See the compound.)

linnet-hole, *s.*

Glass: A hole connecting the glass-melting furnace with the arch.

lĭn-ō-lē'-ĭc, *a.* [Lat., &c. *lin(um)* (q.v.), and Eug. *oleic.*] (See the compound.)

linoleic-acid, *s.*

Chem.: $C_{16}H_{28}O_2$. An acid occurring in linseed and poppy oils. It is obtained by saponifying the oil, extracting with ether, decomposing the soluble soap with an acid, and evaporating the ethereal solution to dryness. It is a faint, yellow, oily liquid, of a sp. gr. 0·9206. It absorbs oxygen with avidity, and becomes converted into a resinoid, Oxy-linoleic acid.

lĭn-ō'-lĕ-ŭm, *s.* [Lat. *linum* = flax, and *oleum* = oil.]

I. A preparation of linseed-oil, rendered solid by admixture with chloride of sulphur. It is rolled into sheets, and used as a substitute for india-rubber or gutta-percha. Vulcanized, it is carved into mouldings and polished; and, mixed with ground cork and pressed upon canvas, it forms a kind of floor-cloth. Dissolved, it is used as a varnish for waterproof fabrics, or as a paint for iron or wood, ships' bottoms, &c.

2. The floor-cloth so prepared.

lī-nō-syr'-ĭs (yr as ĭr), *s.* [Lat. *linum*; Gr. λίνον (*linon*), and Lat. *syrus* = a broom, a besom.] [Linum.]

Bot.: Goldylocks; a genus of Composites, suborder Solidagineæ. The achenes are compressed and silky, the pappus in a double row pilose, the involucre of one row of scales, surrounded by several long ones, or imbricated; the florets all perfect, deeply five-cleft, yellow. Ten species known from Europe and the West of Asia. *Linosyris vulgaris*, the Flax-leaved Goldylocks, is British. It is found on limestone cliffs in the South of England, but is rare.

lī-nō'-ta, *s.* [Mod. Lat., from Fr. *linot* = a linnet (q.v.).]

Ornith.: Linnets. A term proposed by Prince Charles Bonaparte, in his *Geographical and Comparative List of the Birds of Europe and North America*. By this classification, the Linnets are admitted to generic distinction among the finches. The bill is straight, conical, and pointed; the nostrils, basal, lateral, concealed by short feathers; wings long, somewhat pointed; the first, second, and third feathers nearly equal in length; the tarsi short; the lateral toes of equal length. Third toe and claw are long, as is that in the middle; claws slender, acute, and curved; tail forked. Linnets are common and widespread in Europe and in Northwest Africa. They are good singers, are easily educated, and are often kept as cage birds. They are known by various names, as the Red or Rose Linnet, the Green Linuet, the Mealy Redpole, &c.

*** lī'-noŭs,** *a.* [Eng. *lin(e)* (1), s.; *-ous.*] Pertaining to or in a line.

lĭn'-pĭn, *s.* [Linch-pin.]

lĭn'-saŋg, *s.* [Javanese.]

Zool.: A genus of Viverridæ. *Linsang gracilis* is found in Java.

lĭn'-seed, * lynne-seed, * lin-ced, *s.* [Mod. Eng. *lin* = flax, and Eng. *seed.*]

Chem.: The seed of the flax-plant (*Linum usitatissimum*). It is grown in various countries, but chiefly in the North of Europe. Its composition varies considerably, but the following is the average proportion in which the principal constituents are present:—Albuminous substances, 30 per cent.; fat and oil, 32 per cent.; mineral matter, 4 per cent.; water, 10 per cent. It also contains a large quantity of mucilage in the outer layers of the cells of the epidermis, which swells up when the seed is macerated in water. One part of linseed in sixteen parts boiling water yields a mucilage thick enough to be drawn into threads. The chief ash constituents are lime, potash, and iron, partly as phosphates and partly united in the ash with carbonic acid. The residue obtained after expressing the fixed oil forms the principal oil-cake of commerce.

linseed-cake, *s.* The caked or solid mass left after the oil has been pressed out of flax-seed. It is largely used as food for cattle. Also called OIL-CAKE (q.v.).

linseed-meal, *s.* Pulverized or ground linseed, used for poultices.

linseed-mill, *s.* A mill for grinding flax-seed for oil.

linseed-oil, *s.*

Chem.: The fixed oil expressed from linseed. Linseed-oil consists of the glycerides of linoleic, palmitic, and stearic acids, about nine-tenths of the whole being the glyceride of linoleic acid. It may be taken as the type of the class known as *drying oils*, from their property of drying up into a transparent, tough, resinous mass when exposed to the air. When the oil is boiled for some time, till it loses about one-sixth of its weight, it becomes thicker, tenacious, and viscid, and dries up, still more readily than in the fresh state, into a turpentine-like mass, scarcely soluble in oils. It then forms the basis of printers' and painters' varnishes. The freshly pressed oil has a pale yellow colour, and is without disagreeable taste; but the commercial oil has often a sharp, penetrating smell and taste. It has a sp. gr. of ·9335 at 15°, and becomes solid at 20° to 27°. Linseed-oil, mixed with chloride of sulphur, forms caoutchouc-like products. A drop of strong sulphuric acid forms a yellow-brown spot, quickly changing to black, with ropy consistence. Linseed-oil yields, with alkalis, a very soft soap, and is acted on with facility by oxidizing agents generally. It is often found largely adulterated with other oils, such as cotton-seed oil, rosin oil, &c.

lĭn'-sĕ-īte, *s.* [LINDSAYITE.]

lĭn'-sey, *s.* [Mid. Eng. *lin* = linen; suff. *-sey.*] A country-made fabric of linen warp and worsted filling, undressed; linsey-woolsey.

linsey-woolsey, *a.* & *s.*

A. *As adjective:*

1. *Lit.:* Made of linen and wool mixed.

2. *Fig.:* Made up of different materials; neither one thing nor the other; vile, mean.

"A lawless, *linsey-woolsey* brother."
Butler: Hudibras, pt. i., c. iii.

B. *As substantive:*

1. *Lit.:* A fabric made of linen and wool mixed; linsey.

* 2. *Fig.:* A motley composition; a galimatia; jargon.

"What *linsey-woolsey* hast thou to speak to us?"
Shakesp.: All's Well That Ends Well, iv. 1.

***lĭn'-stŏck, *lĭnt'-stŏck,** *s.* [Dut. *lontstok*, from *lont* = a match, *stok* = a stick; cogn. with Dan. *lunte-stok*, from *lunte* = a match, *stok* = a stick; Sw. *lunt-stake*, from *lunta* = a match, *stake* = a stick.] A gunner's forked staff to hold a match of lint dipped in saltpetre.

LINSTOCKS.

"The gunner held his *linstock* yare,
For welcome-shot prepared."
Scott: Marmion, i. 9.

lĭnt, * lynt, *s.* [Mid. Eng. *lin* = flax.] [LINE (2), *s.*]

1. Flax.

2. Ravelled or scraped linen reduced to a soft state and used for dressing wounds or ulcers. As formerly prepared, it consisted of scrapings from the surface of old linen cloth, which was drawn beneath a knife, the weft-threads being pushed back from time to time, and the scrapings being obtained from the threads of the warp.

3. Fine fluff or flue.

lint-doctor, *s.* A sharp-edged ruler on the delivery side of the calico-printing cylinder, to detain any lint or fibres which may come off the cotton cloth.

*** lint-scraper,** *s.* A young surgeon.

lĭn'-tel, * lyn-tel, * lin-tell, *s.* [O. Fr. *lintel*; Fr. *linteau*, from Low Lat. *lintellus*, from *limitellus*, dimin. of *limes* (genit. *limitis*) = a border.]

Arch.: A piece of timber or stone laid horizontally over a doorway or window.

"Take a bunch of hyssop, and dip it in the blood that is in the bason, and strike the *lintel* and the two side-posts."—*Exodus* xii. 22.

lĭn'-tŏn-īte, *s.* [Named after Miss L. A. Linton, who analyzed it; suff. *-ite* (*Min.*).]

Min.: A variety of Thomsonite (q.v.), having a fine granular structure and green colour. It occurs as pebbles on the shores of Lake Superior. They are derived from the amygdaloidal diabase of Graud Marais.

*** lĭnt'-sēd,** *s.* [LINSEED.]

lĭnt'-white, *s.* [A.S. *linetwige.*] A linnet.

"Oh, sweet are Coila's haughs an' woods,
When *lintwhites* chant among the buds."
Burns: To William Simpson.

lĭnt'-white, *a.* [Eng. *lint*, and *white.*] Flaxen; as white as lint.

"Lassie wi' the *lintwhite* locks." *Burns.*

lĭ'-num, *s.* [Lat., from Gr. *λίνον* (*linon*) = anything made of flax or the flax plant.]

Bot.: The typical genus of the order Linaceæ (q.v.). It consists of herbs or small shrubs with alternate or rarely opposite entire leaves, the stipules wanting or glandular. Flowers in dichotomous panicled racemose or fascicled cymes: sepals five, persistent; petals five; stamens five; styles five; seeds ovate, compressed. Known species eighty. Widely cultivated for economic purposes, though much less so in this country than in parts of Europe and Asia. [FLAX.] The leaves of *L. catharticum* are purgative. *L. selaginoides* is considered in Peru as bitter and aperient. *L. strictum*, a small herbaceous plant with yellow flowers, wild in the Punjaub and Thibet, is cultivated in Afghanistan for its oil, which does not differ essentially from linseed oil.

*** lī'-ŭ,** *a.* [Eng. *lin(e)* (1), s.; *-y.*] Full of lines.

"Their eyes long and *liny.*"—*Hardy: Far from the Madding Crowd*, ch. viii.

lī'-ŏn, * le-on, *s.* [O. Fr. *leon*, from Lat. *leonem*, accus. of *leo* = a lion, from Gr. *λέων* (*leōn*); Fr. *lion*; Sp. *leon*; Ital. *leone*; Ger. *löwe*; O. H. Ger. *leo*, *lewo*; Russ. *lev*; Lith. *lëvas*, *lavas*; Dut. *leeuw.*]

I. *Ordinary Language:*

1. *Lit.:* In the same sense as II. 3.

2. *Fig.:* An object of interest and curiosity; one who or that which excites curiosity.

"He had suddenly risen to literary fame, and become one of the *lions* of the day."—*Irving: Goldsmith*, ch. xviii.

II. *Technically:*

1. *Astron.:* The constellation *Leo* (q.v.).

2. *Her.:* A frequent charge in coat-armour in various attitudes, as *passant*, *gardant*, *rampant*, *salient*, *couchant*, &c. It is one of the supporters of the royal arms of England.

"The *lion* argent decked his breast."
Scott: Lay of the Last Minstrel, iv. 20.

3. *Zool.:* *Felis leo* (formerly elevated into a distinct genus with a single species, *Leo nobilis*), one of the largest and the most important of the living carnivora. Its range in historical time is very wide. The Hebrew Scriptures abound with reference to it, and in the time of Darius, lions were employed to execute judicial sentences (Dan. vi. 16-24). It is mentioned by Homer (*Il.* xviii. 161); Herodotus mentions lions as occurring in Africa (iv. 191), and in Europe (vii. 126), and Theocritus (*Id.* x. 30); by Virgil (*Ecl.* ii. 65), by Ovid (*Her.* x. 85), by Martial in almost every book, and by Catullus in not the least dainty of his songs (*Carm.* lxiii.). It played an important part in the sanguinary games of the Roman amphitheatre, and the cry "Christianos ad leones" had a terrible import for the early church. Its geographical range is now confined to Africa and the south-west of Asia, extending eastward as far as Gujerat. It existed in Europe down to historic times, and formerly ranged over Asia as far as the plains of Upper India. Though now driven from the Cape, the shores of the Mediterranean, and the populous parts of Egypt, it must have been at no distant date common all over Africa, for Murray says (*Geog. Distrib. of Animals*, p. 93), "I am informed by Dr. Kirk that there is no nation or tribe which has not a name for the lion." It varies somewhat in size; but for an adult African male, from snout to tip of tail, ten feet, tail three feet, height at shoulder, three feet six inches, are average measurements. The Gujerat variety is somewhat smaller. It is usually known as the "maneless" lion, but a specimen in the Zoological Gardens, Regent's Park, "was as thoroughly maned as any African individual. In colour lions vary from a deep chestnut-brown to gray, so silvery as to have given rise to the belief that a race of white lions exists in South Africa. The colour of the mane varies equally. In the Nubian lion it is generally pale fulvous, and in Cape lions black, but all intermediate shades are found both in Nubia and the Cape country.'" (*Sclater.*) Mr. F. C. Selous (*A Hunter's Wanderings*, ch. xv.) has also shown that in South Africa the so-called Black-maned lion and others with yellow scanty manes are found among individuals of the same parentage.

4. *Palæont.:* Prof. W. Boyd Dawkins enumerates among the Mid Pleistocene, and again among Late Pleistocene Mammalia of Great Britain *Felis leo*. A *Felis spelæa* was once recognized; it is now deemed not specifically distinct from the common lion. In the Early Pleistocene, Prof. Dawkins has the Sabre-toothed Lion, sometimes called the Sabre-toothed Tiger. [MACHAIRODUS.] (*Quar. Journ. Geol. Soc.*, xxxvi. (1880), 396-399.)

¶ *The Lesser Lion:*

Astron.: The constellation *Leo minor* (q.v.).

lion-ant, *s.*

Entom.: The same as ANT-LION. [MYRMELEON.]

lion-dog, *s.*

Zool.: According to Vero Shaw (*Book of the Dog*, p. 191) *Canis leoninus*, "a degenerate scion of which exists in Malta." Youatt (p. 50) thinks it may be a cross between the Maltese and the hairless Turkish dog. Its hair on the head, neck, and forelegs is very long.

† lion-heart, *s.* One who is lion-hearted.

lion-hearted, *a.* Having great courage.

"Arabian mothers long awed their infants to silence with the name of the *lion-hearted* Plantagenet."—*Macaulay: Hist. Eng.*, ch. i.

lĭ-pæ'-mĭ-a, *s.* [Gr. λίπα (*lipa*) = fat, and αἷμα (*haima*) = blood.]

Pathol.: Fatty matter in the blood.

lĭ-păr'-ĭ-a, *s.* [Apparently not from Gr. λιπαρία (*liparia*) = perseverance; but from λιπαρός (*liparos*) = fatty, oily, shining with oil; unctuous; from the shining surface of the leaves.]

Bot.: The typical genus of the tribe Lipariеæ. The tender stalks and leaves of *Lippia nodiflora,* wild in the Punjaub, is prescribed in infusion to children suffering from indigestion, and to women after delivery.

lĭ-păr'-ĭ-dæ, *s. pl.* [Mod. Lat. *lipar(is);* Lat. fem. pl. adj. suff. *-idæ.*]

1. *Bot.:* A family of Orchids, tribe Malaxeæ.

2. *Entom.:* A family of Moths, group Bombycina. Antennæ longer than the thorax, pectinated in the male; abdomen in the female often very thick; larva and pupa hairy. Known British species twelve, including the Black Arches, the Gipsy, and the Vapourers, with the Gold-tail and Brown-tail Moths. The majority are white, more or less marked with black.

lĭ-păr-ĭ-ē'-æ, *s. pl.* [Mod. Lat. *lipari(a)* (q.v.); Lat. fem. pl. adj. suff. *-eæ.*]

Bot.: A subtribe of Papilionaceous flowers, tribe Loteæ.

lĭp'-ăr-ĭs, *s.* [Prohably from λιπαρός (*liparos*) = unctuous.]

1. *Bot.:* The typical genus of the family Liparidæ (q.v.). The sepals and petals are spreading, with linear segments, the lip superior or inferior, the column elongated, the pollen masses four, waxy, with evanescent glands. Known species thirty-three. One, *Liparis Loeselii,* is British, being found in spongy bogs in Norfolk, Suffolk, Huntingdonshire, and Cambridgeshire. It is a small plant with yellowish-green flowers. The genus is named with allusion, Loudon thinks, to the soft surface of the leaves in some species.

2. *Entom.:* The typical genus of the family Liparidæ (q.v.). *Liparis dispar* is the Gipsy-moth.

3. *Ichthy.:* A genus of Discoboli. *Liparis vulgaris* is the Unctuous Lumpsucker, or Sea-snail.

lĭp'-ar-īte, *s.* [Gr. λιπαρός (*liparos*) = shining.]

Min.: The same as FLUORITE (q.v.).

lĭ-păr'-ō-çēle, *s.* [Gr. λιπαρός (*liparos*) = fat, and κήλη (*kēlē*) = a tumour.]

Med.: A tumour consisting wholly or in great part of fat.

lĭp'-ĭc, *a.* [Gr. λίπος (*lipos*) = fat, lard, tallow; vegetable oil; Eng. suff. *-ic.*] (See the compound.)

lipic-acid, *s.*

Chem.: $C_5H_8O_4$ (?). Supposed at one time to be a distinct acid of the oxalic series, but now believed to be an impure succinic acid obtained by the action of nitric acid upon oleic or stearic acids.

* **lĭp'-lĕss,** *a.* [Eng. *lip; -less.*] Having no lips.

* **lĭp'-lĕt,** *s.* [Eng. *lip;* dimin. suff. *-let.*] A little lip.

* **lĭp'-ō-grăm,** *s.* [Gr. λείπω (*leipō*) = to leave, and γράμμα (*gramma*) = a letter; γράφω (*graphō*) = to write.] A writing in which a particular letter is omitted. Thus in the *Odyssey* of Tryphiodorus, there is no A in the first book, no B in the second book, and so on.

* **lĭp-ō-gram-măt'-ĭc,** *a.* [Fr. *lipogrammatique*, from Gr. λιπογράμματος (*lipogrammatos*) = wanting a letter.] [LIPOGRAM.] Of or pertaining to lipograms; of the nature of a lipogram.

* **lĭp-ō-grăm'-ma-tĭsm,** *s.* [Gr. λείπω (*leipō*) = to leave; γράμμα (*gramma*) genit. γράμματος (*grammatos*) = a letter, and Eng. suff. *-ism.*] The art or act of writing lipograms.

* **lĭp-ō-grăm'-ma-tĭst,** *s.* [Fr. *lipogrammatiste.*] A writer of lipograms.

"The *lipogrammatists*, or those who built altars and batched eggs in verse."—*Fitzedward Hall: Modern English*, p. 20.

"Corintbian, who came next, is, we think, a trifle *lippy*."—*Field*, Jan. 28, 1882.

lĭp'-ȳl, *s.* [Gr. λίπος (*lipos*) = fat; *-yl* (*Chem.*).]

Chem.: C_3H_4. The hypothetical radicle of glyceriue.

* **lĭ'-quą-ble,** *a.* [Lat. *liquabilis*, from *liquo* = to melt; Ital. *liquabile.*] Capable of being liquated or melted.

* **lĭ'-quāte,** *v.i.* & *t.* [Lat. *liquatus*, pa. par. of *liquo* = to melt; Ital. *liquare.*]

* **A.** *Intrans.:* To melt, to liquefy; to become dissolved.

"If the salts be not drawn forth before the clay is baked, they are apt to *liquate*."—*Woodward: On Fossils.*

B. *Trans.:* To melt, to liquefy; specif., in metallurgy, to separate one metal from another less fusible by exposing the mass to a heat sufficiently great to melt the more easily fused metal, and cause it to run off.

lī-quā'-tion, *s.* [Lat. *liquatio*, from *liquatus*, pa. par. of *liquo;* Fr. *liquation;* Sp. *licuacion;* Ital. *liquazione.*]

* **I.** *Ordinary Language:*

1. The act of liquefying or melting; the state of being liquefied or melted.

"Ordinary *liquation* in wax and oily bodies is made by a gentler heat."—*Browne: Vulgar Errours*, bk. ii., ch. i.

2. Capacity of being melted.

"The common opinion hath been, that chrystal is nothing but ice and snow concreted, and, by duration of time, congealed beyond *liquation*."—*Browne: Vulgar Errours.*

II. *Metall.:* The act or operation of separating one metal from another less fusible by exposing the alloy to a heat sufficiently great to cause the more fusible metal to melt and run off. Thus silver is separated from copper by melting the alloy with the addition of lead, and cooling the triple alloy suddenly in the form of cakes. These cakes are heated to such a degree on an inclined hearth as to cause the alloy of lead and silver to run off, and allow the copper to remain.

liquation-hearth, liquation-furnace, *s.* A hearth or furnace in which metals are separated by exposure to a heat which melts one or more of them, but leaves the other or others unmelted.

lĭ-quĕ-fā'-cĭ-ant (c as **sh**), *s.* [Lat. *liquefaciens*, pr. par. of *liquefacio* = to make liquid: *liquidus* = liquid, and *facio* = to make.]

* 1. *Ord. Lang.:* That which liquefies or tends to liquefy other things.

2. *Med.:* An agent which augments the secretions and promotes the liquefying processes of the animal economy.

lĭ-quĕ-făc'-tion, *s.* [Lat. *liquefactio*, from *liquefactus*, pa. par. of *liquefacio* = to liquefy (q.v.); Fr. *liquéfaction;* Ital. *liquefazione;* Sp. *leciafaccion.*]

1. The act or operation of liquefying, melting, or dissolving; the operation of converting a solid into a liquid by the agency of heat or caloric.

"The burning of the earth will be a true *liquefaction* or dissolution of it, as to the exterior region."—*Burnet: Theory of the Earth.*

2. The state of being liquefied, melted, or dissolved.

lĭ-quĕ-fī-ą-ble, *a.* [Eng. *liquefy; -able.*] That may or can be liquefied, melted, or dissolved; capable of liquefaction.

"*Liquefiable*, and not *liquefiable*, proceed from these causes."—*Bacon: Natural History*, § 840.

lĭ'-quĕ-fīed, *pa. par.* or *a.* [LIQUEFY.]

lĭ'-quĕ-fī-ĕr, *s.* [Eng. *liquefy; -er.*] One who or that which liquefies, melts, or dissolves.

lĭ'-quĕ-fȳ, * **lĭ'-quĭ-fȳ,** *v.t.* & *i.* [Fr. *liquéfier*, from Lat. *liquefacio* = to make liquid, to dissolve; *liquefio* = to become liquid, to be dissolved: *liquidus* = liquid, and *facio* (pass. *fio*) = to make.]

A. *Trans.:* To melt, to dissolve; to convert from a solid form into that of a liquid, by the agency of heat.

"Mineral bowels, *liquified* by fire,
O'erwhelm the fields, by Nature left unblessed."
Glover: Athenaid, i.

B. *Intrans.:* To become liquefied; to melt, to dissolve, to become liquid.

"The blood of St. Januarius *liquefied* at the approach of the saint's head."—*Addison: On Italy.*

"*Liquid*, low, silvery, streamed the tones beneath the enchanted bow."—*Lytton: Zanoni*, bk. i., ch. ii.

* 4. Dissolved, so as not to be obtainable by law.

"If a creditor should appeal to hinder the burial of his debtor's corpse, his appeal ought not to be received, since the business of burial requires a quick dispatch, though the debt be entirely *liquid*."—*Ayliffe: Parergon.*

† **II.** *Gram.:* Smooth, easy; pronounced easily, and with a slight contact of the organs of articulation: as, a *liquid* letter.

B. *As substantive:*

1. *Ord. Lang.:* A substance whose parts are capable of moving freely among themselves on the least pressure, and which, therefore, retains no fixed form; a substance in a state of liquidity; a fluid not aëriform. [FLUID.]

"Be it thy choice, when summer heats annoy,
To sit beneath her leafy canopy,
Quaffing rich *liquids*." *Philips.*

¶ Volatile liquids are those capable of rising in vapour; fixed liquids cannot do this, unless chemically decomposed.

2. *Gram.:* A letter or sound pronounced with a slight contact of the organs of articulation, as *l*, *m*, *n*, *r*.

liquid-assets, *s. pl.* A term used by bankers to denote coin, bank-notes, and securities, which can be instantly converted into cash.

lit (2), *pret. of v.* [Light (2), *v.*]

lit'-a-nȳ, * **let-a-nie,** * **lit-a-nie,** *s.* [O. Fr. *letanie* (Fr. *litanie*), from Lat. *litania;* Gr. λιτανεία (*litaneia*) = a prayer, from λιταίνω (*litainō*) = to pray; Sp. *litania, letania;* Ital. *litanie, letanie.*]

I. *Ordinary Language:*

1. A solemn form of supplicatory prayer used in public worship.

† 2. A parody of the Litany, consisting of satirical allusions, recited by street singers on an occasion of some political or religious demonstration. (*Slang.*)

II. *Church History, Ritual, &c.:*

1. *Roman:* There are three forms of litany recognized by the Roman Church as admissible in public worship: (1) The Litany of the Saints, used on the feast of St. Mark, on Rogation Days, on Holy Saturday and Whitsun Eve, and during the Exposition of the Blessed Sacrament. (2) The Litany of the Blessed Virgin—usually called the Litany of Loretto, from its being first sung in the Santa Casa of Loretto—now generally used at Benediction (q.v.). (3) The Litany of the Holy Name of Jesus, consisting of titles of Our Lord, with the invocation "Miserere nobis" (Have mercy on us).

2. *Anglican:* The first change from the Roman Litany in the direction of its present form was made in 1544. In the Prayer Book of Edward VI. (1549), directions were appended to the Communion office that "Upon Wednesdays and Fridays the English litany shall be said or sung in all places." In the revision of 1552 it was placed where it now stands, with the rubric "To be used on Sundays, Wednesdays, and Fridays, and at other times when it shall be commanded by the Ordinary." Grindall in 1571 forbade any interval between Morning Prayer, Litany, and Communion Service; but the Fifteenth Canon of 1604 recognizes the Litany as a separate office. The practice of the present day tends in that direction, and in many churches the Litany is recited on Sunday afternoon, followed by a brief address. When it is said at Morning Prayer, it follows the Third Collect for Grace.

litany-desk, *s.* In the English Church a portable desk or *prie-dieu,* placed in the centre of the choir or the chancel facing the communion-table, and at which the priest kneels to recite the Litany. Cosin (*Notes on Common Prayer*) says: "The priest goeth out from his seat into the body of the church, and at a low desk before the chancel door, called the faldstool, kneels, and says or sings the litany." [Faldstool.]

Lustre, dull to metallic; colour, bluish-black; streak, blackish-gray. Distinguished from asbolite and lampadite by its containing lithia and its high percentage of alumina. (See these words.)

lĭ-thĭz'-tēs, *s.* [Gr. λιθίζω (*lithizō*) = to look like a stone (?).]

Zool.: The typical genus of the family Lithistidæ.

lĭ-thĭs'-tĭd-æ, *s. pl.* [Mod. Lat. *lithistes*; Lat. fem. pl. adj. suff. *-idæ*.]

1. *Zool.:* A family of siliceous sponges, suborder Tetractinellidæ. They have a coral-like skeleton, are generally cup-like, lamellar lip-shape, cylindrical, or occasionally brush-like, with a stalk and roots. Their skeleton consists of body surface and flesh spicules irregularly disposed. They occur in the Atlantic, Pacific, and Indian Oceans from 74 to 805 fathoms.

2. *Palæont.:* From the Upper Cambrian till now.

lĭth'-ĭ-ŭm, *s.* [Gr. λίθος (*lithos*) = a stone.]

Chem.: Symbol Li; atomic weight = 7. A monatomic element of the alkali group of metals. It is of comparatively recent discovery, and although occurring generally in minute quantities, is very widely distributed through the mineral kingdom. It can be obtained by reduction of its fused chloride by means of the electric current. The metal has a white colour, and fuses at 180°. Lithium appears to be the lightest solid body known, having a density of only 0·5936. It burns with a white light, and, when thrown upon water, is oxidized like sodium. It is volatile at a high temperature, and may be distilled in a current of hydrogen. Like potassium and sodium, lithium dissolves in anhydrous ammonia, and on evaporating the liquid, it is left behind, with its original appearance and colour.

lithium-carbonate, *s.*

Chem.: Li_2CO_3. It is sparingly soluble in water, and gives an alkaline reaction with turmeric. It is used in medicine.

lithium-chloride, *s.*

Chem.: $LiCl{\cdot}2OH_2$. Occurs in mineral springs. Crystallizes below 10° in square prisms, and is one of the most deliquescent salts known.

lithium-oxide, *s.*

Chem.: Lithia, Li_2O. Prepared from the sulphate by the action of baryta.

lĭth-ŏ-bĭb'-lĭ-ŏn (pl. **lĭth-ŏ-bĭb'-lĭ-ą),** *s.* [Gr. λίθος (*lithos*) = a stone, and βίβλιον (*biblion*) = a book.] The same as BIBLIOLITE (q.v.).

lĭth-ŏ-bĭ-ī'-næ, lĭth-ŏ-bī'-ĭ-dēs, *s. pl.* [Mod. Lat. *lithobi(us)*; Lat. fem. pl. adj. suff. *-inæ*, or masc. or fem. *-ides*.]

Zool.: A sub-family of Scolopendridæ. Ocelli many, the second thoracic segment represented by a dorsal plate. Sixteen segments with dorsal plates, ambulatory legs fifteen on each side.

lĭ-thŏ'-bĭ-ŭs, *s.* [Gr. λίθος (*lithos*) = a stone, and βίος (*bios*) = life, course of life.]

Zool.: The typical genus of the sub-family Lithobiinæ. *Lithobius forficatus* is found in Britain and all over Europe.

lĭth'-ŏ-carp, *s.* [LITHOCARPUS.]

Palæont.: The same as CARPOLITE (q.v.).

lĭth-ŏ-car'-pŭs, *s.* [Gr. λίθος (*lithos*) = a stone, and καρπός (*karpos*) = fruit.]

Bot.: A genus of Corylaceæ. *Lithocarpus javensis* has very hard wood; hence the natives call it Passan-batu = stone-oak.

lĭth-ŏ-chrō-măt'-ĭc, lĭth-ŏ-chrōm'-ĭc, *a.* & *s.* [Gr. λίθος (*lithos*) = a stone, and χρῶμα (*chrōma*), genit. χρώματος (*chrōmatos*) = colour.]

A. *As adj.:* Of or pertaining to the art of painting on stone, and taking impressions on canvas.

B. *As subst.* (*Pl.*)*:* The art of painting in oil upon stone, and taking off impressions on canvas.

lĭth'-ŏ-clăst, *s.* [Gr. λίθος (*lithos*) = a stone, and κλάστης (*klastēs*) = a breaker; κλάω (*klaō*) = to break.]

1. *Ord. Lang.:* A stone-breaker.

2. *Surg.:* A powerful forceps-like instrument, with two blades, having concealed chisel or wedge-shaped projections to cut the stone in the bladder into pieces, if found to be too large to extract by means of the lithotomy forceps after the operation of lithotomy.

*** lĭth'-ō-cŏl-la,** *s.* [Gr. λιθοκόλλα (*lithokolla*), from λίθος (*lithos*) = stoue, and κόλλα (*kolla*) = glue.] A cement that unites stones.

lĭth-ō-cŏl-lĕt'-ĭ-dæ, *s. pl.* [Mod. Lat. *lithocollet(is)*; Lat. fem. pl. adj. suff. *-idæ.*]

Entom.: A family of moths, group or subtribe Tineina. The head is rough, the labial palpi filiform, drooping. The anterior wings elongate, the posterior ones linear lanceolate with long fringes. Forty-six British species, some of them beautiful.

lĭth-ō-cŏl-lē'-tĭs, *s.* [Gr. λιθοκόλλητος (*lithokollētos*) = inlaid with precious stones : λίθος (*lithos*) = a stone, and κολλητός (*kollētos*) = glued together ; κολλάω (*kollaō*) = to glue.

Entom.: The typical and only genus of the family Lithocolletidæ (q.v.).

lĭth'-ō-çỹst, *s.* [Gr. λίθος (*lithos*) = a stone, and κύστις (*kustis*) = a bladder.]

Zool.: The marginal bodies or sense organs of the Lucernarida, or Steganophthalmate Medusæ. (*Nicholson.*)

lĭth-ō-dĕn'-drŏn, *s.* [Gr. λιθόδενδρον (*lithodendron*) = a tree-shaped coral : λίθος (*lithos*) = a stone, and δένδρον (*dendron*) = a tree.

Zool.: The typical genus of the sub-family Lithodendroninæ.

lĭth-ō-dĕn-drŏ-nī'-næ, *s. pl.* [Mod. Lat. *lithodendron* (q.v.); Lat. fem. pl. adj. suff. *-inæ.*]

Zool.: A snb-family of Cyathophyllidæ. It consists of corals having a styliform or a lamellar columella occupying the axis of the visceral chambers in the corallite.

lĭth-ō-dī-ăl'-ỹ-sĭs, *s.*

Med.: The act or process of dissolving stone in the bladder.

lĭth'-ō-dōme, *s.* [Lithodomus.]

Zool.: Any member of the genus Lithodomus (q.v.).

lĭ-thŏd'-ō-moŭs, *a.* [Lithodomus.]

1. Living in stone, a term applied to bivalve shells found in stone more or less hard, which their inhabitants penetrated by means of which we are ignorant. (*Mayne.*)

2. Belonging to, or in any manner characteristic of the genus Lithodomus (q.v.).

lĭ-thŏd'-ō-mŭs (pl. **lĭ-thŏd'-ō-mī**), *s.* [Gr. λίθος (*lithos*), and δόμος (*domos*) = a habitation. So-called because the animals make perforations in rocks, in which they live.]

Zool. & Palæont.: Date-shells. A sub-genus of Modiola, distinguished by their long, cylindrical, anteriorly-inflated shell, and by the habit from which they derive their name. Known recent species forty, from West Indies to New Zealand ; fossil thirty-five. Lithodomi have the power of excavating holes in the hardest limestones. Holes formed by Lithodomi are found in inland cliffs, proving that they were at one time covered by the sea. They appear to date from the Carboniferous rocks, and are known to palæontologists by their shells and their burrows.

lĭth-ō-fĕl'-lĭc, *a.* [Gr. λίθος (*lithos*) = stone ; Lat. *fel* (genit. *fellis*) = gall ; and Eng. suff. *-ic.*] Obtained from gall stone.

lithofellic-acid, *s.*

Chem.: $C_{20}H_{36}O_4$. It occurs as the chief constituent of the intestinal concretions of the Persian goat. It resembles the cholic acids in many respects, and in giving Pellenkofer's reaction. It crystallizes from alcohol in prisms, and melts at 204°.

lĭth-ō-frăc'-tēur, *s.* [Fr.]

Chem.: An explosive substance composed of nitro-glycerine, 52 per cent ; infusorial silica and sand, 30 per cent. ; carbon, 12 per cent. ; NaO NO_5, 4 per cent. ; sulphur, 2 per cent. Its characteristics, as compared with dynamite, are : (1) greater sensitiveness to temperature, exploding at 120°, while dynamite explodes at 190° ; (2) greater sensitiveness to moisture from the presence of the hygroscopic nitrate of soda ; (3) the gases from the explosion always contain carbonic oxide from the carbon in the compound ; (4) for equal volumes it has the less explosive power. (*Journal of Applied Chemistry.*)

lĭth-ō-ĝĕn'-ĕ-sỹ, lĭth-ŏ-ĝĕ-nēs'-ĭ-a, *s.* [Gr. λίθος (*lithos*) = stone, and γένεσις, γενεσία (*genesis, genesia*) = birth ; Fr. *lithogénésie.*] That branch of science which deals with the origin of minerals composing the globe, and of the causes which have produced their form and disposition.

lĭ-thŏĝ'-ĕn-oŭs, *a.* [Gr. λίθος (*lithos*) = stone, and γεννάω (*gennaō*) = to produce ; Fr. *lithogène.*] Producing or forming stone, a term applied to coral-forming animals.

lĭth'-ō-glўph, *s.* [Gr. λίθος (*lithos*) = a stone, and γλύφω (*gluphō*) = to hollow out, to engrave, to carve.] The art of engraving on precious stones ; an engraving or carving on a precious stone.

lĭ-thŏĝ'-lўph-ĕr, *s.* [Eng. *lithoglyph ; -er.*] One who cuts or engraves precious stones.

lĭth-ŏ-glўph'-ĭc, *a.* [Eng. *lithoglyph ; -ic.*] Of or pertaining to the art of cutting or engraving precious stones.

lĭth-ō-glўp'-tĭcs, *s.* [Gr. λίθος (*lithos*) = a stone, and γλυπτός (*gluptos*) = fit for carving ; γλύφω (*gluphō*) = to cut, to carve.] The art of cutting or engraving precious stones ; lithoglyph.

lĭth'-ō-grăph, *s.* [Gr. λίθος (*lithos*) = a stone, and γράφω (*graphō*) = to write, to draw ; Fr. *lithographie.*] A print or impression from a drawing on stone.

lĭth'-ō-grăph, *v.t.* [Lithograph, *s.*] To engrave or draw on stone, and transfer on paper, &c., by printing.

lĭ-thŏĝ'-ra-phĕr, *s.* [Eng. *lithograph ; -er.*] One who practises or is skilled in lithography.

lĭth-ō-grăph'-ĭc, * lĭth-ō-grăph'-ĭc-al, *a.* [Eng. *lithograph ; -ic ; -ical.*] Of or pertaining to lithography ; done by lithography ; printed from stoue ; used in lithography.

lithographic-crayon, *s.* A crayon used for drawing on stone for the purposes of lithographic printing. They are composed essentially of soap, wax, fat, and lampblack, and are cast in the form of little cylindrical sticks. These are fastened in a porte-crayon or quill in the ordinary way. The above constituents, with various additions of shellac, mastic, &c., are fused together and finally set on fire. The longer the mixture burns, the harder the product becomes ; three or four grades are usually made.

lithographic-stone, *s.* A sedimentary limestone from the upper beds of the Jurassic formation. They are obtained almost solely from the extensive quarries of Solenhofen, in Bavaria. France furnishes a very hard and dark-blue stone, which is but little used. In Canada stone of good quality is said to exist, as also in Missouri. The Bavarian stone occurs in nearly horizontal layers. When these are of suitable quality and thickness (from two to five inches), they are squared and trimmed for exportation, the slabs varying in size from 6 × 8 to 40 × 60 inches. Two qualities are recognized : the yellow, and the blue or gray (though the difference in colour is slight). The latter are harder and more generally serviceable, and cost ten to fifteen per cent. more than the yellow.

lithographic-varnish, *s.* An oily varnish used for the manufacture of lithographic ink, and by printers for thinning the same. It is made by heating linseed-oil very strongly in a suitable pan, and finally setting fire to it. When sufficiently changed in its nature, and sufficiently concentrated, the flame is extinguished, and the varnish allowed to cool.

lĭth-ō-grăph'-ĭc-al-lỹ, *adv.* [Eng. *lithographical ; -ly.*] By means of lithography.

*** lĭ-thŏĝ'-ra-phīze,** *v.t.* [Eng. *lithograph ; -ize.*] To lithograph ; to produce by lithography.

"This picture has been *lithographized.*"—*Archæologia*, xxii. 452.

lĭ-thŏĝ'-ra-phỹ, *s.* [Eng. *lithograph ; -y.*] The process of engraving or drawing on stone, in such a way as to produce a surface from which printed copies can be multiplied in the press. It was invented by Alois Senefelder about 1799. Almost the only stone suitable for lithographic work is that known as lithographic-stone (q.v.). Upon such a surface the artist produces the design to be printed from. This is done by one of four distinct methods :—(1) He draws it with a fluid, watery ink ; (2) with a solid crayou ; (3) he obtains it by transfer from an inky design on paper by various means ; or (4) he engraves it on a prepared stone. The design is drawn with a watery solution of an ink consisting essentially of a soluble soap (stearate or oleate of soda or potash) coloured with lampblack sufficient to render it visible upon the gray surface of the stone.

lĭth'-ōid, lĭ-thŏĭd'-al, *a.* [Gr. λίθος (*lithos*) = a stone, and εἶδος (*eidos*) = appearance.] Resembling a stone ; of a stony nature or structure.

lĭ-thŏĭ'-dīte, *s.* [Eng. *lithoid ; -ite.*]

Petrol.: The same as Liparite, and as Rhyolite.

lĭth'-ō-lābe, *s.* [Gr. λίθος (*lithos*) = a stone, and λαβεῖν (*labein*), 2nd aor. infin. of λαμβάνω (*lambanō*) = to take, to seize.]

Surg.: An instrument for grasping a stone in the bladder, and holding it while it is being acted upon by a lithotritic instrument.

lĭth-ŏ-lŏĝ'-ĭc, lĭth-ŏ-lŏĝ'-ĭc-al, *a.* [Eng. *lithologe(y) ; -ical.*] Of or pertaining to lithology, or the science of stones ; pertaining to the character of a rock, or derived from the nature and mode of aggregation of its mineral contents. It is specially used regarding the stony structure or character of a mineral mass, as distinguished from its zoological or palæontological character.

lĭth-ŏ-lŏĝ'-ĭc-al-lỹ, *adv.* [Eng. *lithological ; -ly.*] In a lithological manner ; according to lithology.

lĭ-thŏl'-ō-ĝĭst, *s.* [Eng. *litholog(y) ; -ist.*] One versed in lithology.

lĭ-thŏl'-ō-ĝỹ, *s.* [Gr. λίθος (*lithos*) = a stone ; and λόγος (*logos*) = a discourse, a treatise.]

1. *Geol.:* The department of science which treats of the mineral constituents and stratigraphical arrangement of rocks, as distinguished from their palæontology.

2. *Med.:* The department which treats of stones or calculi in the body.

lĭth'-ō-lỹte, *s.* [Gr. λίθος (*lithos*) = a stone, and λύω (*luō*) = to loosen, to dissolve.]

Surg.: A form of catheter for conveying solvents of calculi into the bladder.

*** lĭth'-ō-măn-çỹ,** *s.* [Gr. λίθος (*lithos*) = a stone, and μαντεία (*manteia*) = prophecy, divination.] Divination by means of stones.

"As strange must be the *lithomancy*, or divination, from this stone, whereby Helenus the prophet foretold the destruction of Troy."—*Browne : Vulgar Errours*, bk. ii., ch. iii.

lĭth-ō-măn'-tĭs, *s.* [Gr. λίθος (*lithos*), and Mod. Lat. &c., *mantis* (q.v.).]

Palæont.: A genus of fossil Mantidæ. *Lithonantis carbonarius* is from the English Coal measures.

lĭth'-ō-mărge, *s.* [Gr. λίθος (*lithos*) = a stone, and perhaps Lat. *marga* = marl, or old Ger. *maergel* = marl. Steinomarga was a name used by old German miners for clays which did not occur in beds, but enclosed in rocks like marrow in bones, hence Ger. *Steinmark* = stone-marrow.]

Min.: Essentially a hydrated silicate of alumina, included by Dana as a compact form of Kaoliuite (q.v.). The name appears, however, to have been applied to several compact minerals of varied composition. Des Cloizeaux places it under the heading of "products of alteration or mixtures." The *Brit. Mus. Cat.* groups it with Halloysite (q.v.).

*** lĭth-ŏn-thrĭp'-tĭc, * lĭth-ŏn-trĭp'-tĭc,** *a. & s.* [Gr. λίθος (*lithos*) = a stone, and θρύπτω (*thruptō*) = to break, to wear ; τρίβω (*tribō*) = to rub, to grind.]

A. *As adj.:* Having the quality or property of destroying stone in the bladder or kidneys.

B. *As subst.:* A medicine or preparation having the quality of destroying stone in the bladder or kidneys.

***lĭth'-ŏn-trĭp-tĭst,** *s.* [Gr. λίθος (*lithos*) = a stone; θρύπτω (*thruptō*) = to break, and Eng. suff. *-ist.*] The same as LITHOTRIPTIST (q.v.)

***lĭth'-ŏn-trĭp-tŏr,** *s.* [Gr. λίθος (*lithos*) = a stone, and θρύπτω (*thruptō*) = to break; suff. *-or.*] An instrument for crushing a stone in the bladder into minute fragments, which may pass out with the urine.

lĭth-ŏn-trўp'-tĭc, lĭth-ŏn-thrўp'-tĭc, *a.* & *s.* [LITHONTRIPTIC.]

lĭ-thŏph'-ą-gī, lĭth-ō-phăj'-ĭ-dæ, *s.* [Gr. λίθος (*lithos*) = a stone, and φαγεῖν (*phagein*) = to eat.]

Zool.: A name applied to animals of all classes which form holes in the solid rocks, as the molluscous genera Lithodomus, Pholas, &c., or the annelid Spio. The termination *-idæ* would suggest that they are so much akin as to form one family, which is not at all correct.

***lĭ-thŏph'-ą-gŏŭs,** *a.* [Gr. λίθος (*lithos*) = a stone, and φαγεῖν (*phagein*) = to eat.] Eating or swallowing stones or gravel; perforating stones.

lĭth'-ō-phāne, *s.* [Gr. λίθος (*lithos*) = a stone, and φαίνω (*phainō*) = to cause to appear.] A style of ornamentation suitable to lamps, windows, and other transparencies, and prepared by impressing thin sheets of porcelain, while soft, into figures, which become visible when viewed by transmitted light.

lĭth'-ō-phŏs-phor, *s.* [Gr. λίθος (*lithos*) = stone, and φωσφόρος (*phōsphoros*) = bringing light.] A stone which becomes phosphoric by heat.

lĭth-ō-phŏs-phŏr'-ĭc, *a.* [Eng. *lithophosphor; -ic.*] Pertaining to lithophosphor; becoming phosphoric by heat.

lĭth-ō-phō-tŏg'-rą-phy, *s.* [Gr. λίθος (*lithos*) = a stone, and Eng. *photography* (q.v.).] A process by which a photographic picture is developed on stone, so as to admit of impressions being taken therefrom. [PHOTO-LITHOGRAPHY.]

lĭth'-ō-phўl, *s.* [Gr. λίθος (*lithos*) = a stone, and φύλλον (*phullon*) = a leaf.] A fossil leaf or impression of a leaf; a stone containing a fossil leaf.

lĭth'-ō-phўte, *s.* [Gr. λίθος (*lithos*) = stone, and φύτον (*phuton*) = a plant. Named from the erroneous view that corals were a kind of stone that vegetated, or plants whose tissue was solid like that of a stone.]

Zool.: An obsolete designation for a coral. (*Griffith: Cuvier*, vi. 497, 498.)

lĭth-ō-phўt'-ĭc, *a.* [Eng. *lithophyt(e); -ic.*] Of or pertaining to lithophytes.

lĭ-thŏph'-ў-toŭs, *a.* [Eng. *lithophyt(e); -ous.*] Pertaining to, consisting of, or of the nature of lithophytes.

lĭ-thŏr'-ĭ-nēur, *s.* [Gr. λίθος (*lithos*) = a stone, and ῥίνη (*rhinē*) = a file, a rasp.]

Surg.: An instrument invented by Meirieu and Tanchou for filing down a calculus in the bladder.

lĭth-or'-nĭs, *s.* [Gr. λίθος (*lithos*) = stone, and ὄρνις (*ornis*) = a bird.]

Palæont.: A genus of fossil birds, family Vulturidæ (?). *Lithornis vulturinus* is from the London clay of Sheppey.

lĭ-thō'-sĭ-ą, *s.* [From Gr. λίθωσις (*lithōsis*) = turning into stone; petrifying.]

Entom.: Footman, the typical genus of the family Lithosidæ (q.v.). *Lithosia complanula* is the Common Footman. It is leaden-gray, with a leaden stripe attenuated at one end. *L. complana*, a much rarer species, has the stripe uniform in width. Other British species are *L. aureola*, *L. straminea*, *L. griseola*, &c.

lĭ-thō'-sĭ-dæ, lĭth-ō-sī'-ą-dæ, lĭth-ō-sī'-ĭ-dæ, *s. pl.* [Mod. Lat. *lithosi(a)*; Lat. fem. pl. adj. suff. *-idæ.*]

Entom.: Footmen; a family of Day-moths of the group or sub-tribe Bombycina. Antennæ filiform, collar well-developed, thorax and abdomen unspotted, the latter occasionally with pale belts, anterior wings generally narrow, hinder ones broad, the former often gray, the latter yellowish; larvæ hairy, feeding on lichens. Known British species, seventeen. (*Stainton.*) Their wing-expanse about an inch and a quarter.

lĭth-ō-spĕr'-mĕ-æ, *s. pl.* [Mod. Lat. *lithosperm(um)*; Lat. fem. pl. adj. suff. *-eæ.*]

Bot.: A tribe of Boraginaceæ.

lĭth-ō-spĕr'-mŭm, *s.* [Lat. *lithospermon*; Gr. λιθόσπερμον (*lithospermon*) = gromwell (sec def.): λίθος (*lithos*) = stone, and σπέρμα (*sperma*) = a seed.]

1. *Bot.:* Gromwell; the typical genus of the boraginaceous tribe Lithospermeæ. The calyx is in five deep segments, the corolla funnel-shaped, its mouth naked or with very minute scales; the stamens included, filaments very thick, style simple, achenes stony with a truncated base, seated on a hypogynous disc. Known species about fifty, all from the temperate zone. Three of these are *Lithospermum arvense*, the Common Gromwell; *L. arvense*, the Corn Gromwell, or Bastard Alkanet; and *L. purpureo-cœruleum*, the Creeping or Purple Gromwell. No. 1 is pale yellow, No. 2 white, and No. 3 bright blue. The roots of *L. tinctorium* contain a reddish-brown substance used as a dye.

2. *Chem.:* A red colouring matter obtained from the root bark of *Lithospermum arvense*. It resembles alkanct.

lĭth-ō-strō'-tĭ-ŏn, *s.* [Gr. λιθόστρωτος (*lithostrōtos*) = paved with stones: λίθος (*lithos*) = stone, and στρωτός (*strōtos*) = spread, laid.]

Palæont.: A genus of Rugose Corals, family Cyathophyllidæ. Morris enumerates eleven or twelve British species, all from the Carboniferous limestone. In some places they are so abundant as to make the bed, in which they are somewhat resemble a coral reef.

lĭth'-ō-tĭnt, *s.* [Gr. λίθος (*lithos*) = a stone, and Eng. *tint* (q.v.).]

1. A process of drawing upon stone, in which the ink is applied to the stone by a camel's-hair pencil.

2. A drawing upon stone so produced.

lĭth'-ō-tōme, *s.* [Gr. λίθος (*lithos*) = a stone, and τομή (*tomē*) = a cutting; τέμνω (*temnō*) = to cut.]

* I. *Ord. Lang.:* A stone so formed by nature as to appear to have been cut artificially.

2. *Surg.:* A bistoury or scalpel for making the incision in lithotomy. This knife is of various sizes and shapes, blunt, probe, or sharp-pointed. It is inserted through the groove of the lithotomy-staff, through a small opening previously made in the urethra, and carried along into the bladder, making an opening just large enough to allow the extraction of the stone by means of the forceps.

lithotome-caché, *s.*

Surg.: An instrument used in lithotomy. It is introduced with blades concealed in a sheath, from which they are protruded, by pressing upon a lever, on reaching the place of operation. The incision is made by withdrawing the instrument. It is made single or double bladed. Called also a bistouri-caché.

lĭth-ō-tŏm'-ĭc, lĭth-ō-tŏm'-ĭc-ąl, *a.* [Eng. *lithotom(y); -ic, -ical.*] Of or pertaiuing to lithotomy; performed by lithotomy.

lĭ-thŏt'-ō-mĭst, *s.* [Eng. *lithotom(y); -ist.*] One who performs the operation of lithotomy; one skilled in lithotomy.

lĭ-thŏt'-ō-mў, *s.* [Gr. λιθοτομία (*lithotomia*).] [LITHOTOME.]

Surg.: The act or operation of cutting for stone in the bladder.

lithotomy-bisector, *s.*

Surg.: An instrument for making the bilateral incisions in lithotomy.

lithotomy-forceps, *s.* An instrument for extracting stone from the bladder through the opening previously made by lithotomy.

lithotomy-gorget, *s.*

Surg.: A lithotome with one or two concealed blades which are exposed by pressure when required.

lithotomy-scoop, *s.*

Surg.: A small, spoon-like instrument for removing calculi or fragments of stone from the bladder, after the operatiou of lithotomy.

lithotomy-searcher, *s.*

Surg.: [LITHOTOMY-SOUND].

lithotomy-sound, *s.*

Surg.: A steel, catheter-shaped instrument introduced into the bladder by the urethra. It indicates the presence of stone by a peculiar click when it comes in contact with it.

lithotomy-staff, *s.*

Surg.: An instrument curved like a catheter and with a deep groove on the convex side of its curved portion, introduced into the bladder by the urethra, for the purpose of guiding the cutting-instrument in lithotomy.

lĭth'-ō-trĭp-sў, *s.* [Gr. λίθος (*lithos*) = a stone, and τρῖψις (*trīpsis*) = a rubbing; τρίβω (*tribō*) = to rub.] The same as LITHOTRITY (q.v.).

lĭth'-ō-trĭp-tĭst, *s.* [LITHOTRIPSY.] The same as LITHOTRITIST (q.v.).

lĭth'-ō-trĭp-tŏr, *s.* [Gr. λίθος (*lithos*) = a stone, and τρίβω (*tribō*) = to rub.] The same as LITHOTRITIST (q.v.).

lĭth'-ō-trīte, *s.* [Gr. λίθος (*lithos*) = a stone, and Lat. *tritus*, pa. par. of *tero* = to rub, to grind.] The same as LITHOTRITOR (q.v.).

lĭth-ō-trĭt'-ĭc, *a.* [Eng. *lithotrit(e); -ic.*] Of or pertaining to lithotrity; destroying or tending to destroy stone in the bladder.

lĭth'-ō-trĭt-ĭst, *s.* [Eng. *lithotrit(e); -ist.*] One who is skilled in lithotrity.

lĭth'-ō-trĭt-ŏr, *s.* [Eng. *lithotrit(e); -or.*]

Surg.: The same as LITHONTRIPTOR (q.v.).

lĭ-thŏt'-rĭ-tў, *s.* [Eng. *lithotrit(e); -y.*] The act or operation of crushing a stoue in the bladder by means of a lithontriptor.

lĭth'-ō-tўpe, *s.* [Gr. λίθος (*lithos*) = a stone, and Eng. *type* (q.v.).]

1. A stereotype in which the surface is composed of gum-shellac, fine sand, and a little tar and linseed-oil.

2. A name signifying printing from stone. The lithographic design on the stone is deeply etched, giving a sufficient relief for the type-press.

lĭth'-ō-tўpe, *v.t.* [LITHOTYPE, *s.*] To prepare for printing by lithotypy.

lĭ-thŏt'-ў-pў, *s.* [Gr. λίθος (*lithos*) = a stone, and Eng. *type* (q.v.).] The art or process of stereotyping by pressing the types of a page set up into a soft mould or matrix. The hollows left by the types are then filled with a mixture of gum-shellac, fine sand, tar, and linseed-oil, heated, which when cold becomes as hard as stone, and can be printed from.

lĭ-thŏx'-ўle, lĭ-thŏx'-ўl-ite, *s.* [Gr. λίθος (*lithos*) = stone, and ξύλον (*xulon*) = wood.]

Min.: A name given to the mineral hornstone (q.v.), when it replaced woody substance and presented its structure. Called also Lithoxylon. [WOODSTONE.]

lĭ-thŏx'-ў-lŏn, *s.* [LITHOXYLITE.]

Rhet.: A diminution or softening of statement, for the purpose of avoiding censure, or of expressing more strongly what is intended; a figure in which the affirmative is expressed by the negative of the contrary; thus, a citizen "of no mean city" means "of an illustrious or important city."

lĭ-trăm'-ĕ-tĕr, *s.* [Gr. Λίτρα (*litra*) = a weight, and μέτρον (*metron*) = a measure.] An instrument for ascertaining the specific gravity of liquids, invented by Dr. Hare of Philadelphia. It is founded upon the principle that, when columns of different liquids are elevated by the same pressure, their heights must be inversely as their gravities. It consists of two tubes, their lower ends open and submerged in two liquids, whose specific gravity is to be compared, say one vessel of water and the other of an oil or spirit. The tubes connect above with a horizontal pipe, from which the air is exhausted by an air-pump. Atmospheric pressure causes the liquids to rise in the tubes to a height according to their gravity.

lĭ'-tre (tre as tĕr), *s.* [Fr., from Low Lat. *litra*, from Gr. Λίτρα (*litra*) = a weight, a pound.] The French standard measure of capacity in the decimal system. It is a cube, each side of which measures 3·937 English inches, and it contains 61·028 English cubic inches. The English imperial gallon contains 4·54345797 litres, or rather more than 4½ litres.

Bot.: A genus of Lauraceæ, with reticulated leaves, flowers or axillary tufts, and fleshy fruits. *Litsæa consimilis*, *L. lanuginosa*, and *L. zeylanica*, Indian trees, have valuable wood. The fruits of the first and the last also furnish an oil for burning.

lĭt'-tĕr (1), *lit-ere, *lyt-ter, *lit-our, *s.* [Fr. *litière*, from Low Lat. *lectaria* = a litter, from *lectus* = a bed; Gr. λέκτρον (*lektron*) = a bed; Sp. *litera*; Port. *literia*; Ital. *lettiera.*]

1. A stretcher with a bed, and, in many cases, a canopy; used, not as the stretcher ordinarily is, in emergency and haste, but provided for the use of the sick during transportation home or to the hospital. Amongst the ancient eastern and classic nations litters were used for carrying females, sick persons, and ultimately the luxurious rich from place to place. They were provided with cushions, canopies, and curtains, and sometimes constructed of gold and ivory.

"They shall bring all your brethren . . . . in *litters* and upon mules, and upon swift beasts, to my holy mountain Jerusalem."—*Isaiah* lxvi. 20.

2. Straw, hay, or other soft material used as a bed for horses, cattle, &c., or as a covering for plants.

"And he [Laban] brought *lytter* and pronander for the camels."—*Genesis* xxiv. (1551.)

3. Waste or refuse material, shreds, fragments, &c., scattered or lying about on a floor or other place in a careless, slovenly manner; scattered rubbish.

4. A state of disorder or untidiness: as, A room is in a *litter.*

lĭt'-tĕr (2), *s.* [Icel. *látr*, *láttr* = a place where animals produce their young; *látrask* = to litter, from *lag* = a layer; *leggja* = to lay.]

1. The young brought forth by an animal at a birth.

"I do here walk before thee, like a sow, that hath o'erwhelm'd all her *litter* but one."—*Shakesp.*: 2 *Henry IV.*, i. 2.

lĭt'-tĕr (1), *v.t.* & *i.* [Litter (1), *s.*]

A. *Transitive:*

1. To scatter straw, hay, or other soft substance on or over for bedding.

2. To supply with litter; to spread bedding for: as, To *litter* a horse.

3. To use as litter; to make litter of.

"Then to their roots
The light soil gently move, and strew around
Old leaves or *litter'd* straw, to screen from heat
The tender infants." *Dodsley: Agriculture*, ii.

4. To scatter things in a careless or slovenly manner over or in.

"Wandering and *littering* with unfolded silks
The polish'd counter, and approving none."
Cowper: Task, vi. 280.

* **5.** To carry in a litter.

"These pagan ladies were *littered* to Campus Martius."—*Gentleman Instructed*, p. 112.

* **B.** *Intrans.:* To sleep in litter; to make a bed in litter. (*Habington: Castara*, pt. ii.)

lĭt'-tĕr (2), *v.t.* & *i.* [Litter (2), *s.*]

A. *Trans.:* To bring forth; said especially of those animals, as the sow, dog, rabbit, &c., that bear several at a birth; applied to human beings in contempt.

"Though in Rome *litter'd*, not Romans."
Shakesp.: *Coriolanus*, iii. 1.

* **B.** *Intrans.:* To bring forth a litter of young.

lĭt'-tĕr-a-tēur, *s.* [Fr.] One engaged in literature or literary work; a literary man.

"Mr. Irving gave a farewell breakfast in the morning to seventy-five gentlemen, actors, editors, critics, *litterateurs*, lawyers, judges, and others."—*Pall Mall Gazette*, May 1, 1884.

8. Not liberal, free, or generous; mean, niggardly, paltry, selfish: as, a *little* mind.

9. Young; not grown up.

"But your *little* ones, which ye said should be a prey, them will I bring in."—*Numbers* xiv. 31.

II. *Bot.:* Small in all its parts, but well proportioned.

B. *As adv.:* In a little or small degree or quantity; not much, slightly.

"Recking as *little* what betideth him."
Shakesp.: *Two Gentlemen of Verona*, iv. 3.

C. *As substantive:*

1. That which is little or small in amount, quantity, space, &c.

"Every moment leaves my *little* less."
Johnson: London.

2. A small scale or degree; miniature.

"His picture in *little.*"
Shakesp.: *Hamlet*, ii. 2.

¶ **1.** *A little:* Somewhat; in a small or slight degree; rather.

"The painter flattered her *a little.*"
Shakesp.: *Two Gentlemen of Verona*, iv. 4.

2. *By little and little:* By slow degrees, gradually.

"*By little and little* I will drive them out from before thee."—*Exod.* xxiii. 30.

¶ *Little* is properly opposed to the great, *small* to the large, and *diminutive* is a species of the *small*, which is made so contrary to the course of things: *little* children cannot be left with safety to themselves; *small* children are pleasanter to be nursed than large ones; if we look down from any very great height the largest men will look *diminutive.*

"So that if the *liturgies* of all ancient churches throughout the world be compared amongst themselves, it may easily be perceived that they had one original mold."—*Hooker: Eccles. Politie,* bk. v. § 25.

2. *Church Hist.:* The Liturgy of the Church of England. This is a modification of that previously existing in the Church of Rome, several parts of which, however, were traceable back to the early ages. It was compiled under the superintendence of Archbishop Cranmer, by order of Edward VI. It was confirmed by Parliament in 1547-48, and issued in 1549. It was revised in 1559 by a resolution of Parliament. In its present form it received the sanction of Parliament by 13 & 14 Chas. II. c. 4, generally called the Act of Uniformity, passed on May 19, 1662. The Act 34 & 35 Vict. c. 37 arranged for the introduction of a new system of lessons.

¶ McClintock and Strong (*Cyc. Bib. & Eccles. Lit.*) give the following summary of ancient liturgies, with their developments:—

1. Liturgy of St. James, Antioch, or Jerusalem, with two forms—the Liturgy of St. Basil and the Syriac Liturgy of St. James, the former becoming the Liturgy of St. Chrysostom, and later the Liturgy of the Oriental and Russian Churches, the latter giving rise to the various Monophysite Liturgies.

2. Liturgy of St. Mark, or Alexandria, the parent of the present Liturgy of Egypt.

3. Liturgy of St. Peter, or Rome, with two divisions—the Ambrosian (now, with slight modifications, in use in the diocese of Milan), and the Sacramentary of St. Leo, developing successively into the Sacramentaries of Gelasius and St. Gregory, and finally into the present Liturgy of the Roman Church.

4. Liturgy of St. John, St. Paul, or Ephesue, appearing later as the Liturgy of Lyone, whence were derived the Mozarabic Liturgy and the Liturgies of Britain and Tours. These two were the foundation of the British Liturgy as revived by St. Augustine, and gave rise to the various English uses, in their turn

yielding place to the present Liturgy of the Anglican Church, modifications of which are in use in the Scotch and American Episcopal Churches.

LITUUS.

Anatomy:

1. *Human:* The largest gland in the body weighing about four pounds, and measuriug in its greatest length nearly twelve inches. It is placed obliquely in the abdomeu, ou the right side, with its eonvex surface upwards, and the concave downwards. It is in relation as to its position with the diaphragm above, the stomach and intestines below, and the right kidney, sometimes extending almost over to the spleen on the left side. It corresponds by its free edge with the lower margin of the ribs. It is divided by fissures into five lobes, two on the upper surface, right and left lobes, and with them three minor lobes on the under surface. The liver consists of lobules, a eonnecting structure, Glisson's capsule, ramifications of the portal vein, hepatic duct, hepatic artery and veins, lymphatics, and nerves, and is enclosed and kept *in situ* by the peritoneum. The functions of the liver are twofold : the separation of impurities from the venous blood of the chylo-poietic viscera previously to its return to the general venous circulation, and the secretiou of bile, the fluid necessary to chylification; theuce it passes into the duodenum and the gall-bladder by means of the ducts of the liver, after mingling with the mucous secretiou from the follicles in the duct walls.

2. *Compar.:* In the lower animals there is apparently no liver; in those somewhat higher the rudiments of it appear, and it developes markedly the higher we ascend in the scale of animal life. Thus, in the Echinodermata it has been identified with two or more small glandular sacs of a yellowish colour opening into the bottom of the stomach. The liver in Molluscs is always large. In the Cephalopoda it is a bulky gland divided into four lobes, and these are again subdivided into numerous angular lobules. In the Vertebrates it yet more nearly approaches the liver of man. In many fishes, the cells of the liver are loaded with fat, that which is a morbid state of the organ with man being normal with them.

¶ *Diseases of the liver:*

Pathol.: Hepatitis, or inflammation of the liver, is the commonest form, and is either simple or malignant, the latter being known as acute yellow atrophy; a third form, common to tropical countries, is known as suppurative hepatitis, ending in abscess and suppuration. Cirrhosis, hob-nailed or gin-drinker's liver, is also a frequent form of disease, often accompanied with jaundice. Lardaceous, waxy, or amyloid disease of the liver sometimes occurs. In abscess of the liver, it is still not quite settled whether the purulent matter should be allowed to evacuate spontaneously, or be evacuated, as Sir Joseph Fayrer recommends, by operation with the precautious of the Listerian method. [Listerism.]

liver-color, *s. & a.*

A. *As subst.:* The color of the liver; a reddish-brown, or dull brown mingled with a little yellow.

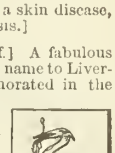
lĭv'-ẽr (3), *s.* [For etym. see def.] A fabulous bird, supposed to have given its name to Liverpool, and to be still commemorated in the arms of that town. "It has been variously called a dove, a shoveller duck, an eagle, and a hypothetical bird, the *liver,* to which the name of the town has been traditionally ascribed. . . . In deriving the name of a town from an imaginary bird, which was unknown long after the town had a common seal, we have a remarkable instance of putting the cart before the horse." (*Baines: Hist. Lanc.,* ii. 294). Attempts have also been made to identify the liver with the Cormorant or the Glossy Ibis.



LIVER.

"The *liver* was a foolish invention to account for the name. There was the 'pool,' which accounted for the last syllable, and there was the bird on the seal or shield, which, in the absence of other information was supposed to indicate the prefix. A stuffed bird has from time immemorial been preserved in the Town Hall, supposed to be a specimen of the genus *liver.* It is, in reality, an immature cormorant, which has not attained its final dark plumage."—*Sir J. A. Picton,* in *Notes & Queries,* May 3, 1884, p. 350.

lĭx-ĭv'-ĭ-ŭm, *s.* [Lat., from *lix* = wood-ashes, lye.] Water impregnated with alkaline salts extracted from wood-ashes.

"I made a *lixivium* of fair water and salt of wormwood."—*Boyle.*

lĭz'-ard, *les-arde, *lus-arde, *lic-erte, *lyz-ard, *s.* [O. Fr. *lesard* (Fr. *lézard*), from Lat. *lacerta* = a lizard; Sp. & Port. *lagarto;* Ital. *lacerta.*]

1. *Zoology:*

(1) *Sing.:* The popular name for any member of the Lacertidæ, the family of Lacertilia, which contains the typical Lizards, having four well-developed limbs, each terminated by five toes of unequal length. [LACERTA.] Though most abundant in the tropics, lizards are world-wide in distribution, except in very cold countries. They are common throughout the United States, usually of quite small size. Among the most remarkable forms are the Geckos; the large monitors, which grow to a length of six feet; the poisonous Mexican Lizard; the large Iguanas, of South America; the Flying Dragon; the changeful Chameleon, and various others. They are usually active animals, agile in movement, and often beautifully or protectively colored. The order is divided into 21 families, with over 1600 species.

(2) *Pl.:* The family Lacertidæ (q.v.), and, in a wider sense, the order Lacertilia.

2. *Palæont.:* [LACERTILIA, MOSOSAURIA, PROTOSAURIA, &c.].

3. *Agric.:* A crotch of timber or a forked limb, used as a sled to support a stone being hauled off a field; a stone-boat.

4. *Nautical:*

(1) A piece of rope haviug one or more legs with thimbles, acting as fair-leaders or for other purposes.

(2) [TOP-GALLANT LIZARD].

lizard-seeker, *s.*

Ornith.: Saurothera, a genus of Cuculidæ.

lizard-shaped, *a.* Formed like or resembling a lizard.

Lizard-shaped Amphibia:

Zool.: The sub-order Salamandrinæ (q.v.).

lizard-tailed, *a.* Having a tail like a lizard.

Lizard-tailed birds:

Ornith.: [SAURURÆ].

lizard's-herb, *s.*

Bot.: *Goniophlebium trilobum.*

lizard's-tail, *s.*

Bot.: The genus Saururus (q.v.).

lizard's-tongue, *s.*

Bot.: The genus Sauroglossum (q.v.).

Lĭz'-ard (2), *s.* [See def.]

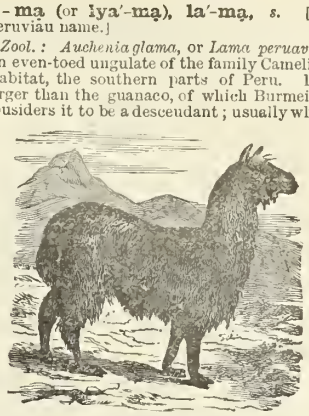
Geog.: A bold headland in Cornwall, twenty-three miles E.S.E. of Land's End.

Lizard-stone, *s.*

Petrol. & Comm.: A kind of serpentine found near the Lizard Point, in Cornwall. It is used for chimney-pieces, &c. (*Simmonds.*)

lla'-mạ (or **lya'-mạ**), **la'-mạ,** *s.* [The Peruvian name.]

Zool.: *Auchenia glama,* or *Lama peruavina.* An even-toed ungulate of the family Camelidæ. Habitat, the southern parts of Peru. It is larger than the guanaco, of which Burmeister cousiders it to be a desceudant; usually white,



LLAMA.

sometimes spotted with brown or black, and sometimes entirely black. In size it is smaller, and in general form lighter than the camels, standing about three feet at the shoulder; no dorsal hump. Feet narrow, toes widely separated, each with a distinct pad; hairy covering long and woolly. The earliest account of this animal is that of De Zarate, treasurer-general of Peru, in 1544, who calls it the "sheep of Peru," but notices its general resemblauce to the camel. The llama is only known in a domesticated state. It is still used as a beast of burden, but since the introduction of horses, mules, and asses, its importance in that respect has greatly diminished.

2. *Palæont.:* Remains of llamas have been found in the Pleistocene deposits of the Rocky Mountains and in Central America. Gradual changes have been traced from the differentiated species now existing down through the Pliocene to the early Miocene. Prof. Flower, remarking on the fact that none of these annectant forms have been found in the fossiliferous strata of the Old World, says: "It may fairly be surmised . . . that America was the original home of the Tylopoda, and that the camels passed over into the Old World, probably by way of the north of Asia, where we have every reason to believe there was formerly a free way of communication between the continents."

llăn-, *pref.* [Wel. = an enclosure, a church.] A common prefix in place-names in Wales; **as,** *Llan*gollen, *Llan*dudno, &c.

Llăn-bĕr'-ĭs, *s.* [Wel.]

Geog.: A place in Carnarvonshire.

Llanberis-slates, *s. pl.*

Geog.: Slates with associated sandy beds, the two together sometimes 3,000 feet thick, found at Llanberis and Penrhyn, in Carnarvonshire. They are arranged in the Longmynd group of Cambrian rocks. Fossils, two species of Oldhamia, have been fouud.

Llăn-deī'-lō, *s.* [Wel. *Llandeilo Vawr* or *Fawr.*]

Geog.: A market-town and parish of South Wales, fourteen miles E.N.E. of Carmarthen.

Llandeilo-flags, *s. pl.*

Geol.: Dark-coloured micaceous flags, frequently calcareous, resting on a great thickness of shales, generally of a black colour below them, and these again on black carbonaceous shale of great thickness, frequently containing sulphate of alumina, and sometimes, as in Dumfriesshire, beds of anthracite, resulting probably from the decomposition, not of plants, but of graptolites, about forty species of which have been found in the Llandeilo-flags and the Arenig beds. [LLANDEILO-FORMATION.] Among these, graptolites with two rows of cells (Diplograpsus, &c.) are conspicuous. About forty-seven Brachiopoda are found, and of other molluscs Orthoceras, Cyrtaceras, and Bellerophon. Trilobites abound.

Llandeilo-formation, *s.*

Geol.: A formation of Lower Silurian age. As originally marked out by Sir Roderick Murchison, it fell naturally under two divisions,

an Upper, containing the Llandeilo-flags (q.v.), and a Lower, now called the Arenig or Stiperstone group. According to Prof. Ramsay, the two together are 3,300 feet thick in North Wales, and the lavas (which are felspathic and porphyritic), 2,500.

Llăn-dŏv'-ĕr-ў, *s.* [See def.]

Geog.: A town in South Wales, county of Carmarthen.

Llandovery-group, *s.*

Geol: A group of rocks occurring in the hill of Noeth Grug, near Llandovery. Sir Roderick Murchison divided it into an Upper and a Lower Llandovery, the first sometimes called the May Hill group. Sir Charles Lyell believes that they constitute the base of the Upper Silurian, being at the same time beds of passage to the Lower. The beds of conglomerate, &c., constituting the greater part of the Lower Llandovery Rocks, are from 600 to 1,000 feet thick.

llan-ĕr'-ō (ll as ly), *s.* [Sp., from *llanos.*] One who lives on the llanos of South America. The llaneros are principally the descendants of whites and Indians, and are distinguished for their activity, ferocity, and semi-barbarous habits.

lla'-nōs (ll as ly), *s. pl.* [Sp., from Lat. *planus* = level.] The level steppes or plains in the northern part of South America. Some are barren wastes, others furnish pasture, and others again are covered with forest.

llŏyd'-ĭ-a, *s.* [Named after Edward *Lloyd*, an antiquary, who discovered the species, in the eighteenth century, in Wales.]

Bot.: A genus of Liliaceæ, tribe Tulipeæ. It has a scaly bulb; leaves, filiform; stem, leafy; one or two flowers. *Lloydia serotina* is found on the Snowdon range of hills, but is very rare.

Llŏyd's, *s.* [English.] A name given to the place of general insurance business, from that of the proprietor of a coffee-house, formerly used for a similar purpose in Lombard-street, London. It was afterwards removed to Pope's Head Alley, where it was called *New Lloyd's*, and subsequently, in 1773, to some rooms in the upper part of the Royal Exchange, and the interest of it having long been purchased of the then proprietor, it has from that time been placed under the management of a committee of the members. This institution, now known simply as *Lloyd's*, is devoted entirely to marine insurance, and to such business as is subsidiary thereto, as the classification and registration of vessels, &c.

Lloyd's-bond, *s.*

1. A form of security devised by John Horatio Lloyd, for enabling corporate bodies, whose powers of borrowing money are regulated and limited by statute, to incur greater pecuniary liabilities than they are authorised to do under their borrowing powers. It consists of an acknowledgement of debt under the company's seal, with a promise to pay at a certain date, and bears a certain rate of interest.

2. A form of agreement authorised by the Committee of Lloyd's. It differs from a policy, inasmuch as a policy is issued before a ship sails, and contains a promise contingent on certain eventualities. But a Lloyd's Bond supposes a ship to have returned, and to have already suffered damage; and the object of the bond is to protect shipowners from losses, as specified in the bond.

Lloyd's-list, *s.* A newspaper published daily in London, containing the latest information on shipping matters.

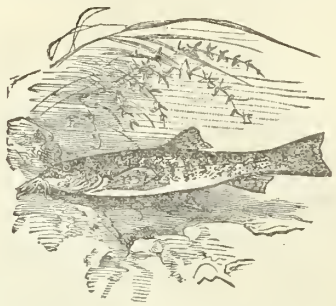
Lloyd's-register, *s.* A register of ships, British and foreign, published yearly. It contains the names of all ships, arranged alphabetically, and classed according to their qualifications, as A1, &c., such class being determined by the report of surveyors and the construction, materials, and state of repair of the vessels.

lō, *interj.* [A.S. *lá.*] An exclamation to direct attention: see! behold! observe!

lōach, lōche, *s.* [Fr. *loche.*]

Ichthyology:

1. *Sing.: Cobitis barbatula*, the Common Loach, Loche, or Beardie, a malacopterygious British fish of the family Acanthopsidæ. It is found also all over Europe, except in Denmark and Scandinavia. It delights in small, shallow, clear streams, and swims rapidly when disturbed by the moving of the stone under which it secretes itself. The



LOACH.

Loach is an animal feeder; it seldom exceeds four inches in length, but, spite of its small size, it is highly prized for food. *C. tænia* is the Spinous Loach, or Groundling, scarce and local in Britain. Dr. Günther refers the Loach to the genus Nemachilus (q.v.).

2. *Plural:*

(1) The genus Cobitis (q.v.).

(2) The group or sub-family Cobitidina. Mouth surrounded by six or more barbels; dorsal fin short or of moderate length; anal fin short; scales small, rudimentary, or entirely absent; pharyngeal teeth in a single series, in moderate number; air-bladder partly or entirely cuclosed in a bony capsule; pseudobranchiæ, noue. (3) That which is borne with difficulty; a heavy weight; a burden.

(4) The charge of a firearm.

2. *Figuratively:*

(1) That which oppresses, hinders, or grieves; a burden, an encumbrance, a weight.

"Our life's a *load*; encumbred with a charge,
We long to set th' imprison'd soul at large."
Dryden: Palamon & Arcite, ii. 265.

*(2) A quantity of food or drink as much as can be borne.

"There are those who can never sleep without their *load*, nor enjoy one easy thought, till they have laid all their cares to rest with a bottle."—*L'Estrange.*

*(3) Weight or violence, as of blows.

"Like lion mov'd they laid on *load*,
And made a cruel fight." *Chevy Chase.*

II. *Technically:*

1. *Mach.:* The amount of work done by an engine working up to its capacity. Not to be confounded with duty.

2. *Min.:* The quantity of nine dishes of ore, each dish being about half a cwt.

load-line, *s.*

Naut.: The same as Load water-line (q.v.).

load water-line, *s.*

Naut.: The line of flotation of a ship when she has her full cargo on board.

lōad (2), *s.* [Lode.]

lōad, * **lode,** *v.t.* [A.S. *hladan* = to lade, to load: cogn. with Dut. *laden* = to lade, to load; Icel. *hladha*; Dan. *lade*; Sw. *ladda*; Goth. *hlathan*; Ger. *be-laden*; O. H. Ger. *hladan. Load* and *lade* are doublets.]

I. *Literally:*

1. To place or set a load upon or in; to charge with a load; to supply with a load or cargo.

"I strive all in vaine to *lode* the cart when it raineth."—*Gascoigne: To Lord Gray of Wilton.*

2. To weigh down; to be a burden, load, or weight upon; to oppress.

"Its ebb he measured by a book,
Whose iron volume *loaded* his huge hand."
Scott: Vision of Don Roderick, xv.

3. To encumber; to bestow or provide for in great abundance.

"The army which besieged it (consisting of Catti Vasidi and Matiaci) was already departed away *loaden* with spoiles."—*Savile: Tacitus; Hist.*, p. 168.

4. To make heavy.

"In autumn, Jove his fury pours,
And earth is *loaden* with incessant showers."
Pope: Homer; Iliad xvi. 476.

5. To make heavy by something added or appended: as, To *load* a ship.

6. To place a charge in; to charge, as a gun.

"His musketeers had still to learn how to *load* their pieces."—*Macaulay: Hist. Eng.*, ch. xiv.

7. To crowd, to fill to overflowing.

"When *loaded* cribs their evening banquet yield."
Pope: Homer; Odyssey x. 486.

* 8. To magnetize, by bringing into contact with loadstone.

"Great kings to wars are pointed forth,
Like *loaded* needles, to the north."
Prior: Alma, ii. 228.

II. *Figuratively:*

1. To weigh down, to oppress.

"Yes! 'twas sublime, but sad. The loneliness
Loaded thy heart; the desert tired thine eye."

lōam, *s.* [A.S. *lām;* Dut. *leem;* H.Ger. *lehm;* L.Ger. *lein;* cogn. with Eng. *lime* and Lat. *limus* = mud.]

1. *Ord. Lang.:* Alluvial soil, consisting of sand and clay soil in considerable quantity. If one or the other largely preponderates, the soil ceases to be loam.

"If thy stroug *loam* superfluous wet retain,
Lead through thy fields the subterraneous drain."
Scot: Amœbœan Eclogues, 2.

2. *Founding:* A mixture which essentially consists of sand and clay, the former largely predominating, with a certain quantity of horse-dung added, or some equivalent for the same, such as chopped straw, saw-dust, cow-hair, &c. Beds of loam are sometimes found of nearly suitable composition, but it is more commonly made up by blending different sorts of sand, clay, &c., in a mill resembling a pug-mill. In moulding, it is always used quite wet, like plaster, but is dried perfectly before pouring. Its characteristics must be plasticity while wet, strength and solidity when dry, perviousness to the air from the mould, and the power to resist the high temperature of the metal. It is employed for large work in both brass and iron, obviating the use of a pattern. [MOULD, LOAM-WORK.]

¶ *Fluviatile-loam:* [LOESS]. (*Lyell.*)

loam-beater, *s.*

Founding: The rammer of a moulder, used in compacting the loam around the pattern.

loam-cake, *s.* A disc of loam which covers in the mould in loam-work casting, and which is perforated with holes for the entry of the metal and the escape of the air.

loam-moulding, *s.* Making a mould by templets.

loam-plate, *s.*

Founding: One of the flat cast-iron rings or plates used in loam-moulding, upon which the nowel or the cope rests, as the case may be.

loam-work, *s.* A method of making moulds for large hollow castings, such as cisterns, tanks, steam-engine cylinders, and kettles of large size, &c. Instead of making a pattern of the object, the nowel and cope are built up of bricks and covered with loam, which is shaped by a templet. The parts are afterwards brought into the required juxtaposition in a pit, surrounded by packed sand, and then the metal is run in.

lōam, *v.t.* [LOAM, *s.*] To cover over with loam; to clay.

"The joist ends and girders which he in the walls, must be *loamed* all over, to preserve them from the corroding of the mortar."—*Mozon: Mechanical Exer.*

lōam'-ў, *a.* [Eng. *loam; -y.*] Consisting of loam; of the nature of loam; resembling loam; marly.

"Plashed neatly, and secured with driven stakes
Deep in the *loamy* bank." *Cowper: Task,* iv. 438.

lōan, * **lone,** *s.* [A.S. * *lán, læn;* cogn. with Dut. *leen* = a grant, a fief; Icel. *lán* = a loan; *lén* = a fief; Dan. *laan* = a loan; Sw. *lån;* Goth. *lehn, lehen* = a fief; O. H. Ger. *léhan* = something granted.]

1. The act of lending or granting the use of anything temporarily to another, on the express or implied condition that it or its equivalent in kind shall be returned.

2. That which is lent; especially, a sum of money lent at interest.

"The Lord give thee seed of this woman for the *loan* which is lent to the Lord."—1 *Samuel* ii. 20.

3. Permission to make use of: as, a *loan* of credit.

¶ *Gratuitous loan* or *commodate:*

Law: The gratuitous loan of an article to a borrower for his own use, to be used according to the lender's intention, and returned at the proper time and in proper condition.

loan-office, *s.*

1. A public office whose loans are arranged for the public, the accounts of the lenders kept, and the interest paid to them.

2. An office where money is lent on goods or other security; a pawnbroker's office.

loan-society, *s.* A society or association established for the purpose of advancing money on loan to the working classes, to be repaid with interest by instalments.

loan-word, *s.* (For def., see extract).

"*Loan-words* are common to all dialects. No people can have near neighbours without receiving something from them in the shape of inventions, products, or social institutions, and these, almost inevitably, are adopted under their foreign names. The French have taken 'meeting' and 'turf' from us, together with the ideas which they denote. We have had in return 'naive' and 'verve.'"—*Sayce: Comparative Philology,* ch. v.

lōan (2), **lōne** (2), **lōan'-ĭng,** *s.* [LANE.]

1. An opening between fields of corn, or leading to the homestead, and left uncultivated for the purpose of driving cattle out and home.

2. A lane; a narrow road between hedges or walls.

"The mason-lads that built the laug dike that gaes down the *loaning.*"—*Scott: Antiquary,* ch. iv.

"Rhubarb . . . being not flatuous nor *loathsome.*"—*Bacon: Nat. Hist.,* § 44.

* 4. Feeling nausea: affected with nausea.

† **lōath'-sŏme-nĕss,** * **loth-sum-nesse,** * **loth-som-nes,** *s.* [Eng. *loathsome; -ness.*] The quality or state of being loathsome.

"Wearied with the *loathsomeness* of the present government."—*Holinshed: Hist. Scotland* (an. 1422).

† **lōath'-sŏme-lў,** * **loth-som-ly,** *adv.* [Eng. *loathsome; -ly.*] In a loathsome manner: so as to excite loathing or disgust.

"The bloudie gore and poison dropping *lothsomly.*"
Spenser: F. Q., V. xii. 30.

* **lōath'-ў,** * **loth-y,** *a.* [Eng. *loath(e); -y.*] Loathsome.

"With *lothy* chere lord Phebus gan behold."
Uncertaine Authors: M. T. Cicero's Death.

* **lōaveș,** *s. pl.* [LOAF, *s.*]

lŏb, *s.* [Wel. *llob* = a dolt, a blockhead.] [LUBBER.]

I. *Ordinary Language:*

1. A heavy, dull, stupid fellow; a blockhead.

"Farewell, thou *lob* of spirits, I'll be gone."
Shakesp.: Midsummer Night's Dream, ii. 1.

2. Anything thick and heavy.

3. A lobworm.

"For the trout, the dew worm, which some also call the *lob* worm, and the braudling, are the chief."—*Walton: Angler.*

II. *Cricket:* A slow ball, sent in with a low delivery bowled underhand, and falling heavily after a much curved trajectory. It is more successful upon soft than upon hard wickets. [FLOP.]

***lob-dotterel,** *s.* A loutish fool.

"Grouthead, gnat-snappers, *lob-dotterels*, gaping changelings."—*Urquhart: Rabelais*, bk. i., ch. xxv.

***lob-like,** *a.* Clumsy, loutish.

***lŏb,** *v.t.* [LOB, *s.*]

1. *Ord. Lang.:* To droop; to let fall in a sloveuly or lazy manner; to hang down.

"The horsemen sit like fixed candlesticks,
With torch-staves in their hand: and their poor jades
Lob down their heads." *Shakesp.: Henry V.*, iv. 2.

2. *Cricket:* To bowl a ball like a lob: as, To *lob* a ball into the air.

lō'-bar, *a.* [Mod. Lat. *lobaris*, from *lobus.*] [LOBE.] Of or belonging to a lobe of any organ of the body. (Used chiefly of man, but also of the inferior animals.)

lobar-emphysema, *s.*

Pathol.: Emphysema affecting a whole lobe of the lungs, as distinguished from lobular emphysema (q.v.). (*Dr. Waters.*)

lobar-pneumonia, *s.*

Pathol.: Pneumonia, affecting a lobe of the lungs.

lō-băr'-ĭc, *a.* [Mod. Lat. *lobar(ia)*; Eng. suff. *-ic.*] Contained in or derived from the lichen, *Lobaria adusta.*

lobaric-acid, *s.*

Chem.: $C_{17}H_{16}O_5$, a colourless resinoid acid extracted from the lichen, *Lobaria adusta.* It crystallizes in thin plates, and resembles a crystalline resin in many of its properties, and in its degree of solubility in different menstrua. Its ammoniacal solution is colourless, but on exposure to the air it becomes rose-red, and dries up to an amorphous violet brown mass, resembling in tint the thallus of the lichen which yields it.

lō-bā'-tą, *s. pl.* [Neut. pl. of Mod. Lat. *lobatus* = lobed.]

Zool.: A suborder of Hydrozoa, order Cteuophora.

lō'-bāte, lō'-bāt-ĕd, lōbed, *a.* [Mod. Lat. *lobatus* = divided into segments.]

Bot.: Partly divided into a determinate number of segments. Thus, a leaf may be bilobate = two-lobed, trilobed = three-lobed, and palmate-lobed = five-lobed, like the human hand.

lō'-bāte-lў, *adv.* [Eng. *lobate; -ly.*]

Bot.: So as to form lobes.

lobately-crenated, *a.*

Bot.: Having crenatures, or indentations, so deep as to constitute a series of small lobes.

lŏb'-bĭng, *s.* [Etym. doubtful.]

Metall.: [COBBING, C. 2].

***lŏb'-bĭsh,** *a.* [Eng. *lob; -ish.*] Loutish.

"Their *lobbish* guard."—*Sidney: Arcadia*, p. 430.

lŏb'-bў, *s.* [Low Lat. *lobia, lobium* = a portico, a gallery, from M. H. Ger. *loube* = an arbour; Ger. *laube* = a bower, from M. H. Ger. *loub, loup*; O. H. Ger. *laup*; Ger. *laub* = a leaf.]

I. *Ordinary Language:*

1. An inclosed space surrounding or communicating with one or more apartments; a small house or waiting-room; the entrance into a principal apartment when there is a considerable space between this apartment and a portico or vestibule. (*Gwilt.*)

"His *lobbies* fill with 'tendance."
Shakesp.: Timon of Athens, I. 1.

2. That part of a hall of a legislative assembly not appropriated to official business.

"He haunted the public offices and the *lobbies* of the Houses of Parliament."—*Macaulay: Hist. Eng.*, ch. xviii.

1. *Agric.:* A space for cattle, inclosed by hedges, trees, or other fencing.

2. *Naut.:* A name sometimes given to an apartment close before the captain's cabin.

lobby member, *s.* A person who frequents the lobbies of a legislative assembly; a lobbyist.

lŏb'-bў, *v.i. & t.* [LOBBY, *s.*]

A. *Intrans.:* To frequent the lobby of a legislative assembly for the purpose of addressing members with a view to influence their votes; to solicit the votes of members.

B. *Transitive:*

1. To address or solicit, as the members of a legislative assembly, for the purpose of influencing their votes in favour of or against some measure.

2. To carry through a house of legislation, as a measure or bill, by addressing or soliciting the votes of members in favour of such measure or bill.

lŏb'-bў-ĭst, *s.* [Eng. *lobby; -ist.*] One who frequents the lobbies of a legislative assembly for the purpose of soliciting or influencing the votes of members; a lobby-member.

"She is the wife of a noted *lobbyist* who died about two years ago."—*Democracy*, ch. vi.

lŏb'-cŏck, *s.* [LOB, *s.*] A stupid, dull, sluggish person; a lob, a lubber.

lōbe, *s.* [Fr., from Mod. Lat. *lobus*, from Gr. λοβός (*lobos*) = a lobe of the ear or liver; cogn. with Eng. *lap* (q.v.).]

I. *Ord. Lang.:* A projection or division, especially one of a rounded form.

II. *Technically:*

1. *Anat.:* Any rounded and projecting part of an organ; thus, the liver is divided into two unequal lobes, a right and a left, and on the under surface of the right lobe are three secondary lobes or lobules—namely, the lobe of Spigelius, the caudate or tailed lobe, and the square lobe. There are five lobes in the cerebrum—viz., the frontal, the parietal, the occipital, the tempero-sphenoidal, and the central lobes. Others are in the cerebellum. There are lobes also of the lungs. (*Quain.*) [LOBULE.]

"The heart lies on the left side; a *lobe* of the lungs on the right."—*Paley: Natural Theology*, ch. xi.

2. *Bot.:* A division more or less rounded.

"When these parts are touched by the legs of flies, the two *lobes* of the leaf instantly spring up."—*Smellie: Philosophy of Nat. Hist.*, i. 5.

3. *Mach.:* The larger and most prominent or projecting part of a cam-wheel.

lobe-berry, *s.*

Bot.: The genus Coccolaba.

lobe-foot, *s.* A lobe-footed bird; a lobiped.

lobe-footed, *a.* Having the toes lobate, or bordered with membranes, as in the case of the grebes.

lobe-plate, *s.* A strong piece of cast-iron laid upon the keelson, &c., to support the parts of a marine steam-engine. A sole-plate; a foundation-plate.

lōbed, *a.* [Eng. *lob(e); -ed.*] The same as LOBATE (q.v.).

lō-bĕl'-ą-crĭn, *s.* [Mod. Lat. *lobel(ia)*; Lat. *acer*, fem. *acr(is)* = sharp, and Eng. suff. *-in* (*Chem.*).]

Chem.: An acrid substance found in *Lobelia inflata* (Indian tobacco), and to which the herb owes its taste. It crystallizes in warty tufts of a brownish colour, slightly soluble in water, but very soluble in alcohol, ether, and chloroform. It is decomposed by boiling with water, and, when treated with alkalis or acids, is converted into sugar and lobelic acid.

lō-bē'-lĕ-æ, *s. pl.* [Mod. Lat. *lobel(ia)*; Lat. fem. pl. adj. suff. *-eæ.*]

Bot.: The typical tribe of the order Lobeliaceæ (q.v.).

lōbe'-lĕt, *s.* [Eng. *lobe*; dimin. suff. *-let.*]

Bot.: A little lobe.

lō-bē'-lĭ-ą, *s.* [Named after *Matthias Lobel*, physician and botanist to James I. He died in London, A.D. 1616.]

1. *Bot.:* The typical genus of the order Lobeliaceæ (q.v.). The calyx is irregular, two-lipped, cleft longitudinally on the upper sides, the upper lip smaller and erect, the lower spreading; three cleft; the anthers united, the two lower ones bearded at the apex; capsule two or three-celled, the upper part free, two-valved loculicidal. The genus includes many beautiful garden flowers, such as the brilliant Cardinal Flowers. The Indian Tobacco, of the United States (*L. inflata*), is a species.

2. *Pharm.:* *Lobelia urens* blisters the skin, *L. cardinalis* is acrid, and is considered anthelmintic, *L. inflata* is a powerful emetic, sudorific, and expectorant. The infusion of the leaves of *L. nicotinæfolia*, an Indian species, is used by the natives as an antispasmodic, the dry herb when handled irritates the throat and nostrils like tobacco. The flowering herb of *L. inflata* (Indian tobacco), indigenous to the United States, is used in British practice. The medicinal preparations of it are two—the Tincture and the Ethereal Tincture of Lobelia. In small doses Lobelia is expectorant and diaphoretic; in large ones, emetic or cathartic. It has been used in spasmodic asthma, and in dyspnœa, &c., as a diuretic. [I.]

lō-bē-lĭ-ā'-çē-æ, *s. pl.* [Mod. Lat., &c. *lobeli(a)*; Lat. fem. pl. adj. suff. *-aceæ.*]

Bot.: Lobeliads; an order of epigynous exogens, alliance Campanales. It consists of herbs or shrubs, with milky juice, alternate leaves without stipules; the calyx five-lobed or entire; corolla monopetalous, irregular, five-lobed or deeply five-cleft; stamens five, anthers cohering in a tube; ovary, inferior, one to three-celled; seeds, very numerous, parietal or attached to the axis; style, simple; stigma, surrounded by a cup-like fringe; fruit, capsular, one to three-celled; many-seeded, dehiscing at the apex. Found in semitropical and temperate climates. The acridity of their milk makes them suspicious. About 275 species are known. Sir Joseph Hooker makes the Lobeliaceæ a sub-order of Campanulaceæ. The order is divided into three tribes, Clintoneæ, Lobeleæ, and Delisseæ.

lō-bĕl'-ĭ-ăds, *s. pl.* [Mod. Lat. *lobeli(a)*; Eng. pl. suff. *-ads.*]

Bot.: The name given by Lindley to the order Lobeliaceæ (q.v.).

lō-bĕ'-lĭc, *a.* [Mod. Lat. *lobel(ia)*; Eng. suff. *-ic.*] Derived from or characteristic of the genus Lobelia (q.v.).

lobelic-acid, *s.*

Chem.: A non-volatile acid existing in the decoction of *Lobelia inflata.* It is soluble in water and alcohol, and in many of its reactions resembles gallic acid. It yields a soluble salt with barium oxide, but its lead salt is insoluble in water.

lō'-bĕ-lĭn, lō'-bĕ-lĭne, *s.* [Mod. Lat., &c. *lobel(ia); -in, -ine* (*Chem.*).]

Chem.: An oily alkaloid obtained from *Lobelia inflata.* It is soluble in alcohol and ether, and acts as a narcotic when taken internally.

lō'-bĭ-ōle, *s.* [Dimin. of Eng. *lobe.*]

Bot.: One of the small lobes into which the thallus of some lichens is divided.

lōb'-ĭ-pĕd, *s.* [LOBIPES.]

Zool.: A bird belonging to the family Lobipedidæ (q.v.); a lobe-foot.

***lōb-ĭ-pĕd'-ĭ-dæ,** *s. pl.* [Mod. Lat. *lobipes*, genit. *lobiped(is)*; Lat. fem. pl. adj. suff. *-idæ.*]

Ornith.: A family of wading birds, having the auterior toes lobed or semi-palmated. By many naturalists this family is merged in Scolopacidæ.

lōb'-ĭ-pēs, *s.* [Mod. Lat. *lobus* (genit. *lobi*) = a lobe, and Lat. *pes* = foot.]

Ornith.: Cuvier's name for a genus of waders. It is the same as Phalaropus of Vieillot. [PHALAROPUS.]

lŏb'-lŏl-lў, *s.* [LOLLIPOP.]

1. Water-gruel or spoon-meat.

2. A sweet.

loblolly-bay, *s.*

Bot.: *Gordonia Lasianthus*, an elegant evergreen shrub or small tree, from the Southern States of America. Its bark is sometimes used in tanning.

loblolly-boy, *s.*

Naut.: A boy who attends on the surgeon of a vessel, to compound the medicines, and otherwise assist him in his duties.

"I was known by the name of *loblolly-boy*."—*Smollett: Roderick Random*, ch. xxvii.

loblolly-pine, *s.*

Bot.: *Pinus Tæda.*

loblolly-sweetwood, *s.*

Bot.: *Sciadophyllum Jacquinii.*

loblolly-tree, *s.*

Bot.: *Varronia alba*, a tree of the order Cordiaceæ, growing in the West Indies. The fruit is sometimes eaten.

loblolly-wood, *s.*

Bot.: (1) The wood of *Cupania glabra*; (2) that of *Pisania cordata.*

lŏb'-ō-dŏn, *s.* [Gr. λοβός (*lobos*) = a lobe, and ὀδούς (*odous*), genit. ὀδόντος (*odontos*) = a tooth.]

Zool.: A genus of Phocidæ. *Lobodon carcinophaga* is the Crab-eating Seal, or Saw-tooth Sterrinck, of Owen. It inhabits the Antarctic Ocean.

lō'-bō-īte, *s.* [Named after Chevalier Lobo da Silveira; suff. *-ite* (*Min.*); Ger. *loboit.*]

Min.: The same as Vesuvianite (q.v.).

lō-bō'-sạ, *s. pl.* [Neut. pl. of Mod. Lat. *lobosus* = lobed.]

Zool.: A division of Rhizopoda, consisting of genera with a lobe or pseudopod. They are divided into Naked (*i.e.*, shell-less) and Shelled Lobosa.

lŏb-ŏs'-tō-mạ, *s.* [Gr. λοβος (*lobos*) = a lobe, and στόμα (*stoma*) = a mouth.]

Zool.: The typical genus of the sub-family Lobostominæ.

lŏb-ŏs-tō-mī'-næ, *s. pl.* [Mod. Lat. *lobostom(a)*; Lat. fem. pl. adj. suff. *-inæ.*]

Zool.: The name given by Dobson to a subfamily of Bats, family Phyllostomidæ. They have terminal nostrils, and cutaneous folds or ridges on the chin.

lŏb'-ō-tēş, *s.* [Mod. Lat., from Gr. λοβός (*lobos*) = a lobe.]

Ichthy.: A genus of Acanthopterygians, family Percidæ (q.v.). Body rather elevated, compressed, with ctenoid scales of moderate size. Snout obtuse, teeth villiform; no canines or palatal teeth. One dorsal fin, with twelve spines; anal with three. Præoperculum denticulated. Branchiostegals six. *L. auctorum* is remarkable for its extraordinary range. It occurs in the East Indies and on the Atlantic coast of America, and has been met with in the Mediterranean. It lives in salt and brackish water. Length about two feet.

lŏb'-scoŭse,*lobs-course,*laps-course, *s.* [Eng. *lob*, and *course.*]

Naut.: A hash of meat with vegetables of various kinds; an olio.

"That savoury composition known by the name of *lobs-course.*"—*Smollett: Peregrine Pickle*, ch. ix.

lŏb'-sīd-ĕd, *a.* [Eng. *lob*, and *sided.*] Heaving over to one side; lopsided.

*** lŏbs'-pŏund,** *s.* [Eng. *lob*, s., and *pound.*] A pound, a prison.

lŏb'-stĕr, * lop-ster, * lop-stere, * lop-pe-ster, * lop-pi-ster, * lop-py-ster, * lop-stere, * lob-star, *s.* [A.S. *loppestre*, *lopystr*, a corrupt. of Lat. *locusta* = (1) a lobster, (2) a locust.]

1. *Lit. & Zool.: Homarus vulgaris*, the Common Lobster, a well-known decapod, macrourous, marine crustacean, of the family Astacidæ. It has five pairs of ambulatory legs, the first pair being the chelæ or great claws, the next two pairs also chelate but smaller, the last two pairs monodactyle. The segments of the abdomen carry each a pair of swimmerets, the last pair greatly expanded, and constituting with the telson (q.v.) a powerful caudal fin. The nervous system is homogangliate; the organs of sense consist of the two compound eyes, two pairs of antennæ, and two auditory sacs, and the sexes are invariably distinct. General colour, dull, pale reddish-yellow, spotted with bluish-black; the spots coalescent on the upper parts. "Lobsters do not stray from their haunts; hence the discovery of a new station is a fortunate circumstance for the fisherman, and each situation is found to impress its own shade of colour upon the shell." (*Couch: Cornish Fauna.*) Lobsters are very abundant on the coast of Maine, Nova Scotia, and further north, and are taken in enormous quantities, for the supply of the markets of the United States. The species here is *H. americanus.* Its claws are much larger than those of *H. vulgaris.* The Norway lobster, *Nephrops norvegicus*, is taken by the millions. Some epicures consider it the most delicate of all crustaceans; others prefer the common lobster. *H. vulgaris* is taken on all coasts of the British islands. The Spiny Lobster, or Sea Crayfish, of Europe, has very long antennæ. It is supposed to have been eaten by the Greeks and Romans, and is still brought to market, but is inferior to the ordinary lobster. [Nephrops.]

lobster-flower, *s.*

Bot.: Poinciana pulcherrima, the Barbadoes Flower-fence.

lobster-louse, *s.*

Zool.: Nicothoë astaci, an entomostracan parasitic on the lobster.

lobster-moth, *s.*

Entom.: Stauropus Fagi. The name has reference to the grotesque shape of the caterpillar, in which the second and third pair of legs are much elongated. It occurs in Britain, but is rare. [Stauropus.]

lŏb'-ụ-lạr, *a.* [Eng. *lobul(e)*; *-ar.*] Of the nature, character, or form of a lobule or small lobe.

lobular-emphysema, *s.*

Pathol.: Emphysema affecting one or more lobules in different parts of the lungs. There is also a pectoral lobular-emphysema. (*Dr. Waters.*)

lobular-pneumonia, *s.*

Pathol.: Pneumonia affecting one or more lobules of the lungs.

lŏb'-ụ-lạte, lŏb'-ụ-lāt-ĕd, *a.* [Eng. *lobul(e)*; *-ated.*] Consisting of lobules; having small lobular divisions.

lŏb'-ụle, *s.* [Fr., from Low Lat. *lobulus*, dimin. of *lobus* = a lobe; Sp. & Ital. *lobulo.*] A small lobe. There are lobules of the cerebrum, of the ear, &c.

¶ *Lobule of the ear:*

Anat.: The soft pendulous portion of the ear.

lŏb'-ụ-lŭs, *s.* [Lat.] A lobule (q.v.).

lō'b'-ŭs, *s.* [Lat.] A lobe (q.v.).

lŏb'-wŏrm, *s.* [Eng. *lob*, s., and *worm.*] The same as Lugworm (q.v.).

lō'-cal, * lō'-cạll, *a.* & *s.* [Fr. *local*, from Lat. *localis* = pertaining to a place, local, from *locus* = a place; Sp. & Port. *local*; Ital. *locale.*]

local-militia, *s.*

Mil.: An armed force embodied for service within certain limits.

local-option, *s.*

Temperance Advocacy: An expression believed to have been first used by the Right Hon. W. Gladstone, M.P., who wrote in a letter to the Rev. John Jones on October 9, 1868, "that, as regarding the liquor traffic, it was his disposition to let in the principle of 'local option' wherever it was likely to be found satisfactory." Sir Wilfred Lawson has for many years urged the adoption of the principle in some legislative measure, contending that the inhabitants of conveniently marked-out districts should be allowed the option of deciding whether the liquor traffic should be licensed and carried on in their several localities, and of regulating it if they elect for its continuance.

local-preacher, *s.*

Methodism: A lay preacher who carries on his ordinary business or profession, while devoting a portion of his time to preaching. He remains in the place where his business or profession lies, and does not go on circuit like the "travelling" preachers (q.v.), whose time is entirely devoted to their religious duties.

lock-hole, *s.* The recess in a musket-stock to receive the lock.

lock-hospital, *s.* A name very generally adopted in Great Britain to characterize a charitable institution for the treatment of venereal diseases. In 1452 Ralph Holland, a merchant-tailor, bequeathed twenty shillings to the *Lock* lazar-house, outside St. George's Gate—"Item, lego leprosis de Lokis extra barram Sti. Georgii, 20s." This afterwards became a hospital for syphilitic patients; hence it and similar institutions came to be designated simply lock-hospitals. The word *lock* has been differently explained—as from *loke* = a house for lepers, but no earlier instance of its use can be found than the passage quoted above; from Fr. *loque* = a rag, a tatter; but there is no reason why rags or tatters should form a distinctive characteristic of a syphilitic hospital. Mayne (*Lexicon of Terms in Science*) suggests Saxon *loc* or Fr. *loquet,* referring to St. George's Gate, bar (rendered *barram* in the wretched Latin of the time), or other means by which that entrance to the city was secured, and outside which stood the lazar-house, as a more consistent etymon.

lock-jaw, *s.*

Pathol.: Tetanus, persistent, painful contractions or spasms of the voluntary muscles, either idiopathic or, more frequently, traumatic. Five varieties are noted: Trismus, or lock-jaw, limited to the throat and lower jaw; tetanus, affecting the flexor and extensor muscles of the body in general; emprosthotonos, where the body is flexed forwards; opisthotonos, backwards, and pleurosthotonos, laterally or to one side only. Trismus is the commonest form, and then opisthotonos, accompanied by the *risus sardonicus,* the body being arched and resting upon the occiput and heels. Treatment with calabar-bean or the hypodermic injection of curare has given good results in some cases, or chloroform inhalation during the paroxyms.

lock-keeper, *s.* A man employed to attend to a canal-lock.

lock-nail, *s.* One of the pins by which the parts of a gun-lock are secured to the lock-plate. In the old form of lock, they were the tumbler-pin, mainspring-screw, sear-pin, bridle-screw pin, hammer-nail, hammer-spring screw.

lock-nut, *s.* A supplementary nut screwed down upon a primary one, to prevent its shaking loose; a jam-nut, check-nut, or pinching-nut.

lock-out, *s.* The discharge and keeping out of employment of artisans and labourers by the masters.

"All sides of the Agricultural *Lock-out* of 1874 are conscious of blunders which they wish to avoid on any future occasion."—*Times,* Nov. 10, 1875.

lō-cō-mō-tor ăt-ăx′-ў, *s.* [Lat. *locus* = a place, and *motor* = a mover; with Gr. ἀταξία (*ataxia*) = disorder.]

Pathol.: A peculiar form of apparent paralysis, with more or less wasting, but always unsteady and disorderly muscular movements, though muscular power is entire, and loss of co-ordinating movement. It is generally associated with degeneration of the posterior columns of the spinal cord and posterior roots of the spinal nerves. Sometimes known as Charcot's disease. According to Sir James Paget and Prof. Humphrey, it is probably a compound of two things, rheumatic gout and chronic rheumatic arthritis, not definitely so, but a method of rheumatic arthritis altered from its ordinary fashion by the intervention of the locomotor ataxy. Mr. Hutchinson considers it a sort of tumultuous old age, an old age of premature senility of the nervons system, with loss of sensation, and considerable alteration in the heads of the bones.

† **lō-cō-rĕst′-ĭve,** *a.* [Lat. *locus* = a place, and Eng. *restive*, in the sense of being at rest.] Staying in one place, unwilliug to stir from the place in which one is.

lō′-cŭst, *s.* [Lat. *locusta* = a locust; Fr. *locuste;* Ital. *locusto.*]

I. *Zoology:*

1. *Sing.:* Any migratory species of the Orthopterous family Acridiidæ, specially *Œdipoda migratoria*, the Migratory Locust. An allied species, *Œ. cinerascens*, occurs in the south-east of Europe. The females excavate holes in the earth, and deposit their eggs in a long mass enveloped in a glutinous secretion. The larvæ commence their destructive career almost as soon as they are hatched. The migrations of locusts are probably in search of food, and extraordinary accounts are on record of the vast swarms that from time to time invade particular districts. They clear everything off the surface of the ground, and have on several occasions caused disastrous famines. Their range in the Old World stretches from Spain and the South of France, through Russia to China; south of this boundary line they are equally destructive. The Rocky Mountain Locust is *Caloptenus spretus*. Its ravages in the Western States, particularly in Kansas, have been great in years of special visitation, which fortunately do not often recur. It is boped that it may eventually be eradicated, by destruction on its mountain breeding grounds, when these once become well known. The habits of the Locusts are being diligently studied. Next to man, who adopts various means for their destruction, their chief enemies are insectivorous birds, parasitic beetles of the family Cantharidæ, and dipterous flies of the family Bombyliidæ.

2. *Plural:*

† (1) A rendering of the name Locustidæ, applied to a family which does not contain the genuine Locusts. [Locustidæ.]

(2) The family Acridiidæ, to which the true Locusts belong

locust-shrimp, *s.*

Zool.: Squilla mantis. Nicholson considers this crustacean a good example of the order Stomapoda (q.v.). The carapace is small, and does not cover the posterior half of the thorax. Several of the anterior appendages are developed into powerfully prehensile and hooked feet. The branchiæ are attached to the first five pairs of abdominal feet. The three posterior thoracic and the abdominal appendages are in the form of swimmerets, and the tail is expanded into a powerful fin.

locust-tree, *s.*

1. *Robinia Pseudacacia*, or Pseudo-Acacia. The Locust tree of the United States is a valuable and beautiful tree, its flowers being attractive in form and color, and delightful in perfume. The wood is hard and durable.

2. *Ceratonia Siliqua.* [Carob.] It is called the Locust-tree because it is by some supposed to have been the food of John the Baptist in the wilderness (Matt. iii. 4). Hence it is called also St. John's Bread.

¶ The Bastard Locust-tree is *Clethra tinifolia*; the Honey Locust-tree, *Gleditschia triacanthos;* the Swamp or Water Locust-tree, *G. monosperma.*

lō-cŭs′-ta, *s.* [Lat. = a locust.]

I. *Entomology:*

1. *Formerly:* According to Linnæus, a subgenus of the genus Gryllus. Type, *Locusta migratoria*, the Migratory Locust. [Locustidæ.]

2. *Now:* A genus of which *Locusta viridissima*, the Great Green Grasshopper of England is the type. [Locustidæ.]

II. *Bot.:* The spikelet of the inflorescence of grasses. [Spikelet.]

lō-cŭs-tĕlle′, lō-cŭs-tĕl′-la, *s.* [From Lat. *locustella*, dimin. of *locusta.* So named because the species feed on Grasshoppers, &c.]

Ornith.: A name given to some Warblers of the genus Salicaria. Thus *Salicaria luscinoidea* is called the Willow Locustella, and the scientific name of the Grasshopper Warbler is *S. locustella.*

* **lō-cŭs′-tĭc,** * **lō-cŭs′-tĭc-al,** *a.* [Eng. *locust; -ic, -ical.*] Of or pertaining to locusts; locust-like.

"Tho' all, to a man,
Translators adopt the *locustical* plan."
Byron: Epistle to J. Bl—k—n, Esq.

lō-cŭs′-tĭ-dæ, *s. pl.* [Lat. *locust(a)*; fem. pl. adj. suff. *-idæ.*]

Entom.: A family of Orthoptera, tribe Saltatoria. The term Locustidæ ought to have been the scientific designation of the family whose type is the Migratory Locust, placed in the sub-genus Locusta by Linnæus, with which should have been included its close allies, the small so-called grasshoppers, which sometimes leap forth when one crosses fields or meadows. Unhappily Fabricius, in dividing Linnæus's great genus Gryllus into smaller genera, transferred the term Locusts from the genuine locusts to the insects of which the Great Green Grasshopper is the type; and entomologists in general have followed the injudicious arrangement. The family Locustidæ does not now contain the Locusts. [Locust.] The antennæ in the modern family Locustidæ are very long, thin, and bristle-shaped, the tarsi four-jointed, the ocelli generally wanting. [Locusta.]

* **lō-cū′-tion,** *s.* [Lat. *locutio*, from *locutus*, pa. par. of *loquor* = to speak.] The act or power of speaking; speech, discourse; mode of speech; phrase.

"Should gentle Phœbus fortify my lungs,
And give *locution* from a hundred tongues."
Lewis: Statius; Thebaid, xi.

* **lŏc′-ŭ-tōr-ў,** * **loc-u-tor-ye,** *s.* [As if from a Lat. *locutorium*, from *locutus*, pa. par. of *loquor* = to speak.] A room or place for conversation; specif., in monasteries a room in which the monks were allowed to converse, silence being enjoined elsewhere.

***lōd'-am, *lōad'-ŭm,** *s.* [Etym. donbtfnl.] An old game of cards.

"She and I will take you at *lodam*."
Woman Killed with Kindness.

lŏd-dĭ-ġē'-sĭ-ą, *s.* [Named after Mr. George Loddiges.]

Ornith.: A genus of Trochilidæ (Humming Birds). The sole species is *Loddigesia mirabilis*, of which only one specimen has been met with, Mr. Gould vainly offering £50 to any person who would find a second.

lōde, *load, *s.* [A.S. *lád* = a way, a course, from *lidhan* = to go, to travel; cogn. with Icel. *leidh* = a lode, a way; *lidha* = to go, to move; Dan. *led* = a gate, from *lide* = to glide on; Sw. *led* = a way, a course, from *lida* = to pass on.]

I. *Ordinary Language:*

1. In the same sense as II. 2.

"They begin at another place neere-hand, and so drawe by gesse to the main *load* againe."—*Carew: Survey of Cornwall*, fo. 10.

2. An open ditch or watercourse for carrying off water from a fen.

"There were lakes or *lodes* several miles in extent."—*Tomlinson: Level of Hatfield Chase*, p. 67.

II. *Technically:*

1. *Hydr. Eng.:* A reach of water in a canal, or slack-water navigation.

2. *Mining:* A regular vein affording metal.

***lode-ship,** *s.* A small fishing vessel.

***lōde'-mąn,** *s.* [Loadsman.]

***lōde'-mĕn-age (age as ĭġ),** *s.* [Loadmanage.]

***lōdes'-mąn,** *s.* [Loadsman.]

***lōde'-stąr, *lode-sterre,** *s.* [Loadstar.]

***lōde'-stōne,** *s.* [Loadstone.]

1. The same as Loadstone, (q.v.).

2. A name given by Cornish miners to a species of stone, or rather a compound of stone and sand of different colours; called also tristone (q.v.).

***lŏdġ'-ą-ble,** *a.* [Lodgeable.]

lō'-dĭ-cule, lō-dĭc'-ų-lą, *s.* [Lat. *lodicula* = a small coverlet, a blanket.]

Bot.: The name given by Palisot de Beauvois to the hypogynous scale of a grass.

lō-dō-ĭ-çē'-ą, *s.* [Named after Laodice, the daughter of Priam and Hecuba. (*Paxton.*)]

Bot.: A genus of Palms, tribe Borasseæ, and the fan-leaved section of it. *Lodoicea seychellarum*, the Sea Cocoa-nut or Double Cocoa-nut, is sixty, eighty, or even a hundred feet high. Its leaves bend to the wind, but hold their places tenaciously. Its native country was unknown till 1743, when it was found in the Seychelles Archipelago. Previously it had been known only by "double cocoa-nuts," floating on the sea, or cast on Indian or other Eastern shores. They were supposed to grow in a submarine forest, and to possess fabulous virtues. Now they are believed to be wild only in the Maldives and Laccadives. (*Prof. Watt*), those in Seychelles having been planted. Their cabbage-like top is often preserved in vinegar, and eaten. The leaves are employed to thatch houses; the young leaves are made into hats; the trunk split into palisades for surrounding houses and gardens. The hard, black shell of the fruit is used by Indian fakirs as a drinking and begging cup.

lœll'-ĭng-īte, *s.* [Named after the place where first found, Lœlling; suff. *-ite* (*Min.*); Ger. *löllingit, löllingit.*]

Min.: An orthorhombic mineral much resembling in form and angles leucopyrite and mispickel (q.v.). Hardness, 5 to 5·5; sp. gr. 6·8 to 8·71; in other physical characters the same as leucopyrite. Compos.: arsenic, 72·8; iron, 27·2; corresponding to the formula $FeAs_2$. Occurs with nickeline at various localities.

lō'-ĕss, *s.* [Provincial Ger.]

Geol.: Mud deposited by the Rhine along its banks, and occupying a great part of the valley of the river. It consists of a finely-comminuted sand, or pulverulent loam of a yellowish-gray colour, chiefly of argillaceous matter combined with a sixth-part of carbonate of lime and a sixth-part of quartzose and micaceous sand. Sometimes it contains sandy and calcareous concretions or nodules. In some places it is 200 or 300 feet thick. It contains river and fresh-water shells of existiug species. Interstratified with it are layers of ashes, thrown out by some of the last eruptions of the now extinct, or at least dormant, Eifel volcanoes. In Alsace it is called Lahm. There is a corresponding loess on the Mississippi. Both are Post Tertiary.

lœw'-ĕ-īte (w as v), *s.* [Named after A. Lœwe by Haidinger; suff. *-ite* (*Min.*); Ger. *löweit.*]

Min.: A tetragonal mineral found in pure crystalline masses an inch in thickness mixed with anhydrite (q.v.) at Ischl, Austria. Cleavage, basal Hardness, 2·5 to 3; sp. gr. 2·376; lustre, vitreous; colour, honey-yellow to reddish. Taste weak. Compos. sulphate of soda, 46·3; sulphate of magnesia, 39·1; water, 14·7.

lœ'-wĭg-īte, (w as v) *s.* [Named after Lœwig, who first analysed it; suff. *-ite* (*Min.*); Ger. *löwigit.*]

Min.: A mineral found in rounded compact lumps in a coal bed at Tabrze, Upper Silesia. Hardness, 3 to 4; sp. gr. 2·58; lustre, feeble; colour, pale straw-yellow; fracture, perfectly conchoidal. Compos.: sulphurie acid, 36·2; alumina, 34·8; potash, 10·7; water, 18·3; corresponding to the formula $KOSO_3 + 3Al_2O_3 SO_3 + 9HO$. Resembles in texture the lithographic stone of Solenhofen.

*** lof,** (1) *** lofe,** *s.* [A.S. & Icel. *lof*, O. H. Ger. *lob.*] Praise.

"Drihtin to *lofe* and wurthe." *Ormulum*, 1,141.

II. *Bot.: (Of a tree or plant):* The next stage in the scale of height above tall (q.v.).

lŏg (1), *s.* [Icel. *lág* = a felled tree, a log; cogn. with Sw. dial. *låga* = a felled tree; Old Sw. *låge* = broken branches; Sw. *logg* = a log (naut.), *log-lina* = a log-line; *log-bok* = a log-book, *logga* = to heave the log; Dan. *log* = a log (naut.), *log-line* = a log-liue, *log-bog* = a log-book, *logge* = to heave the log; Dut. *log* = a log (naut.), *log-lijn* = a log-line; Ger. *log.*]

I. *Ordinary Language:*

1. A rough bulky piece of timber unhewed; a block; a piece of wood.

"I must remove
Some thousands of these *logs*, and pile them up."
Shakesp.: Tempest, iii. 1.

2. An account of one's acts or trausactions; a diary, a journal.

"The *log* of the exploring expedition eent out by the Portuguese in 1501 is written on the Brazilian coast."—*Taylor: Words & Places* (1873), ch. ii.

3. A book in which the master of a public school enters memoranda. (*English.*)

II. *Technically:*

1. *Nautical:*

(1) An apparatus for ascertaining the rate of a ship's motion. In its common form it consists of a triangular piece of wood, called the log-chip, curved at the bottom, which is loaded so that it may float upright in the water. To its corners is attached a cord, termed a log-liue, which is wound around a reel, the axis of which projects, allowing it to turn freely when held in the hollow between the thumb and forefinger. The line is long enough to measure the distance sailed by the ship at her greatest speed during a given time, usually 30 secouds, and is divided into knots, corresponding to a proportionate part of the nautical mile, that is, 51 feet. The string is knotted at such intervals that the spaces bear the same relation to a nautical mile that a half-miuute does to an hour, that is, the knots must be the 120th of a nautical mile apart. The English geographical or nautical mile is $\frac{1}{60}$ of a degree of latitude, about 2,025 yards. A certain length of line—not marked—intervenes between the chip and the first division on the line. This is termed the stray-line, and serves to allow the chip to drift beyond the dead-water in the wake of the ship. Each knot is made sensible to the feeling as well as to the sight, and is subdivided into teu fathoms so called. The time is measured by a small sand-glass. In heaving the log, the observer, usually an officer or petty officer, throws the chip over the taffrail, and as the first mark on the line passes over the reel, calls out "turn" to the assistant, who immediately inverts the glass. When the sand has all ruu out, the latter calls out "out," when the observer checks the line, noting the knots and fathoms which have passed out. This operation, in well-regulated vessels, is performed every hour, and the result, as well as the course by compass which the vessel is steering at the time, is entered in the log-book, to serve as a basis for the dead reckoning (q.v.).

(2) The same as Log-book (q.v.).

2. *Steam-engin.:* A tabulated summary of the performance of the engines and boilers, and of the consumption of coals, tallow, oil, and other engineers' stores on board a steam-vessel.

log-board, *s.*

Naut.: The hinged pair of boards on which the memoranda of time, wind, course, rate, &c., are noted for trauscription into the log-book.

log-book, *s.*

1. *Naut.:* The book which contains a journal of the vessel's progress from day to day, with any event occurring on board, of vessels spoken, &c. It is transcribed from the log-board, and forms the rough-log from which (in government vessels) the smooth-log is transcribed for the navy department.

2. The same as Log, *s.*, 1. 3.

"Every teacher should bring his *log-book* to the collective examinatiou every two or three yeare."—*Fearon: School Inspection*, § 13.

log-cabin, *s.* A hut or cabin roughly constructed of logs laid on each other.

log-canoe, *s.* A canoe constructed of a single log hollowed out.

log-chip, *s.*

Naut.: The triangular board on the end of the log-line. [Log (1), *s.*, II. 1 (1).]

*** log-end,** *s.* The thick end of anything.

"The most heavy *log-end* of Christ's Cross."—*Gauden: Tears of the Church*, p. 122.

log-glass, *s.*

Naut.: The sand-glass used at heaving the log. Half-minute or quarter-minute glasses are used, according to the rate of sailing. [Log (1), *s.*, II. 1 (1).]

log-house, *s.* The same as Log-cabin (q.v.).

log-line, *s.*

Naut.: A line 150 fathoms in length. [Log (1), *s.*, II. 1 (1).]

log-measurer, *s.* A device for gauging logs, taking the round measure with the allowance for the squaring, and giving results in board measure of the ascertained square in running feet of the log.

log-reel, *s.* The reel of the log-line.

log-roll, *v.t.*

1. *Lit.:* To assist in collecting and rolling logs for burning.

2. *Fig.:* To assist mutually in carrying measures of legislation. (*American.*)

log-ship, *s.* [Log-chip.]

log-slate, *s.* A log-board (q.v.).

log-sled, *s.* A short, long, low-benched sled for hauling logs.

*** lŏg** (2), *s.* [Heb.] A Hebrew measure for liquids, containing according to some three-quarters of a pint; according to others, a quarter of a cab, and consequently five-sixths of a pint. According to Dr. Arbuthnot, it was a liquid measure, the seventy-second part of the bath or ephah, and twelfth part of the hin. (*Calmet.*)

"A meat-offering mingled with oil, and one *log* of oil."—*Leviticus* xiv. 10.

lŏg (1), *v.i.* [Log (1), *s.*] To cut and get out logs. (*American.*)

lŏg (2), *v.t.* [Log (1), *s.*] To enter in a log-book.

"I've known a smart chase and a fight at the tail where lees has been *logged* than I've got on that there slate."—*J. F. Cooper: Pioneers*, ch. xxxii.

lŏg'-ąn, lŏg'-gąn, *s.* [Log (3), *v.*] A rocking-stone; a large stone so balanced as to be easily made to rock to and fro. [Rocking-stone.]

lō-găn'-ĕ-æ, *s. pl.* [Mod. Lat. *logan(ia)*; Lat. fem. pl. adj. suff. *-eæ.*]

Bot.: The typical tribe of the order Loganiaceæ (q.v.).

lō-găn'-ĭ-ą, *s.* [Named by Mr. Brown after a Mr. Jas. Logan, said to have been the author of some experiments on the generation of plants. (*Loudon.*)]

Bot.: The typical genus of the tribe Loganeæ and the order Loganiaceæ (q.v.). It cousists of about eleven small Australian bushes or herbaceous plants, with opposite entire leaves and terminal or axillary bunches of white flowers.

lō-găn-ĭ-ā'-çĕ-æ, *s. pl.* [Mod. Lat. *logan(ia)*; Lat. fem. pl. adj. suff. *-aceæ.*]

Bot.: Loganiads; an order of perigynous exogens, alliance Geutianales. The leaves are opposite, entire, with stipules often interpetiolar; flowers racemose, corymbose, or solitary; calyx valvate or imbricated, four to five-parted; corolla regular or irregular, four, five, or ten-cleft; stamens in the same line; ovary superior, two, three, or spuriously four-celled; ovules indefinite or solitary; fruit capsular, drupaceous or berried. Distribution, tropical or intertropical countries. Known genera 22, species 162. (*Lindley.*)

lō-găn'-ĭ-ądş, *s. pl.* [Mod. Lat. *logani(a)*; Eng. pl. suff. *-ads.*]

Bot.: The name given by Lindley to the order Loganiaceæ (q.v.).

lō'-gąn-īte, *s.* [Named after Sir Wm. Logan by T. S. Hunt; suff. *-ite* (*Min.*).]

Min.: A mineral resulting from the alteration of hornblende, having its form, augles, and cleavage. Compos.: silica, 33·28; alumina, 13·30; sesquioxide of iron, 1·92; magnesia, 35·50; water, 16·0. Corresponds very closely to the composition of penninite (q.v.). Found in the Laurentian crystalline limestone of Canada.

lŏg-ą-œd'-ĭc, *a.* [Gr. λογαοιδικ *(logaoidikos)*, from λόγος *(logos)* = speech, prose, and ἀοιδή *(aoidē)* = poetry, verse.]

Pros.: A term applied to verses in which the stronger dactylic rhythm passes into the weaker trochaic, so that they seem to partake of the natures both of prose and poetry.

lŏg'-ą-rĭthm, *s.* [Gr. λόγος *(logos)* = a word, a proportion, and ἀριθμός *(arithmos)* = a number; Fr. *logarithme;* Sp. & Ital. *logaritmo.*]

Math.: The logarithm of a number is the exponent of the power to which it is necessary to raise a fixed number, called the base, to produce the given number. The logarithm of N to the base a is thus expressed, $\log_a N$. The logarithm of any number depends upon the value of the base a, and different systems of logarithms are found by taking different values of a; but since $a^0 = 1$, in every system $\log_a 1 = 0$. By taking different values of N in each system, different values of x will be found in each system, and such numbers being registered will form tables of logarithms. The Common, or Briggs', tables of Logarithms are calculated to base 10. The Napierian tables, invented by Lord Napier, are calculated to base ϵ, which = 2·7182818. In the common system of logarithms, the logarithm of 100 is 2, because 10 raised to the second power = 100; similarly, the logarithm of 1000 = 3, of 10000 = 4, and so on. When the logarithms form a series in arithmetical progression, the corresponding natural numbers form a series in geometrical progression, thus—

Logarithms	0	1	2	3	4	5
Natural numbers	1	10	100	1000	10000	100000

The logarithms of numbers between 1 and 10 consist of decimals, of numbers between 10 and 100 they consist of the integer 1 and a decimal; of numbers between 100 and 1000 of the integer 2 and a decimal, and so on. The integral part of a logarithm is called the index, and it is always less by 1 than the number of integer places in the corresponding natural number: thus the index of the logarithm of 3 is 0, of 30 is 1, of 300 is 2, and so on. The logarithms of decimals have negative indices, and the number of units in the index is always greater by 1 than the number of ciphers immediately following the decimal point: thus the index of the logarithm of ·3 is — 1, of ·03 is — 2, of ·003 is — 3, and so on. The decimal part of a logarithm is called the mantissa. Logarithms are of great service in shortening and facilitating the arithmetical operations of multiplication and division; for since the sum of the logarithms of two numbers is the logarithm of the product of those numbers; and since logarithms are the indices of powers of the same basis, the difference of the logarithms of two numbers is the logarithm of the quotient; also the multiple of the logarithm of a number is the logarithm of the power of that number, and a fraction of the logarithm of a number is the logarithm of the corresponding root. Hence a complete table of logarithms would enable us to perform multiplication by addition, division by subtraction, involution by multiplication, and evolution by division. Logarithms were invented by Lord Napier of Merchiston in Scotland in 1614, and improved by Henry Briggs, Savilian Professor of Geometry at Oxford in 1624.

¶ (1) *Arithmetical complement of a logarithm:* The difference between the given logarithm and 10.

(2) *Hyperbolic logarithms:* The Napierian system of logarithms, so called from their relation to certain areas included between the equilateral hyperbola and its asymptotes.

"There is no reason why the Napierian *logarithms* should be called *hyperbolic*, rather than those of any other system; for, the same relation which exists between the Napierian system and the equilateral hyperbola also exists between other systems and oblique hyperbolas. In the case of oblique hyperbolas, the area is limited by two oblique ordinates, and the modulus of the system is always equal to the sine of the angle between the ordinates."—*Davies & Peck: Mathematical Dict.; Logarithms.*

*** lŏg-ą-rĭth-mĕt'-ĭc, * lŏg-ą-rĭth-mĕt'-ĭc-ąl,** *a.* [Formed on analogy of *arithmetic, arithmetical.*] Of or pertaining to logarithms; logarithmic.

"A mathematical novelty in the shape of a *logarithmic* average."—*Athenæum*, Aug. 19, 1882.

logarithmic-curve, *s.*

Math.: A curve that may be referred to a system of rectangular co-ordinate axes, such that the ordinate of any point will be equal to the logarithm of its abscissa.

logarithmic-spiral, *s.*

Math.: A curve-line intimately connected with the logarithmic curve. It intersects all its radiants at the same angle, which angle is the modulus of the system of logarithms represented by the particular spiral. Also called a logistic spiral.

*** lŏg-ą-rĭth'-mĭc-ąl-lў,** *adv.* [Eng. *logarithmical; -ly.*] In a logarithmical manner; by the use or aid of logarithms.

*** loge,** *s.* [Fr.] A lodge, a lodging, a habitation. (*Chaucer: C. T.*, 14,895.)

lŏg'-gąn, *s.* [LOGAN.]

*** lŏg'-gąt,** *s.* [A dimin. from *log* (1), s. (q.v.).]

1. A small log or piece of wood.

2. *(Pl.):* The name of an old game, consisting in fixing a stake in the ground, and pitching small pieces of wood at it, the nearest thrown winning. It was declared unlawful by the 33rd of Henry VIII. (*Shakesp.: Hamlet*, v. 1.)

*** lŏgged,** *pret. & pa. par. of v.* [LODGE, *v.*]

1. *Ord. Lang.:* Fastened with logs. (*Amer.*)

2. *Naut.:* The same as WATER-LOGGED (q.v.).

lŏg'-gĕr, *s. & a.* [Eng. *log* (1), s.; *-er.*]

A. *As subst.:* A person employed to get logs or timber. (*American.*)

*** B.** *As adj.:* Stupid. (*Cotton: Burlesque upon Burlesque.*)

lŏg'-gĕr-hĕad, *s.* [Eng. *logger*, a., and *head.*]

*** I.** *Ord. Lang.:* A blockhead, a stupid fellow, a dolt. (*Shakesp.:* 1 *Henry IV.*, ii. 4.)

II. *Technically:*

1. *Bot. (Pl.):* *Centaurea nigra.*

2. *Build.:* A spherical mass of iron with a long handle used to melt tar.

3. *Naut.:* A runnel on the gunwale of a whaleboat, over which the line passes as it is drawn out by the fish; a ballard.

4. *Zool.:* [LOGGERHEAD-TURTLE].

¶ (1) *To fall (come, or go) to loggerheads:* To come to blows. (*L'Estrange.*)

(2) *To be at loggerheads:* To quarrel, to fight; to engage in a dispute.

loggerhead-turtle, *s.*

Zool.: *Thalassochelys olivacea*, formerly *Chelone couanna*, a turtle frequenting the Atlantic, and found more rarely in the Mediterranean. The head is low, broad, and flat on the top. The feet are large. Body coloured brownish or reddish-brown. The Indian loggerhead has long fore limbs, and but one claw.

*** lŏg'-gĕr-hĕad-ĕd,** *a.* [Eng. *loggerhead; -ed.*] Doltish, stupid, blockheaded. (*Shakesp.: Taming of the Shrew*, iv. 1.)

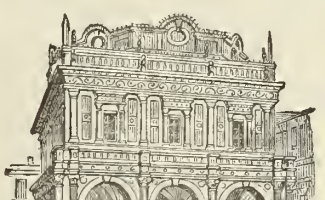
loggerheaded-shrike, *s.*

Ornith: *Lanius carolinensis* (*Wilson*). Its colours are gray, black, and white. It feeds on crickets and grasshoppers.

lŏg'-gĭ-ą (pl. **lŏg'-gĭ-ê**), *s.* [Ital.] [LODGE.]

Italian Architecture:

1. A corridor or gallery of a palatial building, sometimes on the level of the ground, at other times at the height of one or more stories running along the front or part of the front of the building, and open on one side to the air, on which side is a series of pillars or slender piers; a belvedere.



PALAZZO DELLA LOGGIA, BRESCIA.

2. A large ornamental window in the middle of the chief story of a building, often projecting from the wall.

3. An open balcony in a theatre or concert-hall.

*** log-ging** (1), *s.* [LODGING.]

*** lŏg'-gĭng** (2), *pr. par. & s.* [LOG, *v.*]

A. *As pr. par.:* (See the verb).

B. *As subst.:* The act of collecting or getting logs.

logging-axe, *s.* An axe used in cutting off logs. It is usually heavier than a felling or lopping axe.

logging-head, *s.* The working-beam of a steam-engine.

lŏj'-ĭc, † **lŏj'-ĭcs,** *s.* [Fr. *logique*, from Lat. *logica (ars)* = (the art) of logic; *logicus* = logical; Gr. λογική *(logikē)* (τέχνη *(technē)* = (the art) of logic; λογικός *(logikos)* = pertaining to speech or logic; λόγος *(logos)* = a speech; λέγω *(legō)* = to read.]

Hist. & Phil.: Logic, as known in the present day, is a development and modification of the τέχνη διαλεκτική *(technē dialektikē)* = art of reasoning, which Aristotle, utilizing the labours of his predecessors, and notably those of Zeno of Elea, moulded into something like consistent shape. The first development of Aristotelian Logic was by the Scholastics (q.v.); and Lewes (*Hist. Phil.* (1880), ii. 22) mentions it with praise of Abelard, that "he brought forward Logic as an independent power in the great arena of theological debate." At the time of the Reformation, probably as a protest, Scholasticism was depreciated, and at some of the Scotch Universities it was discarded for Ramism (q.v.). The subtle distinctions and keen disputations of the Schoolmen led in the next century to Bacon's condemnation of the perversion—not of the cultivation—of logical pursuits. Locke was not so moderate, as may be seen in his *Essay* (ch. xxii., *Of Reason*). [For German Logic, see HEGELIANISM, KANTIAN-PHILOSOPHY, and TRANSCENDENTALISM.] Generally speaking, down to the first half of the present century, there was little dispute as to how Logic should be defined. The Port Royalists had, certainly called it the Art of Thinking; but the Art *or* Science of Reasoning, or the Art *and* Science of Reasoning met with little opposition as a definition. This is how Whately defines it (*Logic*, Introd., § 1), and a writer of such opposite opinions as Tongiorgi, S.J. (*Inst. Phil.*) has substantially the same words; and a parallel passage to Whately's explanation, as to how Logic is at once a science and an art, occurs in Liberatore, who is read in many of the ecclesiastical colleges in Rome. Sir W. Hamilton says that—

"*Logic* is the Science of the Laws of Thought as Thought or the Science of the Formal Laws of Thought, or the Science of the Laws of the Forms of Thought; for all these are merely various expressions of the same thing."—*Lectures on Logic* (ed. 1874), i. 26.

Mill's definition is far wider in its inclusion, for he makes Logic co-extensive with proof:—

"*Logic*, then, is the science of the operations of the understanding which are subservient to the estimation of evidence; both the process itself of advancing from known truths to unknown, and all other intellectual operations in so far as auxiliary to this. It includes, therefore, the operation of Naming; for language is an instrument of thought, as well as a means of communicating our thoughts."—*Logic.* (Introd. § 7.)

Sayce (*Prin. Comp. Philol.*, Pref. ix.), has a passage, which is an admirable gloss upon the latter part of this definition. (See also *Lewes: Hist. Phil.* (1880), i. 301, sqq.)

¶ 1. *Applied logic:*

(1) [*Modified logic*].

(2) The term is sometimes loosely used for logical method employed in some particular branch of investigation.

2. *Deductive logic:* Syllogistic Logic; in which no more is inferred in the conclusion than is implicitly contained in the premisses. [SYLLOGISM.]

3. *Equational logic:* A system of logical notation in which propositions are expressed in the form of equations. (See *Jevons: Principles of Science*, and *Studies in Deductive Logic.*)

4. *Inductive logic:* The science which treats of inductive reasoning, by which, broadly speaking, a general proposition is inferred

from a number of particular propositions. [Inductive-method.]

5. *Modified logic:* That Logic which is concerned in the investigation of Truth and its contradictory opposite, Error; of the causes of Error, and the impediments to Truth and their removal; and of the subsidiaries by which human thought may be strengthened and guided in its functions.

"What I have called *Modified Logic* is identical with what Kant and other philosophers have denominated Applied Logic."—*Sir W. Hamilton: Logic* (ed. 1874), i. 60.

6. *Pure logic:* (See extracts).

"*Pure logic* arises from a comparison of things as to their sameness or difference in any quality or circumstance whatever."—*W. Stanley Jevons: Pure Logic*, p. 17.

"*Pure logic* teaches both the laws of immediate knowledge or Perception, and those of mediate knowledge or Thought."—*Ueberweg: Logic*, p. 17.

7. *Syllogistic logic:* [*Deductive logic*].

8. *Symbolic logic:*

(1) (See extract.)

"*Symbolic Logic* is not a generalization of the Common Logic in all directions alike. It confines itself to one side of it, viz., the class or denotation side—probably the only side which admits of much generalization—and this it pushes to the utmost limits, withdrawing attention from everything which does not develope in this direction."—*Venn: Symbolic Logic*, ch. ii.

(2) The term is also loosely applied to the illustration of logical relations by mathematical signs or by diagrams.

¶ The form *logics* is used in the Dublin Uuiversity.

lŏĝ'-ĭc-ăl, *a.* [Eng. *logic; -al.*]

1. Of or pertaining to logic; taught or used in logic.

"But they are put off by the names of vertues, and natures, and actions, and passions, and such other *logicall* words."—*Bacon: Nat. Hist.*, § 98.

2. According to the rules or principles of logic; sound in reasoning.

"He, by sequel *logical*,
Writes best, who never thinks at all."
Prior: Epistle to Fleetwood Shephard.

3. Skilled in logic; furnished with logic.

"A man who sets up as a judge in criticism, should have a clear and *logical* head."—*Addison.*

***lŏĝ-ĭ-căl'-ĭ-tў,** *s.* [Eng. *logical; -ity.*] The state or quality of being logical.

"It [Cynicism] required a great rude energy, a fanatical *logicality* of mind."—*Lewes: History of Philosophy*, i. 191.

***lŏĝ-ĭ-căl-ĭ-zā'-tion,** *s.* [Eng. *logicalīz(e); -ation.*] The act of making logical.

"The mere act of writing tends in a great degree to the *logicalization* of thought."—*E. A. Poe: Marginalia*, xvi.

***lŏĝ'-ĭ-cal-īze,** *v.t.* [Eng. *logical; -ize.*] To make logical.

"Thought is *logicalized* by the effort at expression."—*E. A. Poe: Marginalia*, xvi.

lŏĝ'-ĭc-al-lў, *adv.* [Eng. *logical; -ly.*] In a logical manner; according to the rules or principles of logic.

"This danger we avoid if we *logically* follow out the principles of the constitution to their consequences."—*Macaulay: Hist. Eng.*, ch. x.

lŏ-ĝĭ'-cian, *s.* [Fr. *logicien*, from Lat. *logicus.*] One who is versed or skilled in logic; a teacher or professor of logic.

"The grim *logician* puts them in a fright;
'Tis easier far to flourish than to fight."
Dryden: Hind & Panther, iii. 201.

***lŏĝ'-ĭ-çīse,** *v.i.* [Eng. *logic; -ise.*] To reason; to exercise logical powers.

†**lŏĝ'-ĭcs,** *s.* [Logic.]

lō'-ĝiĕr, *s.* [Etym. doubtful.] A piece of hollowed-out pewter polished in various concavities, and used as theatrical jewelry. (*Annandale.*)

Lō-ĝĭĕr'-ĭ-an, *a.* [See def.] Of or belonging to John Bernard Logier, who was born at Cassel, in 1780, and died in 1846.

Logicrian system, *s.*

Music: A system of musical instruction introduced by Logier. It flourished from about 1817 to 1827.

***lŏĝ'-ĭst,** *s.* [Gr. λογιστής (*logistēs*) = a calculator.] A calculator.

lŏ-ĝĭst'-ĭc, *a.* [Gr. λογιστικός (*logistikos*) = skilled in calculating, from λογίζομαι (*logizomai*) = to calculate; Fr. *logistique.*]

* 1. Logical.

2. Pertaining or relating to logistics; sexagesimal.

logistic-arithmetic, *s.*

Math.: Certain logarithmic numbers used for facilitating the calculation of the fourth term of a proposition, of which one of the terms is a given constant quantity, commonly one hour, while the other terms are expressed in minutes and seconds; in which case the logistic logarithm of a given number of seconds, or minutes and seconds, is the excess of the logarithm of 3,600, the number of seconds in an hour, over the logarithm of the given number of seconds; so that the process is reduced to adding the logistic logarithms of the second and third terms, which gives the logistic logarithm of the fourth term. For example, to form the logistic logarithm of 3′ 20″ or 200″, we take the logarithm 2·3010 from 3·5563, and we have 1·2553 for the logistic logarithm of 3′ 20″. Logistic logarithms are tabulated and employed in certain astronomical computations, but they are now almost entirely disused.

logistic-spiral, *s.* [Logarithmic-spiral.]

lŏ-ĝĭst'-ĭc-al, *a.* [Eng. *logistic; -al.*] The same as Logistic (q.v.).

lŏ-ĝĭst'-ĭcs, *s.* [Logistic.]

1. *Math.:* The same as sexagesimal arithmetic, that is, that system of arithmetic in which numbers are expressed the in scale of sixty. The use of this scale is almost entirely confined to trigonometrical operations for expressing fractional parts of a circumference, or of a right angle.

2. *Mil.:* That branch of military science or art which deals with the comparative warlike resources of countries betweeu which war is likely to break out, and also with the conditions under which it has to be conducted, the means of transit, resources of food, geographical features, climate, &c.

"I have written of him [Johnston] as a master of *logistics.*"—*R. Taylor: Destruction & Reconstruction*, ch. v.

lŏĝ'-măn, *s.* [Eng. *log*, and *man.*]

* 1. One employed to carry logs.

"To make me slave to it; and, for your sake,
Am I this patient *logman.*"
Shakesp.: Tempest, iii. 1.

2. A person employed to collect and take logs to a mill. (*American.*)

* **lŏ-ĝŏc'-rą-çў,** *s.* [Gr. λόγος (*logos*) = a word; κρατέω (*krateō*) = to rule.] Government by the power of words. (*Irving: Salmagundi*, No. 14.)

* **lŏ-gō-dæ'-dąl-ў,** *s.* [Gr. λόγος (*logos*) = a word, and δαίδαλος (*daidalos*) = cunningly wrought.] A playing with words; verbal legerdemain. (*Coleridge.*)

lŏĝ'-ō-grăm, *s.* [Gr. λόγος (*logos*) = a word, and γράμμα (*gramma*) = a letter.]

1. A phonogram or sign, which for the sake of brevity represents a word: as, | that is *t*, for *that.*

2. A set of verses forming a puzzle. The verses contain words synonymous with certain others formed from the transposition of the letters of an original word, which last it is the object to find out.

lŏĝ'-ō-grăph, *s.* An instrument for recording the sounds of the human voice. (*Smithsonian Report*, 1880.)

* **lŏ-ĝŏg'-rą-phĕr,** *s.* [Gr. λογογράφος (*logographos*) = a prose writer; λόγος (*logos*) = prose, and γράφω (*graphō*) = to write.]

1. An historian. The early Greek historians from Cadmus of Miletus to Herodotus are so called by Thucydides (i. 21), and the name has been since appropriated to the old chroniclers before Herodotus. (*Liddell & Scott.*)

"His [Herodotus] style must be considered as the perfection of the uuperiodic style, the only style employed by his predecessors, the *logographers.*"—*Mueller: Lit. Anc. Greece* (ed. *Donaldson*), i. 363.

2. A professional speech-writer.

"The plain man, intending to go to law, addressed himself to a professional speech-writer or *logographer*, who not only gave him legal advice, but furnished him with a speech to be learnt by heart."—*Quarterly Review*, Oct. 1881, p. 531.

***lŏ-gō-grăph'-ĭc,** ***lŏ-gŏ-grăph'-ĭc-ăl,** *a.* [Eng. *logograph(y); -ic, -ical.*] Of or pertaining to logography (q.v.).

logographic-printing, *s.* The same as Logography, 1.

* **lŏ-gō-grăph'-ĭc-ăl-lў,** *adv.* [Eng. *logographical; -ly.*] In a logographic manuer; in the manner of logography.

"The *Daily Universal Register* . . . had thus been printed *logographically* more than a year and a half."—*Grant: The Newspaper Press*, i. 420.

lŏ-ĝŏg'-rą-phў, *s.* [Gr. λογογραφία (*logographia*), from λόγος (*logos*) = a word, and γράφω (*graphō*) = to write; Fr. *logographie.*]

1. A method of printing, in which a type represents a whole word, or a termiuation of a word, instead of a single letter.

2. A system of taking down the words of a speaker, without making use of shorthand, by a number of reporters, each of whom took down three or four words. It was invented by Mr. H. Barlow, about 1784.

* **lŏĝ'-ō-grĭph,** * **lŏĝ'-ō-grўph,** *s.* [Gr. λόγος (*logos*) = a word, and γριφος (*griphos*) = a fishing-net, a riddle; Fr. *logogriphe;* Ital. & Sp. *logogrifo.*] An enigmatical question; a puzzle, a riddle.

"Worse than the *logogryphes* of later times."
Bp. Hall: Satires, bk. iv., sat. 1.

†**lŏ-gŏm'-ą-chĭst,** *s.* [Eng. *logomach(y); -ist.*] One who contends or disputes about words.

"One feels inclined to demur, and to ask, like some old *logomachist*, what he exactly means by 'is.'"—*Pall Mall Gazette*, May 11, 1882.

lŏ-gŏm'-ą-chў, *s.* [Gr. λογομαχία (*logomachia*), from λόγος (*logos*) = a word, and μάχομαι (*machomai*) = to fight; Fr. *logomachie;* Ital. *logomachia;* Sp. *logomaquia.*] A contention in words or about words; a dispute about words.

"His sturdy English contempt for philosophical *logomachy.*"—*Leslie Stephen: English Thought in the Eighteenth Century*, i. 38.

lō-gŏm'-ĕ-tĕr, *s.* [Gr. λόγος (*logos*) = a word, ratio, and μέτρον (*metron*) = a measure.] A scale for measuring chemical equivalents.

lō-gō-mĕt'-rĭc, lō-gō-mĕt'-rĭc-ăl, *a.* [Gr. λόγος (*logos*) = a word, ratio, and Eng. *metric, metrical* (q.v.).] Of or pertaining to a logometer; used to measure chemical equivalents.

lŏĝ'-ŏs, *s.* [Gr.]

1. *Phil.:* The word Logos has a philosophical as well as a religious history. It first becomes promiuent in the theories of Heraclitus of Ephesus, where it appears as a law of nature, objective iu the world, giving order and regularity to the movement of things. The Logos formed an important part of the Stoic System. The active principle living in the world, and determining it they called both Logos and God. The Divine Reason, operating upon matter, bestows upon it the laws which govern it, laws which the Stoics called λόγοι σπερματικοί, or productive causes. They also taught that in man there was a special Logos, which they called ἐνδιάθετος, so long as it was resident within the breast; προφορικός, when it was expressed. For the doctrine of Philo, see extract—

"The *Logos*, a being intermediate between God and the world, dwells with God as his Wisdom. The *Logos* is diffused through the world of the senses as divine reason revealing itself in the world. . . . The *Logos* does not exist from eternity like God, and yet its genesis is not like our own and that of all other created beings; it is the first-begotten Son of God, and is for us, who are imperfect a God; the wisdom of God is its mother. . . . Through the agency of the *Logos*, God created the world, and has revealed himself to it. The *Logos* is also the representative of the world before God, acting as its high-priest, intercessor, and Paraclete."—*Ueberweg: Hist. Philos.*, i. 224, 225.

2. *Scrip.:* A Being who was in the beginning, was with God, and was God; made all things, had in himself life, which was the light of men; became flesh, and dwelt among men. (John i. 1, 3, 4, 14; cf. also 1 John i. 1, where the Logos is called the "Word of Life.") The reference is evideutly to Jesus Christ, viewed as having existed from the beginning, and at a certain period becoming incarnate and dwelling among meu.

* **lŏĝ'-ō-thēte,** *s.* [Gr. λόγος (*logos*) = a word, and τίθημι (*tithēmi*) = to place.] An accountant; an officer of the Byzantine Empire, who was the head of an administrative department, the public treasurer, or the chancellor of the empire.

"In the ancient system of Constantine, the name of *logothete*, or accouutant, was applied to the receivers of the finances: the priucipal officers were distinguished as the *logothetes* of the domain, of the posts, the army, the private and public treasure; and the great *logothete*, the supreme guardian of the laws and revenues, is compared with the chancellor of the Latin Monarchies."—*Gibbon: Roman Empire*, ch. liii.

lŏg'-ō-tȳpe, *s.* [Gr. λόγος (*logos*) = a word, and Eng. *type* (q.v.).]

Print.: A type having for its face a whole word or a combination of letters in common use; as, *con, com, tion, ing, the, and, in,* on, &c. These compounded types are not now used, but the practice still remains in combination of letters, such as *ff, ffi.*

lŏg'-rōll, *v.i.* To engage in political log-rolling. (*U. S.*)

lŏg'-rōll-ĕr, *s.*

1. A device for rolling logs upon a saw-carriage.

2. One engaged in political logrolling. (*U. S.*)

lŏg'-rōll-ĭng, *s.*

1. A joining together of neighbors or others for the purpose of handling logs.

2. A joining together, especially of politicians, for the furthering of individual interests on a reciprocal basis. (*U. S.*)

lŏg'-wood, *s.* [Eng. *log,* and *wood;* it derives its name from the fact that it is imported in logs.]

Bot., Comm., &c: The wood of *Hæmatoxylon campeachianum.* It is used as a red dye stuff. The Decoction of Logwood and the Extract of Logwood are officinal preparations. Logwood is used as an astringent in diarrhœa, chronic dysentery, and atonic dyspepsia. It colonrs the urine of those who use it pink. (*Garrod.*)

***lŏim'-ĭc,** *a.* [Gr. λοιμικός (*loimikos*), from λοίμος (*loimos*) = contagious matter.] Of or pertaining to the plague or other contagious disease.

lŏin, *loine, *loyne, *s.* [O. Fr. *logne, longe,* from Low Lat. **lumbea,* from Lat. *lumbus* = the loin. Prob. cogn. with Mid. Eng. *lend, lænd;* A.S. *lendena* = the loins.]

I. *Ordinary Language:*

1. In the same sense as II.

2. A joint of meat, corresponding to the part described under II.

3. (*Pl.*). The reins.

"Smite through the *loins* of them that rise against him."—*Deut.* xxxiii. 11.

II. *Anat.* (*Human & Comp.*): A popular rather than a scientific term for the soft part of a vertebrate, lying between the false ribs and the hip-joint. Scientifically this is called the lateral part of the lumbar region.

loir (oi as wâ), *s.* [From Fr. *loir;* Prov. *glire;* Sp. *liron;* Port. *leirão;* Ital. *gliero;* Lat. *glis* (genit. *gliris*) = a dormouse.]

Zool.: Myoxus glis. A dormouse larger than the common species. It is found in the south of Europe and in Asia.

lŏi-sĕ-leŭr'-ĭ-ą, *s.* [Named after Loiseleur-Deslongchamps, a French botanist.]

Bot.: A genus of Ericaceæ, sometimes merged in Azalea, but Sir Joseph Hooker makes them distinct. *Loiseleuria procumbens* is better known as *Azalea procumbens.* [AZALEA.]

lŏi'-tĕr, *loy-ter, *loi-tren, *loy-tron, *v.i. & t.* [Dut. *leuteren* = to linger, to loiter, to trifle; *loteren* = to delay, to linger. From the same root as Eng. *lout;* A.S. *lútan;* Icel. *lúta* = to stoop; *lútr* = stooping.]

A. *Intrans.:* To linger, to delay, to dawdle, to spend time idly, to be dilatory, to lag.

"Oh, aid me, then, to seek the pair,
Whom, *loitering* in the woods, I lost."
Scott: Glenfinlas.

B. *Trans.:* To waste or consume in trifles; to idle. Followed by *away:* as, To *loiter away* one's time.

lŏi'-tĕr-ĕr, *s.* [Eng. *loiter; -er.*] One who loiters or lingers; a lingerer, an idler; one who is dilatory.

"And gathering *loiterers* on the land discern
Her boat."
Byron: Corsair, i. 4.

lŏi'-tĕr-ĭng, *pr. par.* or *a.* [LOITER.]

lŏi'-tĕr-ĭng-lȳ, *adv.* [Eng. *loitering; -ly.*] In a loitering, dawdling, or dilatory manner.

Lŏk, Lō'-kĭ, *s.* [Icel. = a deceiver, *lokka,* Ger. *lochen* = to entice.]

Scand. Mythol.: The evil deity, the author of all wickedness and calamities. He is said to be the father of Hela, goddess of the lower regions.

lō'-ka-ō, *s.* [Native name.]

Chem.: A crude dye, originally imported from China under the name of Chinese Green, but now extracted from the berries of the common buckthorn. It contains 30 per cent. of mineral matter. Pure lokao, obtained by treating the crude dye with solution of ammonia carbonate, filtering, and precipitating with alcohol, is a compound of ammonia with a pure blue colouring matter called lokaïn, $(NH_4)_2C_{56}H_{66}O_{34}$. On treating ammonium-lokaïn with dilute sulphuric acid, it splits up into glucose and an insoluble residue, lokaëtin, $C_{18}H_{16}O_{10}$. An aqueous solution of crude lokao dyes cotton a pale green, but gives to wool and silk a pale bluish-gray.

lō-ka'-ĕ-tin, *s.* [LOKAO.]

lō'-ka-ĭn, *s.* [LOKAO.]

lōke (1), *s.* [LOCK, *s.*]

1. A wicket, a hatch.

2. A private road or path.

3. A narrow lane.

lŏ-lĭg'-ĭ-dæ, *s. pl.* [Lat. *lolig(o);* fem. pl. adj. suff. *-idæ.*]

Zool.: Carpenter's name for a family of Cephalopods, called by Woodward and others Tenthidæ.

lŏl'-ĭ-gō, *s.* [Lat. = the cuttle fish.]

Zool.: Calamary. A genus of cephalopodous molluscs, family Teuthidæ, sub-family Myopsinæ (Myopsidæ, *D'Orbigny*). The pen is lanceolate, with the shaft produced in front. It is multiplied by age, so that in old individuals several pens are found packed closely together. (*Owen.*) The body tapers behind, being much elongated in the males; the fins are terminal, united, rhombic. Length, excluding the tentacles, from three inches to two and a half feet. S. P. Woodward considered that twenty-three recent species are known, these Steenstrup reduces to seven. They are found in all seas. One is fossil; it is from the Lias. *Loligo vulgaris* is the Common Squid; *L. media* the Little Squid. [SQUID.]

lŏl-ĭ-gŏp'-sĭs, *s.* [Lat. *loligo* = a cuttle fish, and Gr. ὄψις (*opsis*) = look, appearance.]

Zool.: A genus of cephalopodous molluscs, family Teuthidæ, sub-family Oligopsinæ (Oligopsidæ, *D'Orbigny*). The pen is slender, with a minute conical appendix; the body is elongated, the arms short, the cups in two rows; the tentacles slender, the funnel valveless. Eight species are known, all recent. They are pelagic, and found in various seas.

lŏl'-ĭ-ŭm, *lŏl'-ĭ-ŏn, *s.* [Lat. *lolium* = darnel, cockle, tares.]

Bot.: Rye-grass. A genus of Grasses, tribe Hordeæ (*Lindley*), tribe Poaceæ, sub-tribe Hordeaceæ (*Sir Joseph Hooker*). The spike is distichous, the spikelets solitary: the empty glume one, the flowering glumes many. Four species are known, all from the north temperate zone. Two are British, *Lolium perenne,* the Perennial or Beardless Rye-grass, and *L. temulentum,* the Darnel. *L. multiflorum* is a colonist (*Watson*). The Bearded Rye-grass is an escape, and *L. linicola,* the Annual or Flax Rye-grass is *L. temulentum,* var. *arvense.* [RYE-GRASS.]

lŏll, *loll-en, *v.i. & t.* [O. Dut. *lollen* = to sit over the fire; prob. a derivative of *lull* = to sing to sleep; Icel. *lulla* = to loll; *lolla* = to move slowly; *lalla* = to toddle as a child; *lolla* = sloth.]

A. *Intransitive:*

1. To lie or recline idly; to lie in a careless attitude; to lounge.

"The large Achilles on his press'd bed *lolling*
From his deep cheat laughs out a loud applause."
Shakesp.: Troilus & Cressida, i. 3.

2. To hang from the mouth, as the tongue of a dog when heated with exertion and panting.

"To the black fount they rush, a hideous throng,
With paunch distended, and with *lolling* tongue."
Pope: Homer; Iliad xvi. 199.

* 3. To suffer the tongue to hang out from the mouth. (Said of animals.)

B. *Trans.:* To put out; to allow to hang from the mouth.

"With his *lolled* tongue he faintly licks his prey."
Dryden: Annus Mirabilis, cxxxii.

***lŏll,** *s.* [LOLL, *v.*] One who lolls about; a lounger, an idler.

"A lobbe, a loute, a heavy *loll,* a logge."
Breton: Pasquil's Madcappe, p. 10.

Lŏl'-lard, *s.* [A confusion between two words: *loller* = one who lolls about, a lazy fellow, and O. Dut. *lollaerd* = a mumbler of prayers, a Lollard, from *lullen, lollen* = to sing, to hum.]

Ecclesiol. & Church Hist. (Pl.):

1. A name given to a religious association which arose at Antwerp about the beginning of the fourteenth century. By some, Walter Lollard, who was burnt alive at Cologne in 1322, is said to have been the founder, but it seems to have existed before his time. The members were unmarried men and widowers, who lived in community under a chief, reserving to themselves, however, the right of returning to their former mode of life. In 1472 the Pope constituted them a religious order. In 1506 Julius II. increased their privileges. They continued to the French Revolution.

2. The name, having become one of contempt, was applied to the followers of Wycliffe, and especially to the poor preachers whom he sent out. Lechler states that "a monkish zealot, Henry Cromp, of the Cistercian Monastery of Bawynglas, in the county of Meath," preaching before the University of Oxford, on Saturday, June 14, 1382, "indulged in violent attacks upon the Wiclif party, and applied to them the heretic name of Lollards, which had recently come into use, but till that time had never been publicly employed." (*Lechler: Wiclif and his English Precursors,* ed. Lorimer.) Whilst Richard II. reigned, the persecution of the Lollards was not heartily favoured by the Court, though proceedings against them were authorised, and in 1395 they presented a petition to Parliament for the reform of the Church. But on the accession of the House of Lancaster, in 1399, a change for the worse took place. The clergy had assisted Henry IV. to the throne, in return for which he followed their directions as to the Lollards, and the Act *de hæretico comburendo* was passed as 2 Henry IV., c. 15. The first Lollard martyr was William Sautre, who was burnt in London, Feb. 12, 1401. The second was Thomas Badby, a mechanic in the diocese of Worcester, who was burnt in 1409 or 1410. Henry V., who carried out the ecclesiastical policy of his father, became king in 1413. On Sept. 25 of the same year, Sir John Oldcastle (Lord Cobham), who had edited the works of Wycliffe, was adjudged to be "a most pernicious and detestable heretic." In Jan., 1414, a conspiracy of Lollards under the leadership of Lord Cobham was alleged to have been detected, and he was committed to the Tower, but escaped into Wales. Being recaptured, he was put to death by cruel torture in St. Giles' Fields, London, on Dec. 25, 1418. [WYCLIFFITES.]

"John Wycliffe had by his doctrine won many disciples unto him (who after were called *Lollards*), professing poverty, going barefoot and poorly clad in russet."—*Baker: Chronicle Edw. III.; Affairs of the Church.*

Lŏl'-lard-ĭşm, *s.* [Eng. *Lollard; -ism.*]

Theol. & Church Hist.: The tenets of the followers of John Wycliffe. The views of Wycliffe underwent a process of development as his researches and experience extended, and were by no means the same at all periods of his life. In so far as they departed from Roman Catholicism, they approached, and, in some cases, went beyond what subsequently became the doctrine and discipline of Calvinism or Puritanism, commingled with an antagonistic element, Erastianism. Among the articles of his pronounced "heretical" by an assembly of ecclesiastical notables, convened in London, in 1382, by Wm. Courtnay, Archbishop of Canterbury, were these:—

"1. That the substance of material bread and wine doth remain in the Sacrament of the Altar after consecration.

"3. That Christ is not in the Sacrament of the Altar truly and really in His proper corporeal person.

"5. That if a man be only contrite, all exterior confession is to him superfluous and invalid.

"7. That it hath no foundation in the Gospel that Christ did ordain the Mass.

"8. That if the Pope be a reprobate and an evil man, and consequently a member of the devil, he hath no power over the faithful of Christ given to him by any, unless, peradventure, it be given him by the Emperor.

"9. That after Urban VI. none other is to be received as Pope, but that Christendom ought to live after the manner of the Greeks under its own laws.
"10. That it is against the sacred Scriptures that ecclesiastical persons should have any temporal position."

Among fourteen articles adjudged to be "erroneous" were the following:—

"13. That a prelate or bishop excommunicating a cleric who hath appealed to the king or the council of the realm, in doing so is a traitor to the king and the realm.
"15. That it is lawful for any deacon or presbyter to preach the Word of God without the authority or licence of the Apostolic See, or of a Catholic bishop or of any other recognised authority.
"17. Also that temporal lords may at will take away their temporal goods from churches habitually delinquent.
"18. That tithes are pure alms, and that parishioners may for the offences of their curates detain them, and bestow them on others at pleasure, and that tenants may correct delinquent landlords at will.
"24. That friars are bound to get their living by the labour of their hands, and not by begging." [LOLLARD.]

† Lŏl'-lard-ў, *s.* [Eng. *Lollard; -y.*] The same as LOLLARDISM (q.v.).

"When the eyes of the Christian world began to open, and the seeds of the Protestant religion (though under the opprobrious name of *lollardy*) took root in this kingdom."—*Blackstone: Comment.*, bk. iv., ch. 4.

lŏll'-ẽr, *s.* [Eng. *loll; -er.*] One who lolls about; a lounger, an idle vagabond.

"'Now, good men,' quod our hoste, 'herkneth to me, 'I smell a *loller* in the wind,' quod he."
Chaucer: C. T., 12,914.

lŏll'-ĭng, *pr. par.* & *a.* [LOLL, *v.*]

lŏll'-ĭng-lў, *adv.* [Eng. *lolling; -ly.*] In a lolling, dawdling fashion.

lŏl'-lĭ-pŏp, *s.* [Etym. doubtful; *pop* is probably the same as *pap* (q.v.), and *lolly* is perhaps the same as in *loblolly* (q.v.).] A sweet; a kind of sugar confection which dissolves easily in the mouth.

lŏl'-lŏp, *v.i.* [LOLL, *v.*]

1. To move heavily.
2. To lounge or idle about.

"A room where sat or *lolloped* eleven ladies."—*Reade: Cloister & Hearth*, ch. iii.

lō-măr'-ĭ-ạ, *s.* [Mod. Lat., fr. Gr. λῶμα (*lōma*) = the hem, fringe, or border of a robe, from the marginal sori.]

Bot.: Hard Fern. A genus of ferns, order Polypodiaceæ. It has more or less barren and quite fertile fronds, the latter with linear sori, and an involucre close to the margin. Forty species are known: one is British, *Lomaria Spicant*, better known as *Blechnum boreale*. [BLECHNUM.]

Lŏm'-bard, *s.* [Low Lat. *Longobardi* = long beards, the Latinized form of the German words for *long* and *beard*. It has also been derived from Lat. *longus*, Ger. *lang* = long, and O. H. Ger. *barte, part* = a battle-axe. Another etymology is from Low Ger. *börde* = a fertile plain on the banks of a river, the name thus signifying dwellers on the banks (of the Elbe).]

I. *Ordinary Language:*

1. A native of Lombardy in Italy.

* 2. A money-changer, money-lender, or banker: so called from the profession being first followed in London by immigrants from Lombardy. The name is still kept up in Lombard Street in London, where a large number of banks and bankers have their places of business. The three golden balls, the sign of a pawnbroker, also preserve the name, these being the arms of Lombardy.

* 3. A bank.

"A *lombard* unto this day signifying a bank for usury or pawns."—*Fuller: Ch. Hist.*, III. v. 10.

* 4. A public institution for lending money to the poor at low interest upon articles deposited in pledge.

* II. *Ordn.:* A kind of cannon.

† lŏm'-bard-eẽr, *s.* [Eng. *lombard; -eer.*] A money-lender, a pawnbroker. (*Howel: Letters*, I. vi. 14.)

Lŏm-bărd'-ĭc, *a.* [Eng. *Lombard; -ic.*] Of or pertaining to Lombardy or the Lombards.

Lombardic alphabet, *s.* An alphabet derived from the Roman, and used in the manuscripts of Italy.

Lombardic architecture, *s.* The style of architecture that prevailed in Lombardy and part of Upper Italy, and which for a long time was recognized as a distinct Lombard style, presenting essential points of difference from the other Later Romanesque styles. In the Lombard churches the type of Early Christian architecture was abandoned, and the vaulted basilica was introduced in its stead, although this system was subjected to several necessary modifications. Many peculiarities assert themselves in which the vaulted basilicas of Lombardy differ from those of other countries. This occurs particularly in the façades, which have not, as is usually the case, a higher central portion and low side divisions, but which present one mass, terminating in a gablo above, under the slopes of which, as well as in the choir and dome, are introduced arcade galleries. The separation into central and side

divisions, as marking out the nave and aisles, is only effected in a way that harmonizes but indifferently with the whole by means of pilasters and half-columns. Besides the small arcade galleries below the gable, the whole of the façade is frequently decorated with one or more of these rows of arcades one above another, either continuous or grouped, with pilaster-strips between the groups. The west front is sometimes embellished with a large and elegant rose window, which in fact forms one of the chief beauties of the façades of many of the churches in Italy, which are built in the Later Romanesque style.

Lombardic School of Painting, *s.* The distinguishing characteristics of this school are—grace, an agreeable taste for design, without great correctness, a mellowness of pencil, and a beautiful mixture of colours. Antonio Allegri, called Correggio, was the father and greatest ornament of this school: he began by imitating nature alone, but as he was chiefly delighted with the graceful, he was careful to purify his design; he made his figures elegant and large, and varied his outlines by frequent undulations, but was not always pure and correct, though bold in his conceptions. Correggio painted in oil, a kind of painting susceptible of the greatest delicacy and sweetness; and as his character led him to cultivate the agreeable, he gave a pleasing, captivating tone to his pictures.

Lŏm'-bardў, *s.* [LOMBARD.] A province in the north of Italy, of which Milan is the capital.]

Lombardy-poplar, *s.*

Bot.: Populus fastigiata. [POPULUS, POPLAR.]

lō'-mĕnt, lō-mĕn'-tŭm, *s.* [Lat. *lomentum*, a mixture of bean-meal and rice kneaded together, used by the Roman ladies for preserving the skin.]

Bot.: A legume divided internally by dissepiments, not dehiscing longitudinally, but either remaining always closed as in *Catharto-carpus fistula*, or separating into pieces at transverse contractions along its length as in Oruithopus. Lindley places it in his order Apocarpi. (*Gærtner & Lindley.*) Now generally limited to an indehiscent legume, separating spontaneously by a transverse articulation between each seed.

* **lō-mĕn-tā'-çĕ-æ,** *s. pl.* [Lat. *loment(um)*; fem. pl. adj. suff. *-aceæ.*]

Botany:

1. The name given by Linnæus to the fifty-sixth order of his Natural System. It contained Leguminous plants, with jointed pods, Cæsalpinieæ and Mimoseæ.

2. A sub-order of Cruciferæ, having lomentaceous pods. British genera, Crambe, Cakile, and Raphanus.

Bot.: A sub-order of Ceramiaceæ. The frond is cellular; the ceramidia have pear-shaped granules at the base of a cup-shaped envelope, finally bursting by a pore; tetraspores scattered within the branches. (*Lindley.*)

lō-mĕn-tăr'-ĭ-ạ, *s.* [Lat. *lomentarius* = a dealer in lomentum (q.v.).]

Bot.: The typical genus of the Lomentaceæ (q.v.).

lō-mĕn'-tŭm, *s.* [LOMENT.]

lō'-mŏn-īte, *s.* [LAUMONTITE.]

Min.: The same as LAUMONTITE (q.v.).

lŏmp, *s.* [LUMPFISH.]

lŏn'-chĭd-īte, *s.* [Gr. λογχίδιον (*longchidion*) = a small spear; Ger. *lonchidit.*]

Min.: A mineral which, judging from its analyses, would appear to be a mixture of marcasite and mispickel (q.v.). Occurs in tin-white crystals (Ger. *kausimkies*), and massive in Saxony and Cornwall. Dana includes it under marcasite.

lŏn-chī'-tĭs, *s.* [Lat. *lonchitis*; Gr. λογχίτις (*longchitis*) = (as adj.) like a spear, (as subst.) an orchid with spear-shaped seeds; λόγχη (*longchē*) = a spear-head, in allusion to the shape of the fronds.]

Bot.: A genus of Ferns, order Polypodiaceæ. Two known species, both handsome, from the West Indies.

lŏn-chū'-rŭs, *s.* [Gr. λόγχη (*longchē*) = a lance, and οὐρά (*oura*) = a tail.]

Ichthy.: A genus of Acanthopterygians, family Sciænidæ, established by Bloch and adopted by Cuvier. Two species are known.

Robert of Gloucester, p. 44.

London-basin, *s.*

Geol.: A series of Tertiary deposits in a depression in the older strata under and arouud the city of London.

London-clay, *s.*

1. *Geol. & Palæont.:* A formation of Lower Eocene age; so called from its existing at and near London. It consists of a tenacious brown and bluish-gray clay, with layers of concretions called septaria. In the Isle of Sheppey the London-clay is 500 feet thick. Fossils have been obtained from it chiefly at Highgate Hill, London, in the Isle of Sheppey, and Boguor on the Sussex coast. It contains 254 fossil molluscs, mostly tropical, 166 of them not found in any other Eocene beds in Britain. Remains of a saw-fish and a sword-fish, of various turtles, a crocodile, and a serpent thirteen feet long [PALÆOPHIS], have been found with mammals such as Chœropotamus, Lophiodon, &c. The upper fifty feet of the Sheppey clay have furnished many seeds and fruits. A few have been described by Mr. Bowerbank in his *Fossils of the London Clay*. There are Nipadites, a palm-like fruit [NIPADITES], Petrophiloides, a Protead, an acacia-like legume, a cucurbitaceous fruit, an anona, &c. The fruits seem to have floated down a great river, flowing from what is now the continent. The climate of the Eocene period in Britain was hotter than any which has since existed. (*Lyell.*)

2. *Comm.:* The clay is used for brickmaking; septaria of the London clay [1] are collected from sea-cliffs near Harwich, on shoals off the Essex coast, and from the Isle of Sheppey, and burnt for Roman cement. (*Lyell,*)

London-pride, *s.*

Bot.: Saxifraga umbrosa, particularly the sub-species, and a variety of the same specific name. The plant itself, which is wild in the west and south-west of Ireland, and naturalized in some other parts of Britain, has coriaceous

leaves and panicled cymes of small white flowers, speckled with red. The variety has the leaves compactly rosulate, oblong, ovate, crenate. Called also None-so-pretty, Pretty Nancy, and St. Patrick's Cabbage. (*Sir Joseph Hooker.*)

London-rocket, *s.*

Bot.: Sisybrium Irio. It has runcinate, toothed, or pinnatifid glabrous leaves and yellow flowers. It occurs on old walls, &c., near Berwick and Dublin. Watson considers it a denizen. It derives its popular name from the fact that it sprang up abundantly after the great fire of London in 1666.

London-white, *s.*

Pigments: A pure white lead, prepared with care, and ground to a state of considerable fineness.

Lŏn'-dŏn-ĕr, *s.* [Eng. *London; -er.*] A native, inhabitant, or citizen of London.

"The king hearing of this his demeanor, was so highly offended withall, that he sent to the *Londoners.*"—*Holinshed: Henry III.* (an. 1232).

* **Lŏn'-dŏn-ĭsm,** *s.* [Eng. *London; -ism.*] A mode of expression or action peculiar to Londoners.

"The *Londonisms* as I may call them, are far from being reproachable in themselves."—*Pegge: Anec. of the Eng. Lang.*

Lŏn'-dŏn-īze, *v.t. & i.* [Eng. *London; -ize.*]

A. *Trans.:* To invest with some quality or characteristic peculiar to London or to Londoners.

B. *Intrans.:* To imitate the manners or language of Londoners.

lōne, *a.* [A shortened form of *alone* (q.v.).]

1. Without any companion or fellow; single, unaccompanied; not having another or others near.

"When I have on those pathless wilds appear'd
And the *lone* wanderer with my presence cheer'd."
Shenstone: Judgment of Hercules.

2. Solitary, unfrequented, retired, seldom visited by man, deserted.

"Where shall he find, in foreign land,
So *lone* a lake, so sweet a strand!"
Scott: Lady of the Lake, vi. 15.

3. Single, unmarried; without or having lost a husband. (*Shakesp.: 2 Henry IV.*, ii. 1.)

lone-star, *s.*

Hist.: An American secret society established in 1848 for extending the territory of the United States over all the continent of America and the adjacent islands. It did not long attract notice.

Long-eared Fox:

Zool.: Megalotis Lalandii, one of the Canidæ, peculiar to South Africa. It resembles a fennic, but the bushy tail is straight, only half the length of the body and head, which together measure some twenty-four inches. Ears large, snout long and pointed; colour, grayish-yellow, white beneath, tail darker. This fox differs from other Canidæ in the dental formula, the molars being $\frac{4-4}{4-4}$ instead of $\frac{2-2}{3-3}$.

Long-eared Hedgehog:

Zool.: Erinaceus auritus. Habitat, Western Asiatic Russia, especially near the Caspian. The ears are large, the muzzle and legs longer than in *E. europœus,* from which in habit it differs little.

Long-eared Owl:

Ornith.: Asio otus.

long Eliza, *s.* (For def. see extract.)

"A correspondent writes to us from Holland: '*Long Elizas* (the trade term for certain blue and white vases ornamented with figures of tall thin China-women) is a name derived undoubtedly from the German or Dutch. Our sailors and traders called certain Chinese vases, from the figures which distinguished them, *lange Lischen* (= tall Lizzies), and the English sailors and traders promptly translated this into *long Elizas.*"—*Pall Mall Gazette,* Dec. 4, 1884.

long-field, *s.*

Cricket: A term including long-field off and long-field on (q.v.).

Long-field off:

Cricket: A fielder stationed behind and to the left of the bowler. Commonly contracted to *long-off.*

Long-field on:

Cricket: A fielder stationed behind and to the right of the bowler. Commonly contracted to *long-on.*

Joinery: A joiner's plane used when a piece of stuff is to be planed up very straight.

long-poil, *s.*

Fabric: A shaggy velvet.

long-primer, *s.*

Print.: A size of type between Small Pica and Bourgeois.

This line is set in Long Primer.

long-range barometer, *s.* A barometer, the upper portion of whose tube is in spiral form, and of diminished diameter, the distance between the coils being usually 12 base to 1 perpendicular, so that each inch rise of mercury in the tube is indicated by an advance of 12 inches in the spiral coil. Another form of long-range barometer is that filled with glycerine instead of mercury, with a tube twenty-seven feet long. This inconvenient length has led to the invention of a combined mercury and glycerine barometer. It consists of two vertical tubes forty inches in length, and joined at the bottom by a short curve. One, larger in diameter, and closed at the top, is filled with mercury, which extends through the bend, and partly into the second tube of less diameter, which is further partly filled with glycerine. The rising and falling of the mercurial column in the large tube, having a lighter fluid to balance, and that dispersed over a larger space by reason of the difference in the diameter of the two tubes, a longer range is obtained, due both to the unequal capacity of the two tubes and the difference in the specific gravity of the two fluids. These barometers admit of minute variations being read without the aid of a vernier.

long-ruffer, *s.* A coarse heckle. [Heckle.]

long-saw, *s.* A pit-saw.

long-shielded, *a.* Having a long, shield-like defence on the body.

Long-shielded Jacare:

long-sight, *s.* The same as Long-sightedness (q.v.).

long-sighted, *a.*

1. Able to see to a great distance.

2. Able to see things distinctly at a distance but not close at hand; presbyotic.

3. Far-seeing, shrewd, sagacious.

"Dictated by a *long-sighted* desire of making the royal office more durable" — *Lewis: Cred. Early Roman History*, ch. xiv., § 15.

long-sightedness, *s.*

1. A defect of sight by reason of which objects are seen distinctly when at a distance, but confusedly when close at hand.

¶ Where long-sight occurs, the eye is not sufficiently convergent, so that the image of the object looked at is formed beyond the retina. If the object be removed to a certain distance, the object will fall exactly on the retina and be clearly seen. Long-sightedness is the usual accompaniment of advancing years. The spectacles used for it are convergent lenses. [Spectacles.] Called also Presbytism (q.v.).

2. The power or faculty of seeing to a great distance.

3. Sagacity, shrewdness.

long-slide, *s.*

Steam engin.: A slide-valve of such length as to cover the ports at both ends of cylinder, and having a hollow back which forms an eduction passage.

long-slip, *s.*

long-spined, *a.* Having long spines.

Long-spined Echidna: [Porcupine-echidna].

long-stalked, *a.* Having a long stalk.

Long-stalked Crab:

Zool.: The genus Podophthalmus.

long-stop, *s.*

Cricket: A fielder placed behind the wicket-keeper to stop any balls which may pass him.

long-stop, *v.i.*

Cricket: To act as long-stop.

* **long-sufferance,** *s.* Forbearance to punish; mercy, patience. (*Scott: Rokeby*, iv. 24.)

long-suffering, *a.* & *s.*

A. *As adj.:* Forbearing, patient, bearing injuries or provocation for a long time.

"The Lord God, merciful and gracious, *long-suffering*, and abundant in goodness and truth."—*Exod.:* xxxiv. 6.

B. *As subst.:* The same as Long-sufferance (q.v.).

"What if God endured with much *long-suffering* the vessels of wrath fitted to destruction."—*Rom.* ix. 22.

long-tackle block, *s.*

Naut.: A block having two single sheaves, one above the other. The lower one is two-thirds the size of the upper. It is used in combination with a single block, to form long-tackle for loading or other purchase.

long-tail, *s.* & *a.*

A. *As substantive:*

I. *Ordinary Language:*

1. An animal, especially a dog, having an uncut tail. As the dogs of those not qualified to hunt had their tails cut, the word came to signify gentlefolk.

"Come cut and *longtail* under the degree of a squire"—*Shakesp.: Merry Wives of Windsor*, iii. 4.

2. A greyhound. (*Slang*).

II. *Zool.* (*Pl.*): The genus Harelda (q.v.). [Long-tailed Duck.]

A. *As adj.:* Having the tail uncut, as a dog.

long-tailed, *a.* Having a long tail.

Long-tailed Bats:

Zool.: The genus Miniopterus (q.v.).

Long-tailed Blue Jays:

Ornith.: The genus Xanthura (q.v.).

Long-tailed Duck, Long-tailed Hareld:

Ornith.: *Fuligina* (*Anas*) *glacialis*, a winter visitor to Britain. It is remarkable for its elongated tail-feathers.

Long-tailed Field-Mouse:

Zool.: *Mus sylvaticus*, the Wood Mouse (q.v.).

Long-tailed Hareld: [*Long-tailed Duck*].

Long-tailed Hawk:

Ornith.: *Micrastur semitorquatus.*

Long-tailed Horned Owl:

Ornith.: The same as *Long-eared Owl* (q.v.).

Long-tailed Locust-eater:

Ornith.: The name given by Swainson to *Gryllivora longicauda*, one of the Sylvidæ.

Long-tailed Mole:

Zool.: *Talpa macrura*, a native of Northern India.

Long-tailed Pangolin:

Zool.: *Manis tetradactyla*, a scaly Ant-eater from Eastern Africa. Dark-brown in colour, with the hair of the face and under-sides black; from two to three feet in length, of which the tail makes up two-thirds. Called also the Four-fingered Pangolin.

Long-tailed Tiger Cat:

Zool.: *Felis macrurus.* Habitat, Brazil, where it was discovered by Prince Maximilian of Neuwied. It resembles the ocelot, but is smaller, and its spots are not so well marked. Length of body, about twenty-seven inches; tails, fourteen inches. Sometimes called the Oceloid Leopard.

Long-tailed Titmouse:

Ornith.: *Parus caudatus.* the Bottle-tit.

Long-tailed Trogon:

Ornith.: *Pharomacrus mocinno*, the Quesal (q.v.).

long-threadworm, *s.* [Threadworm.]

long-timber, *s.*

Shipbuilding: A timber rising from the cants, and continued in one piece to the top of the second futtock.

long-tom, *s.*

1. *Mining:* An apparatus used by the Californians for washing gold from the earth or gravel in which it is found. It consists of a wooden trough, from twelve to twenty-five feet long and about a foot wide. At its lower end it widens, and its floor there is of sheet-iron pierced with holes half an inch in diameter, under which is placed a flat box a couple of inches deep. The apparatus is set at an inclination over the place which is to be worked, and a stream of water is kept running through it by means of a hose; and, while some of the party shovel in the dirt, one man stands at the lower end stirring the mass, as it is washed down, and separating the stones, while the earth and gravel fall through the sieve into another box, where they are again sifted. (*Bartlett.*)

2. *Ordnance:* A cannon of large size and special length.

* **long-tongued,** *a.* Talkative, chattering, prating. (*Shakesp.:* 3 *Henry VI.*, ii. 2.)

long-vacation, *s.* [VACATION.]

long-valve, *s.*

Steam-eng.: [LONG-SLIDE].

long-waisted, *a.*

A. *Ordinary Language:*

1. Having a loug waist. (Said of persons.)

2. Long from the armpits to the waist. (Said of a dress.)

B. *Naut.:* Applied to a ship having a long waist. [WAIST.]

long-winded, *a.*

1. Having good breath or wind; long-breathed.

2. Tedious: wearisome from prolixity. (Applied to persons and things.)

"He would have nothing but *long-winded* cant without books."—*Macaulay: Hist. Eng.*, ch. vi.

long-windedness, *s.* Tedious prolixity.

"He makes the Doctor, in spite of his *long-windedness*, an amusing and even sympathetic personage."—*Pall Mall Gazette*, Feb. 18, 1884.

long-winged, *a.* Having long wings.

Long-winged Puff-bird:

Ornith.: *Chelidoptera tenebrosa*, one of the Bucconidæ, from the warmer parts of America.

Long-winged Swift: The Indian genus Macropteryx of Swainson.

long-wool, *s.* Combing wool, in distinction to the shorter which is carded.

***long-yarned,** *a.* Spun out, unduly protracted.

"Ofttimes when Giles doth find
Harsh sights at home, Giles wisheth he were blind;
All this doth Joan; or that his *long-yarn'd* life
Were quite spun out." *Ben Jonson: Epigram* 42.

lŏng, * long-en, * long-i-en, *v.t.* & *i.* [A.S. *langian, longian* = to lengthen, to long after, from *lang, long* = long (q.v.).]

***A.** *Trans.:* To lengthen.

B. *Intransitive:*

***1.** To lengthen; to become long or longer.

"Thonne se dæg *langath*."—*Popular Treatises on Science*, p. 9.

2. To stretch the mind or heart after anything; to have an eager desire; to desire anything earnestly. (Followed by *for* or *after*, or by an infinitive.)

"Abetted by an anxious eye
That *longed* to be deceived."
Scott: Bridal of Triermain, iii. 3.

3. To have an eager appetite. (Generally followed by *for*.)

"And David *longed*, and said, Oh that one would give me drink of the water of Bethlehem."—1 *Chron.* xi. 17.

*****4. To belong.

"But he me first through pride and puissance strong,
Assayld, not knowing what to armes doth *long*."
Spenser: F. Q., VI. ii. 8.

***lŏng,** *adv.* [A shortened form of *along* (q.v.).] By means of, by reason of, because of.

"It's all *long* on you, I could not get my part a night or two before."—*Prologue to Returne from Parnassus.*

***lŏn-ǧæ'-vĭ-tў,** *s.* [LONGEVITY.]

lŏng'-an, longyen, *s.* [Chinese.]

Botany:

1. The fruit of *Nephelium, Dimocarpus*, or *Euphoria Longanum*, a sapindaceous tree from the Indian Archipelago. It is akin to the Litchi, but the fruit is smaller, being but from half an inch to an inch in diameter. It has a semi-transparent pulp, is eatable, and is sold in the Chinese markets.

2. The tree itself.

† lŏn-ga-nĭm'-ĭ-tў, *s.* [Lat. *longanimitas*, from *longus* = long, and *animus* = mind; Fr. *longanimité*; Ital. *longanimità.*] Forbearance, long-suffering, patience.

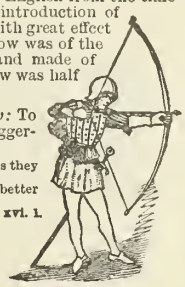
"It had overcome the patience of Job as it did the meeknesse of Moses, and would surely have mastered any, but the *longanimity* and lasting sufferance of God."—*Browne: Vulgar Errours*, bk. i., ch. iii.

lŏng'-bōat, *s.* [Eng. *long*, and *boat.*]

Naut.: A large ship's boat, from 32 to 40 feet long, having a beam from ·29 to ·25 of its length. It has a heavy, flat floor, and is sharper in its floor than a launch. It is carvel built.

"At the first descent on shore, he did countenance the landing in his *longboat*."—*Wotton.*

lŏng'-bōw, *s.* [Eng. *long*, a., and *bow.*] The national weapon of the English from the time of Edward II. to the introduction of firearms. It was used with great effect at Crecy (1346). The bow was of the height of the archer, and made of yew, ash, &c. The arrow was half as long as the bow.



LONGBOW

¶ *To draw the longbow:* To tell improbable or exaggerated stories.

"At speaking truth perhaps they are less clever,
But *draw the longbow* better now than ever."
Byron: Don Juan, xvi. 1.

***lŏnge,** *s.* [LUNGE, *s.*]

***lŏnge** (1), *v.i.* [LUNGE, *v.*]

***longe** (2), *v.i.* [LONG, *v.*]

***lŏn-ǧē'-vąl, *lŏn-ǧæ'-vąl,** *a.* [Lat. *longævus*, from *longus* = long, and *ævum* = an age.] Long-lived.

***lŏn-ǧĕv'-ĭ-tў, *lŏn-ǧæv'-ĭ-tў, *lon-gæv-i-tie,** *s.* [Lat. *longævitas*, from *longævus.*] Length of life; great age or duration of life.

"We shall single out the deer, upon concession a long-lived animal, and in *longævity* by many conceived to attain unto hundreds."—*Browne: Vulgar Errours*, bk. ii., ch. ix.

¶ (1) The term may be applied to the duration of species, genera, &c., as well as to the life of individuals.

"Relative *longevity* of species in the Mammalia and Testacea."—*Lyell: Student's Elements of Geol.*, p. 139.

(2) We learn from Scripture that the lives of the antediluvian patriarchs were greatly extended, Methusaleh having reached the age of 969 years (Gen. v. 27). When Psalm xc. was written, the limits of human life were as they are now. A few instances of abnormal longevity still occur, though a large number of the recorded cases are mythic. The inhabitant of a workhouse or a pauper outside, on reaching 100, is sure to receive much consideration and many presents from the public, on which account there is a strong temptation to add on a substantial number of years to the life. Even people not paupers may be tempted to do it. It may well be doubted whether the poor man, Golour M'Crain, who died in the reign of Charles I., really spent 180 Christmas seasons in his house; or whether Old Parr "was in his 153rd year" when he died, in 1635; or Henry Jenkins 169 when he died, in 1670; or whether Thomas Carn, who died in 1588, was 207; or Johannes de Temporibus, whose life ended in 1014, was 361. The existence of centenarians stands on good evidence. A few years ago the Rev. Mr. Ingram, of Unst, died at the age of 102, and Sir Moses Montefiore's hundredth birthday has been celebrated. Dr. Farr, of the General Register Office, Somerset House, says that if the returns made to the office as to the ages of persons deceased can be depended on, 223 persons (79 men and 144 women) out of every million of the population reach 100 years; one, a woman, reaches 108. The longevity tends to be greater in women than in men. It has been recently thought by sanitarians that when the laws of health are completely observed that 125 years are the natural term of human life.

***lŏn-ǧēv'-oŭs *lŏn-ǧæv'-oŭs,** *s.* [Lat. *longævus*, from *longus* = long, and *ævum* = an age.] Living a long time; long-lived; of great age.

"Cedar wood is *longevous* and an evergreen."—*Grew: Cosmo. Sacra*, bk. iv., ch. viii.

lŏng'-hănd, *s* [Eng. *long*, and *hand.*] Ordinary writing, or written characters, as distinguished from shorthand, stenography, &c.

lŏn'-ǧĭ-corn, *a.* & *s.* [LONGICORNES.]

A. *As adj.:* Of or pertaining to the Longicornes (q.v.).

"A chirping noise, like some of the *Longicorn* coleoptera."—*Swainson & Strickland: Insects*, p. 123.

B. *As subst.:* A member of the family Longicornes.

"*Cerambyx heros*, a common European *longicorn*."—*H. W. Bates, F.L.S.*, in *Cassell's Nat. Hist.*, v. 298.

lŏn-ǧĭ-cor'-nēs, * lŏn-ǧĭ-cor'-nĭ-a, *s. pl.* [Lat. *longus* = long, and *cornu* = a horn.]

Entom.: Longicorns, a subsection of Beetles, section Tetramera. The autennæ are usually louger than the body. They are filiform, tapering, or more rarely hooked or pectinated; the maudibles are large; the thorax and part of the elytra sometimes with spines; the body elongated; the colour, as a rule, bright. The longicornes are large beetles, the larvæ of which feed on timber. The perfect insect makes a sound produced by the rubbing of the hind limb of the prothorax over a finely-ribbed prominence on the mesothorax beneath. It is divided into three families, Prionidæ, Cerambycidæ, and Lepturidæ (q.v.).

***lŏn-ǧĭ-lăt'-ĕr-al,** *a.* [Lat. *longus* = long, and *lateralis* = pertaining to the side; *latus* (genit. *lateris*) = a side.] Having long sides; having the form of an elongated parallelogram.

"But Nineveh, which authors acknowledge to have exceeded Babylon, was of a *longilateral* figure."—*Browne: Cyrus' Garden*, ch. ii.

***lŏn-ǧĭm'-ą-noŭs,** *a.* [Lat. *longus* = long, and *manus* = a hand; Fr. *longimane.*] Having long hands; long-handed.

"Whose malice was never so *longimanous* as to reach the soul of their enemies."—*Browne: Vulgar Errours*, bk. vii., ch. xix.

***lŏn-ǧĭm'-ĕ-trў,** *s.* [Lat. *longus* = long, and Gr. *μέτρον* (*metron*) = a measure.] The art or practice of measuring distances or lengths.

"Our two eyes are like two different stations in *longimetry*, by the assistance of which the distance between two objects is measured."—*Cheyne: Philosophical Principles.*

lŏng'-ĭng, *long-yng, *pr. par.*, *a.*, & *s.* [LONG, *v.*]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As substantive:*

1. *Ord. Lang.:* An eager desire or yearning; a craving or morbid appetite.

"I have a woman's *longing*, . . .
To see great Hector in the weeds of peace."
Shakesp.: Winter's Tale, iv. 4.

2. *Physiol.:* The name given to the peculiar and often whimsical desires of females during pregnancy, and in those states in which the uterine discharge is suppressed.

lŏng'-ĭng-lў, *adv.* [Eng. *longing; -ly.*] In a longing manner; with eager desire or yearning.

"Nor did his eyes less *longingly* behold
The girdle belt, with nails of burnished gold."
Dryden: Virgil; Æneid ix. 487.

† lŏn-ǧĭn'-quĭ-tў, *s.* [Lat. *longinquitas*, from *longinquus* = long, extensive; *longus* = long.] Greatness of distance.

"Pope Leo himself saw that *longinquity* of region doth cause the examination of truth to become over dilatory."—*Barrow: Of the Pope's Supremacy.*

lŏn'-ǧĭ-pălp, *a.* & *s.* [LONGIPALPI.]

A. *As adj.:* Of or pertaining to the Longipalpi (q.v.).

B. *As subst.:* An insect of the section Longipalpi (q.v.).

lŏn'-ǧĭ-păl-pī, *s. pl.* [Lat. *longus*, and *palpi*, pl. of *palpus* = a stroking, flattering. By entomologists used for a feeler.]

Entom.: The name given by Latreille and Cuvier to a section of the Brachelytra. The maxillary palpi are almost as loug as the head. Geuera, Pœderus, Stenus, &c.

lŏn-ǧĭ-pĕn-nā'-tæ, *s. pl.* [Fem. pl. of Mod. Lat. *longipennatus*, from Lat. *longus* = long, and *pennatus* = winged; *penna* = a feather.]

Ornith.: A tribe of Birds, order Natatores. The wings are long; the bill pointed, knife-like, or hooked; the hind toes not connected with the others by a membrane. Families Laridæ, Procellaridæ.

lŏn-ǧĭ-pĕn'-nāte, *a.* [LONGIPENNATÆ.] Having long wings.

lŏn-ǧĭ-pĕn'-nēs, *s. pl.* [Lat. *longus* = long, and *penna* = a feather.]

Ornith.: The name given by Cuvier to a family of Sea Birds containing the long-winged species, which, by their great capability of flight, are spread everywhere over the ocean. He included under it the genera Procellaria, Thalassidroma (Petrels), Diomedia, the Albatross, &c.

† lŏn-ǧĭ-rŏs'-tĕr, *s.* [LONGIROSTRES.]

Spenser: F. Q., III. x. 50.

6. Diarrhœa; flux of the bowels.

"Fat meats, in phlegmatick stomachs, procure *looseness* and hinder retention."—*Arbuthnot: On Aliments.*

loôs'-en-ĭng, *pr. par., a., & s.* [Loosen, *v.*]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As subst.:* The act of loosing or making loose; the state of becoming loose.

loosening-bar, *s.*

Founding: A stiff bar with a point or screw which stands in a hole in the pattern, and extends upward through the top box. After ramming up, and before lifting the top part, this bar is struck alternately from opposite sides with a short, heavy piece of iron, so as to loosen the pattern slightly in the sand, after which it is removed. This facilitates the separation of the sand from the pattern, and lessens the amount of mending required.

loôse'-strĭfe, *s.* [The English rendering of the Gr. λυσιμάχιον (*lusimachion*).]

Botany:

1. The genus Lysimachia (q.v.).

2. The genus Lythrum (q.v.). Called more fully Purple Loosestrife. Two species are British: Spiked Purple Loosestrife, *Lythrum Salicaria*, and Hyssop-leaved Loosestrife, *L. hyssopifolia.*

3. (*Pl.*): One of the names given by Lindley to the order Lythraceæ (q.v.).

¶ *West Indian Loosestrife:*

Bot.: Jussiœa suffruticosa.

loôs'-ĭsh, *a.* [Eng. *loos(e)*, a.; *-ish.*] Rather loose; somewhat loose.

loô'-sŏme, *a.* [Scotch *loo* = love; suff. *-some.*] Lovely, lovable.

loôt, *pret. of v.* [Let, *v.*] Let, permitted. (*Scotch.*)

"I *loot* naebody sort it but my ain hands."—*Scott: Old Mortality*, ch. xl.

loôt, *s.* [Hind. *lút* = plunder.] Booty, plunder; espec., that taken by a victorious army from a sacked city.

loôt, *v.t.* [Loot, *s.*] To plunder, to pillage; espec., to plunder a city after a siege.

"As a place of security for the plunder *looted* by laundresses."—*Dickens: Uncommercial Traveller*, xiv.

loôt'-ẽr, *s.* [Eng. *loot*, v.; *-er.*] One who loots; a plunderer.

loô'-tỹ, loô'-tĭĕ, *s.* [Hind. & Mahratta *loot* or *lút*, with suff. *-y*, from *-ee* at the end of some Mahratta words used of persons (?).] A plunderer and occasional assassin. (*East Indies.*)

"I will find the dagger of a *lootie* which shall reach thee."—*Scott: Surgeon's Daughter*, ch. xii.

loô'-vẽr, *s.* [Louvre.]

loôveş, *s. pl.* [Loaf, *s.*] (*Scotch.*)

lŏp (1), *v.t.* [O. Dut. *luppen* = to maim, to castrate; Dut. *lubben.*] [Lib.]

1. To cut off the top or extremities of anything; to make shorter by cutting off the extremities; to trim by cutting.

"As wood-knife *lops* the sapling spray."
Scott: Marmion, vi. 11.

2. To cut partly through, and pleach or bend down: as, To *lop* the bushes in a hedge.

3. To cut off generally. (Usually followed by *off.*)

"His hand had been *lopped off* for an offence into which he had been hurried by his intemperate zeal."—*Macaulay: Hist. Eng.*, ch. i.

4. To cut down, to maim, to omit a part of.

"For particulars and circumstances he continually *lops* them."—*Pope: Homer; Iliad.* (Pref.)

lŏp (2), *v.t.* & *i.* [Prob. akin to *lap* (q.v.).]

A. *Trans.:* To allow to hang down; to let fall: as, To *lop* the ears.

B. *Intrans.:* To hang down, to be pendulous.

lop-eared, *a.* Having ears which hang down; as some kind of rabbits.

lŏp, ***lopp,** *s.* [Lop (1), *v.*] That which is lopped or cut from trees, shrubs, &c.

"A trembling contribution! Why we take
From every tree, *lop*, bark, and part o' th' timber."
Shakesp.: Henry VIII., i. 2.

***lōpe,** *pret. of v.* [Leap, *v.*]

***lōpe,** *s.* [Leap, *s.*] A leap.

***lope-staff,** *s.* A leaping-pole.

***lōpe,** *v.i.* [Lope, *s.*] To leap; to move or run with a leap or jump.

"His malice *lopes* at a venture."—*North: Examen*, p. 73.

lŏ-phăn'-thŭs, *s.* [Gr. λόφος (*lophos*) = a crest, and ἄνθος (*anthos*) = a flower.]

Bot.: A genus of Labiatæ, tribe Nepeteæ. It consists of very pretty pink, blue, and white flowers, mostly natives of North America, but cultivated in British gardens.

lŏ-phī'-ą-dæ, *s. pl.* [Lophiidæ.]

lŏ-phī'-ĭ-dæ, lŏ-phī'-ą-dæ, *s. pl.* [Mod. Lat., &c. *lophi(us);* Lat. fem. pl. adj. suff. *-idæ, -adæ.*]

Ichthy.: A family of Acanthopteri. The carpal bones are prolonged, so as to form a sort of arm for the support of the pectoral fins, which sometimes have a faint resemblance to legs; this gives these fishes a frog-like appearance. Called also Pediculati.

lŏph'-ĭne, *s.* [Etym. doubtful.]

Chem.: $C_{21}H_{18}N_2$, pyrobenzoline. An organic base obtained by the dry distillation of hydrobensamide and other compounds. It is dissolved out with boiling alcoholic potash, from which it crystallizes on cooling. It forms colourless needles, often an inch long, with a lustre similar to that of caffeine. It melts at 265°, and sublimes without decomposition. It is tasteless and inodorous, and has scarcely any alkaline reaction. It is insoluble in water, sparingly soluble in alcohol and ether. Its alcoholic solution is fluorescent, like quinine. It forms crystallizable salts with the mineral acids which are rather unstable, and for the most part insoluble in water.

lŏ-phī'-ō-dŏn, *s.* [Gr. λόφος (*lophos*) = a ridge of ground, an eminence, and ὀδούς (*odous*), genit. ὀδόντος (*odontos*) = a tooth.]

Palæont.: A genus of Tapiridæ, named from having eminences on the teeth. Various species are found in the Eocene. They vary in size from that of a horse to that of a rhinoceros.

lŏ-phī'-ō-dŏnt, *a.* [Lophiodon.] Belonging to, having the characteristics of, or resembling the genus Lophiodon (q.v.).

lŏph-ĭ-ō-mỹ'-ĭ-dæ, *s.* [Mod. Lat., &c. *lophiomy(s);* Lat. fem. pl. adj. suff. *-idæ.*]

Zool.: A family of Simplc-toothed Rodents, established by Alphonse Milne-Edwards for the reception of Lophiomys (q.v.).

lŏph'-ĭ-ō-mys, *s.* [Gr. λοφιά (*lophia*) = the bristly back of a boar, and μῦς (*mus*) = a mouse.]

Zool.: *Lophiomys Imhausi*, the sole member of the family Lophiomyidæ (q.v.), closely allied to the Muridæ, and particularly to the Hamsters. It somewhat resembles a small opossum. Colour blackish-brown; a spot on the forehead, a streak under each eye, and the tip of the tail are white. The long hairs of the middle of the back and tail are erectile. To this the generic name has reference; the specific name commemorates the person who brought the creature under the notice of naturalists. The first toe in each hind foot is opposable, thus converting it into a prehensile hand, which the animal uses freely in climbing. Habitat, the north-east of Africa, and possibly Arabia.

lŏ-phĭr'-ą, *s.* [Gr. λόφος (*lophos*) = a crest; suff. *-ira.* So called because one of the sepals is extended into a ligulate wing or crest.]

Bot.: The typical genus of the order Lophiraceæ (q.v.).

lŏph-ĭ-rā'-çē-æ, *s. pl.* [Mod. Lat. *lophir(a);* Lat. fem. pl. adj. suff. *-aceæ.*]

Bot.: An order of hypogynous exogens, alliance Guttiferales. It consists of tropical African many-branched trees of pyramidal form; the leaves alternate, stalked, quite entire, with raised veins and a jointed stalk, stipules small, deciduous; flowers perfect, axillary and terminal, yellow, with two small bracts; sepals five, the inner three smaller and concave, the outer opposite; petals five; stamens indefinite; ovary one-celled; ovules indefinite; fruit a leathery nut, one-celled, by abortion one-seeded. Only known genus Lophira. The order was established by Endlicher.

lŏph'-ĭ-ŭs, *s.* [Gr. λόφος (*lophos*) = a ridge of ground, an eminence. The name has reference to the protuberances on the head of the fishes of this genus.]

Ichthy.: The typical genus of the family Lophiidæ. *Lophius piscatorius* is the Angler or Fishing Frog. [Angler.]

lŏph-ō-brăn'-chĭ-ate, *a.* & *s.* [Gr. λόφος (*lophos*) = a ridge of ground, an eminence, and Eng. *branchiate.*]

A. *As adj.:* Belonging to, having the characteristics of, or resembling the Lophobranchii (q.v.).

B. *As subst.* (*Pl.*)*:* The same as Lophobranchii (q.v.).

"But in a good many fishes, such as the Plectognathi and *Lophobranchiates*, the otolites are represented by calcareous dust."—*Prof. Seeley*, in *Cassell's Nat. Hist.*, v. 12.

lŏph-ō-brăn'-chĭ-ī, lŏph-ō-brăn'-chĭ-ą, *s. pl.* [Gr. λόφος (*lophos*) = a crest, and βράγχια (*brangchia*) = gills.]

1. *Ichthy.:* Fishes with tufted gills; *i.e.*, the gills are not as in other fishes pectinated, but consist of small rounded lobes clustered together, which are attached to the branchial arches. The snout is produced into a tube. The order is divided into two families, Syngnathidæ and Soleuostomidæ.

2. *Palæont.:* Found from the Eocene onward.

lō'-phō-īte, *s.* [Gr. λόφος (*lophos*) = crest, suff. *-ite* (*Min.*); Ger. *lophoit.*]

Min.: A variety of chlorite referred by Des Cloizeaux to the species Ripidolite, and by Dana to his Prochlorite. (See these words.) Occurs in comb-shaped groups of crystals at Greiner, Zillerthal, Tyrol.

lŏ-phŏp'-ĕ-a, lŏ-phŏph'-ĕ-ą, *s. pl.* [Mod. Lat., from Gr. λόφος (*lophos*) = a crest, and πούς (*pous*), genit. ποδός (*podos*) = a foot.]

Zool.: A sub-order of Phylactolæmata. Sometimes made a suborder of Bryozoa, order Holobranchiata, section Ectoprocta. The epistome is developed; the tentacles are numerous, and placed upon a pair of the arms of the lophophore, in form like a horse-shoe. The cells are usually leathery, horny, or subcalcareous, and nearly transparent, springing from a root-stalk, which creeps along upon the surface of stones, though sometimes the whole body is gelatinous and floating. Three or four individuals are generally together. The Lophopea inhabit fresh water. Families Plumatellidæ and Cristatellidæ.

lŏph-ō-pĕt'-ą-lŭm, *s.* [Gr. λόφος (*lophos*) = a crest, and πέταλον (*petalon*) = a petal (q.v.).]

Bot.: A genus of Celastraceæ. *Lophopetalum littorale, L. Wallichii*, natives of the Eastern Peninsula, and *L. Wightianum*, an Indian tree, furnish wood valuable for furniture or for building. (*Calcutta Exhib. Report.*)

lŏph'-ō-phŏre, *s.* [Gr. λόφος (*lophos*) = a crest, and φέρω (*pherō*) = to bear, to carry.]

Zool.: The name given by Prof. Allman to the disc or stage upon which the tentacles of the Polyzoa are borne.

"In the majority of Polyzoa—including almost all the marine species—the *lophophore* is circular."—*Nicholson: Zoology* (ed. 1878), p. 358.

lŏph-ō-phŏr-ĭ'-næ, *s. pl.* [Mod. Lat. *lophophor(us);* Lat. fem. pl. adj. suff. *-inæ.*]

Ornith.: A subfamily of Phasianidæ, sometimes merged in Phasianinæ. [Lophophorus.]

lŏ-phŏph'-ŏr-ŭs, *s.* [Gr. λόφος (*lophos*) = a crest, and φορός (*phoros*) = bearing, φορέω (*phoreō*) = to bear.]

Ornith.: Monaul. A genus of Phasianidæ, subfamily Phasininæ (true pheasants). The upper maudible is much curved, the head is feathered, the tail straight and even. They inhabit the higher ranges of the Himalayas. *Lophophorus impeyanus* is the Impeyau pheasant (q.v.).

lŏph-ō-phỹ'-tĭd'-ĕ-æ, *s. pl.* [Mod. Lat. *lophophyt(um);* Lat. fem. pl. adj. suff. *-ideæ.*]

Bot.: A tribe of Rhizogens, order Balanophoraceæ.

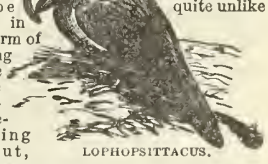
lŏph-ō-phỹ'-tŭm, *s.* [Gr. λόφος (*lophos*) = a crest, and φυτόν (*phuton*) = a tree, a plant.]

Bot.: The typical genus of the tribe Lophophytideæ (q.v.).

lŏ-phŏp'-ō-dą, *s. pl.* [Lophopea.]

lŏph-ō-psĭt'-ą-cŭs, *s.* [Gr. λόφος (*lophos*) = a crest, and ψίττακος (*psittacos*) = a parrot.]

Zool.: A name proposed by Prof. Newton for an extinct group of parrots, of which *Psittacus mauritianus* is the type. It was distinguished by a frontal crest, of a shape quite unlike that found in any other form of parrot, rising from the base of the bill and terminatiug before reaching the occiput, which was apparently flat and smooth. (*Proc. Zool. Soc.*, 1875, p. 350.)



LOPHOPSITTACUS.

lŏph'-ō-pŭs, *s.* [Lophopea.]

Bot.: The Bell Flower. The typical genus of the sub-order Lophophea. The ectocyst is of a gelatiuous consistence. A species was first described in 1741 by Tremblcy.

lŏph-or'-tỹx, *s.* [Gr. λόφος (*lophos*) = a crest, and ὄρτυξ (*ortux*) = a quail.]

Ornith.: A genus of Perdicinæ (True Partridges). *Lophortyx californianus* is the Californian quail. It has a beautiful crest and bright plumage. It is abundant in California.

lŏph-ō-sĕr'-ĭ-næ, *s. pl.* [Mod. Lat. *lophoser(us);* Lat. fem. pl. adj. suff. *inæ.*]

Zool.: A sub-family of Madrepores, family Fungidæ. The wall is entire and not spinose. Some are simple, and cup or button-shaped; others are compound. There are twenty genera.

lŏph-ō-sĕr'-ŭs, *s.* [Gr. λόφος (*lophos*) = a crest, and σηρικός (*sērikos*) = silky, from σήρ (*sēr*) = silk.]

Zool.: The typical genus of the sub-family Lophoserinæ (q.v.).

lŏph'-ō-spĕr-mŭm, *s.* [Gr. λόφος (*lophos*) = a crest, and σπέρμα (*sperma*) = seed.]

Bot.: A genus of Scrophulariaceæ, tribe Antirrhineæ. It consists of very elegant plants, with large purple flowers. They are from Mexico, but cultivated in Britain.

lŏ-phō'-tēş, *s.* [Gr. λοφωτός (*lophōtos*) = crested.]

1. *Ichthy:* The typical genus of the family Lophotidæ. *Lophotes cepidianus* is a ribbon-like fish with a silvery body, rose-coloured fins, and no scales. It is about five feet long, and has been found in the Mediterranean and in the ocean near Japan.

2. *Ornith.:* A genus of raptorial birds, sub-family Falconinæ.

lŏ-phō'-tĭd-æ, *s. pl.* [Mod. Lat. *lophot(es)*; Lat. fem. pl. adj. suff. *-idæ.*]

Ichthy.: A family of Acanthopteri or Acanthopterygii. The head has a high crest, a single dorsal fin runs the whole length of the back.

lŏph-ŷ-rŏp'-ō-da, *s. pl.* [Gr. λόφουρος (*lophouros*) = having a long-haired tail (?), and πούς (*pous*), genit. ποδός (*podos*) = a foot.]

Zool.: A legion of Crustacea, division Gnathopoda. The locomotory organs have stiff hairs. The branchiæ are attached to mouth organs. It contains two orders, Ostracoda and Copepoda. (*Dr. Henry Woodward, F.R.S.*)

lŏ-phŷ'-rŭs, *s.* [Gr. λόφουρος (*lophouros*) = having a long-haired tail (?).]

1. *Entom.:* A genus of Tenthredinidæ (Saw flies). *Lophyrus pini* is a small species a third of an inch long, very common in the Coniferæ.

2. *Zool.:* A genus of Lizards, family Iguanidæ.

lŏp'-pard, *s.* [Eng. *lop* (1), *v.*; suff. *-ard.*] A tree whose top has been lopped; a pollard.

***lŏppe,** *s.* [A.S. *loppe*; Sw. *loppa*; Dan. *loppe.*] A flea.

lŏpped, *a.* [LOPPERED.]

lopped-milk, *s.* [LOPPERED-MILK.]

lŏp'-pĕr, *s.* [Eng. *lop* (1), v.; *-er.*] One who lops trees.

lŏp'-pĕr, *lop-ren, *v.t.* [Cf. Prov. Ger. *lubbern*; Ger. *liefern, geliefern* = to curdle; Icel. *hleypa*; Ger. *luppe, lab* = rennet.] To curdle, to coagulate, as milk.

loppered-milk, *s.* Milk which has become curdled or coagulated.

***lop-pes-tre, *lop-pis-ter, *lop-ster,** *s.* [LOBSTER.]

lŏp'-pĭng, *pr. par., a., & s.* [LOP (1), *v.*]

A. & B. *As pr. par. & particip. adj.:* (See the verb).

C. *As substantive:*

1. The act or process of cutting off all the branches of a tree, except the crop or main shoot.

2. That which is lopped or cut off; the branches lopped off a tree.

"If they are divided yet further, so as to be laid close, and bound up in a more uniform manner into several faggots, perhaps those *loppings* may be all carried to one single load or burden."—*Watts: On the Mind*, ch. xviii.

lopping-axe, *s.* A light axe used for trimming trees. The term may be considered as in contradistinction to felling-axe or logging-axe.

lopping-shears, *s. pl.* A pair of heavy shears for trimming bushes, hedges, &c.

"Why *loquacity* is to be avoided, the wise man gives sufficient reason, for in the multitude of words there wanteth not sin."—*Ray: On the Creation*, pt. ii.

lō'-quăt, *s.* [JAPANESE.]

Botany:

1. The fruit of *Eriobotrya japonica.* It is yellow, about the size of a gooseberry, and pleasant to the taste. The tree has been introduced into Australia, and the fruit is sold at a cheap rate in the markets of Sydney and other towns.

2. The tree itself. [ERIOBOTYRA.]

lō-quē'-la, *s.* [Lat.]

Law: An imparlance, a declaration.

lör-ăn-thā'-çē-æ, *s. pl.* [Mod. Lat. *loranth(us)*; Lat. fem. pl. adj. suff. *-aceæ.*]

Bot.: Loranths; an order of epigynous exogens, alliance Asarales. It consists of shrubby parasitic plants; leaves fleshy, veinless, without stipules; flowers hermaphrodite or unisexual; calyx, if present, generally with bracts at the base; sepals three, four, or eight, often formed into a tube; petals none (*Lindley*), but what Lindley looks on as a calyx, Berkeley deems a corolla; stamens equal in number to the sepals and opposite to them; ovary one-celled; style one or none; stigma simple; fruit succulent or dry, one-seeded. Akin to Santalaceæ. Found in tropical and, to a less extent, in temperate countries. Known genera 13, species 450. One is the well-known Misseltoe (q.v.).

lör'-ănths, *s. pl.* [LORANTHUS.]

Bot.: The name given by Lindley to the order Loranthaceæ (q.v.).

lör-ăn'-thŭs, *s.* [Gr. λῶρον (*lōron*), λῶρος (*lōros*) = a thong; Lat. *lorum*, in allusion to the long linear sepals, and Gr. ἄνθος (*anthos*) = a flower.]

Bot.: The typical genus of the order Loranthaceæ (q.v.). The flowers have a petaloid appearance, being generally coloured, but Lindley and Sir Joseph Hooker consider the perianth a calyx. About 300 are known, chiefly from the tropics; none are British. The wood of *Loranthus longifolius* is used in India as a finishing tan stuff to give softness to leather.

lör'-āte, *a.* [Lat. *lorum* = a thong, a strap.]

Bot.: Shaped like a thong or strap; ligulate.

lor'-chą, *s.* [Port.]

Naut.: A light Chinese coaster having a hull of European model and Chinese masting and rigging.

¶ The name became familiar to the public in 1856, a dispute about a "lorcha" having in that year brought on war with China.

lord (1), ***lav-erd, *lov-erd,** *s.* [A.S. *hlâford*, from *hlâf* = a loaf, and *weard* = warden, keeper. *Lord* thus means the *loaf-keeper—i.e.*, the master of the house, the head of the family.]

1. A ruler, a master, a governor; one possessing supreme power or authority.

"Left by his sire—too young such loss to know,
Lord of himself—that heritage of woe."
Byron: Lara, i. 2.

2. *Specif.:* The Supreme Being, God, Jehovah.

"And the people answered and said, God forbid that we should forsake the *Lord* to serve other gods."—*Joshua* xxiv. 16.

¶ When in the Authorized Version of the Old Testament the word "Lord" is printed in small capitals, it is the rendering of the Hebrew *Yehovah* (Exod. vi. 1, vii. 1, &c.). [JEHOVAH.] In the New Testament it most commonly stands for the Lord Jesus Christ (Matt. xxvi. 22; Mark v. 19; Luke ii. 11, xxiv. 34, &c.).

3. The proprietor of a manor.

"In early times the king's great barons granted out smaller manors to inferior persons to be holden of themselves; which still continue to be held under a superior *lord*, whose seignory is frequently termed an honour. In imitation whereof these inferior *lords* carved out to others still more minute estates, to be held of themselves, and were so proceeding downwards *in infinitum*, till the superior *lords* observed that by subinfeudation they lost all their feudal profits."—*Blackstone: Comment.*, bk. ii., ch. 4.

*4. The head of a house or family; a husband.

"Thou worthy *lord* of that unworthy wife."
Shakesp.: Rape of Lucrece, 1,903.

5. The same as HARVEST-LORD (q.v.).

"My *Lord* hegg'd round, and held his hat,
Says Farmer Gruff, says he,
'There's many a *lord*, Sam, I know that,
Has hegg'd as well as thee.'".
Bloomfield: The Horkey.

*6. The principal actor in a play.

7. A title of respect given (especially in the phrase *my lord*), to persons of high rank, position, or consideration, as princes, ecclesiastics of high rank, &c.

"Good-morrow, my good *lords.*"
Shakesp.: Merchant of Venice, i. 1.

8. A nobleman or peer of Great Britain, including dukes, marquises, earls, viscounts, and barons, and also archbishops and bishops, who, as such, are members of the House of Lords.

¶ The title is given by courtesy to all the sons of dukes and marquises, and to the eldest sons of earls.

9. A title of honour given to certain official personages, as to judges when presiding in court, the mayors of London, York, and Dublin, the provosts of Edinburgh, Glasgow, Aberdeen, and Perth, the members of the College of Justice in Scotland, &c.

¶ (1) *House of Lords:* The second branch of the British legislature, consisting of the lords spiritual and temporal, assembled together.

A council or legislative assembly, which ultimately developed into the House of Lords as now constituted, seems to have existed at least as early as the Norman Conquest in 1066. It then consisted of the prelates and barons in conjunction with the king. It took part with him in passing the Constitutions of Clarendon. Writs for calling them together began (6 & 7 John) in 1205, though the first extant is of date 1265. In 1215 the barons—headed by Stephen Langton, cardinal-priest of St. Chrysogonus, who held an English barony in virtue of his office as primate—were powerful enough to extort Magna Charta from the king. In 1341 the personal privilege of the peers was precisely defined. The prelates did not sit in virtue of their sacred office, but of their temporal possessions. Each held, or was at least assumed to hold, a barony under the king, William the Conqueror having altered the spiritual tenure of frank almoign, by which in Saxon times they had held their landed property, into the Norman or feudal tenure by barony. When the Reformation commenced, there were twenty abbots and two priors in the House of Lords, and, including these, the spiritual peers were about as numerous as the temporal. The suppression of the monasteries under Henry VIII. deprived the abbots and priors of their seats. The House of Lords was abolished by the Long Parliament, Feb. 6, 1649. It met again as part of the first Parliament after the Restoration, April 25, 1660. Consequent on the union with Scotland in 1707, 16 representative peers, elected by the rest at the commencement of each Parliament, were added to the House; and on the union with Ireland in 1800, 28 representative peers were elected for life. At the end of 1884 the House of Peers consisted of 5 princes of the blood, 2 archbishops, 20 dukes, 18 marquises, 113 earls, 27 viscounts, 24 bishops, 260 barons, 16 Scottish and 28 Irish representative peers, in all 513 members.

lord-wood, *s.*

Bot.: Liquidambar orientale. [LIQUIDAMBAR.] The term lord-wood is a translation of Xylon Effendi, the Cypriot name of the plant.

Lord's-day, *s.*

Theol.: A day first named in Revelation i. 10, where the sacred writer says, I was in the spirit on the Lord's day (ἐν τῇ Κυριακῇ ἡμέρᾳ (*en tē Kuriakē hēmera*). "The Lord" in the New Testament generally referring to the Lord Jesus, the Lord's-day was probably that celebrating His resurrection, viz., the first day of the week. (John xx. 1-19, 26; Acts xx. 7; 1 Cor. xvi. 1, 2.) Regarding the proper method of its celebration, two schools of thought exist. The first considers that the Lord's-day is simply the Christian Sabbath, and that the Old Testament directions for the keeping of the Sabbath are also those divinely given for the observance of the Lord's-day. The second view is that the Sabbath was designed to be simply a Jewish institution, and that the Lord's-day is a joyous Christian festival, in some respects essentially differing from the Old Testament Sabbath. [SABBATH.]

Lord's-day Act.

Law: 29 Chas. II., c. 7. It requires cessation from oue's ordinary occupation on the Lord's-day.

lord's-mear, *s.*

Lord's-prayer, *s.* The prayer which Jesus taught his disciples (Matt. vi. 9-13), and which is used in public worship, whether liturgical or not.

Lord's Supper, *s.*

Theol. & Eccles.: A term first used by St. Paul in 1 Cor. xi. 20, of a ceremonial ordinance observed in the Corinthian and doubtless in other churches. The night on which Jesus was betrayed, he took bread, blessed it, brake it, and gave it to his disciples to eat, with wine similarly blessed for them to drink, the former in the Protestant view symbolising his broken Body, the latter his shed Blood. (Matt. xxvi. 26-29; Mark xiv. 22-25; Luke xxii. 14-20). St. Luke records that Jesus said, "Do this in remembrance of Me" (xxii. 19). St. Paul evidently considered that these words, addressed originally to the Apostles, were designed for the Church of all ages. The term Lord's supper is used chiefly by those who hold the ordinance to be a commemorative one. [COMMUNION, EUCHARIST, MASS.]

lords-and-ladies, *s. pl.*

Bot.: A popular name for *Arum maculatum.*

"The *lords spiritual* consist of the Archbishops of Canterbury and York, the Bishops of London, Durham, and Winchester, and twenty-three other bishops of dioceses in England, according to their priority in consecration."—*Blackstone: Comment.*, bk. i., ch. 2.

lords-temporal, *s. pl.* Lay peers who have seats in the House of Lords.

"The *lords temporal* consist of all the peers of the realm, by whatever title of nobility distinguished. Some of these sit by descent, as do all ancient peers; some by creation, as do all new-made ones; others, since the union with Scotland, by election, which is the case with the sixteen peers who represent the body of the Scots noblity for the parliament for which they are elected; and, since the union with Ireland, with the twenty-eight representative peers, who are elected for life, to represent the Irish nobility. The number of *lords temporal* is thus indefinite, for it may be increased at will by the power of the crown, by the creation of peers of the United Kingdom."—*Blackstone: Comment.*, bk. i., ch. 2.

Min. : The same as Hedenbergite (q.v.).

lōte (1), *s.* [Lotus.]

lote-bush, *s.*

Bot.: [Lote-tree, 1].

lote-tree, *s.*

Botany :

1. *Zizyphus lotus*, the fruit of which may have been that which gave the name to the ancient Lotophagi. Claims have been made also in favour of *Celtis australis*, though it is now believed that *Nitraria tridentata* was the genuine species. Palmer, evidently referring to this species, says, that its fruit which is called Nebuk, is a small round berry, in taste something like the jargonelle pear, and is a great favourite with the Bedâwin. It grows freely in the Sinaitic peninsula.

2. *Diospyros lotus.*

lōte (2), *s.* [Fr. *lote, lotte*, from Mod. Lat. *lota.*] A fish; the eel-pout.

Bot.: The typical genus of the family Lotononideæ (q.v.).

lō-tŏph'-a-ğī, *s. pl.* [Gr. = lotus-eaters, from λωτός (*lōtos*) = the lotus, and φαγεῖν (*phagein*) = to eat.]

Gr. Myth.: The name given to a people who ate of the fruit of the lotus tree, the effect of which was to make them forget their friends and homes, and to lose all desire of returning to their native land, their only wish being to live in Lotus-land.

"The trees around them all their food produce;
Lotos, the name; divine, nectareous juice!
(Thence called *Lotophagi*)."
Pope: Homer; Odyssey ix. 107.

***lō'-tŏs**, *s.* [Lotus.]

lŏt'-tĕr-y, *s.* [Eng. *lot; -ery;* Fr. *loterie.*]

1. The allotment or disposition of prizes by chance or lot; the drawing of lots. Lotteries are carried out by means of a number of tickets drawn at the same time, some of which entitle their owners to prizes, while the rest are blanks. They were formerly very common, being resorted to both by governments and by individuals. Few countries now permit them. The Louisiana Lottery was brought to an end by the closing of the United States mails against it.

"On the security of this fund a million was to be raised by a *lottery*, but by a lottery which had scarcely anything but the name in common with the lotteries of a later period."—*Macaulay: Hist. Eng.*, ch. xx.

2. A chance, a mere hazard: as, It is all a *lottery.*

*3. The prize, lot, or portion which falls to one's share.

"The *lottery* of my destiny
Bars me the right of voluntary choosing."
Shakesp.: Merchant of Venice, ii. 1.

lŏt'-tō, lŏt'-ō, *s.* [Ital. *lotto* = a lot, a lottery; Fr. *loto.*] A game of chance, played in some cases with a series of balls or knobs, numbered from 1 to 90, with a set of cards or counters having corresponding numbers. The balls are put into a revolving urn, and a certain number allowed to drop out, one by one. The player who holds a card containing a column of figures, corresponding to the numbers of each of the balls successively dropped, gains the stakes deposited at the commencement of the game. It is usually played as a child's game, with counters on a figured board, but one of the many varieties of it, called keno, is played for considerable stakes in America. (*Annandale.*)

lō'-tŭr, *s.* [Native name.] (See the compound.)

lotur-bark, *s.*

Bot.: The bark of *Symplocos racemosa*, a tree belonging to the natural order Styracaceæ, and found growing in the tropical and sub-tropical regions of both hemispheres. It has a bitter aromatic taste, and is used in India as a dyeing material.

lō-tūr'-ĭ-dīne, *s.* [Eng., &c. *lotur;* Lat. *id(em)* = the same, and Eng. suff. *-ine* (*Chem.*).]

Chem.: An alkaloid extracted, together with loturine, from lotur bark by means of hot alcohol, and separated from the latter by its solubility in potassium thiocyanate. It is an amorphous body yielding amorphous salts. It is soluble in concentrated nitric and sulphuric acids, forming yellow fluorescent solutions.

lō-tu-rĭne, *s.* [Eng., &c. *lotur* (bark); *-ine* (*Chem.*).]

Chem.: An alkaloid extracted from the bark of *Symplocos racemosa* by means of hot alcohol. It crystallizes in efflorescent crystals, soluble in alcohol, ether, chloroform, and acetone; insoluble in water, ammonia, caustic soda, and potassium thiocyanate. It melts at 234°, and sublimes, forming colourless prisms. Its solution in dilute acids exhibits a fluorescence brighter than that of quinine sulphate. Loturine forms well-crystallized salts. The hydrochloride, which is soluble in water and alcohol, forms double salts with the chlorides of platinum, gold, and mercury. The hydriodide forms a double salt with the iodide of mercury. The tannate is an amorphous powder. [Lotur-bark.]

lō'-tŭs, lō'-tŏs, *s.* [Lat. *lotus, lotos;* Gr. λωτός (*lōtos*) = (1) the Egyptian water-lily, *Nelumbium speciosum;* (2) the lotus-tree, *Zizyphus lotus*, &c.]

1. *Ord. Lang. & Myth.: Nelumbium speciosum*, a Water-lily represented on the Egyptian monuments and on those of India. It is the Egyptian bean of Pythagoras. [Nelumbium.]

2. *Bot.:* Bird's-foot Trefoil. The typical genus of the papilionaceous tribe Loteæ (q.v.). The calyx is five-toothed, the teeth nearly equal, the keel ascending much acuminate, the legume cylindrical, somewhat spongy within, and imperfectly many celled. Fifty species are known. Three are British, *Lotus corniculatus, L. major*, and *L. angustissimus.* [*Bird's-foot Trefoil.*]

"Eating the *lotos* day by day."
Tennyson: Lotos-Eaters, 105.

3. *Arch.:* An ornament frequently seen on the capitals of Egyptian columns. It resembles the present white lily of Egypt, or yet more closely *Nelumbium speciosum*, now extinct.

Louis Quatorze (as **Lô'-ĕ ka-torz'**), *s.* [Fr. = Louis XIV.] The name given to a meretricious style of architecture and internal decoration which prevailed in France in the reign of Louis XIV. It was marked by a deterioration of taste, the natural laws of architecture being more and more neglected, and replaced by certain conventional rules for the application of the Roman columuar orders. The principal architect of this style was Jules Hardouiu Mansard, by whom were built the palaces of Versailles (1647–1708), Marly, the Grande Maison, and also the Invalides at Paris. The windows are larger, the rooms more lofty, than in the preceding period, and in everything there was a striving after pomp and sumptuousness. In internal decorations mirrors were freely introduced, and may he said to become a distiuctive feature of interiors. Gilt stucco-work was largely used, the scroll and shell patterns being the characteristic features of ornamental decoration, the panels being formed by chains of scrolls, coucave and convex alternately, but symmetry of arrangement was largely neglected.

Louis Quinze (as **Lô'-ĕ kañz**), *s.* [Fr. = Louis XV.] The name sometimes given to the style of architecture and internal ornamentation prevailing in rance during the reign of Louis XV. It is often known under the desiguation Rococo (q.v.). Internal arrangement and decoration are the main characteristics of the style of this period, and in this direction the best results were doubtless obtained. Large and lofty rooms, as well as scope for display, were indispensable; consequently this style of embellishment was most happily carried out in state apartments, especially in princely castles and palaces, and the mausions of the aristocracy. There was the greatest freedom in the treatment of architectural forms, to the disregard of all laws, and free scope was given to the most fantastic combinations. Curved lines superseded all straight lines both in ground plans and in designs, whilst the most ordinary and characteristic embellishments were volutes, shell-fish and scrolls, groups of fruit, garlauds of flowers, hangings, &c.

2. Devoted attachment to a person of the opposite sex.

"Yes—it was *love*—if thoughts of tenderness,
Tried in temptation, strengthened by distress,
Unmoved by absence, firm in every clime,
And yet—oh, more than all!—untired by time;
Which nor defeated hope, nor baffled wile,
Could render sullen, were she near to smile;
Nor rage could fire, nor sickness fret to vent
On her one murmur of his discontent:
Which still would meet with joy, with calmness part,
Lest that his look of grief should reach her heart;
Which nought removed, nor menaced to remove—
If there be *love* in mortals—this was *love!*"
Byron: Corsair, i. 12.

3. Strong attachment, liking, or inclination; fondness of or for anything.

* (2) A kind of game in which one player holds up one or more fingers, and the other, without looking, guesses at the number.

¶ *Love* subsists between members of the same family ; it springs out of their natural relationship, and is kept alive by their close intercourse and constant interchange of kindnesses : *friendship* excludes the idea of any tender and natural relationship ; nor is it, like *love*, to be found in children, but is confined to maturer years ; it is formed by time, by circumstances, by congruity of character, and sympathy of sentiment. *Love* always operates with ardour ; *friendship* is remarkable for firmness and constancy. Both *love* and *friendship* are gratified by seeking the good of the object ; but *love* is more selfish in its nature than *friendship*. As *love* is a passion it has all the errors attendant upon passion ; but *friendship*, which is an affection tempered by reason, is exempt from every such exceptionable quality. *Love* is blind to the faults of the object of its devotion ; it adores, it idolizes, it is fond, it is foolish : *friendship* sees faults, and strives to correct them ; it aims to render the object more worthy of esteem and regard. (*Crabb : Eng. Synon.*)

¶ (1) *A labour of love :* Any work or task done willingly and without expectation of reward, either from fondness for the work itself or from love for the person for whom it is done.

Pharm.: One of the three varieties of pale cinchona-bark (q.v.). Loxa-bark is derived exclusively from *Cinchona condaminea*, or from it and *C. scrobiculata.* The former tree is cultivated in India at high elevations in the Nilgiri Hills, in Ceylon, and in Sikkim.

lŏx-ar'-thrŭs, *s.* [Gr. λοξός (*loxos*)=oblique, and ἄρθρον (*arthron*) = a joint.]

Surg.: A term applied to the abnormal direction of a joint, caused neither by spasm nor luxation, as in the varieties of talipes, or club-foot, which Sauvage constituted a genus of the order Ectopia. (*Mayne.*)

lŏx'-ĭ-a, *s.* [Gr. λοξός (*loxos*) = oblique, crooked.]

Ornith.: Crossbill; the typical genus of the snb-family Loxinæ, or the family Loxiadæ. [Crossbill.]

lŏx-ĭ'-ĭ-dæ, lŏx-ĭ'-a-dæ, *s. pl.* [Mod. Lat., &c. *loxi(a)*; Lat. pl. adj. suff. *-idæ, -adæ.*]

Ornith.: The name given by Vigors, &c., to a family of Conirostres. The two mandibles cross at the tip, enabling the bird to erush hard fir cones and obtain the seeds. Generally reduced to Loxinæ, a sub-family of Fringillidæ. [Crossbill.]

lŏx-ĭ'-næ, *s. pl.* [Mod. Lat., &c. *lox(ia)*; Lat. fem. pl. adj. suff. *-inæ.*]

Ornith.: Crossbills (q.v.).

lŏx'-ō-clāse, *s.* [Gr. λοξός (*loxos*) = transverse, and κλάω (*klaō*) = to cleave; Ger. *loxoklas.*]

Min.: A variety of orthoclase (q.v.), in yellowish or grayish-white crystals, somewhat greasy in lustre, occurring in large crystals at Hammond, St. Lawrence Co., New York. Named under the supposition that the crystals were peculiar in their direction of cleavage.

lŏx'-ō-dŏn, *s.* [Gr. λοξός (*loxos*) = slanting, crosswise, and ὀδούς (*odous*), genit. ὀδόντος (*odontos*) = a tooth.]

1. *Ichthy.:* A genus of Sharks, family Carchariдæ. Locality, the Indian Ocean.

2. *Zool.:* A sub-genus of Elephas, establisbed by Dr. Falconer. The dental lamellæ, lozenge or diamond-shaped, do not greatly differ in number in the tbree true molars. It coutains the African Elephant, *Elephas* (*Loxodon*) *africanus.*

3. *Palæont.:* *Elephas planifrons* of the Siwalik formation [Upper Miocene (?)] in India. *E. meridionalis*, of the European Pliocene, and the pigmy *E. melitensis*, of the Post Pliocene, are of tbis type.

lŏx'-ō-dŏnt, *a. & s.* [Loxodon.]

A. *As adj.:* Having teeth as in the sub-genus Loxodon (q.v.).

B. *As subst.:* An elephant, recent or fossil, of the sub-genus Loxodon (q.v.).

lŏx-ō-drŏm'-ĭc, *a.* [Gr. λοξός (*loxos*) = oblique, and δρόμος (*dromos*) = a course; Fr. *loxodromique.*] Pertaining to oblique sailing, or sailing by the rhumb.

loxodromic-curve, *s.*

Math.: A curve beariug a strong resemblance to the logarithmic spiral. It is traced upon the surface of a sphere by a point moving in such a manner that its path cuts all the meridians at the same angle. In navigation the loxodromic curve is the same as the rhumb line, and is the path of a ship sailing always in the same tack. The loxodromic curve turns continually about the pole, but does not reach it till after an iufinite number of turus.

lŏx-ō-drŏm'-ĭcs, *s.* [Loxodromic.] The art of oblique sailing by the loxodromic curve or rhumb.

***lŏx-ŏd'-rō-mĭsm**, *s.* [Loxodromic.] The art or process of tracing a loxodromic curve or line; the act or state of moving as in a loxodromic curve.

lŏx-ŏd'-rō-mȳ, *s.* [Loxodromic.] The same as Loxodromics (q.v.).

lŏx-ŏm'-ma, *s.* [Gr. λοξός (*loxos*) = oblique, and ὄμμα (*omma*) = the eye.]

Palæont.: A genus of Labyrinthodonts, sub-order Chanliodonta. The orbits are very large, irregularly oval, with cusps proceeding from the posterior part of outer and inner margins, narrowed in front, slightly oblique, the long axis diverging forwards; the teeth with large anterior and posterior cutting edges. *Loxomma Allmanni* (Huxley) is from the Giliverton Ironstone of tbe Edinburgh coal field. (*Quar. Journ. Geol. Soc.* xviii. 291; *Brit. Assoc. Rep.* (1874), 150, 162.)

lŏx-ō-nē'-ma, *s.* [Gr. λοξός (*loxos*) = oblique, and νῆμα (*nēma*) = a thread.]

Palæont.: A genus of holostomatous gasteropods, family Pyramidellidæ. It extends from the Silurian to the Trias, but is most abundant in the Carboniferous. Known species seventy-five. The generic name has reference to the striæ, with which many of the species are marked. *Loxonema elegans* is a fine shell, two inches long, frequent both in the Wenlock and Ludlow shales.

lŏx-ō-sō'-ma, *s.* [Gr. λοξός (*loxos*) = oblique, and σῶμα (*sōma*) = the body.]

Zool.: A marine genus of Bryozoa, or Moss-animals. It lives, fixed by a pedal gland, on the tails of worms. The tentacles are obliquely developed, and the body cavity is attached to a contractile stem. There is no stolon. (*A. Crane.*)

lōȳ, *s.* [Etym. doubtful.]

Agric.: A long narrow spade, used in stony lands.

lōȳ'-al, *a.* [Fr., from Lat. *legalis* = legal (q.v.); Sp. & Port. *leal*; Ital. *leale.*]

1. True or faithful to one's sovereign; true in allegiance; devoted to the maintenance of law and order.

"No English legislature, however *loyal*, would now consent to be merely what the legislature had been under the Tudors."—*Macaulay: Hist. Eng.*, ch. ii.

2. Faithful in love or duty; true to one's word.

"And faithful, *loyal* in her innocence,
Like the brave lion slain in her defence."
Wordsworth: White Doe of Rylstone.

3. Characterized by or indicative of loyalty.

"The people were mad with *loyal* enthusiasm."—*Macaulay: Hist. Eng.*, ch. ii.

loyal-hearted, *a.* The same as Loyal, 2 (q.v.).

"On thee the *loyal-hearted* hung."
Tennyson: In Memoriam, cix.

* **lōȳ'-al-ĭsm**, *s.* [Eng. *loyal*; *-ism.*] Loyalty.

lōȳ'-al-ĭst, *s.* [Eng. *loyal*; *-ist.*] One who is loyal to his sovereign; one who in time of revolt or revolution remains faithful to his allegiance to his sovereign.

"If, after all, the *loyalists* should not be received into the bosom of their native country, Britain . . . would afford them an asylum."—*Belsham: Hist. Great Brit.*, vii. (an. 1783).

lōȳ'-al-lȳ, *adv.* [Eug. *loyal*; *-ly.*] In a loyal manner; faithfully.

"Cambridge was not less *loyally* disposed."—*Macaulay: Hist. Eng.*, ch. viii.

lōȳ'-al-nĕss, *s.* [Eng. *loyal*; *-ness.*] The quality or state of being loyal; loyalty.

"So honorably and ioyfully receiued, as eytheir their *loyalnesse* towards the Queen's Majesty . . . did require."—*Stow: Queen Elizabeth* (an. 1563).

lōȳ'-al-tȳ, *s.* [O. Fr. *loialteit*; Fr. *loyauté*; Sp. *lealtad*; Ital. *lealta, legalita.*] The quality or state of being loyal; faithful adhereuce to allegiance; faithfulness, devotion, constancy.

"The *loyalty* of Lochiel is almost proverbial: but it was very unlike what was called *loyalty* in England."—*Macaulay: Hist. Eng.*, ch. xiii.

loyalty-loan, *s.* A loan to the Government, not from commercial motives, but as a proof of loyalty. Used specially of a loan opened in London on Dec. 5, 1796, when within sixteen hours about £18,000,000 were promised.

* **lōze**, *v.t.* [Lose (2), *v.*]

* **lōz'-ęl**, *s.* [Losel.]

lŏz'-ĕnġe, ***lŏş'-ĕnġe**, *s.* [O. Fr. *losenge, lozenge* (Fr. *losange*), a word of doubtful origin; Sp. *lozanje*, prob. from *losa* = a flagstone, a marble-slab, a square-stone used for paving.]

I. *Ordinary Language:*

1. A confection, a sweetmeat, so called from being originally made of the shape of a lozenge.

2. A small rhomb-shaped pane of glass set in a leaden frame for a church window or lattice.

II. *Technically:*

1. *Geom.:* An equilateral rhomboid or rhombus; an oblique-angled parallelogram or diamond. [Rhomb.]

2. *Her.:* A bearing of the shape of a lozenge appropriate to the arms of spinsters and widows.

LOZENGE.

* 3. *Pharm.:* A form of medicine made in small pieces, to be held or chewed in the mouth till dissolved.

* **lozenge-coach,** *s.* A dowager's carriage. [LOZENGE, *s.*, II. 2.]

lozenge-graver, *s.* *Engrav.:* A graving-tool the cross section of which is of a rhomb or diamond shape. The two faces which meet to form the belly of the graver have an angle less than 90°.

lozenge-mail, *s.* [MASCLED-MAIL.]

lozenge-moulding, *s.* *Arch.:* An ornament inclosing diamond-

LOZENGE-MOULDING.

shaped panels. It is frequently found in Norman architecture.

lozenge-shaped, *a.* Diamond-shaped; rhomboidal.

lŏz'-ĕnged, *a.* [Eng. *lozeng(e); -ed.*] Made into the shape of a lozenge or lozenges.

"The *lozenged* panes of a very small latticed window." —*C. Brontë: Jane Eyre*, ch. xxviii.

lŏz'-ẹn-ġy̆, **lŏz'-ẹn-ġeĕ,** *a.* [Eng. *lozeng(e); -y, -ee.*]

Her.: A term used to express the field or any armorial charge which is divided by diagonal lines transversely into equal parts or lozenges of different tinctures.

lō-zŏp'-ĕr-ạ, *s.* [Gr. λοξός (*loxos*) = oblique, and πέρας (*peras*) = an end. (*Agassiz.*)]

Entom.: The typical genus of the family Lozoperidæ (q.v.).

lō-zō-pĕr'-ĭ-dæ, *s. pl.* [Mod. Lat. *lozoper(a)*; Lat. fem. pl. adj. suff. *-idæ.*]

Entom.: A family of Moths, group Tortricina. The anterior wings are of variable length, the costæ generally regularly arched, the hind margin often oblique, the colour generally yellow, often with a central fascia. Larva generally feeding on seeds. Forty-five species are Europeau; many of them beautiful. (*Stainton.*)

* **lû,** *s.* [Loo.]

* **lŭb'-bard,** *s. & a.* [LUBBER.]

A. *As subst.:* A lazy fellow, a lubber.

"Their victuals those curmudgeon *lubbards* Lock up from my sight." *Swift: Apollo to the Dean.*

B. *As adj.:* Lubberly.

"Conscious how much the hand Of *lubbard* labour needs his watchful eye." *Cowper: Task*, iii. 400.

lŭb'-bĕr, * **lobre,** * **lob-ur,** *s.* [Of Celtic origin; cf. Wel. *llob* = a dolt, a blockhead; *llabi* = a stripling, a looby; Sw. dial. *lubber* = a thick, clumsy, lazy man.] A lazy clumsy fellow; a dolt; an awkward lout; specif., applied by sailors to one who does not know seamanship; a land-lubber.

"If you will measure your *lubber's* length again, tarry, but away."—*Shakesp.: Lear*, i. 4.

lubber's-hole, *s.*

Naut.: An opening in the floor of the top for those to crawl through who are afraid to climb up by the futtock-shrouds.

"He proposed that I should go through *lubber's-hole*."—*Marryat: Peter Simple*, ch. vii.

lubber's-point, *s.*

Naut.: A black vertical line drawn on the inside of the case of the mariner's compass. This line, and the pin on which the card turns, are in the same vertical line with the keel of the ship, and hence the rhumb opposite to the lubber's point shows the course of the ship at any time. The lubber's-point, however, deviates from its proper position when the ship is heeled over; hence, seamen do not implicitly depend on it, as indeed its name implies.

lŭb'-bĕr-lĭ-nĕss, *s.* [Eng. *lubberly*; *-ness.*] Awkwardness, clumsiness.

"To load an elephant with *lubberliness*."—*T. Brown: Works*, ii. 179.

lŭb'-bĕr-lў, *a. & adv.* [Eng. *lubber*; *-ly.*]

A. *As adj.:* Like a lubber; awkward, clumsy, clownish.

"I came yonder at Eton to marry mistress Anne Page, and she's a great *lubberly* boy."—*Shakesp.: Merry Wives of Windsor*, v. 5.

B. *As adv.:* In a lubberly, clumsy, or awkward manner; clumsily, awkwardly.

* **lû'-brĭc,** * **lû'-brĭck,** *a.* [Fr. *lubrique*; Lat. *lubricus* = slippery, deceitful, hazardous; Sp., Ital., & Port. *lubrico.*]

I. Slippery; having a smooth surface.

"Short thick sobs, whose thund'ring volleys float, And roll themselves over her *lubric* throat." *Crashaw: Musick's Duel.*

2. Uncertain, unsteady, changeable.

"The deep and *lubrick* waves of state and court."—*Reliquiæ Wottonianæ*, p. 208.

3. Wanton, lewd, lascivious.

4. Deceitful, tricky. (*Ford: Witch of Endor*, iii. 1.)

* **lû'-brĭc-al,** * **lû'-brĭc-ąll,** *a.* [Eng. *lubric*; *-al.*] The same as LUBRIC (q.v.).

"What! shall thy *lubricall* and glibberie muse Live, as she were defunct." *Ben Jonson: Poetaster*, v. 3.

lû'-brĭ-cant, *a. & s.* [Lat. *lubricans*, pr. par. of *lubrico* = to make slippery; *lubricus* = slippery; Ital. *lubricante.*]

† **A.** *As adj.:* Lubricating.

B. *As subst.:* A substance used to diminish friction of the working parts of machinery. The requisites of a good lubricant are that it must endure the heat even of melted lead, without change, in order to stand friction and lubricate the cylinders of steam-engines. Lubricants must be fixed and not volatile oils, as produced by destructive distillation, otherwise they are decomposed by friction, and burnt or dried up. They must not show or possess any acid reaction, either naturally or artificially, otherwise the bolts are cut in the steam-chest, and the iron, particularly wrought-iron, is made porous. They must possess a sufficient power of tenacity without oxidation, otherwise they will thicken.

lû'-brĭ-cāte, *v.t.* [Lat. *lubricatus*, pa. par. of *lubrico* = to make slippery; *lubricus* = slippery; Ital. *lubricare*; Sp. *lubricar, lubrificar*; Fr. *lubrifier.*]

I. *Lit.:* To make smooth and slippery, so as to diminish friction; to rub or smear with some greasy substance.

"For not only both the ingredients are of a *lubricating* nature, but there is this advantage gained from their composition, that they do mutually improve one another."—*Ray: On the Creation*, pt. ii.

* 2. *Fig.:* To make smooth; to smoothen, to make easy.

lubricating-oil, *s.* Any vegetable or mineral oil that can be used for lubrication.

* **lû'-brĭ-cąte,** *a.* [LUBRICATE, *v.*] Slippery.

lû-brĭ-cā'-tion, *s.* [LUBRICATE, *v.*]

1. The act of lubricating or making smooth and slippery.

"Secondly, by the healing *lubrication* of the mucilage."—*Paley: Nat. Theol.*, ch. viii.

2. A lubricant.

lû'-brĭ-cā-tŏr, *s.* [Eng. *lubricat(e)*; *-or.*]

I. *Ord. Lang.:* One who or that which lubricates.

"It [water] is found, when not cold, to be a great resolver of spasms, and *lubricator* of the fibres."—*Burke: On the Sublime & Beautiful*, pt. iv., § 21.

II. *Technically:*

1. *Steam-engin.:* An oil cup or other contrivance for supplying oil or grease to rubbing surfaces, in order to diminish friction.

2. *Shafting:* A pivoted disc in a cup below the lower journal-box is revolved by contact with the under side of the shaft, and carries up oil to lubricate the latter.

3. *Vehic.:* The ordinary mode of lubricating carriage or waggon axles is by placing grease on the spindle and then putting on the wheel, giving it a few revolution before lowering it again to the ground. The grooves in the box of the hub form pockets in which the grease collects, and from which it passes to the spindle as it gradually wastes away.

4. *Ordn.:* An arrangement for lubricating and cleaning the grooves of rifled guns.

* **lû-brĭç'-ĭ-tāte,** *v.t.* [Lat. *lubricus* = smooth, slippery.] To make smooth or slippery. (*Kersey.*)

* **lû-brĭç'-ĭ-tў,** *s.* [Fr. *lubricité*, from Lat. *lubricus* = slippery; Ital. *lubricità*; Sp. *lubricidad.*]

I. *Literally:*

1. Smoothness of surface; slipperiness.

"Further provision [is made] for its defence, for its constant *lubricity* and moisture, which we see in its ocket and its lids."—*Paley: Nat. Theol.*, ch. vi.

2. Aptness to glide over any part or to facilitate motion by diminishing the friction between parts in contact.

II. *Figuratively:*

1. Instability, uncertainty.

"The politician is not discouraged at the inconstancy of human affairs, and the *lubricity* of his subject."—*Glanvill: Vanity of Dogmatizing*, ch. xxiv.

2. Lasciviousness, lewdness, incontinency, unchastity.

"As if wantonness and *lubricity* were essential to that poem, which ought in all to be avoided."—*Dryden.*

* **lû'-brĭ-coŭs,** *a.* [Lat. *lubricus* = slippery, deceitful, hazardous.]

1. *Lit.:* Slippery, smooth.

"The parts of water being voluble and *lubricous* as well as fine, it easily insinuates itself into the tubes of vegetables."—*Woodward: Nat. Hist.*

2. *Fig.:* Uncertain, unsteady, unstable.

"Much less shall I positively determine any thing in matters so *lubricous* and uncertain."—*Glanvill: Pre-existence of Souls*, ch. xii.

* **lû-brĭ-făc'-tion,** *s.* [Lat. *lubricus*=smooth, slippery, and *facio* = to make.] The act or operation of lubricating or making smooth.

"The sixth cause is *lubrifaction* and relaxation."—*Bacon: Nat. Hist.*, § 41.

* **lû-brĭ-fĭ-cā'-tion,** *s.* [LUBRIFACTION.] The same as LUBRIFACTION (q.v.).

"A twofold liquor is prepared for the inunction and *lubrification* of the heads of the boues."—*Ray: On the Creation*, pt. ii.

lû-căn'-ĭ-dæ, *s. pl.* [Mod. Lat., &c., *lucan(us)*; Lat. fem. pl. adj. suff. *-idæ.*]

Entom.: Stag Beetles; a family of lamellicorn beetles. Distinguished from the Scarabeidæ by having the leaflets of the antennal club fixed instead of moveable, and greatly projecting jaws. About 550 species have been described. They most abound in well-wooded tropical countries. Only three are British: *Lucanus cervus, Dorcas parallelopipedus*, and *Sinodendron cylindricum.*

lû-cā'-nŭs, *s.* [Lat. *luca* = the stag beetle (see def.).]

Entom.: The typical genus of the family Lucanidæ (q.v.). *Lucanus cervus* is the Stag-beetle (q.v.).

* **lû-carne',** *s.* [Fr., from Lat. *lucerna* = a lamp; *luceo* = to shine.] A dormer; a garret window.

* **lu-cayne,** *s.* [LUCARNE.]

lūçe, *s.* [Lat. *lucius.*] A pike full grown; a fish used as an armorial bearing.

"All his ancestors, that come after him, may; they may give the dozen white *luces* in their coat."—*Shakesp.; Merry Wives of Windsor*, i. 1.

* **lū'-çen-çў,** *s.* [Eng. *lucen(t)*; *-cy.*] Brightness, lustre.

"A name of some note and *lucency*."—*Carlyle: French Revolution*, pt. iii., bk. i., ch. vi.

* **lū'-çent,** *a.* [Lat. *lucens*, pr. par. of *luceo* = to shine.] Shining, bright, resplendent.

"Some weeks have passed since last I saw the spire In *lucent* Thames reflected." *Keats: To Charles Cowden Clarke.*

lū-çĕr'-nąl, *a.* [Lat. *lucerna*=a lamp.] Of or pertaining to a lamp or other artificial light.

Specif. applied to a microscope in which the object to be examined is illuminated by the light of a lamp. The object is placed in a sliding tube between the lens and the lamp, which is contained in a box. The image is received on a screen or plate of ground glass.

lū-çĕr-năr'-ĭ-ạ, *s.* [Lat. *lucerna* = a lamp.]

Zool.: The typical genus of the order Lucernariadæ. The body is campanulate, attached proximally at its smaller extremity by a hydrorhiza. When detached the animal swims rapidly by the alternate contraction and expansion of the umbrella, around the margin of which are tufts of short tentacular processes, and in its centre is a polypite with a quadrangular four-lobed mouth.

lū-çĕr-na-rī′-a-dæ, *s. pl.* [Mod. Lat. *lucernāri(a);* Lat. fem. pl. adj. suff. *-adæ.*]

Zool.: Sea-nettles, Sea-blubbers. An order of the legion or sub-class Luceruarida. It includes those Lucernarida, which have only a single polypite, are fixed by a proximal hydrorhiza, and possess short tentacles on the margin of the umbrella. (*Nicholson.*) [PELAGIDÆ.]

lū-çĕr-năr′-ĭ-da, *s. pl.* [Mod. Lat. *lucernār(ia);* Lat. neut. pl. adj. suff. *-ida.*]

Zool.: A sub-class or legion of Hydrozoa, defined by Greeue as having the base of the hydrosoma developed into an umbrella, in the walls of which the reproductive organs are produced. It is divided into three orders: Lucernariadæ, Pelagidæ, and Rhizostomidæ.

lū-çĕr′-na-rōid, *s.* [Eng., &c. *lucernar(ia),* and Gr. εἶδος (*eidos*) = form, resemblance.]

Zool.: A reproductive zoöid of any of the Lucernarida.

"The hydra-tuba thus constitutes the fixed *lucernaroid* or trophosome of one of the Rhizostomatæ."—*Nicholson: Zool.* (ed. 1878), p. 133.

lū-çĕrne′, *s.* [Fr. *luzerne,* from Languedoc patois, *lauserda.* Littré considers that the French word came from the English, and says that the remote origin is unknown.]

Bot.: Medicago sativa. It is a deep-rooting clover-like perennial plant, with spikes of blue or violet flowers. It is largely cultivated as a fodder plant in the countries bordering on the Mediterranean, and also in parts of the United States, and elsewhere in North and South America, where it has been introduced.

¶ Swiss Lucerne is *Medicago falcata.* It is a coarse plant cultivated on some poor soil in Switzerland.

Lū′-çĭ-an-ĭsts, *s. pl.* [For etym. see def.]

Church Hist.: A sect of Semi-Arians, claiming Lucian, a disciple of Marcion, as their founder. (*Shipley.*)

lū′-çĭd, *a.* [Lat. *lucidus,* from *luceo* = to shine, *lux* (genit. *lucis*) = light; Fr. *lucide;* Ital. & Sp. *lucido.*]

I. *Lit.:* Bright, shining, resplendent, radiant.

"A worm . . .
That shows by night a *lucid* beam."
Couper: Glow-worm.

II. *Figuratively:*

1. Clear, pellucid, transparent.

"Fair Damascus, on the fertile banks
Of Abbana and Pharphar, *lucid* streams."
Milton: P. L., i. 469.

2. Bright with the radiance of intellect; clear; not darkened or confused by madness or delirium.

3. Plain, clear, easily understood, distinct.

"Our prose became more *lucid,* more easy, and better fitted for controversy and narrative."—*Macaulay: Bist. Eng.,* ch. iii.

lucid interval, *s.*

Med. Juris.: A lucid interval is not a mere cessation of the violent symptoms of a disorder, but an interval in which the mind, having thrown off the disease, has recovered its general health. The party must be capable of forming a sound judgment of what he is doing, and his state of mind such that any indifferent persou would think him able to manage his own affairs. (*Collinson: On Lunacy,* p. 39).

¶ The expression *lucid interval* was formerly used less specifically than now, being employed of remissions or intermissions of sickness, &c.

"The Devil heaped afflictions on him [the patriarch Job], allowing him no *lucid intervals.*"—*Fuller: Pisgah Sight,* bk. iv., ch. vi.

lū-çĭd′-ĭ-tў, *s.* [Fr. *lucidité.*]

1. The quality or state of being lucid, bright, or shining; splendour, brightness. (*Lit. & fig.*)

"Fate gave, what chance shall not control,
His sad *lucidity* of soul."
Matthew Arnold: Resignation.

2. Clearness of style or arrangement; intelligibility, plainness.

lū′-çĭd-lў, *adv.* [Eng. *lucid; -ly.*] In a lucid manner; plainly, clearly, intelligibly.

"He argued the matter during two hours, and no doubt *lucidly* and forcibly."—*Macaulay: Hist. Eng.,* ch. xxiv.

lū′-çĭd-nĕss, *s.* [Eng. *lucid; -ness.*] The quality or state of being lucid; lucidity, intelligibility.

"The smoothness and *lucidness* of glass, &c."—*Mountague: Devoute Essayes,* pt. i., tr. 20, § 1.

lū′-çĭ-fĕr, *s.* [Lat., as adj. = light-bringing, as subst., *lucifer* = light-bringer, from *lux* (genit. *lucis*) = light, and *fero,* to bring.]

I. *Ordinary Language:*

1. In the same sense as **II. 1, 2.**

2. A lucifer match (q.v.).

II. *Technically:*

1. *Astron.:* An ancient name for Venus, when the Morning Star, as distinguished from Hesperus, when it is the evening one.

2. *Script.:* A name symbolically applied to Nebuchadnezzar.

"How art thou fallen from Heaven, O *Lucifer,* son of the morning."—*Isaiah* xiv. 12.

3. *Poet. & Hist.:* A name for Satan. It arose because Tertullian, Gregory the Great, and others, misinterpreted the passage in Isaiah of Satan. (Cf. Isa. xiv. 12 with Luke x. 18; Rev. xii. 9, xx. 2.)

"When he falls, he falls like *Lucifer,*
Never to hope again."
Shakesp.: Henry VIII., iii. 2.

¶ Some of the reckless soldiers who followed Claverhouse assumed the name.

"The atrocities committed by the Lambs of Kirke, and by the Beelzebubs and *Lucifers* of Dundee."—*Macaulay: Hist. Eng.,* ch. xxiii.

4. *Ornith.:* A genus of Trochilidæ, established by Lesson.

lucifer-match, *s.* Originally a match tipped with a mixture of chlorate of potash and sulphuret of antimony, and inflamed by friction upon a piece of emery-paper. These were superseded by mixtures containing phosphorus.

Lucifer-match disease:

Path.: Necrosis of the jaws, arising from the inhalation of the fumes of phosphorus during the manufacture of lucifer matches. It has been especially described by Von Bibra and Geist, who had abundant opportunities of observing the disease at the large manufactories at Nuremberg.

"This *lucifer-match disease* was some years ago very frequent, but in consequence of the adoption of precautionary measures, is now much more rarely met with."—*Erichsen: Surgery* (ed. Beck), ii. 577.

Lū-çĭ-fĕr′-ĭ-an, *a. & s.* [Eng. *Lucifer; -ian.*]

A. *As adjective:*

1. *Ord. Lang.:* Of or pertaining to Lucifer.

2. *Church Hist.:* Pertaining or belonging to the Luciferians.

B. *As substantive:*

Church Hist. (*Pl.*): Followers of Lucifer, a bishop of Cagliari, in the fourth century, who refused to hold communion with the clergy who had couformed to the Arian doctrines, and whom a Syuod of Alexandria (A.D. 352), had resolved to re-admit into the Church, on their openly acknowledging their errors. The Luciferians are little heard of after the time of Theodosius the Great.

lū-cū'-lĭ-a, *s.* [Named after Luculi Swa of Nepal. (*Loudon.*)]

Bot.: A genus of Rubiaccæ. *Luculia gratissima* grows in the Himalayan Mountains. Gamble says that it is used in dyeing.

lū-cŭl'-līte, *s.* [Fr. *lucullite*. Named after Lucullus, a wealthy Roman Consul, noted for his luxury, who is said to have admired it; Ger. *lucullan*.]

Petrol. & Comm.: A variety of limestone cut and polished for ornamental purposes.

lū'-cu-ma, *s.* [The name of one species in Peru.]

Bot.: A genus of Sapotaceæ. It consists of about thirty or forty species of milky trees, with leathery leaves, and large, roundish, pulpy fruits, and clustered flowers, growing in the warmer parts of America. *Lucuma mammosum* is the Marmalade or Natural Marmalade of the West Indies. *L. Caimito*, of Peru, has smaller fruit, but is of better flavour.

Lū'-cu-mō (pl. **Lū'-cu-mōes, Lū-cu-mōn'-ēs**), *s.* [Lat., from Etrus. *lauchme* = one inspired.]

Class. Antiq.: An appellation of the Etruscan princes and priests, corresponding to the Roman *patricius* = of the rank of the Conscript Fathers; hence, noble. The Romans mistook this title of dignity for a proper name, and bestowed it on the son of Demaratus of Corinth, afterwards Tarquinius Priscus, King of Rome.

"What noble *Lucumo* comes next,
To taste our Roman cheer?"
Macaulay: Horatius, xlv.

* **lū'-çȳ,** *s.* [LUCE.]

† **Lŭd'-dĭzm,** *s.* [LUDDITES.] The views and procedure of the Luddites.

Lŭd'-dīte, *a.* & *s.* [According to Miss Martineau, from the name of an imbecile, Ned Lud, who, being tormented by boys, chased some of them into a house, and there broke some stocking-frames. This was thirty years before the Luddite commotions. The Luddites called their mythical leader General or Captain Ludd, reviving the name of the imbecile.]

A. *As adj.:* Pertaining to or characteristic of the Luddites. [B.]

B. *As substantive:*

Hist. (*Pl.*): A band of operatives who broke out in a riot at Nottingham on Nov. 10, 1811, with the object of destroying some improved machinery for stocking-weaving. They extended their operations to Derby and Leicester, everywhere destroying stocking-frames. On July 24, 1812, Parliament granted additional powers for dealing with them. The militia were called out. Fourteen of the leaders were executed at York in 1813. The Luddites rose again in 1814 and 1816, and more of them were executed at Derby in 1817.

* **lū-dĭb'-rĭ-ŏŭs,** *a.* [Lat. *ludibriosus*, from *ludibrium* = mockery, derision, from *ludus* = game, sport.] Ridiculous, laughable, sportive, wanton. (*Bramhall: Consec. of Bishops*, ch. iii., p. 75.)

"The *ludicrousness* and fugitiveness of our wanton reason."—*H. More: Antidote against Idolatry*, ch. i.

* **lū-dĭ-fĭ-cā'-tion,** *s.* [Lat. *ludificatio*, from *ludificatus*, pa. par. of *ludificor* = to make sport of; *ludus* = game, sport, and *facio* = to make.] The act of mocking, deriding, or making sport of any person or thing.

"This *ludification* and injurious dealing."—*Baker: King John* (an. 1214).

***lū-dĭ-fĭ-cā'-tŏr-ў,** *a.* [Lat. *ludificatorius*, from *ludificatus*, pa. par. of *ludificor* = to make sport; Fr. *ludificatoire.*] Making sport; exciting ridicule or derision.

"There is nothing empty (or vain), nothing *ludificatory.*"—*Barrow: Sermons*, vol. iii., ser. 39.

lŭd-lam-īte, *s.* [Named by Field after H. Ludlam, of London; suff. *-ite* (*Min.*).]

Min.: A monoclinic mineral found only in crystals. Hardness, 3–4; sp. gr. 3·12; lustre, brilliant; colour, bright green; streak, greenish-white, transparent. The mean of several analyses gave phosphoric acid, 30·11; protoxide of iron, 52·76; water, 16·98, which corresponds to the formula $Fe_7P_4O_{17}$, $9H_2O$. Occurs with chalybite, vivianite, pyrites, and pyrrholite at Wheal Jane, Truro, Cornwall.

Lŭd'-lōw, *s.* [See def.]

Geog.: A corporate town and parliamentary borough in Shropshire, 138 miles N.W. by W. from London.

Ludlow-formation, *s.*

Geol.: The highest part of the Upper Silurian rocks, consisting of (*a*) Upper Ludlow and (*b*) Lower Ludlow beds (q.v.). The Ludlow formation is found near Ludlow, England, and at other places in Shropshire and Herefordshire. Of the fossils, only five per cent. pass into the overlying Devonian.

¶ (1) *Upper Ludlow:* These beds are 780 feet thick. At the top and ranking with them is the Downton sandstone, found at Downton Castle, near Ludlow, where it is quarried for building purposes, and at Kington in Herefordshire. It was called by Sir Roderick Murchison Tilestones, and referred to the Old Red Sandstone, but the fossils are Upper Silurian. Among them are the fiue crustaceans, Pterygotus and Eurypterus. The next bed in the descending order is the bone-bed. Near Ludlow it is three or four inches thick; at other places it varies from au inch to a foot; the bones are those of fish. Beneath the bone-bed are Gray Sandstones and Mudstones. Most of the two-valved molluscs are brachiopods, though lamellibranchiata also occur. Some of the sandstones are ripple-marked.

(2) *Lower Ludlow:* Thickness, 1,050 feet. It consists chiefly of a dark gray argillaceous shale, with calcareous concretions sometimes, as at Aymestry, tipped by a crystalline and argillaceous limestone abounding in remains of *Pentamerus Knightii.* Other genera are Lingula, Rhynconella, brachiopods, and Lituites, a cephalopod. Up till 1859 no fish remains had been found lower than the bone-bed of the Upper Ludlow rocks; but in that year they were found iu a Lower Ludlow bed. No vertebrates have been found in auy older rocks. (*Murchison: Siluria; Lyell: Student's Manual.*)

Ludlow-rocks, *s. pl.*

Geol.: The same as LUDLOW-FORMATION (q.v.).

lū'-dŭs Hĕl-mŏn'-tĭ-ī (t as sh), lū'-dŭs Păr-ą-çĕl'-sī, *s.* [For etym. see def.]

Med. & Phar.: A calcareous stone, the precise nature of which is not known, used by the ancients in calculous affections. The term was also applied to every species of calculous concretion occurring in the human body. (*Dunglison.*) Paracelsus gave the name *ludus* to a kind of cubical pyrites, from their resemblance in shape to a die, and held them in high esteem as a remedy in calculous affections. Hence the Latin name. Van Helmont was of the same opinion, though he was mistaken as to what really was the *ludus* of Paracelsus.

lū'-dŭs Păr-ą-çĕl'-sī, *s.* [LUDUS HELMONTII.]

lŭd-wĭg'-ī-ą, *s.* [Named after C. G. Ludwig, professor of botany at Leipsic.]

Bot.: A genus of Onagraceæ, tribe Jussiæeæ. *Ludwigia palustris* is a procumbent or floating perennial with four angled stems, two, four or no petals, four stamens. Found in boggy pools in Hants, Sussex, and Jersey. Better known as *Isnardia palustris.*

lŭd'-wĭg-īte, *s.* [Named by Tschermak after E. Ludwig; suff. *-ite* (*Min.*).]

Min.: A mineral occurring in finely fibrous masses, with a silky lustre. Hardness, 5; sp. gr. 3·907–4·016; colour, blackish-green, and almost black with a violet tinge; tough; streak, somewhat lighter in colour than the mineral. Compos., a borate of magnesia, sesqui and protoxide of iron, the formula, deduced from the mean of several analyses, being $2MgOBO_3 + FeOFe_2O_3$. Found embedded in a crystalline limestone with magnetite (q.v.) at Morawicza, Hungary.

lūen'-bŭrg-īte, *s.* [Named after Luenburg, where found; suff. *-ite* (*Min.*).]

Min.: A salt, having the composition phosphoric acid, 29·8; boracic acid, 12·7; magnesia, 25·3; water, 32·2. Möllner, who analysed it, gave the formula as $(2MgOHO)PO_5 + MgOBO_3 + 7HO$.

lū'-ēş, *s.* [Lat.] A plague, a pestilence, a poison.

lues venerea, *s.* The venereal disease; syphilis.

lŭff (1), *** loof** (1), *** loofe, * love, * luve,** *s.* [Goth. *lôfa.*] The palm of the hand.

"In the holl *luffis* of his hand, quhare he stude
Dewly the wattir hynt he fra the flude."
Douglas: Virgil; Æneid viii. 242.

lŭff (2), *** loof** (2), *s.* [Dut. *loef* = a weather-gage; O. Dut. *loef* = a thole-pin; Dan. *luv* = weather-gage; *luve* = to luff; Sw. *lof* = weather-gage.]

Nautical:

* 1. The air, the wind.

2. The weather-gauge, or part of a ship toward the wind.

3. The sailing of a ship close to the wind.

4. The weather part of a fore-and-aft sail, on the side next the mast or stay to which it is attached.

5. The loof; the fullest and broadest part of a ship's bow.

6. A luff-tackle (q.v.).

¶ (1) *Luff upon luff:*

Naut.: One luff-tackle applied to the fall of another.

(2) *To spring her luff:*

Naut.: To luff up; to yield to the helm by sailing near the wind.

"The Portsmouth standing out ahead of the bigger man-of-war, after the other of eight guns, he immediately *sprung his luffe*, whereupon the Antelope likewise *sprung his luffe* after him."—*London Gazette* (1672), No. 717.

luff-tackle, *s.*

Naut.: A purchase composed of a double and a single block. The standing end of the rope is fast to the single block and the fall comes from the double.

lŭff, * loof, *v.i.* [LUFF, *s.*]

Naut.: To bring the head of a vessel nearer to the wind; to sail nearer the wind; to put the tiller on the lee side, so as to make the vessel sail near the wind.

"Suddenly the wind began to rise
Aud then we *lufted* aud tacked."
Marlowe: Jew of Malta, ii. 2.

lŭf-fą, *s.* [Arab. *louff* = *Luffa ægyptiaca.*]

Bot.: A genus of Cucurbitaceæ, tribe Cucurbiteæ. They are yellow-flowered plants; the males panicled with a hemispherical calyx, with the segments longer than the tube; females solitary, with the segments shorter than the tube; fruit, an ovate, fibrous, three-celled gourd. *Luffa acutangula* is used as a pot-herb by the natives of India; *L. amara* and *L. Bindaal* of India are strongly purgative, as are *L. purgans* and *L. drastica* of Brazil. *L. ægyptiaca* has an offensive odour, but is cultivated in Egypt, Arabia, India, and China, the fruit being eaten by natives in curry. The seeds are used in India as a cooling medicine. It furnishes an oil, as does *L. acutangula.* The pounded leaves of the last-named species are used in India locally in splenitis, hæmorrhoids, and leprosy. The seeds are purgative and emetic.

lŭf'-fĕr, *s.* [LOUVRE.]

lŭg, * **lugge,** *v.t.* & *i.* [Sw. *lugga* = to pull by the hair, from *lugg* = the forelock; *lock* = a lock of hair; Norw. *lugga* = to pull by the hair; *lugg* = the hair; cf. Prov. Eng. *louk* = to pull up weeds; Icel. *lok* = a weed; A.S. *lyccan* = to pull; Dan. *luge* = to weed.]

A. *Transitive:*

Lûke, *s.* [Gr. Λουκᾶς (*Loukas*). Not connected with the name Lucius (Acts xiii. 1; Rom. xvi. 21), but contracted from Lat. Lucanus, as Silas is from Silvanus, or Apollos from Apollonius. Possibly from Lucania, in the south of Italy.]

Scrip. Biog.: A New Testament evangelist, whose name was not a common one, but in its uncontracted form [see etym.] was immortalized by Lucan, author of the celebrated Roman poem, *Pharsalia.* It has been supposed that the poet, who was born at Cordova, in Spain, may have been connected with St. Luke, who is mentioned three times in the New Testament. In Col. iv. 14, he is called "Luke tbe beloved physician." In Philemon he is called Lucas, and described as one of St. Paul's fellow-labourers, and when "Paul was ready to be offered" (2 Tim. iv. 6), he adds, "Only Lukc is with me." Identifying him with the writer of the Acts of the Apostles, his use of the pronoun "we," commencing with xvi. 10, shows that he joined Paul at Troas and accompanied him to Philippi (11–17). The resumption of the pronouns "he" and "they" (xvi. 19, xvii. 1, 17, &c.) shows that he remained at Philippi till the return of the Apostle thither (xx. 6). He accompanied him on his subsequent missionary journeys (xx. 13–15, xxi. 1, &c.), was with him in his shipwreck (xxvii. 3, 27, xxviii. 2, 10), and his subsequent voyage to Rome (13–16). There is no trustworthy information as to the remainder of St. Lukc's life.

¶ *The Gospel according to St. Luke:*

New Testament Canon: Thc third gospel. The writer had his information from those who "from the beginning were eyewitnesses and ministers of the word" (Luke i. 2), implying that he was not himself an eyewitness of the events that he records. It has been suggested that he may have got many details, as, *e.g.*, of the birth of Jesus, from the "certain women" (Luke viii. 2, 3). When speaking of diseases, there is a technical accuracy, greater than that exhibited by the other evangelists, and in describing the failure of the physicians in the case of the woman with the issue of blood, he uses mild language (viii. 43), forcibly contrasting with that of St. Mark, writtcu probably on information given by St. Peter (Mark v. 26). Universal tradition considers that the gospel was penned under diviue inspiration by St. Luke, "the beloved physician."

There exists, or, rather, is recoverable from the writings of Justin Martyr, Irenæus, Tertullian, and Epiphanius, a gospel issued by the celebrated Gnostic, Marcion, so related to that of St. Luke, that Marcion's gospel must have been an abridgement of St. Luke's, or Luke's an expansion of Marcion's. They cannot have been independent shoots from the root of evangelical tradition, for of fifty-three sections pcculiar to St. Luke, from iv. 16 onwards, all but eight are found in Marcion's Gospel, and in the same order. The foregoing fathers charged Marcion with mutilating, for dogmatic ends, St. Luke's Gospel and the Epistles to the Galatians and Ephesians. This view has been generally accepted. But Ritschl, Baur, Schwleger, and the author of *Supernatural Religion*, held Marcion's to be the original document. Volkmar and Hilgenfeld, though rationalistic writers, reconverted Ritschl, and partially Baur, to the traditionary view. More recently, Mr. Sanday has minutely compared the language of the parts of St. Luke's Gospel common to him and Marcion with those which Marcion has not, and has found that in the 309 verses not in Marcion there are 111 distinct peculiarities of St. Luke's style, numbering in all 185 separate instances and 138 words, with 224 instances peculiar to, or specially characteristic of, the third evangelist. The inference to be drawn from such evidence is irresistible—St. Luke's was the original work and Marcion's the abridgement.

Marcion is believed to have begun to teach in Rome about A.D. 139 to 142 (Sanday), or 138 (Volkmar), or 130 (Tischendorf). "At that time St. Luke's Gospel had been so long published that various readiugs of it had alrcady arisen." (*Fortnightly Review*, xvii. (1875), pp. 885 to 875).

The incidents recorded are not in chronological order. There is a marked superiority to Jewish caste-prejudice or to ceremonial bondage. It is the gospel that tells of the Prodigal Son (xv. 11–32), the Good Samaritan (x. 30–37), the Pharisee and the Publican (xviii. 10–14). The third gospel is exactly such a work as, under Divine inspiration, might be supposed to emanate from the compauion of St. Paul.

Lŭl'-lĭst, *s.* [LULLIAN.]

Hist. & Philos.: A follower of Lully, the author of an art of invention which depended on the placing in differeut circles of various concepts, some formal, others material, so that, when the circles were turned, every possible combination was easily produced by mechanical means, presenting a motley conglomerate of sense and nonsense. He blamed Thomas of Aquinas for holding the doctrines of the Trinity and the Incarnation to be indemonstrable; and said that with his own way of conducting proofs and convincing unbelievers, he found the demonstration of these dogmas not difficult. Lully's invention probably gave rise to Swift's picture of the Laputan professor "employed in a project for improving speculative knowledge by practical mechanical operations." (*Gulliver's Travels*, pt. iii., ch. v.; cf. *Rabelais*, bk. v., ch. xxiii.)

"Lullus . . . found for his fanciful theory of the combination of concepts, with a view to the conversion of the unbelieving and the reformation of the sciences, and great number of partisans (*Lullistæ*)."—*Ueberweg: Hist. Philos.*, i. 457.

Ichthy: Cyclopterus lumpus. [CYCLOPTERUS.]

* **lŭmp'-ĭng,** *a.* [Eng. *lump*; *-ing.*] Large, heavy, bulky.

* **lŭmp'-ĭsh,** * **lomp-ish,** *a.* [Eng. *lump*; *-ish.*]

1. Like a lump; heavy, bulky.

"Little terrestrial particles swimming in it after the grossest were sunk down, which by their heaviness and *lumpish* figure, made their way more speedily."—*Burnet: Theory of the Earth.*

2. Slow, lazy.

"The oxe with *lumpish* pace."
Turberville: That all Things have Release, &c.

3. Dull, spiritless, stupid.

"The punch goes round, and they are dull
And *lumpish* still as ever."
Cowper: Yearly Distress.

* **lŭmp'-ĭsh-lў,** *adv.* [Eng. *lumpish*; *-ly.*] In a lumpish manner: heavily, dully.

* **lŭmp'-ĭsh-nĕss,** * **lump-ish-nesse,** *s.* [Eng. *lumpish*; *-ness.*] The quality or state of being lumpish; heaviness, dulness, stupidity.

"I dwell in a kind of disconsolate darkness, and a sad *lumpishnesse* of unbeliefe."—*Sp. Hall: The Comforter.*

lŭmp'-sŭck-ĕr, *s.* [Eng. *lump*, and *sucker.*]

Ichthy.: The lumpfish (q.v.).

lŭmp'-ў, *a.* [Eng. *lump*; *-y.*] Full of lumps or small compact masses.

"One of the best spades to dig hard *lumpy* clays, but too small for light garden mould."—*Mortimer: Husbandry.*

lû'-na, *s.* [Lat.]

1. *Ord. Lang.:* The moon. (Usually in poetry.)

* 2. *Chem.:* Silver.

luna cornea, *s.*

Chem.: AgCl. Chloride of Silver.

lû'-na-çў, *s. & a.* [Lat. *luna(ticus)* = lunatic (q.v.); Eng. suff. *-cy.*]

A. *As substantive:*

Mental Pathol. & Law: Unsoundness of mind. A distinction exists in nature between a person who, born sane, has from some cause or other fallen into temporary or permanent aberration of intellect, and one born idiotic, and with a brain of so limited a circumference that he is never capable of exercising proper reason. In strictness, only the former is a lunatic. The distinction is not now legally regarded as much as formerly.

B. *As adj.:* Of or pertaining to lunacy or lunatics.

"He warned them against allowing their verdict to be in any way influenced by a dislike of the *lunacy* law."—*Daily Telegraph*, Dec. 1, 1884.

¶ *Commission of lunacy:* [COMMISSION, *s.*].

Commissioner in lunacy: A public official appointed to visit and examine lunatic asylums, public or private, periodically, and to grant licences to persons qualified to open houses for the reception of the insane.

lunacy-law, *s.*

Eng. Law: Certain laws, or the body of English law, affecting lunatics. The lunacy laws were consolidated and amended by 16 and 17 Vic., c. 70.

lû'-nar, *a. & s.* [Lat. *lunaris*, from *luna* (for *lucna*) = the moon; *luceo* = to shine; *lux* (genit. *lucis*) = light; Fr. *lunaire*; Sp. & Port. *lunar*; Ital. *lunare.*]

A. *As adjective:*

1. Of or pertaining to the moon: as, *lunar* observations.

"There full the *lunar* beam resplendent play'd."
Hoole: Jerusalem Delivered, viii.

2. Measured or regulated by the moon: as, *lunar* years.

3. Resembling the moon; round.

* 4. Under the influence of the moon.

"They have denominated some herbs solar and some *lunar*, and such like toys put into great words."—*Bacon: Nat. Hist.*

B. *As substantive:*

Naut.: The same as LUNAR-DISTANCE (q.v.).

lunar-bone, *s.*

Anat.: Os lunare, os *semilunare.* The second bone in the upper row of the human carpus.

lunar-caustic, *s.*

Chem.: $AgNO_3$. Nitrate of silver fused at a low heat. The common form in which this salt is used in surgery.

lunar-cycle, *s.*

Astron.: [CYCLE, *s.*, ¶ (1)].

lunar-distance, *s.*

Naut. Astron.: The distance of the moon from the sun or from a fixed star or planet lying nearly in the line of its path, by means of which the longitude of a ship at sea is determined.

lunar hornet-moth, *s.*

Entom.: A hawk-moth, *Sphecia bembeciformis*, with the head and thorax dark, the latter with a yellow collar. It is British.

lunar-method, *s.*

Naut. Astron.: One method of determining the longitude of a ship at sea by observation of the lunar distances.

lunar-month, *s.* [MONTH.]

lunar-observations, *s. pl.* Observations of the distance of the moon from the sun or a star for the purpose of determining the longitude.

lunar-tables, *s. pl.*

1. *Astron.:* Tables of the moon's motion, &c., arranged for computing her true place at any given period, past or future. They are used in the calculation of eclipses.

2. *Navig.:* Logarithmic tables for correcting the apparent distance of the moon from the sun, or from a fixed star on account of refraction and parallax.

lunar-theory, *s.*

Astron.: The deduction of the moon's motion from the law of gravitation.

lunar-underwing, *s.*

Entom.: Anchocelis lunosa, one of the Orthosidæ. It is of brown, black, and white, and expands its wings about an inch and a quarter. The larvæ feed on grass.

lunar-year, *s.* [YEAR.]

lû-nār'-ĭ-a, *s.* [From Lat. *luna* = the moon, so called from the broad, round, silvery silicules.]

Bot.: Honesty; a genus of Cruciferæ, family Alyssidæ. It consists of large hairy plants, with alternate or opposite cordate leaves, and large lilac flowers. They are from Southern and Central Europe. *Lunaria biennis* is the garden plant called Honesty.

* **lû-nār'-ĭ-an,** *s.* [Lat. *lunaris* = pertaining to the moon.] An inhabitant of the moon.

lû'-na-rў, * **lu-na-rie,** *a. & s.* [Fr. *lunaire*, from Lat. *lunaris* = lunar (q.v.).]

A. *As adj.:* The same as LUNAR (q.v.).

"The Greeks observed the *lunary* year, that is, twelve revolutions of the moon, 354 days."—*Browne: Vulgar Errours*, bk. iv., ch. xii.

B. *As subst.:* A plant, moonwort (q.v.).

"By the vervaine and *lunary*
Draw near." *Fulmus Troes*, ll. 4.

* **lû-nāte,** * **lû'-nāt-ĕd,** *a.* [Lat. *lunatus* = crescent-shaped; *luna* = the moon; Ital. *lunato*; Sp. *lunado.*] Formed or shaped like a half-moon; crescent-shaped.

"A sort of cross, which our heralds do not dream of: which is a cross *lunated* after this manner."—*Brown: Travels* (1685), p. 54.

lunated broad-bill, *s.*

Ornith.: Serilophus lunatus. [EURYLAIMÆ.]

lû'-na-tĭc, * **lû'-na-tĭk,** * **lû'-na-tĭck,** * **lûn-a-tyke,** *a. & s.* [Fr. *lunatique*, from Lat. *lunaticus* = affected by the moon, which was supposed to cause insanity, insane, from *lunatus* = moon-like; *luna* = the moon; Sp., Port., & Ital. *lunatico.*]

A. *As adjective:*

1. Affected with lunacy; mad, insane.

"Dispute not with her, she is *lunatic.*"
Shakesp.: Richard III., i. 3.

† 2. Exhibiting or characterized by madness or insanity.

"Bedlam beggars, who, with roaring voices . . .
Sometimes with *lunatic* bans, sometimes with prayers,
Enforce their charity." *Shakesp.: Lear*, ii. 3.

3. Intended for the reception of lunatics: as, a *lunatic* asylum.

B. *As subst.:* An insane person; one who is affected with lunacy.

"The unhappy prisoner was a *lunatic*, within my own definition of lunacy."—*Erskine: Speech for James Hadfield.*

lunatic-asylum, *s.* An institution or hospital for the reception and treatment of lunatics. There are state and county asylums supported by taxes, asylums with endowments, and asylums kept for private profit. All are now visited and inspected by, and are subject to the control of public officers appointed for the purpose. Formerly lunatics were treated with great severity in asylums; now as much liberty is accorded them as is consistent with the safety of themselves and others, and the results have been most beneficial. The non-restraint system was introduced by Pinel when in charge of the Bicêtre at Paris, in 1792, and his plan was adopted by W. Tuke, in 1813, at the Friends' Retreat in York, England. It has been widely adopted in the United States, and is the only system employed in Britain, its results having proved highly beneficial. Before any lunatic can be taken to an asylum, in this country or England, medical certificates and a magistrate's order must be obtained, the former abuses in this respect being no longer permitted.

¶ About one person in 600 in Britain is either a lunatic or affected by insanity. A lunatic may inherit property whether real or personal, or can obtain it by a decree or a bequest; but he cannot act as an executor or make a will of his own. He is not criminally responsible for his actions, nor is he quite free as to contracts, though, like an infant, he can be made to pay for necessaries. By 15 and 16 Geo. II., c. 30, passed in 1742, the marriage of a lunatic was declared to be illegal.

lû-nā'-tion, *s.* [Low Lat. *lunatio*, from Lat. *lunatus* = moon-like; *luna* = the moon.]

Astron.: A revolution of the moon; the time from one new moon to another.

"If the *lunations* be observed for a cycle of nineteen years, which is the cycle of the moon, the same observations will be verified for succeeding cycles forever."—*Holder: On Time.*

lŭnch, *s.* [A variant of *lump*; cf. *bunch* and *bump*, *hunch* and *hump.*]

1. A lump, a slice, a large piece, as of bread. (*Prov.*)

"An' cheese, an' bread, frae women's laps,
Was dealt about in *lunches*."
Burns: Holy Fair.

2. A luncheon (q.v.).

lunch-counter, *s.* A restaurant counter at which people sit or stand while taking a lunch. (*U. S.*)

lŭnch, *v.i.* [LUNCH, *s.*] To take a lunch or luncheon.

lŭnch'-eŏn, * **lunch-ion,** * **lunch-in,** * **lunsh-in,** *s.* [For *lunching*, from *lunch*, *s.* (q.v.).]

* 1. A lump, a big piece, as of bread or other edible.

2. A slight meal between breakfast and dinner.

luncheon-bar, *s.* A bar or counter in an inn or eating-house where meals can be taken.

lŭnch'-eŏn, *v.i.* [LUNCHEON, *s.*] To take lunch or luncheon.

lŭn'-drĕss, *s.* [From London (?), the city.]

Coinage: A sterling silver penny formerly coined in London. (*Lownd: Essay on Coins.*)

lûne (1), *s.* [Lat. *luna* = the moon.]

* I. *Ordinary Language:*

1. *Lit.:* Anything in the shape of a half-moon or crescent.

"A troop of Janizaries strewed the field,
Fallen in just ranks or wedges, *lunes* or squares,
Firm as they stood." *Watts: Lyric Poems,* 11.

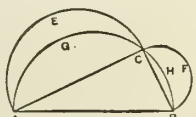
2. *Fig.:* A fit of lunacy or frenzy; a mad freak, a crotchet.

"Why, woman, your husband is in his old *lunes* again."—*Shakesp.: Merry Wives of Windsor,* iv. 2.

II. *Geom.:* The area included between the arcs of two circles which intersect each other.

¶ *Lunes of Hippocrates:*

Math.: The name given to the two semicircular figures AECGA and CFBHC, remarkable for their employment by Hippocrates in his celebrated theorem. ACB is a right-angled triangle, right-angled at C; AGHB, AEC, and CFB are semicircles, with the diameters AB, AC, and CB respectively. By Euclid vi. 31, AEC + CFB = AGHB. By taking away the common areas AGC and CHB, it is clear that lune AECGA + lune CFBHC = triangle ACB. This was the first time that a curvilinear area was proved equal to a rectilinear one.



***lûne** (2), *s.* [Perhaps a corrupt. of *line* (q.v.).] A leash: as, the *lune* of a hawk.

***lû-nĕt',** *s.* [LUNETTE.] A little moon; a small half-moon.

"Our predecessors could never have believed that there were such *lunets* about some of the planets, as our late perspectives have descryed."—*Bp. Hall: Peace-Makers,* § 10.

lû-nĕtte', *s.* [Fr., dimin. of *lune;* Lat. *luna* = the moon; Ital. *lunetta.*] A term applied to various objects of a half-moon shape: as—

1. *Archæol.:* A crescent-shaped penannular concave plate of metal, apparently worn as an ornament about the neck.

2. *Architecture:*

(1) An arched aperture in the side of a long vault, and having a less height than the pitch.

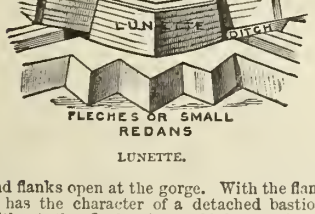
(2) A semicircular aperture in a concave ceiling.

(3) An opening in the roof of a house.

3. *Farriery:* A horseshoe having only the front, curved portion, lacking the branches.

4. *Glassmaking:* The flue connecting the fire-chamber with the pot-chamber of a glass-furnace.

5. *Fort.:* A half-moon; a detached work presenting a salient angle towards the enemy,



FLECHES OR SMALL REDANS

LUNETTE.

and flanks open at the gorge. With the flanks it has the character of a detached bastion; without the flanks, it would be a redan or fleche; with the gorge closed, it would become a redoubt.

6. *Harness:* A blinder for the eyes of an intractable horse.

7. *Optics:*

(1) A perifocal spectacle-glass; concavo-convex, its curve approximating the shape of the eye and affording more distinct oblique vision.

(2) A flattened watch-crystal or glass, to avoid adding to the thickness of the watch.

8. *Ordn.:* A forked iron plate into which the stock of a field-gun carriage is inserted.

lŭng, *longe, *lunge, *s.* [A.S. *lunge;* cogn. with Dut. *long* = lungs, lights; Icel. *lunga* (pl. *lungu*); Dan. *lungre* (pl. *lunger*); Sw. *lunga;* Ger. *lunge* = lungs.]

I. *Ordinary Language:*

1. In the same sense as II.

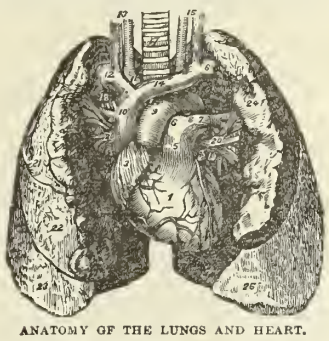
2. (*Pl.*): A person having a strong voice.

*3. (*Pl.*): A servant who blew the fire for an alchemist.

"That is his fire-drake,
His *lungs,* his zephyrus, he that puffs his coals."
Ben Jonson: Alchemist, ii.

II. *Anatomy* (*Pl.*):

1. *Human:* The organs of respiration, on each side of the chest, conical, and separated from each other by the heart in front and a membranous partition, the Mediastinum. Externally they are convex, to correspond with the chest walls, and internally concave to receive the heart; above they terminate in a tapering cone and below in a broad concavity resting on the diaphragm. In colour they are mottled, pinkish-gray, speckled with black. Each is divided into two lobes,



ANATOMY OF THE LUNGS AND HEART.

1. The right ventricle; the vessels to the left of the number are the middle coronary artery and veins, and those to its right the anterior coronary artery and veins. 2. The left ventricle. 3. The right auricle. 4. The left auricle. 5. The pulmonary artery. 6. The right pulmonary artery. 7. The left pulmonary artery. 8. The remains of the ductus arteriosus. 9. The arch of the aorta. 10. The superior vena cava. 11. The arteria innominata, and in front of it the right vena innominata. 12. The right subclavian vein, and, behind it, its corresponding artery. 13. The right common carotid artery and vein. 14. The left vena innominata. 15. The left carotid artery and vein. 16. The left subclavian vein and artery. 17. The trachea. 18. The right bronchus. 19. The left bronchus. 20, 20. The pulmonary veins; 18, 20, form the root of the right lung, and 7, 19, 20, the root of the left. 21. The superior lobe of the right lung. 22. Its middle lobe. 23. Its inferior lobe. 24. The superior lobe of the left lung. 25. Its inferior lobe.

separated by a deep fissure, and the right lung has a third lobe above of triangular shape; the right is also larger on account of the heart lying towards the left side. The lungs are kept in position by their roots, composed of the bronchi, pulmonary artery, and pulmonary veins; the right side presents the bronchus above, then the artery, then the veins; but on the left side we find the bronchus between the artery and the veins. Each lung is enclosed in a serous membrane, the pleura, which extends to its root, and is then expanded on the chest wall. The lungs are composed of minute ramifications of the bronchial tubes, terminating in intercellular passages and quadrilateral or hexagonal air-cells, along with ramifications of the pulmonary artery and veins, bronchial arteries and veins, lymphatics and nerves, the whole bound together by arcolo-fibrous tissue constituting the parenchyma of the lungs. [PHYSIOLOGY, RESPIRATION.]

2. *Compar. Anat.:* In the lowest and simplest forms of animal life (aquatic), we find no trace of respiratory organs, the interchange between the layer of water with the aerating surface being effected by the general movement of the body, or by cilia (q.v.). In most of the Mollusca we find gills in the place of lungs, except in the terrestrial species, as the snail or slug, where we have a lung which is a simple cavity in the back communicating directly with the air, and covered with minute blood-vessels; in bivalve molluscs again, as in the oyster, it is the internal surface of the mantle or skin-lining which is the special organ, with the same essential structure as gills. In the Articulata, as tapeworm, marine worms, Crustacea, as the crab tribe, we find a somewhat similar arrangement to that of the Mollusca, but in insects, and other proper air-breathing Articulata, we have a regular series of air-sacs along each side of the body, opening by pores, called spiracles or stigmata, so in the spider-tribe, but in a more concentrated form, and more resembling the lung of the Vertebrata. The gills of fishes come next in the scale, accompanied in many cases with an air-bladder, especially in those approaching the Reptilia in their organization, and in some of these it is a double sac, the analogue of the double lung. The lungs of the Reptiles are, for the most part, capacious sacs occupying a good deal of the trunk cavity, but not filled, like those of the Mammalia, by an act of inspiration, but chiefly by the process of swallowing. In Birds we have the connecting link between the types of structure in the two classes.

3. *Pathol.:* There are various diseases of the lungs: two of the most important are tubercular phthisis and pneumonia.

¶ (1) *Lungs of London:* The parks. Brewer considers that the first use of the term was by Windham, in a parliamentary debate on Jan. 30, 1808, regarding encroachments on Hyde Park.

(2) *Lungs of the Oak:*

Bot.: [LUNGWORT].

lung-flower, *s.*

Bot.: Gentiana Pneumonanthe.

lung-grown, *a.*

Med.: Having the lungs adhering to the pleura.

"The lungs sometimes grow fast to the skin that lines the breast within; whence such as are detained with that accident are *lung-grown.*"—*Harvey: On Consumption.*

lung-worm, *s.*

Zool.: Strongylus micrurus, a nematoid, parasitic in calves, to which it is often fatal.

lŭnge, *s.* [A corrupt. of Fr. *allonge, alonge* = a lengthening, from *allonger* = to lengthen.] [LONGE.]

Fencing: A sudden thrust or pass with a sword.

lŭnge (1), *v.i.* [LUNGE, *s.*]

1. To make a sudden thrust or pass with a sword.

"I *lunged* out and gaffed one of them."—*Field,* June 24, 1882.

2. To reach or stretch out.

lŭnge (2), *v.t.* [Etym. doubtful.] To exercise a horse by causing him to run round in a ring while held by a rein.

"The coachman was *lunging* Georgy round the lawn."—*Thackeray: Vanity Fair,* ch. xlvi.

lŭnged, *a.* [Eng. *lung; -ed.*]

1. Having lungs.

* 2. Drawing in and expelling air like the lungs.

"The smith prepares his hammer for the stroke,
Which the *lunged* bellows hissing fire provoke."
Dryden: Juvenal, sat. x.

lŭng'-eoŭs, *a.* [O. Fr. *longis* = a lout, from *long* = long.] Awkward, rough, cruel, quarrelsome. (*Prov.*)

lŭng'-ĕr, *s.* [Eng. *lung(e); -er.*] One who lunges.

"To do him justice . . . a swifter *lunger* never crossed a sword."—*Lytton: Zanoni,* bk. ii., ch. i.

lungie, *s.* [Etym. doubtful; prob. O. Fr. *longis.*] [LUNGIS.] The guillemot (q.v.).

lŭn'-gĭs, *s.* [O. Fr. *longis.*] A dull, stupid, drowsy fellow; a lout. [LUNGEOUS.]

lŭng'-lĕss, *a.* [Eng. *lung; -less.*] Having no lungs; destitute of lungs.

"A body heartlesse, *lunglesse,* tongueles too."
Sylvester: Trophies, 760.

* **lŭng'-strŭck,** *a.* [Eng. *lung,* and *struck.*] Suffering from any affection of the lungs.

"Hints about its sanitary condition circulate freely through Aix-les-Bains and Matlock, where the *lung-struck* world passes July and August."—*Pall Mall Gazette,* Oct. 13, 1882.

lŭng'-wŏrt, *s.* [Eng. *lung,* and *wort.*]

1. *Sticta pulmonacea,* a lichen growing on the trunks of trees in moist, sub-alpine countries. It is sometimes prescribed in diseases of the lungs, like Iceland moss. In

Siberia it is used as a substitute for hops. Called also Lungs of the Oak.

2. The boraginaceous genus Pulmonaria. The Narrow-leaved Lungwort, is *Pulmonaria angustifolia*, and the Common Lungwort, *P. officinalis*; the former is wild, and the latter only naturalized in Britain.

3. *Hieracium pulmonarium.*

¶ Bullock's Lungwort is *Verbascum Thapsus*; Tree Lungwort [LUNGWORT (1)].

***lû'-nĭ-cŭr-rent,** *a.* [Lat. *luna* = the moon; and Eng. *current.*] Having relation to changes in currents; depending on the changes of the moon.

***lû'-nĭ-form,** *a.* [Lat. *luna* = the moon, and *forma* = form.] Resembling the moon in form.

***lû'-nĭ-sōl-ar,** *a.* [Lat. *luna* = the moon, and Eng. *solar* (q.v.); Fr. *lunisolaire.*] Compounded of the revolutions of the sun and moon; resulting from the united action of the sun and moon.

lunisolar-period, *s.* [LUNISOLAR-YEAR.]

lunisolar-precession, *s.*

Astron.: That part of the precession of the equinoxes which depends on the joint action of the sun and moon.

lunisolar-year, lunisolar-period, *s.*

Astron.: A period found by multiplying the cycle of the sun by that of the moon. It = 532 years. When it returns, the eclipses return again in the same order.

lû'-nĭ-stĭçe, *s.* [Lat. *luna* = the moon, and *sto* (pa. t. *steti*) = to stand.]

Astron.: The farthest point of the moon's northing and southing on her monthly revolution about the earth.

***lû'-nĭ-tīd-al,** *a.* [Lat. *luna* = the moon, and Eng. *tidal* (q.v.).] Relating to tidal motions dependent on the moon.

"Tables giving the mean *lunitidal* interval."—*New American Cyclopædia*, xv. 474.

lŭnn'-īte, *s.* [Named by Bernhardi after the Rev. F. Lunn; suff. *-ite* (*Min.*); Ger. *lunnit.*]

Min.: Until recently regarded as a synonym of phosphorochalcite (q.v.); but Schrauf uses this name for the group of minerals included by Dana under pseudomalachite (q.v.), and divides them thus: for the pseudo-monoclinic (triclinic), sp. gr. 4·4, and corresponding to $Cu_3P_2H_4O_{12}$, the name dihydrite; for the compound, $Cu_5P_2H_6O_{13}$, the name chlite; and for $Cu_6P_2H_6O_{14}$, that of phosphorocalcite. He regards the massive forms as mixtures of the three crystalline varieties.

lŭnt, *s.* [Dut. *lont*; Dan. & Ger. *lunte* = a match.] Flame; a match-cord for firing cannon; a column of flame and smoke.

lŭnt, *v.i.* [LUNT, *s.*] To flame, to burn, to emit smoke.

"Od, if they burn the custom-house it will catch here, and we'll *lunt* like a tar-barrel a'thegither."—*Scott: Guy Mannering*, ch. xlviii.

lû'-nu-la, *s.* [Lat., dimin. of *luna* = the moon.] Anything in the shape of a half-moon or crescent; specif., in anat., the small white semilunar mark at the base of the nails.

lû'-nu-lar, *a.* [LUNULA.] Formed or shaped like the new moon; crescent-shaped.

lû'-nu-late, lû'-nu-lāt-ĕd, *a.* [LUNULA.] Resembling a small crescent; crescent-shaped.

"At the base of cup-shaped or *lunulate* receptacles."—*Berkeley: Cryptogamic Botany*, § 476.

lû'-nule, *s.* [Fr., from Lat. *lunula*, dimin. of *luna* = the moon.] Anything shaped like a half-moon or crescent, as—

1. *Conchol.:* A crescent-shaped mark on some bivalve shells.

2. *Geom.:* A lune (q.v.).

lû'-nu-lĕt, *s.* [Dimin. of Eng. *lunc.*] [LUNULE.]

Entom.: A small semicircular spot in some insects, which differs from the colour of the other parts.

lû'-nu-līte, *s.* [LUNULITES.]

Zool.: A bryozoan of the genus Lunulites (q.v.).

lû'-nu-lī-tēş, *s.* [Lat. *lunula*, and suff. *-ites.*]

Palæont.: A genus of Bryozoa, genus Escharidæ. Morris enumerates several species, the genus ranging from the Upper Chalk to the Coralline Crag.

Lû'-pĕr-çal (pl. **Lû-pĕr-cāl'-ĭ-a**), *s.* & *a.* [Lat. *lupercalis*, from *lupercal* = a grotto on the Palatine, sacred to Lupercus or Pan.]

* 1. *Ord. Lang.:* The act of cleansing or purifying by water; purification.

"Hereby he establisheth the doctrine of *lustrations*, amulets, and charms."—*Browne: Vulgar Errours*, bk. xi., ch. i.

2. *Comp. Religions:* It is scarcely too much to say that lustration or symbolical purification is to be found in every known form of faith. Tylor (*Prim. Cult.*, ch. xviii.) says that the thought which underlies these ceremonies is the "transition from removal of bodily impurity to deliverance from invisible, spiritual, and at last moral evil." The ancient Romans had reached this point when Ovid (*Fast.* ii., 45, 46) uttered the scathing reproof:

"Ah! nimium faciles, qui tristia crimina cædis
Fluminea tolli posse putetis aqua!"

Lustration by sprinkling with water is the most common form, but it was also effected by fumigation, and by passing through fire; and Mahomet, failing water, commanded his followers to use fine sand (Chapter of the Table). Among the Jews ceremonial washings and purifications were prescribed for the consecration of priests (Lev. viii., 1–13); they appear to have been practised as a preparation for private prayer (Judith xii. 7–9); and the importance attached to ablutions before ordinary actions gave rise to some of the reproaches levelled by the Scribes and Pharisees against Jesus (Matt. xv., 2, 20: Mark vii., 1–5). From Judaism lustration passed into Christianity; all branches of the Church retain it in baptism, and the Roman and Greek communions in the additional form of holy-water (q.v.). It has given rise to some of the most beautiful imagery in the Old and in the New Testament (cf. Ezek. xxxvi. 25; Zech. xiii. 1; Matt. xxvii. 24: Rev. vii. 14), and thousands have used the prayer, "Wash me, and I shall be whiter than snow" (Ps. li. 7), without so much as a thought of the universality of a rite that seems to unite mankind in a bond of common brotherhood. (See *Smith: Dict. Greek & Rom. Ant.*, s. v. *Lustration*, and *Tylor: Prim. Cult.*, ch. xviii., where a copious bibliography will be found.)

lŭs'-tre (tre as **tẽr)** (1), **lŭs'-tẽr,** *s.* [Fr. *lustre*, from Low Lat. *lustrum* = a window, from Lat. *lustro* = to enlighten, to illumine; Ital. *lustro*; Sp. *lustre, lustro.*]

I. *Ordinary Language:*

1. *Literally:*

(1) Brightness, splendour, brilliancy, gloss.

"The unambiguous footsteps of the God,
Who gives its *lustre* to an insect's wing."
Cowper: Task, v. 813.

(2) A bright light, the reflection of a light.

"Like some tall castle given to flame,
O'er half the land the *lustre* came."
Scott: Lord of the Isles, v. 13.

2. *Fig.:* The splendour or brilliancy of fame, deeds, birth, &c.; fame, renown.

"Not greatly willing to cast any popular *lustre* upon them."—*Bacon: Henry VII.*, p. 241.

II. *Technically:*

1. *Domest.:* A sconee with lights; a chandelier ornamented with drops or pendants of cut glass.

2. *Fabrics:* A kind of dress-goods with a cotton chain, woollen filling, plain or self colour, and highly-finished surface.

3. *Min.:* A physical character dependent upon the refractive power and manner of refleeting light. The lustre of crystal faces often differs from that of the cleavage planes of the same crystal, and sometimes different faces of a crystal are characterized by a different lustre. The kinds are: (1) metallic, the lustre of metals; (2) adamantine, that of the diamond; (3) resinous, that of the fracture of amber; (4) vitreous, that of a glass free from lead; (5) waxy, (6) pearly, (7) silky. These are further distinguished by their intensity, as sub-metallic, sub-adamantine, sub-resinous, sub-vitreous, splendent, shining, glistening, and glimmering. A total absenee of lustre is designated as dull.

lustre-ware, *s.* A stone ware on whose surface are burnt metallic oxides of brilliant colours. It is made of a mixture of clay, flint, China-stone, and felspar, coated with a peculiar glaze on which is applied, by means of camel-hair brushes, a pigment prepared from metallic oxides, simulating the lustre of various metals, &e. Platinum produees a lustre like that of polished steel; gold and silver, those of the precious metals. Iron and copper lustres may also be produced. A beautifully-irideseent appearance is derived from chloride of silver in combination with other substances. The lustre is brought out by the heat of the oven in the process of baking.

***lŭs'-tre (tre** as **tẽr)** (2), ***lŭs'-tẽr** (2), *s.* [Lat. *lustrum* = a lustration, a period of five years; Fr. *lustre.*] A period of five years; a lustrum (q.v.).

Music: An instrument of the guitar family, formerly very popular in Europe. It was used for accompaniments and the performance of solos, duets, &c. It had five to six pairs of strings, each pair tuned in unisons or octaves. The several frets of the lute were distinguished by the letters of the alphabet, "one for each fret as many as there may be." The frets divided the strings into semitones. The Orpharion lute had a larger number of strings than the common lute, and its strings were of wire, instead of gut. The lute consists of four parts: the table; the body, which has nine or ten sides; the neck, which has as many stops or divisions; and the head or cross, in which the screws for tuning it are inserted. The performer strikes the string with the fingers of the right hand, and regulates the sounds with those of the left. Simply constructed, it is called the French lute. With two necks—one for the bass notes—it is called a theorbo. If the strings of the theorbo are doubled, it is called an arch-lute.

LUTE.

"Where is the song of Troubadour?
Where are the *lute* and gay tambour?"
Longfellow: Coplas de Manrique. (Transl.)

* **lute-backed,** *a.* Having a curved spine.

lute-case, *s.* A case or frame in which a lute is kept.

lute-string, *s.* A string of a lute.

"He, like to a high-stretched *lute-string* squeaked,
'Tis sweet to talk of kings." *Donne: Satires,* sat. 4.

lûte (2), *s.* [O. Fr. *lut* = clay, mould, loam, from Lat. *lutum* = mud, dirt.]

1. A composition to secure the joints of chemical vessels and tubes, or as a covering to protect them from the fire.

"Part would get through the *lute,* or commissures in the form of fumes."—*Boyle: Works,* i. 604.

2. A packing-ring of india-rubber placed between the lid and the lip of a jar, to prevent the access of air to the contents.

3. A coating of clay, sand, or other material applied to glass retorts, to enable them to support a high temperature without fusing or cracking.

4. A straight-edge employed to strike off the surplus clay from a brick mould.

* **lûte** (1), *v.t.* & *i.* [LUTE (1), *s.*]

A. *Trans.:* To play on or as on the lute.

lû-tē'-ĭc, *a.* [Lat. *lute(us)* = yellow; Eng. adj. suff. *-ic* (*Chem.*).] (See the compound.)

luteic-acid, *s.*

Chem.: A yellow colouring matter extracted from the flowers of *Euphorbia cyparissias* by means of alcohol. It is a pure yellow, and crystallizes in slender needles or more rarely in six-sided prisms. It has a bitterish, somewhat astringent taste, is very slightly soluble in water, more so in alcohol and ether, and melts at 274°. Like luteoline it yields protocatechuic acid when fused with potash. Its solutions have an acid reaction, and it exhibits generally the characters of an acid.

lû'-tĕ-ĭn, *s.* [Lat. *lute(us)* = yellow; suff. *-in* (*Chem.*).]

Chem.: The name given by Thudicum to a yellow substance obtained by Piccoli and Lieben from the ovary of the cow, and called by them hæmolutein.

* **lût'-ẹn-ĭst,** *s.* [LUTANIST.]

lû-tĕ-ō-fŭs'-coŭs, *a.* [Lat. *luteus* = yellow, and *fuscus* = brown.]

Bot., &c.: Between fuscous and yellow.

lû'-tĕ-ō-lĭn, *s.* [Lat. *luteol(a);* suff. *-in* (*Chem.*).]

Chem.: $C_{20}H_{14}O_8$. A crystalline body, obtained by boiling weld, *Reseda luteola,* with water, mixed with one-eighth part proof-spirit. It crystallizes in yellow four-sided needles, which are inodorous, slightly bitter, and melt at 320°. It dissolves with a deep yellow colour in caustic alkalis, and when fused with potash it is resolved, with evolution of carbon dioxide, into phloroglucin and proto-catechuic acid. It unites with metallic oxides, and forms a green precipitate, with dilute solution of ferric chloride.

* **lû'-tĕ-ŏŭs,** *a.* [Lat. *luteus,* from *lutum* = mud, mire.] Of a claycy colour; of a brownish yellow colour.

* **lût'-ẽr,** *s.* [Eng. *lut(e); -er.*] One who plays on the lute; a lutist.

* **lû-tĕs'-ẹent,** *a.* [Lat. *luteus* = yellowish, from *lutum* = mud.] Of a yellowish colour; luteous.

lûte'-strĭng, *s.* [LUSTRING.]

Fabric: The same as LUSTRING (q.v.).

* ¶ *To speak in lutestring:* To speak in an affected manner.

Lû-tē'-ti-ạ (ti as shĭ), *s.* [The Latin name of Paris.]

Astron.: [ASTEROID, 21].

* **lû'-thẽr, * ly-ther, * le-ther,** *a.* [A.S. *lydher.*] Wicked, bad, base, good-for-nothing.

Lû'-thẽr-ạn, *a.* & *s.* [See def.]

A. *As adj.:* Of or belonging to Martin Luther or the church he founded.

B. *As subst.* (*Pl.*)*:* A name said to have been first applied in contempt by Dr. Eck, or Eckius, to the followers of Martin Luther Ludir, or Lother. Luther was born at Eisleben, in Saxony, sixteen miles N.W. of Halle, his father Hans Luther being a miner and worker in metals. Martin lost an intimate companion by sudden death in 1505; he was deeply impressed with the importance of religion, and became an Augustine eremite, at Erfurth. In 1508 he was made Professor of Philosophy in the University of Wittenberg, recently founded by the Elector, Frederick the Wise, and which ultimately was incorporated in 1817 with that of Halle. In 1510 he had to visit Rome on the business of his order. In 1512 he became Doctor of Divinity. In 1517, Pope Leo X. having followed the example of his predecessor in sanctioning the sale of indulgences with the view of raising money nominally for the rebuilding of St. Peter's, Rome, and for supporting a league of the Christian powers against the Turks, Luther came into collision with Tetzel, the agent for the traffic at Wittenberg and the adjacent regions. [INDULGENCES.] On October 31, 1517, a day so important that with it the middle ages are generally held to have closed and modern times begun, he affixed ninety-five theses against indulgences to the cathedral church of Wittenberg. [REFORMATION.] At first Luther's variance was only with the subordinate agents, but gradually it passed into hostility to Leo, and when, in reply to a bull issued against him on June 15, 1520, he, on December 10, burnt the Papal bull with the decretals and canons, his breach with the papacy was complete. More than one previous effort had been made to reconcile him to the Church, but in vain; and finally Charles V. was exhorted to make an example of him as an obstinate heretic. He was therefore summoned to appear before the Diet of Worms, and did so on April 17, 1521. When in the face of the assembled dignitaries, civil and ecclesiastical, of the empire, he refused to retract his views unless first convinced that they were erroneous, it was the sublimest moment in his history. On returning from the Diet his friends carried him off and concealed him for some months in the Castle of Wartburg, on a mountain near Eisenach. In 1522 he ventured to return to Wittenberg to restrain some of his more extreme followers. Believing that monastic vows should not be imposed, and were not binding, he, in 1524, threw off his monastic dress, and next year, though pledged in his youth to celibacy, married, some of his followers following his example. Notwithstanding all the perils so long confronting him, he died at Eisleben in 1546, not by violence but by disease.

From the time that Luther broke with Catholicism, he required to think out a scheme of doctrine and discipline for his followers. The demands of both friends and opponents compelled Luther, his amiable coadjutor, Melanchthon, and others in 1530 to formulate its statements. [AUGSBURG CONFESSION.] A year previously the Lutherans, protesting against the decisions of the second Diet of Spires, for the first time were called Protestants (q.v.).

The Elector John of Saxony, succeeding his brother, Frederick the Wise, organized Lutheran churches throughout his dominions. Hitherto there had been considerable unity between all the Teutonic opponents of the Papacy, but differences of opinion which arose between Luther and Carlstadt at Witteuberg, led to alienation of feeling between them, and then to a schism between the German and Swiss Churches. Both rejected Transubstantiation, but Luther and his followers formulated the view called Consubstantiation (q.v.), which the Zwinglians rejected. [ZWINGLIANS.] From the commencement of controversy on the subject, in 1524, the term Lutherans became confined to the former. In 1521 Lutheranism spread to Denmark under the auspices of the king, Christian II.; in 1523 Olaus Petri, aided by King Gustavus Vasa, introduced it into Sweden. With the exception of some parts of Upper Germany, the continental sections of the Teutonic race, whether German or Scandinavian, have remained Lutheran. About the middle of the eighteenth century, Rationalism (q.v.) became a potent factor in the life of the Lutheran as of other continental churches.

In this country the Lutheran Church consists of four general independent organizations governed respectively by the General Synod, the General Council, the United Synod of the South, and the Synodical Conference. It stands third, in point of membership, among our Protestant denominations.

Lû'-thẽr-ạn-ĭşm, *s.* [Eng., &c. *Lutheran; -ism.*]

Ecclesiol. & Church Hist.: The tenets of Martin Luther. [LUTHERAN, B.]

lû'-tĭ-dĭne, *s.* [Prob. from Eng. *toluidine* reversed.]

Chem.: C_7H_9N. An organic base, isomeric with toluidine, discovered by Anderson in bone-oil. It has a sp. gr. of ·9467 at 0°, and boils at 154°. It has a most characteristic smell, approaching the aromatic, and dissolves readily in three to four times its bulk of water. It unites with acids and with salts, forming crystalline compounds, most of which are very soluble. It forms substitution derivatives, of which the iodide of ethyl lutidine is a type, $C_7H_8(C_2H_5)N,HI$).

lût'-ĭng, *s.* [Eng. *lut(e)* (2), *v.*; *-ing.*] A composition, of clay or other substance, used to stop the joints of vessels so as to make them air-tight; lute.

* **lût'-ĭst,** *s.* [Eng. *lute* (1), *s.*; *-ist.*] One who plays on the lute.

"A controversy between a *lutist* and a nightingale."
—*Hakewill: Apologie,* bk. iii., § 3.

* **lû'-tōse,** *a.* [Lat. *lutosus,* from *lutum* = mud, mire.] Miry, muddy; covered with clay or mud.

lū'-trạ, *s.* [Lat.; Fr. *loutre;* Sp. *lutra, nutra;* Ital.]

Zool.: Otter; the typical genus of the subfamily Lutridæ (q.v.). Body long, legs short, feet webbed; tail long, stout, and horizontally flattened. *Lutra vulgaris,* the Common Otter, is a native of Europe, frequenting the banks of streams and lakes. It lives upon fish, and is highly destructive to salmon. *L. canadensis,* a closely-allied species, is the American Otter. [OTTER.]

lû-trär'-ĭ-a, *s.* [Fem. sing. of Mod. Lat. *lutrarius* = of or belonging to an otter, from Lat. *lutra* = an otter.] [LUTRA.]

1. *Zool.:* Otter's shell; a genus of conchiferous molluscs, family Mactridæ. The shell, which is oblong, gapes at both ends; the cartilage-plate prominent, with one or two teeth in front of it in each valve; animal with the mantle-lobes closed; foot rather large. The species burrow vertically in sand or mud, especially of streams, from low water to twelve fathoms. Eighteen recent species are known, from America, Britain, Africa, India, New Zealand, &c.

2. *Palæont.:* Twenty-five fossil species, from the Carboniferous onward. (*Woodward.*)

lû-trĭc'-tis, *s.* [Lat. *lutr(a)* = an otter, and *ictis* = a weasel.]

Palæont.: A fissiped genus from the Miocene, having structural affinities both with the Civets and the Otters.

* **lû'-trĭn,** *s.* [LECTERN.] A lectern. (*Carlyle.*)

lû-trĭ'-næ, *s. pl.* [Lat. *lutr(a)* (q.v.); fem. pl. adj. suff. *-inæ.*]

Zool.: A sub-family of Mustelidæ, with two genera, Lutra and Enhydris. [LUTRICTIS.]

lû'-trine, *a.* [Mod. Lat. *lutr(a)*; Eng. *-ine.*] Belonging to or resembling the sub-family Lutrinæ or the genus Lutra. (See example under PINNIPED.)

* **lût'-ų-lęnçe,** *s.* [Eng. *lutulen(t)*; *-ce.*] The quality or state of being lutulent; muddiness.

* **lût'-ų-lęnt,** *a.* [Lat. *lutulentus*, from *lutum* = mud, mire.] Muddy, turbid, thick.

Shakesp.: Much Ado About Nothing, iv. 1.

* 9. Luxuriant, exuberant.

"Girded it round about with a belt of *luxurious* blossoms."
Longfellow: Evangeline, ii. 3.

lŭx-ür'-ĭ-oŭs-lў, *adv.* [Eng. *luxurious*; *-ly.*]

1. In a luxurious manner or fashion; delicately, voluptuously, effeminately.

"To spend the time *luxuriously*."
Daniel: Ulysses & the Syren.

* 2. Lasciviously.

"Hotter hours you have
Luxuriously pick'd out."
Shakesp.: Antony & Cleopatra, iii. 13.

lŭx-ür'-ĭ-oŭs-nĕss, *s.* [Eng. *luxurious*; *-ness.*] The quality or state of being luxurious; the state of being given to indulgence in luxury.

"The exceeding *luxuriousness* of this gluttonous age."—*Raleigh: Hist. World*, bk. i., ch. v., § 5.

* **lŭx'-ų-rĭst,** *s.* [Eng. *luxur(y)*; *-ist.*] One who indulges in luxury.

lŭx'-ų-rў, * **lŭx'-ų-rĭe,** *s.* [O. Fr. *luxuré, luxure*, from Lat. *luxuria*, from *luxus* = pomp, excess, luxury; Port. *luxuria*; Sp. *lujuria*; Ital. *lussuria.*]

I. *Ordinary Language:*

* 1. Indulgence in sins of the flesh. (This meaning was derived from the mediæval ethics.)

"O! foule lust of *luxurie*, to thine ende
But only that those faintest maknes mind,
But versily thou wolt his body shende."
Chaucer: C. T., 5,347.

2. Extravagant or excessive indulgence in the gratification of the appetites or in the pleasures of the table; rich and expensive diet, or costly dress and equipage.

"Praises bestowed on *luxury*—for which elegance and taste are but another name."—*Goldsmith: The Bee*, No. 5.

3. A life of delicacy, effeminacy, or voluptuousness; luxurious living.

"When this impostor was thrown into prison for his fraud, his followers maintained him in *luxury*."—*Macaulay: Hist. Eng.*, ch. v.

4. That which is delightful or especially gratifying to the senses or feelings: espec., that which gratifies the appetite; a dainty, a delicacy; delicious food or diet.

5. Anything indulged in for pleasure or gratification, not from necessity.

"Or press the bashful stranger to his food,
And learn the *luxury* of doing good."
Goldsmith: Traveller.

* 6. Luxuriance, exuberance; luxuriant growth.

II. *Law:* Luxury was formerly deemed a punishable offence. The statute making it so was repealed by 19 & 20 Vict. c. 64. Previously it had fallen into disuse.

lŭz, *s.* [Heb. לוּז (*luz*) = (1) a hazel tree, or, much more probably, the almond-tree; (2) the bone described below.] In Rabbinical legends, an unidentified bone in the human body, destined to be the germ of the glorified body at the resurrection. According to Buxtorf (*Lex. Talm.*), it was the *os coccygis*, or one of the lumbar vertebræ.

"Hadrian (whose boues may they be ground, and his name blotted out) once asked Rabbi Joshua ben Chanauia, 'From what shall the human frame be reconstructed when it rises again?' 'From *Luz* in the backbone,' was the answer. 'Prove this to me,' said Hadrian. Then the Rabbi took *luz*, a small bone of the spine, and immersed it in water, but it was not softened; he put it into the fire, but it was not consumed; he put it into a mill, but it could not be pounded; he placed it upon an anvil and struck it with a hammer, but the anvil split and the hammer was broken."—*Midrash Kohelet* (fo. 114, 3) in *Hershon: Talm. Miscel.*, p. 295.

lû'-zŏn-īte, *s.* [Named after the place where found, *Luzon*; suff. *-ite* (*Min.*).]

Min.: A massive mineral, with slight traces of cleavage. Hardness, 3·5; sp. gr. 4·42; colour, dark reddish steel-gray, on exposure turning violet. Lustre, black and metallic; streak, black; brittle. Comp.: sulphur, 33·14; antimony, 2·15; arsenic, 16·52; copper, 47·51. Closely related to Enargite (q.v.). Found at Luzon, Philippine Islands.

lû'-zų-la, * **lû'-çĭ-ô-la,** *s.* [From Ital. *luciola* = a glow-worm, which the heads of flowers, wet with dew and sparkling by moonlight, feebly resemble. (*Sir J. E. Smith.*)]

Bot.: Wood-rush; a genus of Juncaceæ (Rushes). It has soft, plane, generally hairy leaves, a glumaceous perianth of six leaves, and a one-celled, three-valved capsule with three seeds. About forty are known, all from temperate or cold climates. They grow in woods, pastures, and on mountain elevations. Those which grow under the shade of trees preserve their verdure in winter. The Field Rush, *L. campestris*, is very common.

-lў, *suff.* [See def. O. H. G. *lîh*; Goth. *leiks*; Ger. *lich*; Dut. *lijk*; Icel. *likr, legr.*] [LIKE, *a.*] A common adjectival and adverbial ending in English. As an adjectival endiug, as in man-*ly*, it represents the A.S. *-lic* = like; as an adverbial ending, as in splendid-*ly*, the A.S. *lice.*

* **lў-ąm,** *s.* [LEAM.] A leash for holding hounds.

"In a pyde *lyam* leadiug forth his hound."
Drayton: Poems, p. 21.

lў'-art, * **ly-ardc,** *a.* [O. Fr. *liard.*] [LIART.] Of a mixed colour; gray, gray-haired.

"Twa had manteeles o' dolefu' black,
But aue wi' *lyart* liuing." *Burns: Holy Fair.*

* **lўb'-ĭcke,** * **lĭb'-ўck,** *a.* [Lat. *Libycus.*] Of or pertaining to Libya; Libyan.

lў-çæ'-na, *s.* [Gr. λύκαινα (*lukaina*) = a she-wolf.]

Entom.: Copper-Butterfly, so called because a bright coppery-red prevails in the wing-

colouring, the typical genus of the family Lycænidæ (q.v.). *Lycæna phlæas* is the Small Copper, and *L. dispar*, the largest species of the genus, formerly common in the fens of the Eastern counties, is the Large Copper. In *L. gordius* the metallic hue is strongly glossed with blue or purple. All Continental.

lȳ-çæn'-ĭ-dæ, *s. pl.* [Mod. Lat. *lycæn(a)*; Lat. fem. pl. adj. suff. *-idæ*.]

Entom.: A family of Butterflies, nearly world-wide in distribution. The individuals are small, the wing-expanse seldom exceeding an inch and a half or two inches. The prevailing colours are blue, copper-red, or brown. Chief genera: Miletus, Zeritis, Lycæna, Polyommatus, Hypochrysops, Thecla, Zephyrus, Amblypodia, and Eumæus.

lȳ'-cạn-thrōpe, *s.* [Gr. λυκάνθρωπος (*lukanthrōpos*), from λύκος (*lukos*) = a wolf, and ἄνθρωπος (*anthrōpos*) = a man.]

* 1. A man supposed to have been transformed into the form of a wolf, and endowed with a wolf's nature and propensities; a were-wolf (q.v.).

2. A person suffering from lycanthropy (q.v.).

lȳ-căn-thrō'-pĭ-ạ, *s.* [Mod. Lat.] [Lycanthrope.]

Path.: A species of insanity in which the patient believes himself transformed into a wolf.

"Many examples of *lycanthropia* are on record, although an extremely rare disease at the present day. 'Those labouring under *lycanthropia*,' says Paulus Ægineta, 'go out during the night, imitating wolves in all things, and lingering about sepulchres until morning. You may recognise such persons by these marks; they are pale, their vision feeble, their eyes dry, tongue very dry, and the flow of saliva stopped; but they are thirsty, and they have incurable ulcerations from frequent falls.'"—*Bucknill & Tuke: Psychological Medicine*, p. 202.

lȳ-căn-thrŏp'-ĭc, *a.* [Eng. *lycanthrop(y)*; *-ic*.] Afflicted with lycauthropy.

"In a fit of *lycanthropic* madness, she came upon two children."—*S. B. Gould: Were-Wolves*, ch. vi.

lȳ-căn'-thrŏp-ĭst, *s.* [Eng. *lycanthrop(y)*; *-ist*.] The same as Lycanthrope (q.v.).

"Forestus pronounces the man to be a *lycanthropist*, but he does not say that the poor fellow believed himself to be transformed into a wolf."—*S. B. Gould: Were-Wolves*, ch. v.

lȳ-căn'-thrŏp-ŏŭs, *a.* [Eng. *lycanthrop(y)* *-ous*.] Belonging to, or in any way connected with, lycanthropy (q.v.).

"There are two unfailing characteristics of *lycanthropous* belief:—(1) There can nowhere be a living belief in contemporary metamorphosis into any animal which has ceased to exist in the particular locality; (2) Belief in metamorphosis into the animal most prominent in any locality itself acquires a special prominence."—*J. F. McLennan*, in *Encyc. Brit.* (ed. 9th), xv. 89.

lȳ-căn'-thrŏp-ў, †**lȳ-kăn'-thrŏp-ў,** *s.* [Lycanthrope.]

Anthrop.: In a wide sense, the term lycanthropy is used for what Tylor calls the Doctrine of Werewolves—"That certain men by natural gift or magic art can turn, for a time, into ravening wild beasts." Less widely, it denotes a belief in the temporary change of a man into a wolf. Such belief was once widely spread. The dominant Aryans in India in long-past ages described the rude indigenes by an epithet signifying "changing their shape at will." In classic times we find the belief in Herodotus (iv. 105), in Pliny (*H. N.* viii. 34), in Petronius Arbiter (Sat. 62, *ad fin.*), and in Virgil (*Ecl.* viii. 95–99). It is mentioned by Augustine (*de Civ. Dei*, xviii. 17); it flourished in the Middle Ages, when it was viewed as a form of demoniacal possession. Lycanthropy seems to have been first viewed rationally in 1603, when, in the case of Jean Grenier, the judge declared that it was "an insane delusion, not a crime." Strange to say, in France, where this just conclusion was come to nearly three centuries ago, the belief in werewolves still lingers, and within the last twenty years Mr. Baring-Gould found it impossible to get a guide after dark across a wild place said to be haunted by a loupgarou. (*Tylor: Prim. Cult.* (1873), ch. viii., where a copious bibliography will be found; see also *Baring-Gould: Book of Were-wolves.*)

"*Lykanthropy*
I comprehend; for, without transformation,
Men become wolves." *Byron: Don Juan*, ix. 20.

lȳ-cā'-ŏn, *s.* [Gr. Λυκάων (*Lukaōn*), a king of Arcadia, father of Callisto. Said to have been turned into a wolf because he offered human sacrifices to Jupiter; or, according to Ovid (*Met.* i. 163–239), because he tried to murder Jupiter, who was his guest.]

Zool.: An aberrant genus of Canidæ, containing but one species, *Lycaon pictus* (*venaticus*), the Hunting-dog. The head resembles that of a hyæna, and there are but four toes on each foot. It is gregarious, and commits great depredations on flocks of sheep. Habitat, Africa, from the Cape to the valley of the Nile.

lȳ-çē'-ŭm, *s.* [Lat., from Gr. λύκειον (*lukeion*), so named from the neighbouring temple of Apollo Λύκειος (*Lukeios*), or the wolf-slayer; λύκειος (*lukeios*) = pertaining to a wolf; λύκος (*lukos*) = a wolf.]

1. A gymnasium or public palæstra with covered walks in the eastern suburb of Athens, in which Aristotle taught philosophy.

2. A house, room, or apartment set apart for instruction, lectures, or discourses.

3. An association or society for literary improvement and study.

4. A school for higher education preparatory to the universities.

lȳçh'-gāte, *s.* [Lichgate.]

lȳch'-nĭs, *s.* [Lat., from Gr. λυχνίς (*luchnis*) = a plant with a bright scarlet flower, used for garlands. Hooker and Arnott derive it from λύχνος (*luchnos*) = a light; because the thick, cottony substance on the leaves of some species, or of a similar plaut, have been employed as wicks for lamps.]

Bot.: Campion, a genus of Caryophyllaceæ, sub-order Sileneæ. The corolla is monophyllous, tubular, five-toothed; the petals five-clawed, sometimes divided on the limb; stamens, ten; styles, usually five, capsule opening by five or ten teeth. About thirty species are known, all from the northern hemisphere. *L. diurna* and *L. chalcedonica* are saponaceous. The latter, a native of Asia Minor, forms a frequent and brilliant border for flower beds.

¶ *Rock Lychnis:*

Bot.: The genus Viscaria.

* **lȳch'-nīte,** *s.* [Gr. λυχνίτης (*luchnitēs*) = of or like a lamp; λύχνος (*luchnos*) = a lamp, a light.] An old name for Parian marble, from its being quarried by lamplight.

* **lȳch'-nō-bīte,** *s.* [Gr. λυχνόβιος (*luchnobios*) = living by lamplight; λύχνος (*luchnos*) = a lamp, and βίος (*bios*) = life.] One who labours or transacts his business by night, sleeping by day.

lȳch'-nō-scōpe, *s.* [Gr. λύχνος (*luchnos*) = a lamp, a light, and σκοπέω (*skopeō*) = to see.]

Arch.: A small narrow window near the ground in the chancel of a church, so disposed that through it a person outside may see the priest at the altar during the act of consecration.

lȳç'-ĭne, *s.* [Mod. Lat. *Lyc(ium barbarum)*; Eng. suff. *-ine*.]

Chem.: A base contained in the Box Thorn (*Lycium barbarum*). The base obtained from the hydrochlorate is a white radio-crystalline mass, which has a sharp taste, dissolves easily in water and alcohol, and sparingly in ether. Most of its salts are crystallizable, and easily soluble in water.

lȳç'-ĭ-ŭm, *s.* [Gr. λύκιον (*lukion*) = a kind of Lycian thorny shrub.]

Bot.: Boxthorn: a genus of Solanaceæ, tribe Atropeæ. It consists of trees or shrubs, usually spinose, with white, yellow, rose-coloured, purple, or scarlet flowers. About thirty are known. *Lycium europæum* is used for hedges in the Greek Islands, though, perhaps, not wild there. The young shoots are eaten in Spain with oil and vinegar. They are also eaten in India, where goats browse on the plant. The berries are reputed aphrodisiac. *L. barbarum* is sometimes found in cottage gardens in Britain, as are other species in gardens generally.

lȳ-cŏc'-tō-nĭne, *s.* [Mod. Lat. (*Aconitum*), *Lycocton(um)*; Eng. suff. *-ine*.]

Chem.: A base extracted, together with acolyctine, from wolfsbane (*Aconitum Lycoctonum*) by means of alcohol, and separated from the latter by its solubility in ether. It crystallizes in warty groups of crystals, very soluble in alcohol and ether, and slightly soluble in water. It has an alkaline reaction, a strong bitter taste, and is coloured bright red with concentrated sulphuric acid.

lȳ-cō'-dēs, *s.* [Gr. λυκώδης (*lukōdēs*), contracted from λυκοειδής (*lukoeidēs*), wolf-like: λύκος (*lukos*) = a wolf, and εἶδος (*eidos*) = form.]

Ichthy.: The typical genus of the family Lycodidæ. Nine species are known from the Arctic Ocean; four from the southern extremity of the American continent. *Lycodes mucosus* is from Northumberland Sound.

lȳ-cō'-dĭ-dæ, *s. pl.* [Mod. Lat. *lycod(es)*; Lat. fem. pl. adj. suff. *-idæ*.]

Ichthy.: A family of Fishes of the order Anacathini, division *Anacanthini Gadoidei*. Marine littoral fishes of small size, resembling Blennies, chiefly represented in high latitudes, a few living within the tropical zone. There is one rare British species, *Gymnelis imberbis*, the Beardless Ophidium. Length, about three inches; depth, about a quarter of an inch.

lȳ'-cō-dŏn, *s.* [Gr. λύκος (*lukos*) = a wolf, and ὀδούς (*odous*), genit. ὀδόντος (*odontos*) = a tooth.]

Zool.: The typical genus of the family Lycodontidæ (q.v.). *Lycodon capensis*, a South African snake, is shining greenish-brown above, head with variations, and the scales along the middle of the back less distinctly marked with white specks than those of the side. Length about fourteen inches. It affects damp situations, near localities favourable for concealment. Like most of the Innocua of South Africa, its movements are slow.

* **lȳ'-cō-dŏnt,** *s.* [Lycodon.]

Palæont. (*Pl*): Teeth like those of a wolf-fish.

lȳ-cō-dŏn'-tĭ-dæ, *s. pl.* [Mod. Lat. *lycodon*, genit. *lycodont(is)*; Lat. fem. pl. adj. suff. *-idæ*.]

Zool.: A family of Innocuous colubriform snakes, from India and Africa. Body of moderate length, muzzle flat, pupil vertical. They are ground snakes. Those of India live on skinks, while the African species devour mice and other small nocturnal mammals.

lȳ-cŏg'-ạ-lạ, *s.* [Gr. λύκος (*lukos*) = a wolf, and γάλα (*gala*) = milk. So named because, when the plants are young, they resemble a mass of thick cream.]

Bot.: A genus of myxogastrous fungals. *Lycogala epidendron* has heads almost the size of a nut, with only yellow, yellowish, or pinkish-white spores. One species has a blood-like pulp.

lȳ-cō-pĕr-dā'-çĕ-æ, *s. pl.* [Mod. Lat. *lycoperd(on)*; Lat. fem. pl. adj. suff. *-aceæ*.]

Bot.: The same as Gasteromycetes. [Lycoperdon.]

lȳ-cō-pĕr'-dŏn, *s.* [Gr. λύκος (*lukos*) = a wolf, and πέρδομαι (*perdomai*) = to break wind backwards.]

Bot.: Puff-ball; a genus of fungals, order Gasteromycetes or Lycoperdaceæ, sub-order Trichogastres. It has a double peridium, the outer coat breaking into warts, spines, scales, &c. *Lycoperdon Bovista* is eatable. The dry mass of threads and spores may be used as a styptic. *L. giganteum*, a large, indehiscent species, has also been used as a styptic and for tinder; the fumes produce the effect of chloroform. *L. gemmatum* is the Common Puff-ball.

lycoperdon-nuts, *s. pl.* The commercial name of the underground fungals of the genus Elaphomyces.

lȳ-cō-pĕr'-sĭ-cŏn, lȳ-cō-pĕr'-sĭ-cŭm, *s.* [Gr. λύκος (*lukos*) = a wolf, and περσικόν (*persicon*) = (as adj.) Persian; (as subst.) = pearl.]

Bot.: A genus of Solanaceæ, closely akin to Solanum. Ten species are known, chiefly from South America. *Lycopersicon esculentum* is the Tomato or Love-apple [Tomato.]

lȳ'-cō-pŏd, *s.* [Lycopodium.]

Bot.: A plant of the genus Lycopodium (q.v.).

lȳ-cŏp'-ō-dạl, *a.* [Mod. Lat. *lycopodales* (q.v.).]

Bot.: Of or belonging to the genus Lyco-

podium, or the order Lycopodiaceæ, as the Lycopodal Alliance. (*Lindley.*)

lȳ-cō-pō-dā'-lēş, *s. pl.* [Mod. Lat. *lycopod(ium)*; Lat. fem. pl. adj. suff. *-ales.*]

Bot.: An alliance of Acrogens, consisting of vascular flowerless plants with axillary or radical, one or many-celled spore cases, and spores of two sorts. Orders Lycopodiaceæ and Marsileaceæ (q.v.).

lȳ'-cō-pōde, *s.* [Lycopodium.]

Bot., Comm., &c.: The powder contained in the spore-cases of *Lycopodium clavatum* and *L. Selago.* It is highly inflammable, and is used in the manufacture of fireworks, for theatrical lightning, also to roll up pills, which, when coated with it, may be put into water without being moistened. (*Lindley.*)

lȳ-cō-pō-dī-ā'-çē-æ, *s. pl.* [Mod. Lat. *lycopodi(um)*; Lat. fem. pl. adj. suff. *-aceæ.*]

1. *Bot.:* Clubmosses. An order of Acrogens, alliance Lycopodales. It consists of moss-like plants, the rootstock running, creeping, constituting a corm, or wanting. Stem dichotomously branched; leaves imbricate, all round or in two to six rows; capsules, called sporangia, sessile in the axis of the leaves, or in that of the scales of a terminal or axillary sessile or stalked cone; one to three-celled, with macrospores and microspores, the former marked at the top with two radiating lines. Distribution world-wide. Known genera, four or five; species numerous, including the genus Lycopodium, which contains about 100 species.

2. *Palæobot.:* The Lycopodiaceæ seem to have begun in the Upper Silurian, with the Lepidodendroids, Pachytheca and Psilophyton. The genus Lepidodendron, to which some species of plants from the Devonian, and about forty (half of them British) from the Carboniferous, with a few from the Permian, have been referred, is believed to have been Lycopodiaceous. They were gigantic when compared with modern Lycopodiums. Their fruits were Lepidostrobi. There are also, in the Devonian and Carboniferous, Lepidophloios, Cordaites, and Lycopodites, the second of which may, perhaps, have been coniferous. Mr. Carruthers considers Sigillaria to have been Lycopodiaceous. It is found in the Devonian and Carboniferous, being a very marked feature of the latter rocks.

lȳ-cō-pō-dī-ā'-ceoŭs (ce as **sh),** *a.* [Mod. Lat. *lycopodiace(æ)*; Eng. adj. suff. *-ous.*] Pertaining or belonging to the Lycopodiaceæ, resembling the Lycopodiaceæ (q.v.).

"Upon these grounds Mr. Carruthers decides against the view that Sigillaria is a gymnospermous exogen, and he regards it as cryptogamic and *lycopodiaceous.*" —*Nicholson: Palæont.*, ii. 460.

lȳ-cŏp'-ō-dīte, *s.* [Lycopodites.]

Palæont.: A fossil plant of the genus Lycopodites.

lȳ-cŏp-ō-dī'-tēş, *s.* [Mod. Lat. *lycopod(ium)*; Lat. suff. *-ites.*]

Palæont.: A genus of fossil plants, akin to Lycopodium. The leaves are inserted all round the stem or in two opposite rows. Morris enumerates species from the Coal Measures, from the Oolitic Shale, and from the London Clay. It occurs also in the Devonian.

lȳ-cō-pō'-dī-ŭm, *s.* [Gr. λύκος (*lukos*) = a wolf, and πούς (*pous*), genit. ποδός (*podus*) = a foot.]

Bot.: Clubmoss. The typical genus of the order Lycopodiaceæ (q.v.). It consists of perennial plants, with erect, prostrate, or creeping stems, small leaves, and reniform or one-celled, two-valved capsules. The spores of Lycopodium are used for coating pills, and the hands when rubbed with them may be dipped in water without becoming wet. *L. clavatum* is emetic, and *L. Selago* cathartic, but they are dangerous. They can be used externally as counter irritants. *L. cartharticum* (?) or *rubrum*, a South American plant, is violently purgative. It has been used in elephantiasis. *L. phlegmaria* and *L. squamatum* are aphrodisiac. It is said that woollen clothes boiled with it become blue if afterwards treated with Brazil wood.

lȳ-cŏp'-sĭs, *s.* [Lat. *lycopsis*; Gr. λύκοψις (*lukopsis*), λύκοψος (*lukopsos*), λύκαψος (*lukapsos*) = a plant like alkanet.]

Bot.: Formerly regarded as a genus of boraginaceous plants, tribe Anchuseæ. By Sir Joseph Hooker made a sub-genus of Anchusa. The corolla tube is curved, equalling or exceeding the oblique limb; the nutlets with the ring equal at the base. *Anchusa* (*Lycopsis*) *arvensis* is the Bugloss (q.v.).

lȳ'-cō-pŭs, *s.* [Gr. λύκος (*lukos*) = a wolf, and πούς (*pous*) = a foot, which the leaves faintly resemble.]

Bot.: A genus of Labiatæ, family Menthidæ. The calyx is five-cleft, the limbs of the corolla nearly equal; stamens only two. Known species, two. One, *Lycopus europæus*, has bluish-white, purple-dotted flowers.

lȳ-cō'-są, *s.* [Mod. Lat., from Gr. λύκος (*lukos*) = a wolf. The genus is so named from the predatory habits of some of the species. (*McNicoll.*)]

Entom.: The typical genus of the family Lycosidæ (q.v.). *Lycosa piratica* is British. The most celebrated species is *L. tarantula*, the Tarantula (q.v.).

lȳ-cō-sâu'-rŭs, *s.* [Gr. λύκος (*lukos*) = a wolf, and σαῦρος (*sauros*), σαύρα (*saura*) = a lizard.]

Palæont.: A genus of Thecodonts of Triassic (?) age.

lȳ-cō'-sĭ-dæ, *s. pl.* [Mod. Lat. *lycos(a)*; Lat. fem. pl. adj. suff. *-idæ.*]

Entom.: Wolf Spiders. A widely-distributed family of wandering predaceous Spiders, tribe Dipneumones. Ocelli generally in three rows; cephalothorax robust, but narrowed anteriorly; falces vertical, three pairs of spinnerets, legs usually terminated by three claws without any scopulæ or adhesive hairs. Many of the species frequent woods and dry commons; others, as *Lycosa piratica*, are aquatic. Chief genera, Lycosa and Dolomedes.

lȳ-cŏt'-rō-pal, *a.* [Gr. λύκος (*lukos*) = a wolf, and τρόπος (*tropos*) = a turn, a direction.]

Bot.: An orthotropal ovule curved downwards like a horseshoe.

lȳ'-da, *s.* [Gr., fem. of Λυδός (*Ludos*) = a Lydian.]

Entom.: A genus of hymenopterous insects, family Tenthredinidæ. The species are many. *Lyda pratensis* and *L. campestris* feed on pine-trees, which they injure, and *L. betulæ* on the beech.

***lȳd'-dĕrn,** *s.* [Lyther.] An idle fellow.

"It is better that younge *Lyddernes* wepe than olde men."—*Vocacyon of John Bale.* (1553.)

lȳd'-ĭ-ą, *s.* [Gr.]

Astron.: [Asteroid, 110].

Lȳd'-ĭ-an, *a.* [Lat. *Lydius*, from Gr. Λυδία (*Ludia*) = Lydia.]

1. *Geog.:* Of or pertaining to Lydia, a country of Asia Minor, ruled over by Crœsus, and afterwards a Persian satrapy. Its inhabitants were noted for their effeminacy and voluptuousness; hence, Lydian came to mean effeminate, voluptuous, soft.

"Ever against eating cares
Lap me in soft *Lydian* airs."
Milton: L'Allegro, 136.

2. *Music:*

(1) One of the ancient Greek modes, the highest in pitch; its music was of a soft, pleasing character.

(2) The fifth of the Ecclesiastical modes, called by mediæval writers, *Modus lætus* (the joyful mode), from its general jubilant character.

Lydian-stone, *s.*

Min.: The same as Basanite (q.v.).

lȳd'-ĭne, *s.* [Eng. *Lyd(ian)* (?); *-ine.*]

Chem.: A violet dye, produced by the action of potassium ferricyanide on aniline. It is very soluble in alcohol and in the fatty acids, slightly soluble in ether and benzol, but insoluble in water and in fatty oils. It dyes wool, silk, and mordanted cotton, and the tissues dyed with it are not altered by alkaline carbonates or ammonia. Lydine is a poison when taken internally, or when allowed to come in direct contact with the blood.

lȳd'-ĭte, *s.* [Gr. Λυδία λίθος (*Ludia lithos*) = Lydian-stone; suff. *-ite* (*Min.*) (q.v.).]

Min.: The same as Basanite (q.v.).

lȳe (1), ***lee, *leye, *lie, *ley,** *s.* [A.S. *leáh*; cogn. with Dut. *loog*; Ger. *lauge*; O. H. Ger. *louga*; Icel. *laug.*] A solution of an alkali; water impregnated with alkaline salt imbibed from the ashes of wood. Used in soap-making, in neutralizing an acid, in cleansing grease from objects, such as thin iron plates in the operation of tinning, &c.

lȳe (2), *s.* [Prob. from *lie* (2), *v.*]

Rail.-eng.: A siding, offset, or loop, from a main line, on to which trucks may be run for the purpose of loading and unloading; also a siding or set of rails at a terminus used for the same purpose.

***lȳe** (3), *s.* [Lie (1), *s.*]

***lȳe,** *v.i.* [Lie (1), *v.*]

lȳ'-ĕll-īte, *s.* [Named after the eminent geologist Sir Charles Lyell; suff. *-ite* (*Min.*).]

Min.: A variety of langite (q.v.), of a bluish-white colour, occurring in fibrous encrustations. When named it was regarded as a hydrated sulphate of copper and lime, but subsequent analyses proved it to be a mixture of gypsum and langite. The same substance was, about the same time, named Devilline, after the chemist St. Claire-Deville. Found with langite in Cornwall.

lȳ-ĕn-çĕph'-ą-lą, *s. pl.* [Gr. λύω (*luō*) = to loose, and ἐγκέφαλος (*engkephalos*) = the brain.]

Zool.: Owen's first and lowest group or sub-class of Mammalia, characterized by "the comparatively loose or disconnected state of the cerebral hemispheres. The size of these hemispheres is so small that they leave exposed the olfactory ganglions, the cerebellum, and more or less of the optic lobes; their surface is generally smooth; the anfractuosities, when present, are few and simple." The Lyencephala include the orders Marsupialia (with four families, Rhizophaga, Poephaga, Carpophaga, and Eutomophaga), and Monotremata (with two genera, Echidna and Oruithorhyncus).

ly-ĕn-çĕph'-ą-loŭs, *a.* [Eng., &c. *lyencephal(a)*; *-ous.*] Belonging to, or characteristic of the Lyencephala (q.v.).

"The *lyencephalous* mammalia are unguiculate."—*Owen: Class. Mammalia*, p. 27.

***lyf,** *s.* [Life.]

lȳ-ġæ'-ĭ-dæ, *s. pl.* [Mod. Lat. *lygæ(us)*; Lat. fem. pl. adj. suff. *-idæ.*]

Entom.: A family of Geocores or Land Bugs (q.v.). The scutellum is short and triangular; two ocelli, antennæ four-jointed, springing from below a straight line drawn from the eyes to the base of the rostrum, which has four nearly equal joints. The membrane of the hemelytra has usually four or five longitudinal veins. Chief genera, Rhyparochromus, Platygaster, and Lygæus (q.v.).

lȳ-ġæ'-ŭs, *s.* [Gr. λυγαῖος (*lugaios*) = dark, shadowy, gloomy, from its being the habit of the insects to secrete themselves.]

Entom.: The typical genus of the family Lygæidæ (q.v.). These insects are generally red, banded and spotted with black. *Lygæus equestris*, *L. saxatilis*, and *L. familiaris* are found on the continent of Europe.

lȳ-ġĕ'-ŭm, *s.* [Gr. λύγος (*lugos*) = a pliant twig or rod fit for wickerwork.]

Bot.: A genus of grasses, tribe Phalarideæ, Only known species, *Lygeum Spartum*, a rather handsome Indian grass with extensive rootstocks growing in sand, which it binds together. It is the esparto grass (q.v.).

lȳġ'-ĭ-ą, † lĭġ'-ĭ-ą, *s.* [Ligea.]

Zool.: A genus of Crustacea, family Oniscidæ. *Lygia oceanica* is the Great Sea-slater of the British coasts.

lȳ-gō'-dī-ŭm, *s.* [Gr. λυγώδης (*lugōdēs*) = like a lily twig; λύγος (*lugos*) = a plant, twig, or rod.]

Bot.: A genus of ferns, tribe Schizæcæ. The species are elegant twining plants, which bind together the small shrubs among which they grow.

lȳ'-ĭng (1), *pr. par., a., & s.* [Lie (1), *v.*]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As subst.:* The act or habit of telling lies; a falsehood, a lie.

ly'-ĭng (2), *pr. par., a., & s.* [Lie (2), *v.*]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As subst.:* The act or state of being recumbent or prostrate.

* **lying-down,** *s.* A woman's accouchement, childbirth.

* **lying-house,** *s.* A prison for great offenders.

lying-in, *a. & s.*

A. *As adjective:*

1. Being in childbirth: as, a woman *lying-in.*

2. Pertaining to or used for childbirth: as, a *lying-in* hospital.

B. *As subst.:* The act of bearing a child, childbirth.

lying-panels, *s. pl.*

Arch.: Panels in which the fibres of the wood lie in a horizontal direction.

lying-to, *s.*

Naut.: The state of a ship when the sails are so disposed as to counteract each other.

ly'-ĭng-ly, *adv.* [Eng. *lying* (1); *-ly.*] In a lying manner; with lies; falsely.

lyke'-wāke, *s.* [Lichwake.] An assembly of persons to watch in the chamber of a corpse by night.

"'Ay, ay—dead enough,' said another, 'but here's what shall give him a rousing *lykewake.*'"—*Scott: Guy Mannering,* ch. xxvii.

* **lym,** *s.* [Leam.] A lime-bound or limmer.

"Hound or spaniel, brach or *lym.*"
Shakesp.: Lear, iii. 6.

lyme, *s.* [Corrupt. from Lat. *elymus* (q.v.).]

Bot., &c.: (See the compound).

lyme-grass, *s.*

Bot.: The genus Elymus (q.v.).

ly-mĕx'-y-lŏn, *s.* [Gr. λῦμα (*luma*) = (1) filth or dirt, (2) rnin, and ξύλον (*xulon*) = firewood, lumber.]

Entom.: The typical genns of the family Lymexylonidæ (q.v.) *Lymexylon navale* infests oak wood. It is a pest is some continental dockyards.

ly-mĕx-y-lŏn'-ĭ-dæ, *s. pl.* [Mod. Lat. *lymexylon*; Lat. fem. pl. adj. suff. *-idæ.*]

Entom.: A family of Beetles, founded by Swainson, and still retained.

* **lym'-ĭ-tĕr,** *s.* [Limitour.]

lym'-næ-a, *s.* [Limnæa.]

lym-næ'-a-dæ, *s. pl.* [Limnæadæ.]

lym'-nīte, *s.* [Mod. Lat. *lymn(æa);* suff. *-ite* (*Palæont.*).]

Palæont.: A fossil limnæa.

lymph, * **lym'-pha,** *s.* [Lat. *lympha* = water, lymph, prob. allied to *limpidus* = clear; Fr. *lymphe.*]

I. *Ord. Lang.:* Water; any clear transparent fluid like water.

"Thy hauks, Cephisus, he again hath trod,
Thy murmurs heard, and drunk the crystal *lymph.*"
Wordsworth: Excursion, bk. iv.

II. *Technically:*

1. *Phys.:* The chief difference between chyle and lymph is the more complete state of preparation for the operations of nutrition in lymph, owing to the smaller proportion of solid matter, and the almost total absence of fat; it is comparatively transparent, high in the scale of nutrition, bearing a strong resemblance to blood without the red corpuscles.

2. *Bot. Phys.:* The sap of a plant.

¶ *Vaccine Lymph:* (Vaccination, Vaccine).

lymph-channel, lymph-sinus, *s.*

Anat.: A channel or sinus for the conveyance of lymph. It is situated in the mesenteric gland. (*Quain.*)

* **lym'-phăd,** *s.* [Prob. a corrupt. of Gael. *longphade* = a galley.] An ancient vessel with one mast, not uncommonly seen in the heraldry of Scotland. It is the feudal ensign of the lordship of Lorne, and is borne by the family of Argyll, and the clan of Campbell.

"'Our loch ne'er saw the Cawmill *lymphads,*' said the bigger Highlander."—*Scott: Rob Roy,* xxix.

lym-pha-dĕn'-ō-ma, *s.* [Lat. *lympha* [Lymph]; Gr. ἀδήν (*adēn*) = a gland, and suff. *-ωμα* (*ōma*) (?).]

Path.: An important morbid condition of the glands, characterized by hypertrophy; Hodgkin's disease.

lym'-phæ-dŭct, *s.* [Lymphoduct.]

lym-phăn-gĕ'-ī'-tĭs, *s.* [Lat. *lympha* [Lymph]; Gr. ἀγγεῖον (*angcheion*) = a vase or vessel, and suff. *-itis* (*Path.*).]

Path.: Inflammation of the lymphatics.

* **lym'-phāte,** * **lym'-phāt-ĕd,** *a.* [Lat. *lymphatus,* pa. par. of *lympho* = to drive out of one's senses.] Mad, deranged, insaue.

lym-phăt'-ĭc, * **lym-phăt'-ĭck,** *a. & s.* [Lat. *lymphaticus,* from *lymphatus,* pa. par. of *lympho* = to drive out of one's senses; Fr. *lymphatique.*]

A. *As adjective:*

1. *Lit.:* Pertaining to, conveying, or containing lymph.

"There are *lymphatic* vessels which come from the upper and others which proceed from the lower extremities. Numerous glands occur along their course. The coats of the lymphatics, three in number, are delicate and transparent, so that their contents may readily be seen."—*Todd & Bowman: Phys. Anat.* (1856), ii. 269, 289.

* 2. *Fig.:* Mad, frenzied, enthusiastic.

"Horace either is or feigns himself *lymphatick.*"—*Shaftesbury: Concerning Enthusiasm,* § 6.

B. *As substantive:*

* **I.** *Ord. Lang.:* A madman, an enthusiast.

"All nations have their *lymphatics* of some kind or another."—*Shaftesbury: Concerning Enthusiasm,* § 6.

II. *Technically:*

1. *Anat.* (*Pl.*): A name for the lymphatic vessels (q.v.).

† 2. *Bot.* (*Pl.*): The sap vessels of a plant.

¶ The *Lymphatic* or *Phlegmatic Temperament* is characterized by light, sandy, or whitish hair, light gray eyes, a pallid complexion, the skin nearly destitute of hair, much perspiration, small blood-vessels, a feeble and slow pulse, want of energy, both in animal and physical functions. Mental powers sometimes dull, sometimes the reverse. It is the weak temperament of the xanthous variety of mankind.

lymphatic-glands, *s. pl.*

Anat.: The absorbent system for the transmission of the lymph, allied to the lacteal system, and appearing also first in fishes, then reptiles, then mammals. Their chief use is to effect a change in the materials absorbed, and render them more fitted for introduction into the blood. Lymphatics are found in most parts of the animal tissue, except the brain and spinal cord, the eye, bones, cartilages and tendons, the membranes of the ovum, the umbilical cord, and the placenta. Lymphatic vessels like arteries and veins have three coats, an external, middle, and internal; they are also supplied with valves. [Thoracic-duct (q.v.).]

lymphatic-vessels, *s. pl.*

Anat.: The lymphatic vessels convey in solution to the blood matters derived from the wear and tear of the vessels or from outside. (*Todd & Bowman: Phys. Anat.,* ii. 290.)

lym'-phō-dŭct, lym'-phæ-dŭct, *s.* [Lat. *lympha* = lymph, and *ductus* = a leading, a duct.]

1. *Anat.:* A vessel in animal bodies which conveys the lymph; a lymphatic. (*Blackmore.*)

2. *Bot.* (*Pl.*): Sap-vessels.

lym-phŏg'-ra-phy, *s.* [Lat. *lympha* = lymph, and γράφω (*graphō*) = to describe.] A treatise on or description of the lymphatic vessels, their origin and uses.

lymph'-ōid, *a.* [Lat. *lympha,* and Gr. εἶδος (*eidos*) = form.]

Anat.: Having the form or aspect of lymph. There are *lymphoid*-glands and *lymphoid*-tissue. (*Quain.*)

* **lymph'-y,** *a.* [Eng. *lymph; -y.*] Containing or resembling lymph.

* **lym-y-tour,** *s.* [Limitour.]

* **lyn-çē'-an,** *a.* [Lat. *lynceus,* from *lynx* (genit. *lyncis*) = a lynx.] Of or pertaining to the lynx; lynx-like, acute.

"My eyes are so *lyncean* as to see you proudly misconfident."—*Bp. Hall: Answer to the Vindication.*

lynch, *v.t.* [Said to be derived from the name of a Virginian farmer, who took the law into his own hands by tying a thief to a tree, and then flogging him.] To inflict punishment or pain upon, without the forms of law, as by a mob, or any unauthorised persons.

"George was *lynched,* as he deserved."—*Emerson: English Traits,* ch. ix.

lynch-law, *s.* The act or practice of punishing offenders for a crime without a trial. Like the verb "to lyuch," this expression originated in America, but is now naturalized in England.

* **lyn'-cŭs,** *s.* [Mod. Lat.] [Lynx.]

Zool.: A genus proposed by Gray (*Annals of Phil.,* xxvi.), to include the lynxes, which are now classed as species (or varieties of a species) of the genus Felis.

* **lynde,** *s.* [A.S. *lind;* Sw. & Dan. *lind;* Dut. & Ger. *linde.*] Tbe linden-tree (q.v.).

* **lynd'-en,** *s.* [Linden.]

* **lyne,** *s.* [Line, *s.*] Flax.

* **lynn,** *s.* [Linn.] A waterfall.

lynx, * **lince,** *s.* [Lat. from Gr. λύγξ (*lungx*).]

1. *Zool.:* A common name for the different varieties of *Felis lynx,* or, as some zoologists think, of the different species of the genus Lyncus (q.v.). The Greek λύγξ was probably the Caracal (q.v.) (cf. Ovid, *Met.,* xv. 413). Lynxes shared with leopards the duty of drawing the chariot of Bacchus (Pers. i. 101; Virg., *Georgic* i. 264); Pliny (*Hist. Nat.,* xxviii. 32) calls them the "most sharp-sighted of all quadrupeds," hence the epithet lynx-eyed (q.v.). The lynxes are all of moderate size, but larger than the true cats; limbs long, tail short and stumpy, ears tipped with a pencil of hair, the cheeks bearded, and pads of the feet overgrown with hair; colour, light-brown or gray, more or less spotted with a darker shade. They are fierce and savage, and prey on sheep and poultry. Their skins are valuable as fur. *Felis lynx* is the Common Lynx, found in Scandinavia, Russia, the north of Asia, and formerly in the forest regions of Central Europe; *F. cervaria* is a native of Siberia; *F. pardina* of Turkey, Greece, Sicily, Sardinia, and Spain; and *F. isabellina* of Tibet. The New World has also four lynxes: *F. canadensis,* the Canada Lynx, the most northern species; *F. rufa,* the Bay or Red Lynx, extending nearly over the United States, but giving place in Texas and the south of Califoruia to *F. maculata,* and in Oregon and Washington Territory to *F. fasciata.* Prof. Flower is of opinion that, on further investigation, all these will be found to be varieties of a single species.

"I pass the war that spotted *lynxes* make
With their fierce rivals for the female's sake."
Dryden: Virgil; Georgic iii. 415.

2. *Astron.:* A constellation of Hevelius, between the head of Ursa Major and the star Capella. None of the stars are larger than the fourth magnitude.

lynx-eyed, *a.* Having sharp, acute sight.

ly'-ŏn, *s.* [Lion.]

lyon-court, *s.* The Scottish court of the Lyon king-at-arms (q.v.).

¶ *Lyon king-at* (or *of*) *arms:*

Her.: An official in Scotland, deriving his title from the lion rampant, the armorial bearings of the Scottish kings. He has authority to inspect the arms and ensigns-armorial of all noblemen and gentlemen in the kingdom, to distinguish the arms of the younger branches of families, and to give proper arms to those entitled to bear them, to matriculate such arms, and to fine those who bear arms which are not matriculated. He also appoints and superintends messengers-at-arms. He is assisted also by heralds and pursuivants. Called also Lord Lyon.

ly-ō-nĕt'-ĭ-a, *s.* [Named after Lyonet, the entomologist.]

Entom.: The typical genus of the family Lyonetidæ. The larvæ of *Lyonetia Clerckella* burrow in the leaves of the apple and cherry-trees.

ly-ō-nĕt'-ĭ-dæ, *s. pl.* [Mod. Lat. *lyonetia,* and Lat. fem. pl. adj. suff. *-idæ.*]

Entom.: A family of moths, group or tribe Tineina. Head generally smooth; antennæ, with the basal joint expanded into an eye-cap;

the anterior wings narrow; posterior wings lanceolate, with long cilia; larvæ with sixteen legs, most of them leaf miners. Genera, five. British species, mostly leaf miners.

lȳ-pē-mā′-nĭ-ą, *s.* [Fr. *lypémanie*, from Gr. λύπη (*lupē*) = pain of mind, grief, and μανία (*mania*) = madness.]

Mental Pathol.: The melancholia of the ancients. The term was introduced by Esquirol to signify disorder of the faculties with respect to one or a small number of objects, with predominance of a sorrowful and depressing passion. (*Bucknill & Tuke: Psychol. Med.*, p. 33.)

lȳ-rą, *s.* [Lat. = a lyre (q.v.).]

1. *Anat.:* A triangular portion of the *corpus callosum*, marked with transverse longitudinal and oblique lines.

2. *Astron.:* The Lyre or Harp: one of the twenty ancient Northern constellations. It is situated to the south-east of the head of Draco, having Hercules on the west and south and Cygnus on the east. Though a small constellation, it contains the large star Vega (q.v.), with nearly twenty others visible to the naked eye, and, according to Bode, 166 in all, including teleseopie stars.

3. *Zool.:* A sub-genus of Brachiopoda, genus Terabratella.

lȳ′-rāte, lȳ′-rāt-ĕd, *a.* [Lat. *lyra* = a lyre.]

1. *Ord. Lang.:* In a lyrate manner, so as to faintly resemble a lyre.

2. *Bot.:* Lyre-shaped; a kind of pinnatilobate leaf, having the lobes divided into an uncertain depth; panduriform, but with several sinuses on each side, which gradually diminish in size to the base; as the leaves of *Geum urbanum, Raphanus Raphanistrum.* (*Lindley.*)

***lyre (y as ī) (1), *lere, *lire, *luke,** *s.* [A.S. *hleor; Icel. hlyr;* O. L. Ger. *hleor.*] The face, the countenance, the complexion.

"Hire lufum *leor.*" *St. Marherete*, 3.

lyre (y as ī) (2), *s.* [Fr., from *lyra;* Gr. λύρα (*lura*) = a lyre.]

1. *Mus.:* One of the most ancient stringed instruments. The word lyre (λύρα) does not occur in Homer; he speaks only of the citharis (κίθαρις) and phorminx (φόρμιγξ). The distinction between a citharis (or *guitar*), and a lyre, is that the neck of the former runs behind the upper part of the strings, while the strings of the latter are free on both sides. The lyre originally had but three strings, to which four were added by the Greeks to form a heptachord. The number was afterwards increased to eleven and finally to sixteen.

LYRE.

"Taught his warlike hands to wind
The silver strings of his melodious *lyre.*"
Dryden: Ovid; Metamorphoses I.

2. *Astron:* [Lyra].

lyre-bat, *s.*

Zool.: Megaderma lyra, a bat of the family Rhinolophidæ (Nycteridæ). Habitat, continental India and Ceylon; length, three-and-a-half inches; slaty-blue in colour, paler beneath; ears about half the length of the head and body. It is carnivorous, and, in addition to insects, feeds on frogs, fish, and even smaller bats.

lyre-bird, *s.*

Ornith.: Menura superba (or *novæ-hollandiæ*), an insectivorous Australian bird, placed by Professor Huxley in his Coraeomorphæ. (In this connection see a paper by Mr. Bartlett, in *Proc. Zool. Soc.*, 1867, pp. 688, 689.) Habitat, New South Wales, the southern part of Queensland, and perhaps some parts of the colony of Victoria. The lyre-bird is not so large as a hen-pheasant; plumage, sooty-brown, relieved by rufous on the chin, throat, some of the wing-feathers, and the tail-coverts. The sixteen rectrices are developed in the male in the extraordinary fashion that gives the bird its English name. The two exterior have the outer web very narrow, and the inner very broad, and they curve at first outwards, then somewhat inwards, and near the tip outwards again, bending round so as to present a lyre-like form. The middle pair of feathers have the outer web broad, and the inner web very narrow; they cross near their base, and then diverge, bending round forwards near the tip. The remaining twelve feathers are thinly

LYRE-BIRD

furnished with barbs, and present a hair-like appearance. The lyre-bird is becoming rare; and though specimens have been brought to Europe, none has long survived in captivity. (*Prof. Newton.*) Called also Lyre-pheasant.

lyre-flower, *s.*

Bot.: Dielytra spectabilis.

lyre-pheasant, *s.* [Lyre-bird.]

lyre-shaped, *a.* [Lyrate, 2.]

lyre-tail, *s.*

Ornith.: The genus Menura (q.v.).

lyr-ĕn-çĕph′-ą-lą (yr as ïr), *s. pl.* [Gr. λύρα (*lura*) = a lyre, and ἐγκέφαλον (*engkephalon*) = the brain, so named because the brain of reptiles somewhat resembles the loose brain of birds.]

Zool: A name given by Owen to Reptiles (q.v.).

lyr′-ĭc, *lïr′-ïcke, *lÿr′-ïck, *a.* & *s.* [Lat. *lyricus;* from Gr. λυρικός (*lurikos*) = pertaining to the lyre; λύρα (*lura*) = a lyre; Fr. *lyrique;* Ital. & Sp. *lirico.*]

A. *As adj.:* Pertaining or relating to a lyre or harp; intended or suited for the lyre.

"His [Æschylus] versification with the intermixture of *lyric* composition is more various than that of Shakspeare."—*Observer*, No. 70.

B. *As substantive:*

* 1. A composer or writer of lyric poems.

"The greatest conqueror in this nation, after the manner of the old Grecian *lyricks*, did not only compose the words of his divine odes, but set them to music himself."—*Addison.*

2. A lyric poem or composition.

"Or else at wakes with Joan and Hodge rejoice,
Where D'Urfey's *lyrics* swell in every voice."
Gay: Shepherd's Week; Wednesday.

3. A verse of the kind commonly used in lyric poetry.

lyric-poetry, *s.* Originally poems intended to be sung to the accompaniment of the harp or lyre; now poems intended for musical recitation, and especially poems expressing or referring to the poet's individual thoughts and emotions, as distinguished from epic or dramatic poetry, which is concerned with external circumstances and events.

lyric-stage, *s.* A term applied to operatic representations.

* **lyr′-ĭc,** *v.t.* [Lyric, *a.*] To sing in a lyrical manner.

"Parson Punch . . . *lyrics* over his part in an anthem very handsomely."—*T. Brown: Works*, li. 249.

* **lyr′-ĭc-ąl,** *a.* [Eng. *lyric; -al.*] The same as Lyric (q.v.).

"*Lyrical* emotion of every kind, which (to merit the name of *lyrical*) must be in the state of flux and reflux, or, generally, of agitation, also requires the Saxon element of our language."—*De Quincey*, in *Trench's English, Past & Present*, p. 21.

* **lyr′-ĭ-chord,** *s.* [Eng. *lyre*, and *chord.*]

Music: An old name for a vertical harpsichord.

* **lyr′-ĭ-çĭsm,** *s.* [Eng. *lyric; -ism.*] A lyric poem or composition; lyrical form of language.

lyr-ic, *s.* [Icel. *hlyri.*] A name given in Scotland to the fish known more generally as the armed bull-head.

lyr′-ĭ-form, *a.* [Fr. *lyriforme*, from Lat. *lyra* = a lyre, and *forma* = shape.] Having the shape of a lyre; more or less closely resembling a lyre in conformation. [Lyre-bird.]

"In the male of *Menura alberti*, the tail is not only *lyriform*, but the exterior rectrices are shorter than the rest."—*Prof. Newton*, in *Encyc. Brit.* (9th ed.), xv. 117.

* **lyr′-ĭsm (yr as ïr),** *s.* [Eng. *lyr(e); -ism.*] A musical performance.

"The *lyrism* . . . had gradually assumed a rather deafening and complex character."—*G. Eliot: Adam Bede*, ch. liii.

* **lÿr′-ĭst,** *s.* [Lat. *lyristes*, from Gr. λυριστής (*luristēs*), from λύρα (*lura*) = a lyre; Fr. *lyriste.*] One who plays on the lyre or harp.

"From her wilds Ierne sent
The sweetest *lyrist* of her saddest wrong."
Shelley: Adonais, xxx.

lȳ-sĭ-lō′-mą, *s.* [Gr. λύσις (*lusis*), loosing, setting free, and λῶμα (*lōma*) = a hem, fringe, or border.]

Bot.: A genus of Mimoseæ, akin to Acacia. An unknown species from China furnished the excellent Sabicu wood of which the stairs were made in the first Great Exhibition, that of 1851. (*Treas. of Bot.*).

lÿs-ĭ-mā′-chĭ-ą, *s.* [Lat. *lysimachia;* Gr. λυσιμάχον (*lusimachon*) = loosestrife.]

Bot.: Loosestrife, a genus of Primulaceæ, family Primulidæ. The calyx is five-partite, the corolla rotate, the stamens glabrous or glandular, the capsule opening at the summit, with five to ten teeth or valves. Known species, forty, chiefly from the temperate zone. Four (*Lysimachia vulgaris, L. nemorum, L. Nummularia*, and *L. thyrsiflora*) are European. The first and second are the most common; they have yellow flowers. Prof. Watt says that *L. candida* is eaten by the inhabitants of Munipoor as a pot-herb with fish.

lȳ′-sĭs, *s.* [Gr. λύσις (*lusis*) = a loosing; λύω (*luō*) = to loose.]

1. *Arch.:* A plinth or step above the cornice of the podium which surrounds the stylobate.

2. *Med.:* The gradual cooling down and defervescence in fever slowly and regularly for several days without any marked increase of exereta.

* **lÿs′-ą,** *s.* [Gr.] Madness of a dog; hydrophobia.

lȳ-s-ą-kī′-næ, lÿs-ą-kī′-ną, *s. pl.* [Gr. λύσις (*lusis*) = a loosing, setting free; ἀκή (*akē*) = a point, an edge, and Lat. fem. pl. adj. suff. *-inæ*, or neut. *-ina.*]

Zool.: A subfamily of hexactinellid sponges, having the spicules loosely arranged into a fibrous skeleton.

lÿs′-ą-kīne, *a.* & *s.* [Lyssakina.]

A. *As adj.:* A term applied to sponges having the spicules loosely arranged.

B. *As subst.:* A sponge having this structure.

"It is a *Lyssakine* with spicules so arranged crossing one another, as to weave together a thin-walled vase of delicate lattice-work with square meshes."—*Cassell's Nat. Hist.*, vi. 330.

lyssakine-hexactinellids, lyssakine-sponges, *s. pl.*

Zool.: Sponges of the Hexactinellid type.

* **lÿst,** *s.* [List, *s.*]

lÿs-ür′-ŭs, *s.* [Gr. λύσις (*lusis*) = a loosing, setting free, and οὖρον (*ouron*) = urine.]

Bot.: A genus of gasteromycetous fungals sub-order Phalloidei (q.v.). *Lysurus mokusin* is preseribed by the Chinese in gangrenous ulcers. It is also eaten, but is often poisonous.

* **lȳ-tĕr′-ĭ-ąn,** *a.* [Gr. λυτήριος (*luterios*) = loosing, delivering; λυτήρ (*lutēr*) = a looser; λύω (*luō*) = to loose, to free.]

Med.: Terminating a disease; indicating the end of a disease.

* **lȳthe,** *a.* [Lithe, *a.*]

* **lȳthe,** *s.* [Etym. doubtful.] A fish; the coal-fish or whiting pollack in its fourth year.

"There is no need for good fishing when you catch *lythe.*"—*Black: Princess of Thule*, ch. ii.

* **lÿth′-ĕr,** *s.* [Luther.]

lȳ-thrā′-çĕ-æ, *s. pl.* [Lat. *lythr(um);* fem. pl. adj. suff. *-aceæ.*]

Bot.: Loosestrifes or Lythrads, an order of perigynous exogens, alliance Saxifragales. It consists of herbs, or rarely shrubs, fre-

quently with four-cornered branches, generally opposite, entire, and solitary, or clustered regular or irregular, axillary or terminal, spikes or racemes; calyx tubular, ribbed petals inserted between the outer lobes of the calyx, very deciduous or wanting. Stamens equal in number to the petals, or two or three times as many, inserted into the calyx below them; ovary, superior, generally two- to six-celled, rarely one-celled; seeds, numerous, small; capsule, membranous and dehiscent. Known genera, thirty; species, 250, chiefly from the tropics, though some are found in more northern localities.

lȳth'-rĕ-æ, *s. pl.* [Mod. Lat *lythrum,* and fem. pl. adj. suff. *-eæ.*]

Bot.: A tribe of Lythraceæ (q.v.), having the seeds wingless.

lȳ-thrō'-dēs, *s.* [Named by Karsten from Gr. λυθρώδης (*lythrōdēs*) = soiled by blood.]

Min.: A variety of Nephelite (q.v.), having a peculiar greasy lustre, hence Ger. *fettstein* = fatstone. Colours yellow, flesh-red, or as the original was described, red spotted, like streaming blood. Found in the Zircon-syenite of Frederiksvärn and other places in Norway.

lȳ'-thrŭm, *s.* [Gr. λύθρον (*luthron*) = filth, defilement, especially of blood, referring to the purple colour of some of the genus.]

Bot.: Loosestrife, the typical genus of the tribe Lythreæ. Calyx, inferior, tubular, with eight to twelve small teeth; petals, four to six; stamens, the same number or twice as many; capsule, two-celled. Twelve species are known. They are generally tropical in habitat, though a few species are found further north.

lȳt'-ta, *s.* [Lat. *lytta* = a worm under a dog's tongue, said to produce madness.]

Entom.: A genus of beetles, tribe Heteromera, sub-tribe Trachelia. *Lytta vesicatoria* is the Blister-fly. It exists in the south of Europe, feeding chiefly on the ash. *L. assamensis, L. giga,* and *L. violacea* are used in India as blistering agents. (*Prof. Watt.*)

M.

M, the thirteenth letter and the tenth consonant of the English alphabet, is classed amongst the liquids. It has a labial and a nasal articulation, the lips being compressed and the uvula lowered, so as to form a humming noise through the nose. M has but one sound in English, as in *man, much, time.* It is always sounded in native English words, but is silent in some few words, as *mnemonic,* derived from other languages. M has been lost from some of the oldest English words, as, *five* = A.S. *fif,* Goth. *fimf; soft* = A.S. *softe,* Ger. *sanft* = *samft.* It has been weakened to *n,* as in *ant* = A.S. *æmete* = emmet; *count* = O. Fr. *cumte,* Lat. *comes; noun* = Fr. *nom,* Lat. *nomen; ransom* = O. Fr. *raancon,* Lat. *redemptio,* M. Eng. *ramson.* In some cases *m* represents an original *n,* as in *hemp* = A.S. *henep, hœnep; tempt* = O. Fr. *tenter,* Lat. *tento; comfort* = O. Fr. *confort,* Lat. *conforto; vellum* = Fr. *velin; megrim* = Fr. *migraine.*

I. *As a initial* M *is used:* For master (Lat. *magister*), as M.A. (*magister artium*) = Master of Arts; for medicine, as M.D. = Doctor of Medicine; for *mundi* (Lat. = of the world), as in A.M. (*anno mundi*) = in the year of the world; for member, as M.P. = Member of Parliament.

II. *As a symbol* M *is used:*

In numer.: For 1,000; with a dash over it (M) for 1,000,000.

* ¶ *To have an M under* (or *by*) *the girdle:* To have the courtesy to address persons as *Mr., Miss, Mrs.,* or *Madame.*

ma, *conj.* [Ital.]

Music: But; as, Allegro, *ma* non troppo = fast, but not too fast.

mā'am, *s.* [A contr. of *madam* (q.v.).]

ma-ăsh'-a, *s.* [Native name.] An East Indian coin, value rather more than the tenth part of a rupee.

măb, *s.* [Wel. = a child.]

1. A mythical personage, sometimes described as the queen of the fairies.

2. A slattern. (*Prov.*)

măb, *v.i.* [Mab, *s.*] To be slovenly; to dress in a slovenly manner. (*Prov.*)

ma'-ba, *s.* [Native name of the tree on the Island of Tongataboo. (*Forster.*)]

Bot.: A genus of Ebenaceæ, closely akin to Diospyros. It is believed to furnish the ebouy of Ceylon. The berries of *Maba buxifolia* are eaten by the natives of India. The wood is dark coloured, very hard and durable.

*** măb'-ble, * ma-ble,** *v.t.* [Mobile.] To wrap up.

"Their heads and faces so *mabled* in fine linnen."—*Sandys: Travels,* bk. 1., p. 69.

măb'-bȳ, *s.* [Native name.] A spirit distilled from potatoes in Barbadoes.

mă-bō'-la, *s.* [Native name (?).] (See compound.)

mabola-fruit, *s.*

Bot.: Diospyros mabola or *discolor,* a tree wild in the Philippine Islands.

Măc, *pref.* [Gael. = son.] A prefix used extensively in Scotch names; as, *Mac*Gregor, *Mac*Donald, &c. It corresponds with *son* in surnames of Teutonic origin, *Fitz* in those of Romance origin, *Ap* or *Ab* in Welsh surnames, and *O* in Irish.

mą-ca'-cō (1), **mą-câu'-cō,** *s.* [The native name.]

Zool.: Buffon's name for *Lemur catta,* the Ring-tailed or Cat-like Lemur. Colour, chinchilla-gray, with a banded tail of black and gray rings, under parts white. The hind limbs exceed the fore limbs in height, and this gives the body an arched appearance. They are readily domesticated, and may be often seen in captivity. They range along the south and west coasts of Madagascar.

mą-ca'-cō (2), *s.* [Native name (?).] (See the compounds.)

macaco-wood, *s.*

Bot.: Tococa guianensis.

macaco-worm, *s.*

Entom.: Cuterebra noxialis.

"A gad-fly found at Cayenne is distinguished by the name of the *macaco-worm;* it . . . usually attacks the skin of oxen and dogs in South America. It is accidentally found sometimes on man."—*P. J. Van Beneden: Animal Parasites,* p. 175.

mą-cā'-cŭs, *s.* [Latinised from Fr. *macaque.*]

1. *Zool.:* A genus of Catarhine Monkeys, and the section of it having the tail long, generally both with cheek pouches and natal callosities. *Macacus Inuus* is the Barbary Ape, the species a colony of which is on the Rock of Gibraltar. This is the only recent monkey found in Europe. *Macacus Silenus* is the Wanderoo of India. Called also Inuus (q.v.). Several other species are known, which are described under their popular names.

2. *Palæont.:* Found in the Upper Miocene (?) of the Siwalik Hills, and the Pliocene of Italy and the South of England.

măc-ăd-ąm-ī-zā'-tion, *s.* [Eng. *macadamiz(e); -ation.*] The act, art, or process of macadamizing a road. The stone is broken into angular pieces of a uniform size, and, after being laid, is consolidated and levelled by means of heavy rollers. A mode of paving roads introduced by Macadam, the metal or surface stone consisting of pieces of granite, whinstone, limestone, or hard freestone, according to the kind of rock which is accessible.

"Neither the government nor the inhabitants are for a time willing to go to the expense of *macadamization.*"—*A. Trollope: Australia,* i. 493.

măc-ăd'-ąm-īze, *v.t.* [Named after *Macadam,* the introducer of the system.] To pave, cover, or repair a road by the process of macadamization (q.v.).

măc-ăd'-ąm rōad, *s.* [After *Macadam,* the inventor, and *road.*] A road formed by macadamization.

mą-ca'-ō, *s.* [Macaw.]

mą-caque' (que as k), *s.* [Fr., from the native name.]

Zoology:

1. *Sing.: Macacus cynomolgus,* the Common Macaque, which may be taken as the representative of the long-tailed section of this genus. Habitat, the islands of the Malayan Archipelago. In the adult Macaque, the body is large in proportion to the limbs, and the shoulders abnormally developed; the limbs are short, as is the fur. Olive-brown, spotted with black, on the head and body, gray on the limb; tail blackish. It is quiet and good-tempered when young, but becomes savage and brutal as it grows older. Albinoes of this species sometimes occur.

2. *Pl.:* The genus Macacus (q.v.).

măc-ą-răn'-gą, *s.* [Native name.]

Bot.: A genus of Euphorbiaceæ, tribe Acalyphæ. *Macaranga dentata* and *M. gummiflua,* trees found in Sikkim, are used for feucing or temporary huts. *M. indica* and *M. tomentosa* yield gum resins; that of the latter tree is used, according to Gamble, medicinally, and for taking impressions. (*Calcutta Exhib. Report.*)

mą-căr'-ĭ-ą, *s.* [Gr. μακαρία (*makaria*) = happiness, bliss.]

Entom.: The typical genus of the family Macaridæ (q.v.). *Macaria liturata* is the Tawny-barred Angle found in fir woods.

Mą-căr'-ĭ-ąns, *s. pl.* [For etym. see def.]

Church Hist.: The Monothelites of Antioch, so called from Macarius, who was patriarch at the time of the second Council of Constantinople (A.D. 620), at which he defended his opinions, but was condemned. [Monothelites.]

ma-căr'-ĭ-dæ, *s. pl.* [Mod. Lat. *macar(ia);* Lat. fem. pl. adj. suff. *-idæ.*]

Entom.: A family of Moths, group Geometrina. Anteunæ in the males pubescent, rarely pectinated, fore wings running into a prolonged tip, hinder ones angular, somewhat dentate. Larvæ with ten or twelve legs.

***măc'-ą-rīze,** *v.t.* [Gr. μακαρίζω (*macarizō*) = to make happy, to bless; μάκαρος (*makaros*) = happy, blessed.] To bless, to pronounce or cousider happy, to congratulate.

"The word *macarize* has been adopted by Oxford men who are familiar with Aristotle, to supply a word wanting in our language. . . . Men are admired for what they are, commended for what they do, and *macarized* for what they have."—*Whately: Bacon; Essays,* p. 473.

măc-ąr-ō'-nĭ, măc-car-ō'-nĭ, *s.* & *a.* [O. Ital. *maccaroni* = a kind of paste meate boiled in broth and drest with butter, cheese, and spice (*Florio*); Ital. *maccheroni;* cf. Gr. μακαρία (*makaria*) = a mess of broth and pearl-barley, a kind of porridge.]

A. *As substantive:*

I. *Lit.:* An article of food composed of the dough of fine wheaten flour, made into long, slender tubes varying in diameter from one-eighth of an inch to an inch. It is a favourite food in Italy.

1. A medley, an extravagance, an idle fancy

2. A droll, a fool.

3. A fop, a dandy, an exquisite. They led the fashion from 1770 to 1775. They were distinguished by the immense knot of artificial hair worn by them, a very small cocked hat, jacket, waistcoat, and small-clothes very tight to the body, and a walking-stick ornamented with long tassels.

"This fellow would turn rake, and *macaroni,* if he was to stay here a week louger."—*Garrick: Bon Ton,* i. 1.

4. (*Pl.*): A body of soldiers from Maryland during the War of Independence, so called on accouut of their showy uniform.

* **B.** *As adj.:* Foppish, fashionable, dandy, affected.

"Ye travell'd tribe, ye *macaroni* train,
Of French friseurs and nosegays justly vain . . .
Lend me your hands."
Goldsmith: Epilogue, spoken by Mrs. Bulkley.

MACARONI.

*** măc-ą-rō'-nĭ-ąn, * măc-ą-rō'-nĭ-ąn,** *a.* & *s.* [Eng. *macaroni; -an.*]

A. *As adj.:* The same as Macaroni (q.v.).

B. *As subst.:* Macaronic verse.

"The *macaronian* is a kind of burlesque poetry, consisting of a jumble of words of different languages, with words of the vulgar tongue latinized, and latin words modernized."—*Cambridge: Scribleriad*, bk. ii. (Note 16.)

măc-a-rŏn'-ĭc, măc-ca-rŏn'-ĭc, măc-a-rŏn'-ĭck, *a.* & *s.* [Fr. *macaronique*, from *macaroni* (q.v.).]

A. *As adjective:*

I. *Lit.:* Of or pertaining to the dish or food macaroni.

II. *Figuratively:*

1. Pertaining to or like a macaroni; empty, trifling, vain, affected.

2. Consisting of a jumble or mixture of ill-formed words, or of every-day words to which Latin terminations have been added, or of Latin or other foreign words Anglicized: as, *macaronic* verse.

B. *As substantive:*

1. A confused heap, medley, or jumble of several things.

2. Macaronic verse.

¶ *Macaronic verse* or *poetry:* A term first employed by Theophilo Folengo (otherwise Merlinus Coccaius), in 1509, to designate a kind of humorous or ludicrous verses, in which words of other languages, with Latin terminations or inflections are mixed up with Latin words. Verses in which foreign words are ludicrously distorted and jumbled together.

măc-a-roôn', *mak-a-ron, *s.* [Fr., from Ital. *macaroni* = macaroni (q.v.).]

1. A kind of small sweetcake or sweet biscuit made of flour, almonds, eggs, and sugar.

"Marchpane and dry sucket, *macaroons* and diet bread."—*Albumazar*, ii. 3.

*2. A low, coarse fellow, a finical fellow, a macaroon.

"I sigh, and sweat,
To hear this *makaron* talke, in vaine."
Donne: Satires, sat. 4.

Ma-cart'-neў, *s.* [For etym. see compound.]

Macartney-cock, *s.*

Ornith.: Euplocomus ignitus, a gallinaceous bird, first described in the account of Lord Macartney's embassy to China. Length of adult male, about two feet. It has a general resemblance to the Impeyan-pheasant in its rich metallic colouring, but the middle of the back is brilliant orange; the tail bluish-green, orange, and white. Habitat, Sumatra and the adjacent islands.

Ma-căs'-sar, *s.* [See def.] The name of a district in the island of Celebes, in the Eastern Archipelago.

Macassar-oil, *s.* An oil used for promoting and strengthening the growth of the hair, so named from having been originally brought from Macassar. The name is now commonly given to a prepared mixture of castor and olive-oil.

"In earthly virtue nothing could surpass her,
Save thine incomparable *oil, Macassar*."
Byron: Don Juan, i. 17.

ma-câw', *ma-ca'-ō, *mac-câw', *s.* [The native name in the West Indian Islands.

Ornith.: The popular name for any member of the South American family Araidæ, and more strictly of the genus Ara (Brisson), or Macrocercus (*Vieillot*). The macaws are remarkable for their size and the beauty of their plumage. They are less docile than the true parrots, can rarely be taught to articulate more than a few words, and their cry is harsh and disagreeable. The Scarlet Macaw, *Ara macao*, is a very handsome bird; the principal colour is bright-red, with blue rump, vent, tail-coverts, and quills, and greenish-blue and yellow wing-coverts, tail, two-thirds of whole length blue and crimson. The Red and Blue Macaw, *A. aracanga*, resembles the first species, but the middle of the wing-coverts is bright yellow. The Green Macaw, *A. militaris*, has lively green plumage, lower back, upper tail, and wing-coverts blue, the under surface orange-yellow. The Blue and Yellow Macaw, *A. ararauna*, is one of the handsomest of the genus. Waterton (*Wanderings in South America* (ed. 1879), p. 196) says of it: "The flaming scarlet of his body, the lovely variety of red, yellow, blue, and green in his wings, the extraordinary length of his scarlet tail, all seem to join and demand for him the title of emperor of the parrots."

macaw-bark, *s.*

Bot.: Solanum mammosum.

macaw-fat, *s.*

Bot.: A West Indian name for the Oil Palm, *Elæis guineensis.*

macaw-tree, *s.*

Bot.: (1) *Acrocomia fusiformis*, and (2) *A. lasiospatha*; the latter is called the Great Macaw-tree.

Măc-ca-bē'-an, *a.* [Eng. *Maccabe(e)*; *-an.*] Pertaining or relating to the Maccabees.

Măc'-ca-beēs, *s. pl.* [Lat. *Maccabæus*; Gr. Μακκαβαίος (*Makkabaios*); from Heb. מַקַּבּוֹת (*maqqabhoth*), or מַקֶּבֶת (*maqqebheth*) = a hammer; from the last three letters of the names Abraham, Isaac, and Jacob, on the banner of the tribe of Dan, or from the first letters of the Hebrew words מִי כָמֹכָה בָּאֵלִם יְהוָה (*Mi kamokah baelim Jehovah*) ("Who is like unto Thee, O Lord, among the gods?") in Exod. xv. 11.]

Jewish Hist.: A name applied to a patriotic family whose achievements were most notable. Antiochus Epiphanes, a Syrian king, having been expelled from Egypt by the Romans, relieved his vexation by attempting to put down the Jewish worship. Palestine then being under his sway, the aged Mathathias, priest of Modin, was urged to set his people the example of sacrificing to the Greek gods. In place of doing so, he killed the king's messenger, and escaped to the mountains, his sons being companions of his flight. Their names were John called Caddis, Simon called Thassi, Judas called Maccabæus, in connection with whom the name Maccabees originated, Eleazar called Avaran, and Jonathan called Apphus. The revolt began B.C. 168, and in 165 Judas took Jerusalem, and purified the Temple in commemoration of which the winter festival called the Feast of Dedication was annually kept, and is alluded to in John x. 22. After achieving success, a Maccabean, called also an Asmonæan, dynasty reigned for about a century, Herod the Great, slaughterer of the infants of Bethlehem, putting to death Hyrcanus, the last scion of the house, though he was inoffensive, pious, and the high priest.

¶ *The Books of Maccabees:* Four books of our present Apocrypha, with a fifth not in that collection.

1 *Maccabees:* A work giving an account of the Maccabean struggle, with a simplicity and candour which render its statements eminently credible. It seems to have been written originally in Hebrew by a Palestinian Jew, probably a Sadducee. It never formed part of the Jewish canon or the Christian canons of Melito, Origen, the Council of Laodicea, Cyril, St. Hilary, Athanasius, Jerome, &c. It was first received into the canon by the Council of Hippo (A.D. 393) and that of Carthage (A.D. 397), the modern Council of Trent confirming their decision. The Roman Church considers it an inspired production; the Protestant, uninspired but of high historical value.

2 *Maccabees:* A much less valuable production than 1 Maccabees. It was compiled by a person whose name is not given, from a more extended narrative written by Jasou of Cyrene. Jason's book seems to have been published about B.C. 160 The object of the compiler is to exhort the Jews to keep the Jewish faith, and especially to venerate the temple at Jerusalem. The writer gives an incident which he alleges to have occurred during the attempts made by Heliodorus to plunder the temple. He concludes with the victory of Judas Maccabæus over Nicanor, B.C. 161. He has not a critical mind, and some of his narratives have a mythic air.

3 *Maccabees:* A book narrating events earlier than the Maccabean times. It commences with Ptolemy IV (Philopator), B.C. 217, wishing to enter the Holy of Holies, the high priest having in vain remonstrated, prayed against him, causing him to be struck with paralysis. Enraged in consequence, the monarch, on reaching Egypt, wreaked his vengeance on the Alexandrian Jews. Most of them having refused at his bidding to be initiated into the orgies of Bacchus, were confined to the Hippodrome, to be trampled to death by 500 drunken elephants. Through divine interposition, the elephants turned on the soldiers instead of attacking the Jews. The king, relenting at the spectacle, set the Jews free. A festival was instituted to commemorate the deliverance. The author seems to have been an Alexandrian Jew, who wrote in Greek.

4 *Maccabees:* A work written to encourage the Jews, who lived in the midst of a contemptuous heathen population, to remain true to the Jewish faith. Its reasonableness is insisted on, and its power to control the passions and inspire fortitude. As an illustration, the author gives the history of the Maccabean martyrdoms. It seems to have been written A.D. 39 or 40.

5 *Maccabees:* This work embraced the history of 178 years, from Heliodorus's attempt to plunder the treasury at Jerusalem, B.C. 184, to B.C. 6, when Herod was on the throne. There are many parallelisms with Josephus. It is a valuable historical production. It was a compilation made by a Jew after the destruction of Jerusalem, from ancient Hebrew records. (*Ginsburg*, in *Cycl. Bib. Liter.*)

***mạc-câw', s.** [Macaw.]

***măc'-cō, s.** [Etym. doubtful.] A gambling game.

"His uncle was still at the *macco* table."—*T. Hook: Man of many Friends.*

măc'-côu-ba, măc'-cō-bō', mac-cubau, ma-cou-ba, *s.* [From Maccouba, in Martinique, where the tobacco, from which it is manufactured, is cultivated.] A kind of snuff scented with attar of roses.

māçe (1), *s.* [O. Fr. *mace, mache* (Fr. *masse*), from Lat. * *matea* = a beetle, formed in the dimin. *mateola* = a beetle, a mallet; Ital. *mazza*; Sp. & Port. *maza.*]

I. *Ordinary Language:*

1. In the same sense as II. 2.

2. An ornamented staff of silver or other metal, originating in the military mace, borne before judges, magistrates, and others in authority. It was originally decorated at its summit with canopy-work, and is now generally surmounted by a crown.

"It was necessary to put the Speaker in the chair and the *mace* on the table for the purpose of restoring order."—*Macaulay: Hist. Eng.*, ch. xix.

3. A macebearer (q.v.).

4. A policeman's club. (*U. S.*)

II. *Technically:*

1. *Leather:* A currier's mallet with a knobbed face, made by the insertion of pins with egg-shaped heads. It is used in leather-dressing to soften and supple the tanned hides, and enable them to absorb the oil, &c. It is analogous to the fulling-hammer.

2. *Old Armour:* A military implement used for dealing heavy blows, and constructed so as to fracture armour. It was frequently carried by horse-soldiers at the saddle-bow, where it was suspended by a thong which passed through the upper part of the handle; this thong was wound round the wrist to prevent its loss by the force of a blow. It had many forms: a simple iron club, a spiked club, a pointed hammer. In the times of the Plantagenets the mace was used in battles and tournaments, and was superseded by the pistol in the time of Elizabeth. The mace is still retained among the Turkish irregular cavalry.

"Tho heo were thorg out ymengd with swerdes & with *mace*." *Robert of Gloucester*, p. 48.

3. *Billiards:* A heavy rod or cue, used in pushing a ball along the table.

mace-bearer, *s.* An officer who carries the mace before a judge or other person in authority.

"John, Bishop of Lincoln, with purse-bearer, *mace-bearer*, six boy-angels playing on musical instruments, and six Latin verses."—*Walpole: Catalogue of Engravers*, vol. v.

*** mace-proof,** *a.* Secure against arrest.

māçe (2), *s.* [Fr. *macis*; Ital. *mace*; Lat. *macis, macir*; Gr. μάκερ (*maker*).] The aril of *Myristica moschata.* [Nutmeg.]

¶ Red Mace is the aril of *Pyrrhosa tingens*, and White Mace that of *Myristica Otoba.*

"The fruit hereof [nutmeg] consisteth of four parts; the first or outward part is a thick and carnous covering like that of a walnut, the second a dry and flosculous coat, commonly called *mace*."—*Browne: Vulgar Errours*, bk. iii. ch. vi.

¶ *Reed mace:*

Bot.: The genus Typha.

*** mace-ale,** *s.* Warm ale in which mace has been infused.

"I prescribed him a dranght of *mace-ale*, with hopes to dispose him to rest."—*Wiseman: Surgery.*

Măç-ĕ-dō'-nĭ-ạn (1), *a.* & *s.* [See def.]

A. *As adj.:* Of or pertaining to Macedonia, a district in the north of Greece, or its inhabitants.

B. *As subst.:* A native or inhabitant of Macedonia.

Macedonian-phalanx, *s.* [PHALANX.]

Măç-ĕ-dō'-nĭ-ạn (2), *a.* & *s.* [See def.]

A. *As adj.:* Pertaining to, or in any way connected with the teaching of Macedonius: as, the *Macedonian* heresy.

B. *As substantive:*

Church Hist. (*Pl.*)*:* A sect which came into existence towards the end of the Arian controversy, taking its name from Macedonius, who become Patriarch of Constantinople in 341. He taught that the Holy Ghost was "subordinate to the Father and to the Son, unlike to them in substance, and a creature." Macedonius, who was a semi-Arian, was deposed by the Arians in 360; and his special tenets were condemned at the Council of Constantinople in 381, where thirty-six bishops were found to support them. In that Council the clause defining the divinity of the Holy Ghost was added to the Nicene Creed. The Macedoniaus were called also Pneumatomachi.

măk-ĕl'-lō-dŏn, *s.* [Gr. *μάκελλα* (*makella*) = a pickaxe with one point, a kind of spade, and *ὀδούς* (*odous*), genit. *ὀδόντος* (*odontos*) = a tooth.]

Palæont.: A genus of Lacertilians, founded on portions of upper and lower jaw, with teeth, from a slab of Purbeck freshwater stone. (*Owen.*) Nicholson (*Palæont.*, ii. 205) says: "These are perhaps the first traces in the stratified series of the Jurassic period of remains, the affinities of which to the typical Lacertidæ cannot be disputed."

māç'-ēne, *s.* [Eng. *mac(e)*; *-ene.*]

Chem.: $C_{10}H_{16}$. A hydrocarbon present in the volatile oil of mace. It boils at 160°, and is distinguished from oil of turpentine by not forming a crystalline hydrate when mixed with alcohol and nitric acid.

māç'-ẽr (1), *s.* [Eng. *mace* (1); *-er.*]

Scots Law: Officers attending the Supreme Courts in Scotland, appointed by the Crown. Their duty is to keep silence in the court, and execute the orders of the courts, if addressed to them. They hold their office for life, and are paid by salary. (*Chambers.*)

"The jury . . . retired, preceded by a *macer* of court."—*Scott: Heart of Midlothian*, ch. xxiii.

*** māç'-ẽr** (2), *s.* [Eng. MACE (2), *s.*] A medicinal bark, said to be useful in dysentery.

măç'-ẽr-āte, *v.t.* [Lat. *maceratus*, pa. par. of *macero* = to steep; *macer* = lean; Gr. *μάσσω* (*massō*) = to knead, to wipe.]

* 1. To make lean; to wear away.

"Philip, Earl of Arundel, *macerated* himself in a strict course of religion."—*Baker: Queen Elizabeth* (an. 1595).

* 2. To mortify; to harass with hardships; to worry.

"Sad cares, as wont to *macerate*
And rend the greedie mindes of covetous men."
Spenser: Virgil's Gnat, 94.

3. To steep almost to solution; to soften by steeping; to soak; to separate the parts of by the digestive process.

"The saliva, distilling continually, serves well to *macerate* and temper our meat."—*Ray: On the Creation*, pt. ii.

măç-ẽr-ā'-tion, *s.* [Lat. *maceratio*, from *maceratus*, pa. par. of *macero* = to macerate; Fr. *macération*; Sp. *maceracion*; Ital. *macerazione.*]

* 1. The act or process of wasting or making lean.

* 2. The state of becoming lean or wasted.

3. The act of harassing or mortifying.

"A true and serious *maceration* of our bodies by an absolute and totall refraining from sustenance."—*Bishop Hall: Sermon to His Majesty*, March 30, 1628.

4. The act, process, or operation of softening by steeping, or by the digestive process.

"Eaten in excess [onions] are said to offend the head and eyes, unless edulcorated with a gentle *maceration*."—*Evelyn: Acetaria.*

măc-far'-lạn-īte, *s.* [Named after T. Macfarlane; suff. *-ite* (*Min.*).]

Min.: A name given to a granular mixture of reddish-coloured grains with other minerals, occurring at Silver Islet, Lake Superior, with metallic silver. This ore appears to contain several supposed new minerals, two of which have been named huntilite (after Dr. T. Sterry Hunt), and animikite (from *animikie*, the native name for thunder), respectively. The former is assumed from analyses to be an arsenide of silver, with the formula Ag_3As; the latter, an antimonide of silver, having the formula Ag_9Sb. But Macfarlane, who has well investigated these minerals and other mineral mixtures contained in this ore, considers that further examination is necessary before the above can be recognised as mineral species.

mạ-chæ'-rĭ-ŭm, *s.* [Gr. *μαχαίριον* (*machairion*) = a surgeon's knife.]

Bot.: A genus of papilionaceous plants, tribe Dalbergieæ. It furnishes the Itakawood of Guiana. *Machœrium firmum*, *M. incorruptibile*, and *M. legale* are large trees, which yield an inferior kind of rosewood. They are from Brazil.

mạ-chaī'-rŏ-dŭs, *s.* [Gr. *μάχαιρα* (*machaira*) = a large knife or dirk, a dagger, a sabre, and *ὀδούς* (*odous*), genit. *ὀδόντος* (*odontos*) = a tooth.]

Palæont.: Sabre-toothed tiger, a genus of Felidæ, having the upper canines extraordinarily developed, trenchant, and sabre-shaped, with serrated margins. In it the organization reaches the highest power of destruction. Range in space: through India, the continent of Europe, Britain, and North and South America. Range in time from the Miocene to the close of the Upper Miocene period.

ma'-chạ-lăth, ma'-hạ-lăth, *s.* [Heb.] This word occurs in the title of Psalms liii. and lxxxviii.; the former is inscribed to the "chief musician upon Mahalath," the latter to the "chief musician upon Mahalath Leannoth." Mahalath is by some authors traced (like Machol) to a root meaning pierced or bored; hence it is thought these Psalms were accompanied by flutes. It is generally thought that the term leannoth refers to antiphonal singing. Other writers consider the titles of these and several other Psalms to be a reference to well-known tunes to which they were to be sung.

*** măçhe,** *s.* [MATCH.]

mạ-chê'-tê, *s.* [Sp.] A Spanish implement for cutting cane, corn, vines, &c.

mạ-chē'-tēş, *s.* [Gr. *μαχητής* (*machētēs*) = a fighter, a warrior; *μάχη* (*machē*) = a fight.]

Ornith.: A genus of Scolopacidæ, containing only one species, *Machetes pugnax*, the Ruff (q.v.). The name has reference to the pugnacious habits of the bird, and was proposed by Cuvier in his *Règne Animal* (ed. 1817). It has been adopted by Gould, Selby, and Temminck. Others refer the bird to the genus Tringa (q.v.).

"Thus the *Machetes pugnax* retains his ruff in the spring for barely two months."—*Darwin: Descent of Man* (1871), ii. 84.

Măch-ĭ-ạ-vĕ'-lĭ-ạn, *a.* & *s.* [See def.]

A. *As adj.:* Of or pertaining to Nicolo Machiavelli, an Italian writer, secretary and historiographer to the republic of Florence; following the example or teaching of Machiavel; politically cunning; crafty; using duplicity or bad faith.

B. *As subst.:* One who follows the example or teaching of Machiavel.

Măch-ĭ-ạ-vĕ'-lĭ-ạn-ĭşm, Măch'-ĭ-ạ-vĕl-ĭşm, *s.* [Eng. *Machiavelian*; *-ism.*] The principles or system of statesmanship taught or carried out by Machiavel: that right should be systematically subordinated to expediency, and that all means might be resorted to, however treacherous or unlawful, for the establishment and maintenance of the power of the ruler over his subjects; political cunning or duplicity.

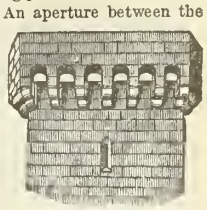
mạ-çhĭc'-ō-lāte, *v.t.* [Low Lat. *machicolatus*, pa. par. of *machicolo*, *machicollo.*] [MACHICOLATION.] To form or furnish with machicolations.

mạ-çhĭc'-ō-lāt-ĕd, *a.* [MACHICOLATE.] Formed or furnished with machicolations.

"Glared on a huge *machicolated* tower."
Tennyson: Last Tournament.

mạ-çhĭc-ō-lā'-tion, *s.* [Low Lat. *machicolamentum*, from O. Fr. *maschecoulis*; Fr. *mâchecoulis*, *mâchecoulis*, *mâchicoulis*, a word of doubtful origin; perhaps from O. Fr. *masche*, Fr. *mâche* = match, combustible matter, and O. Fr. *coulis* = flowing.]

1. *Arch. & Eng.:* An aperture between the corbels supporting a projecting parapet. They were much employed in castellated architecture, and were intended for the purpose of allowing missiles, molten lead, hot pitch, &c., to be hurled or poured down on assailants approaching near the walls.



MACHICOLATION.
(*Tower over South Gateway at Bodiam Castle, Sussex.*)

2. The act of hurling missiles, or pouring molten lead, &c., through the apertures described in 1.

*** ma-chi-cot,** *s.* [Fr.] An obsolete term for one of the *chori ministri minores* of a cathedral, who, in singing, added passing-notes between intervals of the plain-song; or, according to others, added a part to the plain-song at an interval of a third or fourth, thus forming a sort of organum or diaphony. The music thus sung was called machicotage.

mạ-çhî-côu-lîs' (*s* silent), *s.* [Fr.]

Fort.: A projecting gallery with loopholes arranged to obtain a downward fire on an enemy. [MACHICOLATION.]

*** mā'-çhĭ-nạ,** *s.* [Lat.] A machine (q.v.).

"And the world's *machina*,
Upheld so long, rush into atoms rent."
Henry More: On Godliness, p. 42.

¶ *Deus ex machina:* A phrase used to describe the intervention of a god in the classical drama and epic poetry; in modern literature the unexpected introduction of some important personage, or the occurrence of some improbable event to enable a dramatist or novelist to escape from an awkward situation. The allusion is to the *machina*, a machine by which gods and heroes were represented passing through or floating in the air. Nineteenth century experience has failed to improve on the rule for the introduction of supernatural beings which Horace laid down two thousand years ago:

"Nec Deus intersit, nisi dignus vindice nodus
Inciderit." *Ars Poetica*, 191, 192.

*** mạ-çhĭn'-ạl,** *a.* [Lat. *machinalis*, from *machina* = a machine; Fr. *machinal*; Sp. *maquinal*; Ital. *macchinale.*] Of or pertaining to a machine or machines.

*** măch'-ĭ-nāte,** *v.t.* & *i.* [Lat. *machinatus*, pa. par. of *machinor* = to contrive; *machina* = a machine.]

A. *Trans.:* To contrive, to plan, to form, as a plot or scheme.

B. *Intrans.:* To plot, to scheme.

"How long will you *machinate*?
Persecute with causeless hate!"
Sandys: Psalm, p. 96.

măch-ĭ-nā'-tion, *s.* [Lat. *machinatio*, from *machinatus*, pa. par. of *machinor* = to contrive; Fr. *machination*; Sp. *maquinacion*; Ital. *macchinazione.*]

1. The act of plotting, scheming, or contriving plans or schemes for the accomplishment of some object, generally bad.

"The energy and vigour that is necessary for great evil *machinations*."—*Burke: To a Member of the Nat. Assembly.*

2. A plot, a plan, a scheme, a contrivance.

"One Whig historian talks of the *machinations* of the republicans, another of the *machinations* of the Jacobites."—*Macaulay: Hist. Eng.*, ch. xiv.

*** măch'-ĭ-nā-tŏr,** *s.* [Lat., from *machinatus*, pa. par. of *machinor*; Fr. *machinateur*; Sp. *maquinador*; Ital. *macchinatore.*] One who machinates, plots, or intrigues with evil designs; a plotter, a schemer.

"The cunning *machinator* pretends the exaltation of the freeness of that grace which he designs to dishonour and defeat."—*Glanvill: Sermons*, ser. 10.

mạ-çhîne', * ma-chune, *s.* [Fr., from Lat. *machina*, from Gr. *μηχανή* (*mēchanē*) = a contrivance, a machine, from *μῆχος* (*mēchos*) = means, contrivance; Sp. *maquina*; Ital. *macchina.*]

I. *Literally:*

1. An instrument of a lower grade than an

engine, its motor being distinct from the operating part, whereas the engine is automatic as to both. It is also distinct from a tool, as it contains within itself its own guide for operation. A contrivance by means of which a moving power is made to act upon any body, and communicate motion to it. Machines are simple and compound, complex or complicated. The simple machines are the six mechanical powers: viz., the lever, the wheel and axle, the pulley, the inclined plane, the wedge, and the screw. In compound machines two or more of these powers are combined for the production of motion, or the application or transmission of force. Machines employed in the manufacturing arts are named according to their products, as lace-machines, rope-machines, paper-machines; or to the processes they perform, as spinning-machines, printing-machines, sawing-machines, &c. Other machines are classed according to the forces by which they are put in motion, as hydraulic machines, pneumatic machines, &c. The powers employed to transmit or apply force through machines are various, as the muscular strength of men or animals, wind, water, air, gas, electricity, steam, &c.

"A great part of the *machines* made use of in those manufactures in which labour is most subdivided, were originally the inventions of common workmen." —*Smith: Wealth of Nations*, bk. i., ch. i.

* 2. An engine; a battering engine.

* 3. Any complicated body, in which the parts have their several duties or offices.

"We are led to conceive this great *machine* of the world to have been once in a state of greater simplicity."—*Burnet: Theory of the Earth.*

II. *Figuratively:*

1. An engiue, a contrivance.

"With inward arms the dire *machine* they load." *Dryden: Virgil; Æneid* ii. 25.

† 2. In England a public coach; in Scotland a light vehicle for travellers.

"The *machine* trundled on for a couple of hundred yards."—*Dickens: Sketches by Boz; Mr. Minns.*

3. A bicycle or tricycle. (*Colloquial.*)

"As we proceeded, the *machine* became more of an encumbrance."—*Field*, Dec. 6, 1884.

4. Any organization by means of which a desired effect is produced, or a system carried out; a complex system by which any institution is carried on: as, the *machine* of government.

5. A term applied in contempt to one who acts or is willing to act at the will or bidding of another; a tool; one whose actions do not appear to be voluntary or under his own control, but to be directed by some external influence or agency; one who appears to act mechanically and without intelligence.

6. Supernatural agency introduced in a poem, play, or plot, to effect some object, or to perform some exploit; machinery.

"The marvellous fable includes whatever is supernatural, and especially the *machines* of the gods."—*Pope.*

machine-head, *s.*

Music: An arrangement of rack and pinion for the purpose of tightening and keeping in tension the strings of the double-bass, and the guitar, as the ordinary pegs employed to stretch the strings are of unequal leverage.

machine-made, *a.* Made by machinery, as distinguished from hand-made.

machine-man, *s.*

Print.: The English name for the operator called in this country a pressman, even as a machine boy is with us a feeder or press-boy.

machine-minder, *s.*

Print.: A man who has charge of a printing press. (*British.*)

"The *machine-minder* must examine every sheet for some time."—*J. Gould: Letterpress Printer*, p. 130.

machine-ruler, *s.* A machine for ruling paper according to pattern.

machine-shop, *s.* A workshop in which machines are made, and metal-works, &c., prepared for machinery.

machine-tool, *s.* A machine in which the tool is directed by guides and automatic appliances. It is a workshop appliance for operating upon materials in the way of shaping and dressing, having devices for dogging the stuff and feeding the tool. Among tools of this class for working in metal may be enumerated the lathe and machines for planing, slotting, shaping, drilling, punching, and shearing. Machine-tools for wood are lathes, saws of various kinds, machines for planing, moulding, boring, mortising, dovetailing, rabbeting, tenoning, shaping, &c.

machine-work, *s.* Work done by a machine or machinery, as distinguished from that done by manual labour.

ma-çhîne', *v.t.* & *i.* [Machine, *s.*]

A. *Trans.:* To apply machinery to; to effect by means of machinery; specif., to print by means of a printing-machine.

B. *Intrans.:* To be employed in or upon machinery.

măch'-ĭ-neēl, *s.* [Manchineel.]

ma-çhîn'-ĕr, *s.* [Eng. *machin(e)*; *-er.*]

1. One who works or attends to a machine; a machinist.

2. A horse employed in working or driving a machine.

"Commencing with the high-class thoroughbred stallion valued at ten thousand pounds or more, and coming down to the ordinary roadster, *machiner*, and agricultural drudge."—*Daily Telegraph*, Dec. 6, 1880.

ma-çhîn'-ĕr-ў, *s.* [Eng. *machine*; *-ry.*]

I. *Literally:*

1. A general term applied to mechanical combination of parts for collecting, controlling, and using power, or for producing articles of commerce which may otherwise be, more or less perfectly, made by hand. The first class of these combinations is usually distinguished by the name of engines; the second, by that of machines.

2. Machines in general; the machines in any place collectively: as, the *machinery* in a mill.

3. The working parts of a machine, engine, or instrument designed and constructed to apply and regulate force.

"Observing the neatness and perfection of the *machinery*, how exactly and constantly every wheel performed the part to which it was adapted and designed."—*Horne: Newton & Hutchinson.*

II. *Figuratively:*

1. Any complex system or combination of means and appliances designed to keep anything in motion or action, or to effect a specific purpose or object, or to carry on any institution or organization: as, the *machinery* of state.

2. The agencies, especially supernatural, by which the plot of an epic or dramatic poem or play is carried out to its catastrophe.

"The *machinery*, madam, is a term invented by the critics, to signify that part which the deities, angels, or demons, are made to act in a poem."—*Pope: Rape of the Lock; To A. Fermor.*

ma-çhîn'-ĭng, *pr. par.*, *a.*, & *s.* [Machine, *v.*]

A. *As pr. par.:* (See the verb).

B. *As adj.:* Acting as a machine, or as a supernatural agency for the carrying out of the plot of an epic or dramatic poem or play; pertaining to the machinery of a poem.

"Of Venus and Juno, Jupiter and Mercury, I say nothing, for they were all *machining* work."—*Dryden: Virgil; Eneid.* (Dedic.)

C. *As subst.:* The act or process of working or effecting with a machine; specif., printing by means of a printing-machine.

ma-çhîn'-ĭst, *s.* [Eng. *machin(e)*; *-ist*; Fr. *machiniste*; Ital. *macchinista.*]

1. One who constructs machines or engines; one versed in the principles of machinery.

"To give a grant to... canal-makers, *machinists*, or manufacturers."—*Brit. Quart. Review*, lvii. 198.

2. One who works or minds a machine.

"Good dressmaker, hairdresser, and *machinist*."—*Times*, Nov. 4, 1875. (Advt.)

* 3. One who devises the machinery of a poem or play.

"Has the insufficiency of *machinists* hitherto disgraced the imagery of the poet?"—*Stevens: General Note on Macbeth.*

machinist's-hammer, *s.* A hammer which has a flat, round face and an edge-peen transversely of the helve. In some branches of the business it has two faces; in others, again, it has one face and a pointed peen for riveting.

* **măch'-ĭn-ize,** *v.t.* [Eng. *machin(e)*; *-ize.*] To fashion.

"The traveller... seems to have *machinized* the rest of the world for his occasion."—*Emerson: English Traits*, ch. iii.

ma-chōl', **mah-hōl',** *s.* [Heb.] A word often found in the Old Testament, associated with "toph" (timbrel), and almost always rendered in the English version by "dances" or "dancing." But some authorities trace the word to a root meaning "pierced" or "bored," and therefore consider it to have been a flute. It is not improbable that *machol* and *toph* may mean "pipe and tabor," but as these two instruments are often associated with dancing, our version, and others which follow it, can not in any case be said to be incorrect.

ma-chrō'-mĭn, *s.* [Eng. *ma(clurin)*; *chrom(atic)* (from its many changes in colour), and *-in(Chem.).*]

Chem.: $C_{14}H_{10}O_3{}_3H_2O$. A crystalline compound prepared by boiling a concentrated solution of maclurin with sulphuric acid and zinc, and separating by means of ether. It forms colourless spangles, which, under the microscope appear as tufts or stars of slender needles, soluble in ether, and slightly soluble in water and alcohol. The solution of machromin in strong sulphuric acid is at first orange-red, then yellow; after warming or dilution with water it is emerald-green, and, on adding an excess of alkali, is changed to a violet.

ma-çĭ'-gnō (gn as ny), *s.* [Ital.]

Petrol.: A siliceous sandstone, sometimes containing calcareous grains, mica, &c. It is about the age of the London Clay.

* **măç-ĭ-lẹn-çў,** *s.* [Eng. *macilen(t)*; *-cy.*] Leanness, thinness.

"That paleness and *macilency* in their looks and constitutions."—*Sandys: Ovid.* (Pref.)

* **măç'-ĭ-lẹnt,** *a.* [Lat. *macilentus*, from *macies* = leanness, thinness; *macer* = thin, lean.] Lean, thin, emaciated.

"A tall *macilent* man of about fifty was shewn into the room."—*Mortimer Collins: The Ivory Gate*, ii. 188.

măc'-ĭn-tŏsh, măck'-ĭn-tŏsh, *s.* [After the name of the inventor.] An overcoat or cloak of cloth made waterproof by treatment with a solution of india-rubber.

* **măck'-ĕr-ẹl** (1), *s.* [O. Fr. *maquerel*; Fr. *maquereau* = a pander; Dut. *makelaar* = a broker, a pander; *makelen* = to procure.] A pander, a pimp.

măck'-ĕr-el (2), * **măck'-ar-el,** * **măck'-rel,** * **ma-que-rel,** *s.* [O. Fr. *makerel*, from the original Latin word (*macus* or *maca*), of which *macula* is a dimin.; cf. Sp. *maca* = a stain, a bruise on fruit. (*Skeat.*)]

Ichthy.: Scomber scomber (Linn.), *S. scombrus* (Cuv.), the Common Atlantic Mackerel. Snout pointing, under jaw projecting, gill-covers large and smooth, pectoral and ventral fins in advance of the dorsal; five finlets above and below the tail, vertically over each other; tail crescent-shaped. Above the lateral line the colour is a fine green, varied with rich blue, and marked with broad, dark, descending lines, straight in the males, undulating in the females; under parts silvery with golden tints. The home of the Common Mackerel may be broadly described as the North Atlantic Ocean; it is common in the waters of the northeastern United States and of Canada, and is taken in immense quantities for home consumption and export. It is also abundant in the North Sea and around the British coasts. It is an extremely valuable food-fish, and the mackerel fishery is only second in importance to the herring and cod fisheries. The first schools appear in January or February; they are in the best condition towards the end of May, and spawn in the latter half of June or the beginning of July. *S. colias*, the Spanish Mackerel, is found from Nova Scotia to Cape Hatteras. It is not much esteemed. *S. trachurus* is the Horse-mackerel, or Scad (q.v.). [Scombrinæ.]

* **mackerel-gale,** *s.* A strong, fresh breeze. (*Dryden: Hind & Panther*, iii. 456.)

mackerel-guide, *s.* A name for the Gar-fish (q.v.).

mackerel-gull, *s.*

Ornith.: A popular American name for *Sterna hirundo*, the Common Tern, because it is supposed to announce the coming of mackerel. (*Bartlett.*)

mackerel-midge, *s.*

Ichthy.: Couchia glauca, a soft-finned fish, family Gadidæ. Habitat, the North Atlantic, appearing in multitudes in the British Channel in May. Length, an inch to an inch and a half. Back black or bluish-green; fins and belly silvery white. Head obtuse, with four projecting barbels, one depending from under jaw.

mackerel-mint, *s.*
Bot.: A name for Spearmint (*Mentha viridis*).

mackerel-sky, *s.*
Meteor.: A sky with small roundish masses of cirrocumulus disposed with more or less irregularity. It is most frequently seen in summer. Called also Mackerel-back sky.

măck'-ĭ-nâw blănk-ĕt, *s.* The generic name of the blankets supplied (originally from Fort Mackinaw) to the Indians of the Northwest by the United States Government.

măck'-ĭ nâw bōat, *s.* A flat-bottomed, flat-sided boat, originally used at Mackinaw, Mich.

măck'-ĭn-tŏsh, *s.* [Macintosh.]

măc'-kle, *s.* [Macule.]

măc'-le (le as ęl), *s.* [Fr. from Lat. *macula* = a spot.]
1. *Her.:* The same as Mascle (q.v.).
2. *Min.:* A variety of andalusite (q.v.), occurring in long tapering crystals in clay-slate. They have the axes and angles of a different colour from the rest of the crystals, owing to a regular arrangement of impurities in the interior. In transverse section they exhibit a cross or a tesselation, the outlines of which are frequently rhombs. (See figures in Dana's *System of Mineralogy*, 1875.) The same as Chiastolite.

ma-clûr'-ą, *s.* [Named after Wm. Maclure, of the United States, a philosopher and naturalist.]
Bot.: A genus of Moraceæ, consisting of trees, sometimes spiny, with entire or serrated leaves and unisexual flowers. The males in racemes, the females in heads, the fruits consisting of many achenes within the enlarged calyx. *Maclura aurantiaca* is the Osage Orange. It is about as large as the human hand, orange coloured, and filled with a fetid slime, used by the Indian tribes of the United States, in which it grows, to smear their faces when they go out to war. *Maclura tinctoria* yields the dyewood called Fustic (q.v.). The fruit is pleasant, and used in North America as a cathartic and an anthelmintic.

ma-clûr'-ĕ-ą, *s.* [Named after Wm. McClure, the American geologist.]
Zool.: An anomalous genus of Nucleobranchiate Gasteropoda, family Atlantidæ. It is discoidal, few whorled, with a sinistrally sub-spiral operculum. Found in Lower Silurian rocks, in North America, and Scotland. It may be one of the Heteropoda.

ma-clûre'-īte, *s.* [Named after Wm. Maclure; suff. *-ite* (*Min.*).]
Min.: The maclureite named by Nuttall is included by Dana in the Fassaite group of aluminous pyroxenes (q.v.); that named by Seybert in the same year is the same as chondrodite (q.v.)

ma-clûr'-ĭn, *s.* [Mod. Lat. *maclur(a)*; *-in* (*Chem.*).]
Chem.: A crystalline body extracted from fustic, *Maclura tinctoria*. Dried over sulphuric acid, its formula is $C_{15}H_{12}O_3$. Heated to 130° it loses one atom of water, its formation then being $C_{15}H_{10}O_7$. It is soluble in water and alcohol, but insoluble in ether.

Măc-mĭl'-lan-īte, *s.* [For etym. see def.]
Eccles. & Church Hist. (*Pl.*): The followers of the Rev. John Macmillan, of Balmaghie, in Kirkcudbrightshire, who, in the latter part of the seventeenth century, aided in laying the foundation of the Reformed Presbyterian or Cameronian Church.

măc'-ŏn, *s.* [From Mâcon on the Saone, where the grapes are grown.] A celebrated red French wine, noted for its strength and keeping qualities.

măc'-ŏn-īte, *s.* [Named after its locality, Macon Co., North Carolina; suff. *-ite* (*Min.*).]
Min.: A mineral occurring in irregular scales associated with corundum (q.v.), at the Culsagee mine. Soft; sp. gr. 2·827; colour, dark-brown; lustre, pearly. Compos.: silica, 34·22; alumina, 21·53; sesquioxide of iron, 12·41; magnesia, 14·46; potash, 5·70; loss on ignition, 11·85. Exfoliates largely on heating, and is apparently the result of an alteration of a chlorite.

mac-ôu-bą, *s.* [Maccouba.]

macr-, *pref.* [Macro-.]

măc-ra'-mĕ, *s.* [From Arab.] (See the compound.)

macramé-lace, *s.* Au Italian lace, made from twine. It is extensively used in church decorations, and for the ornamentation of furniture. The best is that made at Genoa.

măc'-râu-chēne, *s.* [Macrauchenia.] Any member of the genus Macrauchenia (q.v.).
"In the *Macrauchene* the fibula is indeed entire."—*Eng. Encyc.* (*Nat. Hist.*), iii. 573.

măc-râu-chēn'-ĭ-ą, *s.* [Pref. *macr-*, and Mod. Lat. *auchenia* (q.v.).]
Palæont.: The typical and only genus of the family Macrauchenidæ (q.v.), formerly referred to the Camelidæ, but now placed among the Perissodactyla, all the feet being three-toed. The lower molars resemble those of Palæotherium in being doubly crescentic. The general form of the skull resembles that of the horse. (*Nicholson: Palæont.*, ii. 335.)

măc-râu-chēn'-ĭ-dæ, *s. pl.* [Mod. Lat. *macrauchen(ia)*; Lat. fem. pl. adj. suff. *-idæ*.]
Palæont.: A family established for the reception of the genus Macrauchenia, from the Pliocene or Post-Pliocene of South America.

măc-rĕn-çĕ-phăl'-ĭc, măc-rĕn-çĕph'-ą-loŭs, *a.* [Pref. *macr-*, and Eng. *encephalic*, *encephalous*.] Having a long or large brain.

măc-rŏ-, *pref.* [Gr. μακρός (*makros*) = long.] (For def. see etym.)

macro-lepidoptera, *s. pl.* A collector's term for butterflies. It is of no scientific value.

măc-rŏ-bā'-sĭs, *s.* [Pref. *macro-*, and Gr. βάσις (*basis*) = a stepping, a movement.]
Entom.: A genus of Cantharidæ. *Macrobasis unicolor* is an American blister beetle, the larva of which feeds on the potato.

* **măc-rŏ-bī-ŏt'-ĭc,** *a.* [Gr. μακρόβιος (*makrobios*), μακροβίοτος (*makrobiotos*) = long-lived: μακρός (*makros*) = long; βίος (*bios*) = life; Fr. *macrobiotique*.] Long-lived.

măc-rŏ-bī-ŏt'-ĭ-dæ, *s. pl.* [Mod. Lat. *macrobiot(us)*; Lat. fem. pl. adj. suff. *-idæ*.]
Zool.: A family of spiders, order Tardigrada (Bear or Sloth Animalcules). It consists of microscopic spiders, found in wet moss, and in the gutters of houses, &c. They have elongated bodies, with four legs. They are hermaphrodite. So low are they in organization, that they have been placed by some with the Infusoria, and by others with the Rotifera.

măc-rŏ-bī-ō'-tŭs, *s.* [Macrobiotic.]
Zool.: The typical genus of the family Macrobiotidæ (q.v.) Species, *Macrobiotus huffelandi*, *M. oberhäuseri*, &c.

măc-rŏ-çĕph'-ą-loŭs, *a.* [Pref. *macro-*, and Eng. *cephalous*.]
Bot.: A name applied by Richard to dicotyledonous embryos, with a certain cohesion between the cotyledons.

măc-rŏ-çĕr'-cŭs, *s.* [Pref. *macro-*, and Gr. κέρκος (*kerkos*) = a tail.]
Ornith.: A genus of Psittacidæ, sub-family Arainæ. It contains the Macaws. [Macaw.]

măc-rŏ-chlō'-ą, *s.* [Pref. *macro-*, and Gr. χλόη (*chloē*), χλόα (*chloa*) = young green corn or grass.]
Bot.: A genus of Grasses, tribe Stipeæ. *Macrochloa* (*Stipa*) *tenacissima* is a rush-like grass found on the sandy coasts of the Mediterranean. It is the original Esparto grass.

măc'-rŏ-cŏsm, *s.* [Pref. *macro-*, and Gr. κόσμος (*kosmos*) = the world; Fr. *macrocosme*.] The great world; the universe, or the visible system of the world, as distinguished from microcosm (q.v.).
"He calls a man a microcoem, becauee hie body is really made up of all the several kinds of creatures the *macrocosm* or greater world consists of, and so is but a model or epitome of the universe."—*Boyle: Works*, ii. 54.

* **măc-rŏ-cŏs'-mĭc,** *a.* [Eng. *macrocosm*; *-ic*.] Of or pertaining to the macrocosm; exceedingly great and far-reaching; immense, comprehensive.
"It was a period of prodigious ideas. Every literary work was *macrocosmic* and colossal."—*R. Buchanan*, in *Temple Bar*, 1879, p. 87.

măc-rŏ-çўs'-tĭs, *s.* [Pref. *macro-*, and Mod. Lat., &c. *cystis*.]
Bot.: A genus of Fucaceæ, family or tribe Laminaridæ. *Macrocystis pyrifera* is a giant seaweed, with a stem 700 feet long, no thicker than the finger. The branches are as slender as pack-threads; the leaves long and narrow, each has at its base a vesicle filled with air, enabling the plant to float. It is met with in the ocean in the south temperate and south polar zones.

măc-rŏ-dăc'-tўl, *s.* [Macrodactyles.] An individual of the family Macrodactyles.

măc-rŏ-dăc'-tўl-ēş, măc-rŏ-dăc'-tўl-ĭ-dēş, *s. pl.* [Mod. Lat., from Gr. μακρός (*makros*) = long, and δάκτυλος (*daktulos*) = a finger, a toe.]
Ornith.: Long-toes; a sub-order of Grallatores (q.v.). The feet are furnished with four elongated, sometimes lobated, toes, and the wings are of moderate size. Beak mostly short and compressed, or wedge-shaped. Legs robust, not long; neck not very long; tail very short. The chief members of the subfamily are the Rails, the Waterhens, the Coots, and the Jacana. (*Nicholson.*)

măc-rŏ-dăc-tўl'-ĭc, măc-rŏ-dăc'-tўl-oŭs, *a.* [Eng. *macrodactyl*; *-ic*, *-ous*.] Having long toes; an epithet applied to birds of the sub-order Macrodactyles.

măc-rŏ-dăc-tўl'-ĭ-dēş, *s. pl.* [Macrodactyles.]

măc-rŏ-dī-ăg'-ŏn-ąl, *s.* [Pref. *macro-*, and Eng. *diagonal* (q.v.).] The longer of the diagonals of a rhombic prism.

măc'-rŏ-dōme, *s.* [Pref. *macro-*, and Gr. δόμος (*domos*) = a building.] [Dome.]
Crystallog.: A dome parallel to the longer lateral axis in the trimetric system. (*Dana.*)

măc'-rŏ-dŏn, *s.* [Pref. *macro-*, and Gr. ὀδούς (*odous*), genit. ὀδόντος (*odontos*) = a tooth.]
Ichthy.: A genus of Fishes, family Characinidæ. *Macrodon trahira* and *M. aimara* are from Cayenne.

măc-rŏ-glŏs'-ąą, *s.* [Pref. *macro-*, and Gr. γλῶσσα (*glōssa*) = the tongue.]
Entom.: A genus of Hawkmoths, family Sesiidæ. *Macroglossa stellatarum* is British. The forewings are smoky brown, marked with black; the hinder ones dull tawny, with the base blackish-brown and the head-margin reddish-brown; the body reddish, with black and white on the posterior parts. The larva, which is variegated and has a caudal horn, feeds on bedstraw (Galium) from July to August, the perfect insect appearing from May to September.

măc-rŏ-glŏs'-sŭs, *s.* [Macroglossa.]
Zool.: A genus of Bats, family Pteropidæ. *Macroglossus minimus* is a small fruit-eating bat, found in the Himalayas, the Eastern Peninsula, the Eastern Islands, and the adjacent parts of Australia.

măc-rŏg-năth'-ĭc, *a.* [Pref. *macro-*, and Gr. γνάθος (*gnathos*) = a jaw.]
Anthrop.: Long-jawed; a term applied by Prof. Huxley to skulls of Neolithic age, met with in caves and tombs in Belgium, France, and Spain.
"The skulls are broad or round, the supra-occipital tuberosity, or 'probole' prominent, the parieto-occipital region often flattened, the supraciliary ridges more strongly marked than in the oval skulls. The face, instead of being oval, is angular or lozenge-shaped, and the upper or lower jaws are so largely developed, and projected so far beyond the vertical line dropped from the forehead, that the term *macrognathic* has been happily applied to them by Prof. Huxley."—*Dawkins: Early Man in Britain*, ch. ix.

* **ma-crŏl'-ŏ-gў,** *s.* [Gr. μακρολογία (*makrologia*), from μακρολόγος (*makrologos*) = talking long: μακρός (*makros*) = long, and λόγος (*logos*) = talk, speech.] Long tedious talk; superfluity of words without meaning.

ma-crŏm'-ĕ-tĕr, *s.* [Pref. *macro-*, and Eng. *meter*.] An instrument for measuring inaccessible objects by means of two reflectors on a common sextant.

măc'-rŏn, *s.* [Macrotone.]

măc-rŏ-phўl'-līne, ma-crŏph'-ўl-loŭs, *a.* [Gr. μακρόφυλλος (*makrophullos*): pref. *macro-*, and Gr. φύλλον (*phullon*) = a leaf.]
Bot.: Consisting of elongated extended leaflets.

măc-rō-pī'-pĕr, *s.* [Pref. *macro-*, and Mod. Lat. *piper* (q.v.).]

Bot.: A genus of Piperaceæ, family Piperidæ (q.v.). *Macropiper methisticum* is the plant which the South-sea Islanders call ava or kava. It has a thick woody rugged aromatic rhizome, a tincture of which is used in rheumatism. Macerated in water it is said to bring on copious perspiration, and produce a cure in persons affected with venereal disease.

măc'-rō-pŏd, *s.* [Macropodal.] An individual of the family Macropodia (q.v.).

măc-rŏp'-ō-dal, măc-rŏp'-ō-doŭs, *a.* [Pref. *macro-*, and Gr. *πούς* (*pous*), genit. *ποδός* (*podos*) = a foot.] Having large or great feet.

măc-rō-pō'-dĭ-ą, *s. pl.* [Macropodidæ, 1 (2).]

măc-rō-pō'-dĭ-an, *s.* [Macropodidæ.] A macropod (q.v.).

măc-rō-pŏd'-ĭ-dæ, mą-crŏp'-ĭ-dæ, *s. pl.* [Mod. Lat. *macrop(us)*; Lat. fem. pl. adj. suff. *-idæ.*]

1. *Zoology:*

(1) A family of Marsupials, section Phytophaga, or in Owen's classification Diprodontia. There are six incisors in the upper jaw, and two in the lower; the canines in the upper jaw are small and wanting in the lower one; the molars are five on each side above and below. The anterior feet, which are small, have five toes, each armed with a claw; the hinder ones, which are very large, powerful, and well adapted for leaping, have but four, the inner one, or great toe, being absent. Found in Australia, Tasmania, and New Guinea. Genera: Macropus (Kangaroo), Dendrolagus (Tree-kangaroo), Hypsiprymnus (Kangaroo-rat), &c.

(2) The first family of Milne-Edwards's Oxyrhynchi. They have very long feet, and are called in consequence Sea-spiders and Spider-crabs. They live in the deep sea. Called also Leptopodidæ (q.v.). Latreille has termed them Macropodia.

2. *Palæont.:* Huge Macropi are found in the Post-Tertiary of Australia with representatives of the other genera. They were found in ossiferous breccias in the Wellington Valley, about 210 miles west of Sydney, on the river Bell, one of the principal sources of the Macquarie, and on the Macquarie itself. Kangaroos seem to have been limited to Australia before the human period began. The name of the Rhætic genus Hypsiprymnopsis of Prof. Boyd-Dawkins suggests a relation to Hypsiprymnus, but Prof. Owen considers it to be a Microlestes (q.v.).

măc-rō-pō'-mą, *s.* [Pref. *macro-*, and Gr. *πῶμα* (*pōma*) = a lid, a cover.]

Palæont.: A genus of crossopterygious Ganoid fishes, family Cœlacanthini. It is found in the Cretaceous rocks.

măc-rō-pŏn'-ĭ-dæ, *s. pl.* [Gr. *μακροπονία* (*makroponia*) = long labour; Lat. fem. pl. adj. suff. *-idæ.*]

Ichthy.: In Prof. Owen's classification, the twelfth family of his Lepidoganoidei, a suborder of Ganoidean fishes.

mą-crŏp'-tĕr-ŭs, *s.* [Pref. *macro-*, and Gr. *πτέρον* (*pteron*) = a wing, a fin.] Having long wings or fins.

măc'-rō-pŭs, *s.* [Pref. *macro-*, and Gr. *πούς* (*pous*) = a foot.]

Zool.: The typical genus of the family Macropodidæ (q.v.). [Kangaroo.]

măc-rō-pўg'-ĭ-ą, *s.* [Pref. *macro-* (q.v.), and Gr. *πυγή* (*pugē*) = the rump, the buttocks.]

Ornith.: A genus of Columbidæ, containing the Cuckoo-doves. They have a very long graduated and pointed tail.

măc-rō-rhī'-nŭs, *s.* [Gr. *μακρόρρις* (*makrorrhis*), genit. *μακρόρρινος* (*makrorrhinos*) = long-nosed.]

Zool.: A genus of Phocidæ (Seals). *Macrorhinus elephantinus* is the Elephant Seal, so called from its possessing, when full-grown, a short proboscis. It appears to exist both in the northern and southern hemispheres, though Dr. Gill believes the specimens from the former to be specifically distinct, calling them *M. angustirostra*. The Elephant Seal is found abundantly on the coasts of Juan Fernandez, the Falkland Islands, &c. The male is fourteen to sixteen or twenty feet long, with a proboscis of a foot; the female about nine or ten feet.

măc-rō-sçĕl'-ĭ-dēş, *s.* [Gr. *μακροσκελτής* (*makroskeltēs*) = long-legged: pref. *macro-*, and Gr. *σκελος* (*skelos*) = the leg.]

Zool.: The typical genus of the family Macroscelididæ. *Macroscelides typicus* is the Elephant Shrew of South Africa. It is about five inches long, with a tail of three inches, is diurnal, and resides in burrows. *M. Rozeti* is the Algerian jumping-shrew.

măc-rō-sçĕ-lĭd'-ĭ-dæ, *s. pl.* [Mod. Lat. *macroscelid(es)*; Lat. fem. pl. adj. suff. *-idæ.*]

Zool.: Jumping-shrews, a sub-family of Insectivorous Mammals, resembling shrews, but having very elongated hind legs, enabling them to advance by a series of jumps. The snout is long, and sometimes prolonged into a trunk; the tail long, covered with hair. The species inhabit Africa.

măc-rō-scŏp'-ĭc, *a.* [See Megascopic.]

măc-rō-spō-răn'-gĭ-ŭm (pl. **măc-rō-spō-răn'-gĭ-ą**), *s.* [Pref. *macro-*; Gr. *σπορά* (*spora*), or *σπόρος* (*sporos*) = seed, and *ἀγγεῖον* (*anggeion*) = a vessel, a receptacle.]

Bot. (Pl.): Sporangia of comparatively large size, containing macrospores in the Rhizocarpeæ like Salvinia and Marsilea. [Macrospore.]

măc'-rō-spōre, *s.* [Pref. *macro-*, and Gr. *σπορά* (*spora*), or *σπόρος* (*sporos*) = a seed.]

Bot. (Pl.): Spores of comparatively large size in macrosporangia, as distinguished from microspores in microsporangia in the Rhizocarpeæ, such as Marsilea, Pilularia, and Salvinia.

măc-rō-thĕr'-ĭ-ŭm, *s.* [Pref. *macro-*, and Gr. *θηρίον* (*thērion*) = a wild animal.]

Palæont.: A genus of Edentata founded on remains of a large animal, having the hind limbs shorter than the fore ones, as for climbing purposes, rootless teeth, and toes with immense claws. It is found in the Miocene of France.

măc-rō-tō'-mĭ-ą, *s.* [Gr. *μακροτομέω* (*makrotomeō*) = to prune so as to leave the shoots long.]

Bot.: A genus of Boraginaceæ. *Macrotomia Benthami* grows in the Himalayas, and is considered useful in diseases of the tongue and throat. The bruised roots of *M. perennis* are applied in India to eruptions, and its root is used as a dye.

măc'-rō-tōne, *s.* [Pref. *macro-*, and Eng. *tone.*]

Gram.: A horizontal line drawn over vowels to show that they are to be pronounced long: as, mē, fīne, tōne, &c.

mą-crō'-toŭs, *a.* [Macrotus.] Having long ears; long-eared.

mą-crō'-tŭs, *s.* [Pref. *macro-*, and Gr. *οὖς* (*ous*), genit. *ὠτός* (*ōtos*) = an ear.]

Zool.: A genus of Phyllostomidæ (Vampires). Ears very large, united at the base by a membrane; nasal appendage, erect; interfemoral membrane large, beyond which the tail projects by its last joint. *Macrotus Waterhousii* is the Great-eared Leaf Bat from the West Indies; the length of the head and body is two inches and a half; tail, an inch and one-sixth. Fur, mouse-colour, paler beneath; nose-leaf, lanceolate. It is mainly insectivorous, but sometimes feeds on fruit. Other species are *M. californicus* and *M. mexicanus*, the habitat of which is indicated by their specific names.

măc-rō-tўp'-oŭs, *a.* [Pref. *macro-*, and Gr. *τύπος* (*tupos*) = a blow, a type.]

Numis.: Having a long form.

mą-croûr'-ą, *s.* [Macrura.]

mą-croûr'-al, mą-croûr'-oŭs, *a.* [Macroura.] The same as Macrural or Macrurus (q.v.).

mą-croûr'-an, *s.* [Macruran.]

mą-croûr'-oŭs, *a.* [Macrurus.]

măc-rō-zā'-mĭ-ą, *s.* [Pref. *macro-*, and Mod. Lat. *zamia* (q.v.).]

Bot.: A genus of Cycadaceæ. *Macrozamia spiralis* is believed to be the species of Zamia growing on the west coast of Australia to the height of thirty feet.

mą-crûr'-ą, mą-croûr'-ą, *s. pl.* [Macrurus.]

1. *Zool.:* Long-tailed Crustaceans; lobsters, a sub-order of Decapoda, having the abdomen greatly developed, cylindrical, the segments short, flattened, and expanded laterally; the whole terminated by a broad swimming tail. The antennæ are usually large. The feet are terminated by nipping claws. The young, on being hatched, are not very different in form from their parents. They abound in both salt and fresh water. The sub-order contains the families Crangonidæ, Astacidæ, Thalassinidæ, and Palinuridæ.

2. *Palæont.:* They came into existence in palæozoic times.

mą-crûr'-al, mą-crûr'-oŭs, *a.* [Macrura.] Belonging to or having the characteristics of the family Macrura (q.v.).

mą-crûr'-an, *s.* [Macrura.] An individual of the family Macrura (q.v.).

mą-crûr'-ĭ-dæ, *s. pl.* [Mod. Lat. *macrur(us)*; Lat. fem. pl. adj. suff. *-idæ.*]

Ichthy.: A family of deep-sea Ganoids, distributed over all oceans, in great abundance. About forty species are known. The body terminates in a long, compressed, tapering tail, covered with spiny, keeled, or striated scales. One short anterior dorsal, the second very long, continued to the end of the tail; anal as long as second dorsal; no caudal. Ventrals thoracic or jugular. (*Günther.*)

măc-rû-rō'-nŭs, *s.* [Macrurus.]

Ichthy.: A genus of Macruridæ (q.v.). Snout pointed; mouth anterior and lateral, with the lower jaw projecting.

mą-crûr'-ŭs, *s.* [Pref. *macro-*, and Gr. *οὐρά* (*oura*) = a tail.]

Ichthy.: The typical genus of the family Macruridæ (q.v.). Snout produced and conical; mouth inferior.

* **măc-tā'-tion,** *s.* [Lat. *mactatio*, from *mactatus*, pa. par. of *macto* = to sacrifice.] The act of killing a victim in sacrifice; a sacrifice.

"Here they call Cain's offering, which is described and allowed to be the first-fruits of the ground only, a sacrifice or *mactation*."—*Shuckford: On the Creation.* (Pref.)

măc-tā'-tŏr, *s.* [Lat., from *mactatus*, pa. par. of *macto* = to sacrifice, to kill.] A murderer, a killer.

măc'-tra, *s.* [Gr., = a kneading-trough.]

1. *Zool.:* The typical genus of the family Mactridæ (q.v.). The foot is large and tongue-shaped; the siphons are united and fringed; the shell is nearly equilateral. Habitat, sandy coasts, where they burrow just below the surface. In the Isle of Arran, *Mactra subtruncata* is collected for feeding pigs. One hundred and twenty-five recent species are known. They are world-wide in their distribution, and especially abundant within the tropics.

2. *Palæont.:* Thirty species are known, from the Lias onward.

măc'-trĭ-dæ, *s. pl.* [Mod. Lat., &c. *mactr(a)* (q.v.); Lat. fem. pl. adj. suff. *-idæ.*]

Zool.: Trough-shells; a family of Siphonida, subdivision Sinupallialia. Valves, equal, subtriangular, close-fitting; a deep pit for the hinge-ligament, triangular in form; the hinge has two diverging teeth; siphonal fold short and rounded, epidermis thick. Mostly marine, but also found in brackish waters.

măc'-ų-lą (pl. **măc'-ų-læ**), *s.* [Lat.]

I. *Ord. Lang.:* A spot, as on the skin, the surface of the sun, or other luminous body, &c.

"And lastly, the body of the sun may contract some spots or *maculæ* greater than usual, and by that means be darkened."—*Burnet: Theory of the Earth.*

II. *Technically:*

1. *Bot.:* A broad, irregular spot or blotch.

2. *Path.* (*Pl.*): Permanent discolorations of the skin; spots or stains white, dark, or dusky, with occasionally altered structure.

macula germinativa, *s.*

Anat. & Physiol.: A dark granular spot, about $\frac{1}{1000}$ of an inch in diameter, within the germinal vesicle of an ovum. Called also the germinal-spot.

macula lutea, *s.*

Anat.: A yellow spot, about $\frac{1}{20}$ of an inch in diameter, on the axis of the eyeball; it has a depression in its centre.

* **măc'-ụ-lāte,** *v.t.* [MACULATE, *a.*] To spot, to stain, to blur.

"They wold not *maculate* the honour of theyr people wyth suche a reproche."—*Sir G. Elyot: Governour*, bk. i., ch. xxvi.

* **măc'-ụ-late,** * **măc'-ụ-lāt-ĕd,** *a.* [Lat. *maculatus*, pa. par. of *maculo* = to spot, to stain; *macula* = a spot, a stain.]

I. *Ord. Lang.:* Spotted, stained, blurred, defiled, impure.

"Most *maculate* thoughts, master, are masked under such colours."—*Shakesp.: Love's Labour's Lost*, i. 2.

"Ever he muttered and *maddened.*"
Tennyson: Maud, I. i. 10.

măd'-dĕr, *s.* [A.S. *mæddre, mæddere.*]

I. *Bot.:* The genus Rubia, and specially *Rubia tinctorum.* (Dyer's Madder.) It is a trailing or climbing annual, supporting itself by its leaves and prickles. It is supplied chiefly from Holland, France, Italy, and Turkey. The roots, which are ready the third year, are kiln-dried, and then threshed, to clear them from earth and dust. They are then dried a second time, and afterwards pounded and stamped in a mill. A species of Madder, *Rubia peregrina*, is indigenous in Britain. It has whorls of four to six elliptic, persistent glossy leaves, a yellowish corolla, and small black fruit.

¶ Indian Madder, called also Madder of Bengal, is *Rubia cordifolia;* Madder of Chili, *Rubia augustissima* or *Relboum.*

2. *Chem.:* The root of *Rubia Tinctorum*, extensively used in dyeing for the production of a variety of colours, namely, red, pink, purple, black, and chocolate. Other species of *Rubia* are also used. It would appear that madder contains a colorific principle—rubian—which, under the influence of a peculiar ferment, termed erythrozym, breaks up into alizarin, purpurin, &c. Several of the colouring matters of madder appear to exist in the fresh root, but it is only when it has been kept for some time that the alizarin and purpurin are developed in quantity. The colours produced from madder are very stable, the well-known Turkey-red being one of them; and the tints and shades obtainable, according to the mordant used, are very numerous. Alizarin, or madder red, discovered by Robiquet, may be extracted with solvents, or obtained by sublimation in the form of beautiful reddish needles. [ALIZARIN.] Madder also contains certain yellow colouring matters, but they are useless, if not injurious, in the process of dyeing.

"The best of all and most commended is our *madder* of Italie."—*P. Holland: Plinie*, bk. xix., ch. iii.

3. *Pharm.:* Madder is a tonic, a diuretic, and an emmenagogue.

¶ *Brown Madder:* A rich red-brown pigment, prepared from the roots of *Rubia tinctorum.* [MADDER, *s.*, 1.]

madder-style, *s.*

Calico-print.: A method of calico-printing in which the mordants are applied to the white cloth, and the colours are brought up in the dye-bath.

* **măd'-dĕr,** *v.t. & i.* [MADDER, *s.*]

A. *Trans.:* To dye with madder.

B. *Intrans.:* To perform the operation or process of dyeing with madder.

măd'-dĕr-wŏrt, *s.* [Eng. *madder*, and *wort* (q.v.).]

1. (*Sing.*): The genus Asperugo.

† 2. (*Pl.*): A name sometimes given to the Galiaceæ, called by Lindley, &c., in English, Stellates (q.v.).

* **măd'-dĭng,** *a.* [MAD, *v.*] Raging, furious, mad, wild. (*Pope: Homer; Iliad* xvi. 445.)

* **măd'-dĭng-lў,** *adv.* [Eng. *madding; -ly.*] Madly; like one mad.

"Run *maddingly* affrighted through the villages."
Beaum. & Flet.: Woman Pleased, iv. 1.

Geog.: A city and presidency in India.

Madras-bulbul, *s.*

Ornith.: *Pycnonotus hæmorrhous*, a small bird very common in Ceylon, the Neilgherries, and some other parts of India. It has an unmusical chirp, though it has been called the Ceylon nightingale. It is kept in the Carnatic for fighting purposes. It tries to pull out the red feathers of its antagonist. It makes a neat nest of roots, grass, hair, spiders' webs, &c., in a low bush; the eggs are reddish-brown, blotched and speckled.

¶ *Madras system of Education:* The system of mutual instruction by means of monitors, under the superintendence of a head teacher. It was introduced by Rev. Dr. Andrew Bell into the orphan institution of Madras. Dr. Bell was born in 1753 at St. Andrews, and was English chaplain and clergyman of St. Mary's Church, at Madras, when he first tried his system. On returning to Britain, he published an account of it in 1797. Next year, Mr. Joseph Lancaster, a member of the Society of Friends, carried it out in Southwark, and subsequently in other places. English churchmen, thus stimulated to exertion, employed Dr. Bell in 1807 to form church schools on his system, the rivalry between Messrs. Bell and Lancaster increasing the zeal of both. [Lancasterian.]

mădˊ-rĕ-pēˊrl, *s.* [Ital. *madreperla*, from *madre* = mother, and *perla* = pearl.] Mother of pearl. (*Longfellow.*)

mădˊ-rĕ-pōrˊ-a, *s.* [Madrepore.]

form, rather short, with twelve simple tentacles; the cells are irregularly scattered over the surface. The corallum, which is arborescent or frondescent, is very porous.

2. *Palæont.:* The genus commences in the Eocene.

mădˊ-rĕ-pōrˊ-al, *a.* [Eng. *madrepor(e)*; *-al*.] Pertaining to madrepores; consisting of madrepores.

mădˊ-rĕ-pōr-ärˊ-ĭ-a, *s. pl.* [Mod. Lat. *madrepor(a)*; Lat. neut. pl. adj. suff. *-aria*.]

Zool.: White stony corals or madrepores, a sub-order of Zoantharia, class Anthozoa. If the animal be simple it resembles a sea anemone, having one or more ranges of tentacles, with an internal disc opening in a small mouth. The body may be cup-like, flat, bell-shaped, tubular, or compressed like a fan. Externally, the body is covered with a disc, underneath which are various septa. A columella may or may not exist on the axis. The interstices and walls of the cells are always porous. Some corals are simple and separate, others are compound, budding from the parent. They exist on the floor of the sea at all depths, from water level down to 3,000 fathoms. The sub-order is very numerous, both in genera and individuals. The reef-building corals, among others, belong to it. It is divided into three groups: (1) *Madreporaria aporosa*, (2) *Madreporaria perforata*, and (3) *Madreporaria rugosa*.

mădˊ-rĕ-pōrc, *s.* [Fr. *madrépore;* Ital. *madrepora*, from *madre* = mother, and Gr. πῶρος (*pōros*) = tuff stone (*Littré*); or the first element may be Fr. *madré* = spotted; O. Fr. *madre*, *mazre* = a kind of knotty wood with brown spots;

O. H. Ger. *mosar*; N. H. Ger. *maser* = a knot, grain, or vein in wood, a speck. (*Mahn.*)]

1. *Strictly:* The English name of the genus Madrepora.

2. *Loosely:* Any coral distinguished by superficial star-shaped cavities. (*Lyell.*)

¶ The Common Madrepore of the Devonshire coast is *Caryophyllia Smithii.*

măd-rĕ-pŏr'-ĭc, *a.* [Eng., &c. *madrepor(e)*; *-ic.*]

Zool.: Pierced with minute holes like a madrepore; madreporiform (q.v.).

"The one nearest the *madreporic* inter-radius."—*Rolleston: Forms of Animal Life*, p. 144.

madreporic-canals, *s. pl.*

Zool.: Canals connecting the ambulacral system of starfishes with the openings in the surface. (*Rossiter.*)

madreporic-plate, *s.*

Zool.: A rounded, calcareous mass on the dorsal surface of a starfish. (*Rossiter.*)

madreporic-tubercle, *s.* The same as MADREPORIFORM-TUBERCLE (q.v.).

"The so-called *madreporic-tubercle.*"—*Rolleston: Forms of Animal Life*, p. 142.

măd-rĕ-pŏr'-ĭ-dæ, *s. pl.* [Mod. Lat. *madrepor(a)*; Lat. fem. pl. adj. suff. *-idæ.*]

1. *Zool.:* The typical family of the Madreporaria. The corallum is much branched, the openings of the polype cells constituting orbicular, tubercular prominences, with few rays. There are usually twelve small, short tentacles.

2. *Palæont.:* The family commences in the Cretaceous rocks.

măd-rĕ-pŏr'-ĭ-form, *a.* [Eng. *madrepor(e)*; *i* connective, and *form.*]

Zool.: Perforated with small holes like a coral.

madreporiform-tubercle, *s.*

Zool.: A spongy tubercle, perforated by minute apertures, and rising from a genital plate, or from the centre of the apical disc. Its function appears to be that of admitting water to the body-cavity, excluding injurious solid particles. It is found in the Echinoidea, the Asteroidea, the Ophiuroidea, and the Holothuroidea. (*Nicholson.*)

măd'-rĕ-pŏr-īte, *s.* [Eng., &c. *madrepore*; *-ite* (*Palæont.*); Fr. *madréporite.*]

1. *Palæont.:* A fossil madrepore.

2. *Petrol.:* A calcareous rock, marked with radiated, prismatic concretions, like the stars of madrepores. Found in Norway, in Greenland, in Salzburg, &c. Called also Columnar Carbonate of Lime, and Anthracouite (q.v.).

măd-rĭ-a'-lê, *s.* [Ital.] A word derived from madrigal, and as, in the early operas, madrigals were performed between the acts, without necessarily having any connection with them, the word came to be applied to any species of intermezzo.

măd'-rïër, măd'-rĭ-ĕr, *s.* [Fr.]

Military Engineering:

1. A thick, iron-plated plank, having a cavity to receive the mouth of a petard, which is applied to a gate or other obstacle to be blown down.

2. A beam laid in a ditch to support a wall; or in a mine or bomb-proof to support a side or roof.

3. A plank lined with tin and covered with earth to form roofs over certain portions of military works to afford protection against fires in lodgments, &c.

măd'-rĭ-gal, *s.* [Ital. *madrigale* for *mandrigale*, from *mandra* = a herd; Lat. *mandra* = a stall, a stable; Gr. *μάνδρα* (*mandru*); Sp. & Port. *madrigal.* Grove's *Dict. Music* suggests the alternative etyms.: (1) Ital. *madre* = mother, as the first madrigals were addressed to the Virgin mother; (2) a corruption of Sp. *madrugada* = the dawn, used as = Ital. *mattinata* = morning song; (3) from the name in Old Castile.]

1. *Poet.:* A little amorous poem, sometimes also called a pastoral poem, containing some delicate and tender though simple thought, and consisting of not less than three or four stanzas or strophes. Madrigals were first composed in Italy, those of Tasso being accounted amongst the finest specimens of Italian poetry. In the sixteenth and seventeenth centuries especially, the writing of madrigals flourished in England, the chief writers being Suckling, Carew, Lodge, and Withers.

2. *Music:* An important species of vocal polyphonic composition which reached its highest development between the middle of the sixteenth and the middle of the seventeenth centuries. Madrigals are of various kinds—(1) Simple melodies accompanied by other parts not containing counterpoint or imitation; (2) Elaborate compositions full of contrapuntal devices, sometimes consisting of two or more movements. Strictly speaking, madrigals are an unaccompanied class of pieces; a few, however, have been written with instrumental accompaniments. Madrigals are always sung by several voices to each part: the number of parts in which they were written varies from three to ten; but the favourite number of parts during the classical period above-named was five or six.

măd-rĭ-gāl'-ĭ-an, *a.* [Eng. *madrigal*; *-ian.*] Of or pertaining to madrigals.

"The English *madrigalian* writers being represented solely by Morley's 'My bonny lass.'"—*Athenæum*, July 8, 1882.

măd'-rĭ-gal-ĭst, *s.* [Eng. *madrigal*; *-ist.*] A writer or composer of madrigals.

* **măd'-rĭ-gal-lĕr,** *s.* [Eng. *madrigal*; *-er.*] A writer or composer of madrigals.

"Satyrists, panegyrists, *madrigallers.*"—*T. Brown: Works*, ii. 155.

ma-ĕs-tō'-sō, *adv.* [Ital.]

Music: A direction in music that the passage to which it is appended is to be played with dignity, grandeur, and strength.

Māes'-trĭcht, *s.* [See def.]

Geog.: A town of Holland, on the Maes.

Maestricht-beds, *s. pl.*

Geol.: A series of calcareous beds a hundred feet thick, on the banks of the Meuse at Maestricht, about the age of the Faxoe beds—*i.e.*, the highest part of the Upper Cretaceous Rocks. Like the chalk immediately below, the Maestricht calcareous rock contains *Belemnitella mucronata*, *Pecten quadricostatus*, &c., also the genera Bracuites, Hamites, &c., which are only mesozoic. On the other hand, it has the univalve molluscs Volnta and Fasciolaria, genera not commencing elsewhere till the Tertiary. It is a connecting link between the Secondary and the Tertiary Rocks, but in all essential respects belongs to the former. In the Maestricht beds of St. Peter's Mount was found the huge reptile, Mososaurus (q.v.).

ma-ĕs'-trō, *s.* [Ital.] A master in any art; specif., a master in music, a composer.

ma-feie, *adv.* [O. Fr. = my faith.] By or on my faith.

* **măf'-fle,** *v.i.* [O. Dut. *maffelen, moffelen* = to stammer; Prov. Ger. *maffeln, vaffeln* = to prattle. It is probably of imitative origin.] To stammer.

* **măf'-flĕr,** *s.* [Eng. *maffl(e)*; *-er.*] One who stammers or stutters; a stammerer.

"Who enjoyne stutters, stammerers, and *mafflers* to sing."—*P. Holland: Plutarch*, p. 535.

măg, *s.* [A contraction for *magpie* (q.v.).]

1. A halfpenny. (*Slang.*)

"It can't be worth a *mag* to him."—*Dickens: Bleak House*, ch. liv.

2. Talk, chatter. (*Slang.*)

"If you have any *mag* in you."—*Mad. D'Arblay: Diary*, i. 100.

* **măg'-ą-dĭs,** *s.* [Gr. *μαγάδις* (*magadis*).]

Music: An instrument of twenty strings, on which music could be played in octaves.

* **măg'-ą-dīze,** *v.i.* [Gr. *μαγαδίζω* (*magadizō*), from *μαγάδις* (*magadis*).]

Music:

1. To play upon the magadis.

2. To play in octaves.

mą-găs', *s.* [Gr.]

Music:

1. The bridge of a cithara.

2. A fret.

măg-ą-zīne', * **mag-a-zin,** *s.* [O. Fr. *magazin* (Fr. *magasin*), from Ital. *magazzino* = a storehouse, from Arab. *makhzan* (pl. *makházin*) = a storehouse, a granary, a cellar; *khazn* = a laying-up in store; Sp. *magacen, almugacen.*]

I. *Ordinary Language:*

1. A storehouse or receptacle in which any things are stored; a warehouse.

"Stores from the royal *magazine* I bring;
And their own darts shall pierce the prince and king." *Pope: Homer; Odyssey* xxii. 156.

2. A pamphlet or journal periodically published, and containing miscellaneous essays or compositions. The first publication of this kind in England was the *Gentleman's Magazine*, brought out in 1731 by Edward Cave, under the name of Sylvanus Urban, and still in existence, though changed in character.

"We essayists who are allowed but one subject at a time are by no means so fortunate as the writers of *magazines.*"—*Goldsmith*, Essay 9.

II. *Technically:*

1. *Fort.:* A building, vault, or apartment designed for the storage of ammunition, gunpowder, and other explosive substances. Ma-

gazines in field fortifications are constructed in the most sheltered parts of the work, partly underground where practicable, and are lined with timber or with gabions, the ceiling being of timber or railway metals. The whole is covered with a sufficient thickness of earth to render the structure bomb-proof. Permanent magazines are usually constructed of brick, and should be surrounded by an earthen mound, so that in case of explosion the tendency of the explosive force may be upward.

"Here, throughout the siege, had been
The Christians' chiefest *magazine*."
Byron: Siege of Corinth, xxi.

2. *Firearms:* A chamber in a gun containing a succession of cartridges, which are fed one by one automatically, and loaded at the breech of the gun. [MAGAZINE-RIFLE.]

3. *Naut.:* On shipboard the magazine is an apartment placed sufficiently below the waterline to be safe, under ordinary contingencies, from the enemy's shot. It is lined with sheet-copper, and has tiers of shelves on three sides and in the middle for the reception of the copper canisters, in which the cartridges for the heavy guns are contained.

4. *Domestic:* A chamber in a stove or furnace containing a supply of fuel, which falls or is fed into the combustion-chamber as the fire consumes that previously introduced.

magazine cartridge-box, *s.* A cartridge receiver attached to a gun, or to the person near the gun, to facilitate loading.

magazine-day, *s.* The day on which magazines and other serials are published and issued to the trade. It varies in different publishing offices.

magazine-rifle, *s.*

Firearms: (For def. see extract).

"By a *magazine-rifle* is meant a rifle that contains within itself—presumably in the butt—a magazine or reservoir (holding a limited number of cartridges), combined with a mechanical action which, by trigger pressure only—or at all events with the aid of one other motion—performs all the functions of loading; so that, the magazine being filled beforehand, the firer can repeat his shots almost as quickly as he can take aim and fire."—*Saturday Review*, Feb. 16, 1884, p. 209.

magazine-stove, *s.* A stove in which is a fuel-chamber which supplies coal to the fire as that in the grate burns away.

măg-ą-zîne', *v.t.* & *i.* [MAGAZINE, *s.*]

A. *Trans.:* To store up, as in a magazine; to accumulate for future use.

"Being *magazined* up in a diary might serve for materials."—*North: Examen*, p. 222.

B. *Intrans.:* To conduct or edit a magazine.

"Urhan or Sylvan, or whatever name
Delight thee most, thou foremost in the fame
Of *magazining* chiefs, whose rival page,
With monthly medley, courts the curious age."
Byrom: The Passive Participle's Petition.

măg-ą-zîn'-ẽr, *s.* [Eng. *magazin(e)*; *-er.*] One who writes in or for a magazine.

"If a *magaziner* be dull upon the Spanish war he soon has us up again with the ghost in Cock Lane."—*Goldsmith: Essay* 9.

măg-ą-zîn'-ĭst, *s.* [Eng. *magazin(e)*; *-ist.*] The same as MAGAZINER (q.v.).

"The modern *magazinist* is a pitiable poetaster."—*Mortimer Collins: Thoughts in my Garden*, i. 102.

măg'-bōte, *s.* [MÆOBGTE.]

Măg'-dą-lą, *s.* [See def.]

Geog.: The capital of Abyssinia, stormed and destroyed by the British, April 13, 1868.

Magdala-red, *s.*

Chem.: Naphthaline-red. A beautiful red dye discovered in 1867 by Von Schiendl, at Vienna. It is prepared from naphthylamine by the elimination of 3 molecules of hydrogen from 3 molecules of the base, $3C_{10}H_9N - 3H_2 = C_{30}H_{21}N_3$ = azo-dinaphthylamine, and this, on being combined with hydrochloric acid, forms the Magdala-red of commerce. It is a dark-brown, somewhat crystalline powder, possessing a tinctorial power equal to fuchsine, but surpassing it in being a very fast colour.

măg'-dą-lĕn, *s.* [After Mary Magdalene (Luke vii. 36-50), though it is not universally accepted that she was the woman referred to in the passage.] A reformed prostitute; an inmate of a female penitentiary.

magdalen-hospital, magdalen-asylum, *s.* An asylum or institution for the reception of prostitutes, with a view to their reformation; a female penitentiary.

¶ An order of Penitents of St. Magdalen was formed at Marseilles in 1272. Similar communities followed at Naples and Metz. The Magdalen Hospital in London was founded in 1758.

*** măg-dā'-lĕ-ŏn,** *s.* [Gr. μαγδαλία (*magdalia*) = the crumb of bread.]

Medicine:

1. A pill.

2. A roll of plaster.

Geog.: A town on the Elbe.

Magdeburg Centuries, *s. pl.*

Church Hist.: The name given to the first comprehensive work by Protestant divines on Church history. The name is appropriate because it was planned and begun at Magdeburg, and because it was divided into centuries. Baronius wrote his *Annales Ecclesiastici* in reply to the Centuries. [CENTURIATOR.]

Magdeburg-hemispheres, *s. pl.* A device for ascertaining the amount of atmospheric pressure on a given surface, consisting of hemispheres of brass whose edges are carefully ground together to make an air-tight joint. The experiment originated with Otto Guericke, burgomaster of Magdeburg, about 1654. The edges of the hemispheres, being greased with oil or tallow, are brought together, and a stop-cock in one of them screwed into the centre of an air-pump plate. The cock being opened, and a few strokes of the pump made, the sphere is thus exhausted of contained air, and, the cock being closed, is removed from the plate and affixed to a handle, and is ready for the illustration of the atmospheric pressure. Nearly fifteen pounds of force to the square inch will be required to draw them asunder. To separate them readily, it is only necessary to open the stop-cock and re-admit air.

*** mā̆ge,** *s.* [Lat. *magus*; Gr. μάγος (*magos*) = a Magian, one of a Median tribe, an enchanter, a magician.] [MAGI.] A magician.

"The bardy maid . . . the dreadful *Mage* there found
Depe bueied 'bout worke of wondrous end."
Spenser: F. Q., III. iii. 14.

Măg-ĕl-lăn'-ĭc, *a.* [See def.] Pertaining to Magellan, a celebrated Portuguese navigator.

Magellanic-clouds, *s. pl.* Three conspicuous whitish nebulæ, of a cloud-like appearance, near the south pole.

Magellanic-province, *s.*

Zool. & Geog.: A marine province including the coasts of Tierra del Fuego and the Falkland Islands, those of South America from Point Melo on the east to Concepcion on the west. (*Darwin, S. P. Woodward*, &c.).

Mą-ğĕn'-tą, *s.* [See def.]

1. *Geog.:* A city of Italy, 24 miles N.W. of Pavia, celebrated for the defeat of the Austrians by the French and Sardinians, June 4, 1859.

2. *Chem.:* One of the red dyes from aniline. [ANILINE-RED.]

măgg, *v.t.* [Etym. doubtful.] To steal.

"And loot the carters *magg* the coals."—*Scott: Heart of Midlothian*, ch. xliii.

măgg, *s.* [Etym. doubtful.] [MAG.]

1. A halfpenny. (*Slang.*)

2. (*Pl.*) A gratuity which servants expect from those to whom they drive any goods. (*Scotch.*)

măg-gĭ-mŏn'-ĭ-fēēt, *s.* [For *Maggy many feet.*] A centipede. (*Scotch.*)

măğ-ğĭ-ör'-ê, *a.* [Ital.]

Music: Major, as a scale or interval.

măg'-gŏt,* mag-at,* mag-ot,* mak-ed, *s.* [Wel. *macai*, *maceiad* = a maggot; *magiaid* = worms, grubs, from *magiad* = breeding; *magad* = a brood; *magu* = to breed.]

I. *Ordinary Language:*

1. *Lit.:* The larva of a fly or other insect; a grub, a worm.

2. *Figuratively:*

(1) A whim, a crotchet, an odd fancy.

* (2) A careless, idle fellow.

"You were as great a *maggot* as any in the world."—*Bailey: Erasmus*, p. 177.

II. *Music:* One of the later names given to fancies, airs, and pieces of an impromptu character. The most celebrated of these fancies was that by Moteley or Motley.

*** maggot-pie, * maggoty-pie,** *s.* The magpie.

"Augurs and understood relations have
By *maggot-pies*, and choughs, and rooks brought
The secret'st man of blood." [forth
Shakesp.: Macbeth, iii. 4.

măg'-gŏt-ĭ-nĕss, *s.* [Eng. *maggoty*; *-ness.*] The quality or state of being maggoty or abounding with maggots.

măg'-gŏt-ĭsh, *a.* [Eng. *maggot*; *-ish.*] Maggoty, whimsical.

măg'-gŏt-ў, *a.* [Eng. *maggot*; *-y.*]

1. Full of maggots; infested or abounding with maggots.

2. Whimsical, capricious.

"The common saying that a whimsical person has *maggots*, or has got maggots in his head, perhaps arose from the freaks the sheep have been observed to exhibit when infested by bots."—*Kirby & Spence: Introd. to Entomology*, p. 85.

maggot-headed, *a.* Having a head full of whims; whimsical, capricious.

Mā'-gĭ, *s. pl.* [MAGE.] The caste of priests among the ancient Medes and Persians; holy men of the East.

¶ The first mention of Magi in history seems to be in Jer. xxxix. 3, 13, where one of Nabuchadnezzar's officers was called רַב־מָג Rab-Mag = Chief of the Magi. Herodotus (i. 101) describes them as one of the six Median tribes. Afterwards they became the Persian sacred caste. The Greek word in Matt. ii. 1, rendered in the A. V. "wise men," is μάγοι (*magoi*), = Magi. Ultimately the caste sunk into mere magicians. [MAGIC.]

*** mā'-ğĭ-ąn,** *a.* & *s.* [Eng. *magi*; *-an.*]

A. *As adj.:* Of or pertaining to the Magi.

B. *As substantive:*

1. One of the Persian Magi; a priest of the Zoroastrian religion.

2. A magician.

"Leave her to me, rejoined the *magian*."
Keats: Cap & Bells, lx.

*** Mā'-ğĭ-ąn-ĭşm,** *s.* [Eng. *magian*; *-ism.*] The doctrines or philosophic tenets of the Magi. [ZOROASTRIANISM.]

măğ'-ĭc,* mag-ike,* mag-ick, *a.* & *s.* [Fr. *magique* = magical, from Lat. *magicus*; Gr. μαγικός (*magikos*), from μάγος (*magos*) = one of the Magi, an enchanter, a magician; μαγεία (*mageia*) = magic; Sp., Port., & Ital. *magico* = magical; Sp. & Ital. *magia* = magic.]

A. *As adjective:*

1. Of or pertaining to magic; used in magic: as, a *magic* wand.

2. Using or having power to use magic.

"They by the altar stand, while with loose hair
The *magic* prophetess begins her prayer."
Waller: Virgil; Æneis iv.

3. Working or worked by or as if by magic: as, a *magic* lantern.

4. Having extraordinary or supernatural power; exercising a preternatural influence.

"An epic scarce ten centuries could claim,
While awe-struck nations hail'd the *magic* name."
Byron: English Bards & Scotch Reviewers.

5. Done or produced by or as if by magic.

"And that distill'd by *magic* flights, . . .
Shall draw him on to his confusion."
Shakesp.: Macbeth, iii. 3.

B. *As substantive:*

1. The art or pretended art of putting in action the power of spirits; the science or art of producing preternatural effects by the medium of supernatural means, or the aid of departed spirits, or the occult powers of nature; sorcery, enchantment, witchcraft.

2. A power or influence similar to that of magic or enchantment: as, the *magic* of love, the *magic* of a name.

¶ A belief in magic is to be reckoned among the earliest growths of human thought. It is everywhere present, in a greater or less degree, in an inverse ratio to the progress of civilization. Outlying races, and castes and sects, once dominant, but which have now lost their supremacy, are credited with the possession of supernatural powers by those who have succeeded to the lost position. Thus gipsies frequently reap a rich harvest from the credulity of many who hold in low estimation the seers they consult; and the priests of a faith no longer national are credited by the vulgar with mysterious powers which the ministers of religious sects are not supposed to possess. (*Brand: Pop. Antiq.*, iii. 81-83.) It is noteworthy that in

Ireland miraculous power is attributed to suspended—or, as they are euphemistically called "blessed"—priests, rather than to the ordinary clergy. (*Carleton: Traits; The Lianhan Shee.*) The practice of magic had its origin in the belief in an objective connection between two things—a man, and a rude drawing or image of him, or two events—as between the birth of a child, and the rising or setting of a particular star, when, in truth, the connection could only be subjective. (*Tylor: Early Hist. Mankind*, ch. vi.; *Prim. Cult.*, ch. iv., and *Encyc. Brit.* (ed. 9th), s.v. *Magic.*)

¶ (1) *Black magic:* Magic proper, or that division of it which in former times fell into the hands of unofficial persons, or was practised with malefic intentions.

(2) *Celestial magic:* A supposed supernatural power which gave to spirits a kind of dominion over the planets, and to the planets an influence over man.

(3) *Natural magic:* The art of applying natural causes to produce effects apparently supernatural.

(4) *Superstitious* or *geotic magic:* The invocation of devils or demons involving the supposition of some tacit or express agreement between them and human beings.

(5) *White magic:*

(*a*) Magic practised for the benefit of others. [WHITE-WITCH.]

"The practice of *white-magic* is not contrary to the precepts of [the Mahometan] religion."—*Athenæum*, Feb. 14, 1885, p. 218.

(*b*) The art of performing tricks and exhibiting illusions by aid of apparatus, excluding feats of dexterity in which there is no deception, together with the performance of such automaton figures as are actuated in a secret and mysterious manner. (*Encyc. Brit.*, ed. 9th.)

magic-circle, *s.* A circle invented by Dr. Franklin, founded upon the same principles and possessing similar properties with the magic square of squares.

magic-lantern, *s.* An instrument by which the images of objects, usually, but not always, transparent, and paintings or diagrams drawn upon glass are exhibited, considerably magnified, upon a wall or screen. Its invention has been attributed to Roger Bacon about the year 1261, but it was first generally made known by Baptista Porta in his *Natural Magick*, and by Kircher, 1669-70, who described it in his *Ars magna Lucis et Umbræ*. The instrument consists of a case or box to confine all scattered rays from some powerful light which occupies the centre, and which may be aided by a reflector. On one side of the box powerful lenses condense the diverging rays upon the painting or other object, which slides in a sort of stage. Another object-glass, or focussing lens, usually achromatic, throws the image of the highly illuminated object upon the screen, the focus being adjusted by sliding this lens nearer to or farther from the object, usually by a rack and pinion. The magnitude of the image depends upon the relative distances of the object from the lens, and of the lens from the screen. Powerful lanterns give a brilliant picture twenty feet in diameter of a slide three inches in diameter.

magic-square, *s.* A square figure formed by a series of numbers in mathematical proportion, so disposed in parallel and equal rows that the sum of the numbers in each row or line taken perpendicularly, horizontally, or diagonally, are equal.

magic-tree, *s.*

Bot.: Cantua buxifolia, a native of Peru. The name Magic-tree is a rendering of the native Indian name.

măğ'-ĭc-ăl, ***măğ'-ĭc-ăll,** *a.* [Eng. *magic; -al.*]

1. Of or pertaining to magic.

2. Having magic or supernatural powers. (Said of things.)

"Some have fancied that envy has a certain *magical* force in it."—*Steele: Spectator*, No. 19.

* 3. Having the power of using magic. (Said of persons.)

4. Acting or produced as if by magic.

"Arkwright had yet not taught how it might be worked up with a speed and precision which seem *magical*."—*Macaulay: Hist. Eng.*, ch. iii.

¶ *Magic* differs from *magical* in that the former is not used predicatively; thus we say the effect was *magical*, but we speak of a *magic* lantern.

măğ'-ĭc-ăl-lȳ, *adv.* [Eng. *magical; -ly.*] In a magical manner; by or as if by magic.

ma-ğĭ'-cian, ***ma-ği-ci-en,** *s.* [Fr. *magicien.*] One skilled in magic; one who practises magic or the black art; a sorcerer, an enchanter, a necromancer.

"He sent and called for all the *magicians* of Egypt, and all the wise men thereof."—*Genesis* xli. 8.

***măğ'-ĭke,** *s.* & *a.* [MAGIC.]

ma-ğĭlp', ma-ğĭlph', *s.* [Etym. doubtful.]

Art: A vehicle for colours, consisting of linseed which has been long exposed to the oxidising influence of the air mixed with a certain proportion of mastic varnish. (*Weale.*)

măğ'-ĭl-ŭs, *s.* [Latinised from native name.]

Zool.: A genus of siphonostomatous gasteropods, family Buccinidæ. It contains but one species, *Magilus antiquus*, parasitic in live corals in the Red Sea, and on the coast of Java and the Mauritius. When young the shell of Magilus is spiral and thus, as the animal eats its way horizontally through the living mass of coral, it becomes prolonged into an irregular tube, filled with solid shell-matter, the animal residing at the extremity. The tube is sometimes fifteen inches long, and very heavy. The animal has a coucentric lamellar operculum, with its nucleus near the outer edge. (*Woodward.*)

***ma-ğĭs'-tẽr,** *s.* [Lat.] Master, sir; a mode of address equivalent to the moderu Doctor.

măğ-ĭs-tẽr'-ĭ-ăl, *a.* [Lat. *magisterius* = belonging to a master; *magister* = a master.]

I. *Ordinary Language:*

1. Pertaining to or befitting a master; suitable to a master.

2. Domineering, proud, arrogant, insolent, despotic, dogmatic, imperious.

"He hides behind a *magisterial* air,
His own offences." *Cowper: Charity*, 493.

3. Of or pertaining to a magistrate.

"The plump convivial parson often bears
The *magisterial* sword in vain."
Cowper: Tusk, iv. 596.

* 4. Of the rank of a magistrate.

* II. *Chem.:* Pertaining to magistery.

***măğ-ĭs-tẽr-ĭ-ăl'-ĭ-tȳ,** *s.* [Eng. *magisterial; -ity.*] Dominion.

"When these statutes were first in the state or *magisteriality* thereof."—*Fuller: Ch. Hist.*, IX. iv. 11.

† măğ-ĭs-tẽr'-ĭ-ăl-lȳ, *adv.* [Eng. *magisterial; -ly.*]

1. In a magisterial manner; with the air of a master; arrogantly, despotically, dogmatically.

"The claim of infallibility, or even of authority to prescribe *magisterially* to the opinions and consciences of men, whether in an individual, or in assemblies and collections of men, is never to be admitted."—*Bp. Horsley*, vol. ii., ser. 15.

2. As a magistrate; in the capacity of a magistrate.

"A downright advice may be mistaken, as if it were spoken *magisterially*."—*Bacon: Advice to Villiers.*

***măğ'-ĭs-tẽr'-ĭ-ăl-nĕss,** *s.* [Eng. *magisterial; -ness.*] The quality or state of being magisterial; the air and manner of a master; haughtiness, imperiousness.

"Peremptoriness is of two sorts; the one a *magisterialness* in matters of opinion; the other a positiveness in relating matters of fact: in the one we impose upon men's understandings, in the other on their faith."—*Government of the Tongue.*

***măğ'-ĭs-tẽr-ȳ,** *s.* [Lat. *magisterium*, neut. sing. of *magisterius* = pertaining to a master.]

I. *Ordinary Language:*

1. A magisterial injunction; an order given with authority.

2. A medicine or remedy supposed to be of exceptional efficacy; a magistral.

II. *Chem.:* (See extract).

"Although *magistery* be a term variously enough employed by chymists, and particularly used by Paracelsus to signify very different things; yet the best notion I know of it, and that which I find authorized even by Paracelsus in some passages, where he expresses himself more distinctly is, that it is a preparation whereby there is not an analysis made, of the body assigned, nor an extraction of this or that principle, but the whole, or very near the whole body, by the help of some additament, greater or less, is turned into a body of another kind."—*Boyle: Works*, i. 637.

măğ'-ĭs-trą-çȳ, *s.* [Eng. *magistra(te); -cy.*]

1. The office or dignity of a magistrate.

"That indistinct and fluctuating ebaracter which belongs to the accounts of the origins of the other ancient *magistracies*."—*Lewis: Cred. Early Roman Hist.* (1855), ii. 36.

2. The whole body of magistrates collectively.

măğ'-ĭs-trăl, * **măğ'-ĭs-trall,** *a.* & *s.* [Lat. *magistralis*, from *magister* = a master.]

* A. *As adjective:*

1. Of or pertaining to a magistrate; suiting a magistrate; magisterial.

"Your assertion of the originall of set forms of liturgy, I justly say is more *magistrall* than true, and such as your own testimonies confute."—*Bp. Hall: Answer to the Vind. of Smectymnuus*, § 2.

2. Of or pertaining to a sovereign remedy or medicine; acting as a sovereign remedy.

"Let it be some *magistrall* opiate."—*Bacon: Hist of Life & Death*, p. 23.

3. Applied to a preparation prescribed extemporaneously or for the occasion; as distinguished from an officinal medicine, or one kept prepared in the shops.

B. *As substantive:*

I. *Fortification:*

(1) The line where the scarp, if prolonged would intersect the top of the coping of cordon.

(2) The guiding line which defines the first figure of the works of a fortification. Called also magistral line.

* 2. *Med.:* A sovereign medicine or remedy

"I finde a vaste chaos of medicines, a confusion of receipts and *magistrals*, amongst writers, appropriated to this disease, some of the chiefest I will rehearse."—*Burton: Anatomy of Melancholy*, p. 382.

* 3. *Metall.:* A substance obtained from copper pyrites (or raw magistral), which is found in many parts of Mexico. These ores, according to Napier, contain from 7·47 to 13·75 per cent. of copper. It is reduced to powder by dry stamping and grinding. It is used especially in the patio process of amalgamation. Some authorities state that the copper pyrites are roasted and ground, but this would seem to detract from their activity, which is due to the action of their sulphuric acid upon the salt, liberating muriatic acid.

***măğ-ĭs-trăl'-ĭ-tȳ,** *s.* [Eng. *magistral; -ity.*] Despotic authority, as in matter of opinion; dogmatism.

"The physicians have frustrated the fruit of tradition and experience by their *magistralities*, in adding and taking out, and changing."—*Bacon: On Learning*, bk. ii.

***măğ'-ĭs-trąl-lȳ,** *adv.* [Eng. *magistral; -ly.*] In a magistral manner; magisterially, dogmatically, despotically.

"What a presumption is this for one, who will not allow liberty to others, to assume to himself such a licence to controul so *magistrally*."—*Bramhall: Against Hobbes.*

măğ-ĭs-trănd', *s.* [Low Lat. *magistrandus*, gerund of *magistro* = to make a master of, to confer a degree on, from Lat. *magister* = a master.] In the University of Aberdeen, a student in arts in the last year of his curriculum.

măğ'-ĭs-trate, ***mag-e-strat,** ***maj-es-trat,** *s.* [Fr. *magistrat*, from Lat. *magistratus* = (1) a magistracy, (2) a magistrate, from *magister* = a master; Ital. *magistrato*; Sp. *magistrado.*] A public officer invested with authority to carry out the executive government or some branch of it. Thus in the United States the President is the chief magistrate of the nation, and the governor of each state is its chief magistrate. But the term is commonly confined to subordinate officials, nominated and commissioned to carry out the executive power of the law, such as justices of the peace in the county, and police magistrates in the cities. The term magistrate is given special application by the laws of some of the states. [JUSTICE.]

"He who was the *magistrate*, after long abusing his powers, has at last abdicated them."—*Macaulay: Hist. Eng.*, ch. x.

*** măğ'-ĭs-trăt'-ĭc,** * **mag-is-trat-ick,** * **mag-is-trat-i-cal,** *a.* [Eng. *magistrat(e); -ic, -ical.*] Of or pertaining to a magistrate or magistrates; having the authority of a magistrate.

"Not of the internal and essential glory which is in *magistratick* or ecclesiastick power and order."—*Bp. Taylor: Artificial Handsomeness*, p. 169.

***măğ'-ĭs-trą-ture,** *s.* [Fr., from *magistrat* = a magistrate.] Magistracy.

măğ'-mą, *s.* [Gr., from μασσω (*massō*) = to knead.]

* I. *Ordinary Language:*

1. A crude mixture of mineral or organic matter in a thin paste.

2. A confection.

II. *Technically:*

1. *Phar.:* The thick residuum obtained after expressing certain substances to extract the fluid parts. The grounds which remain after treating a substance with water, alcohol, or any other menstruum. (*Dunglison.*)

2. *Petrol.:* The name given by Vogelsang and Rosenbusch to homogeneous, amorphous mineral matter which cannot be investigated except under high magnifying powers. (*Rutley.*)

¶ *Reticulated Magma:*

Anat.: The gelatinaform substance found between the chorion and the amnion in the early period of embryonic existence.

Măg'-na Chăr'-tą, Măg'-ną Căr'-tą, *s.* [Lat., = the Great Charter.]

1. The Great Charter of the liberties of England (*Magna Charta Libertatum*), signed and sealed by King John at the demand of his barons, at Runnymede, on June 19, 1215. It was several times confirmed by his successors. Its most important articles were:—

1. *Relating to the Church.* That the church should possess all its privileges inviolate, especially freedom of election to benefices.

2. *Relating to the Barons.* That reliefs be limited to a fixed sum, according to the rank of the tenant: That aids be demanded only in the three cases—knighthood of the eldest son, marriage of the eldest daughter, and the ransom of the king's person; in every other case neither aid nor scutage to be imposed but with the consent of the council: That guardians in chivalry may not waste the estate, nor marry the heir during minority; nor to their disparagement, nor compel widows to marry: That the forest law be mitigated: and that whatever privileges the king grants his vassals, they in like manner shall grant to theirs.

3. *Relating to Traders.* That London and other towns retain their ancient privileges: That there be one weight and measure throughout the realm: and that freedom of commerce be granted to foreign merchants.

4. *Relating to Freemen Generally.* That right or justice be not sold, or refused, or delayed: That no freeman be imprisoned, or lose his freehold, or free customs, or be outlawed, or otherwise punished, but by the judgment of his peers, or by the law of the land: That no person be fined to his utter ruin, but only according to his offence, and means of payment, and that no man be deprived of his instruments of labour: That all men may travel out of the kingdom, and return when they please: That a man may make what will he pleases, and, dying without one, the law shall make one for him: and that the Court of Common Pleas shall no longer follow the king's person, but be held in some certain place, and be open to all.

It will be seen from the following extract that Magna Charta no longer exists in the letter—

"Just before the weary Commons adjourned, they read a third time, and passed a bill repealing a number of obsolete statutes, among which was *Magna Charta*. It was obvious that the spirit of the Great Charter had long since been embodied in a number of Acts of Parliament and legal decisions ranging between the time of King John and that of Queen Victoria."—*Daily Telegraph*, Aug. 4, 1874.

2. Any fundamental constitution guaranteeing rights and privileges.

* **măg-năl'-ĭ-tў,** *s.* [Lat. *magnalis* = great, from *magnus* = great.] A great deed or feat; something above the common.

"Although perhaps too greedy of *magnalities*, we are apt to make but favourable experiments concerning welcome truths, and much desired verities."—*Browne: Vulgar Errours*, bk. ii., ch. iii.

* **măg-năn'-ĭ-māte,** *v.t.* [Lat. *magn(us)* = great, and Eng. *animate*.] To cheer; to make great-hearted.

"Present danger *magnanimates* them."—*Howell: Dodona's Grove*, p. 4.

măg-na-nĭm'-ĭ-tў, * **mag-na-nim-ĭ-tee,** *s.* [Fr. *magnanimité*, from Lat. *magnanimitatem*, accus. of *magnanimitas*, from *magnanimus* = magnanimous (q.v.); Ital. *magnanimità*; Sp. *magnanimidad*.] The quality or state of being magnanimous; that elevation and dignity of soul, which encounters danger or trouble with tranquillity and firmness, which raises the possessor above revenge, which makes him disdain injustice and meanness, which prompts him to act and make sacrifices for noble objects, and which makes him delight in acts of benevolence and usefulness.

"But the *magnanimity*, the dauntless courage, the contempt for riches and for baubles, to which . . . Pitt owed his long ascendency, were wanting to Montague."—*Macaulay: Hist. Eng.*, ch. xxiv.

măg-năn'-ĭ-moŭs, *a.* [Lat. *magnanimus* = great-souled, from *magnus* = great, and *animus* = the mind; Fr. *magnanime;* Ital. & Sp. *magnanimo*.]

1. Great of mind; elevated and dignified in soul or sentiment; above what is mean, low, or ungenerous; brave, high-souled.

"For he was great of heart, *magnanimous*, courtly, courageous." *Longfellow: Miles Standish*, iii.

2. Dictated by, characteristic of, or springing from magnanimity; noble, generous: as, a *magnanimous* action.

măg-năn'-ĭ-moŭs-lў, *adv.* [Eng. *magnanimous; -ly.*] In a magnanimous manner; with magnanimity; with dignity or elevation of soul or sentiment; bravely.

"With Hannibal at her gates, she [Holland] had nobly and *magnanimously* refused all separate treaty." —*Burke: Regicide Peace*, let. i.

măg'-nąte, *s.* [Fr. *magnat*, from Lat. *magnatem*, accus. of *magnas* = prince, from *magnus* = great; Sp. & Ital. *magnate*.]

1. A person of rank, position, note, or distinction in any line or sphere.

"The lives and estates of the *magnates* of the realm had been at his mercy."—*Macaulay: Hist. Eng.*, ch. iv.

2. One of the nobility or certain high officers of state forming the House of Magnates in the national representation of Hungary, and formerly of Poland.

* **măg'-nēș,** *s.* [Lat., from Gr.] A magnet.

* **magnes-stone,** *s.* A magnet.

"A hideous rocke is pight
Of mightie *magnes-stone*."
Spenser: F. Q., II. xii. 4.

măg-nē'-sĭ-ą (s as sh), *s.* [Magnesium.]

1. *Min.:* The same as Periclase (q.v.).

2. *Pharm.:* If administered in small doses, magnesia acts as an antacid; if in a quantity beyond what is necessary to neutralize acids in the stomach, it passes undigested into the intestines, and may form concretions. The salts of magnesia are purgatives. It is given as a lithontriptic, from its power of dissolving uric acid, and in gouty diseases. (*Garrod.*)

magnesia-alba, *s.*

Chem. & Phar.: A complex mixture of various carbonates of magnesia. It is obtained as a light, bulky white powder by precipitating soluble magnesia salt with sodic carbonate.

magnesia-water, *s.* A kind of aërated water produced by impregnating carbonate of magnesia in solution with ten times its weight of carbonic acid.

măg-nē'-sĭ-ąn (s as sh), *a.* [Eng. *magnesi(a); -an.*] Of or pertaining to magnesia; partaking of the qualities of magnesia; containing or resembling magnesia.

magnesian-alum, *s.*

Min.: The same as Pickerinoite (q.v.).

magnesian-limestone, *s.*

1. *Petrol., Geol., & Palæont.:* A limestone composed of carbonate of lime and carbonate of magnesia, the proportion of the latter sometimes being nearly fifty per cent. It effervesces much more slowly with acids than common limestone (carbonate of lime). In England it is generally yellowish. It is sometimes earthy, sometimes hard and compact. One variety of it is dolomite (q.v.). This Rutley makes a synonym of magnesian-limestone. The typical kind of magnesian-limestone, generally associated with marl slate, is from the Middle Permian. It is well developed in parts of the United States, and often contains concretionary balls. Its characteristic fossils are *Schizodus Schlotheimi, Mytilus septifer*, &c. (*Lyell.*) It was originally formed in large measure of the remains of marine animals.

2. *Building:* The Houses of Parliament, the Museum of Practical Geology, and York Minster are built of magnesian-limestone. (*Rutley.*)

magnesian-pharmacolite, *s.*

Min.: The same as Berzeliite (q.v.).

măg-nē'-sĭc, *a.* [Eng., &c. *magnesi(a); -ic.*] Contained in or derived from magnesia (q.v.).

magnesic-carbonate, *s.*

Chem.: MgO″CO. Occurs native in rhombohedral crystals, imbedded in talc slate.

magnesic-chloride, *s.*

Chem.: $MgCl_2$. Occurs in sea water or in salt deposits, or may be prepared by dissolving magnesia in hydrochloric acid. It is a white crystalline powder, having a pearly lustre and sharp bitter taste, soluble in water and in alcohol.

magnesic-oxide, *s.*

Chem.: MgO. Produced by burning magnesium in the air or in oxygen gas, or by heating to a red heat *magnesia alba*. It is a soft white powder, almost insoluble in water. It is known in commerce as calcined magnesia.

magnesic-phosphate, *s.*

Chem.: $Mg''HPO_4{\cdot}7H_2O$. Crystallizes in small colourless prismatic crystals, soluble in about 1,000 parts of cold water. Caustic alkalis precipitate, from solutions of magnesium salts, gelatinous magnesic hydrate, insoluble in an excess of the precipitant, but soluble in ammonic chloride. Ammonic phosphate gives a white crystalline precipitate, insoluble in ammonia.

magnesic-sulphate, *s.*

Chem.: $MgO''SO_3{\cdot}7H_2O$. Commonly called Epsom salts, is found in sea water and in many mineral springs. It is now manufactured in large quantities by dissolving magnesian limestone in dilute sulphuric acid, and filtering from the insoluble calcic sulphate. It is soluble in water, has a nauseous bitter taste, and possesses purgative properties; it is also used in dressing cotton goods, and in aniline dyeing.

măg-nēș'-ĭ-nĭ-tre (tre as tĕr), *s.* [Eng. *magnesi(a)*, and *nitre*.]

Min.: The same as Nitromagnesite (q.v.).

măg-nēș-ĭn-phўll'-īte, *s.* [Eng. *magnesi(a)*; *n* connective, and Gr. *φύλλον* (*phyllon*) = leaf.]

Min.: The same as Brucite (q.v.).

măg-nēș-ĭ-ō-fĕr'-rīte, *s.* [Eng. *magnesi(a); o*, and Eng. *ferrite*.]

Min.: An isometric mineral occurring in simple octahedrons, and in octahedrons with planes of the rhombic dodecahedron. Hardness, 6 to 6·5; sp. gr. 4·568 to 4·654; lustre, metallic; colour and streak, black. Strongly magnetic. Compos.: magnesia 20; sesquioxide of iron, 80. Found associated with laminar hæmatite as a sublimation product about the fumaroles of Vesuvius. Artificially formed by heating together magnesia and sesquioxide of iron subjected to the action of the vapour of hydrochloric acid.

măg'-nēș-īte, *s.* [Eng. *magnes(ia); suff. -ite* (*Min.*).]

Min.: A mineral belonging to the group of rhombohedral carbonates, consisting essentially of carbonate of magnesia, having the formula $MgOCO_2$, but in the crystallized forms having more or less of the magnesia replaced by protoxide of iron, forming ferriferous varieties like breunnerite (q.v.). The crystallized varieties present a perfectly rhombohedral cleavage; lustre vitreous; colour white to various shades of brown. The massive and purer kinds are white, mostly compact; lustre dull; fracture resembling unglazed porcelain. The *Brit. Mus. Cat.* reserves this name for the pure mineral only, and groups the ferriferous carbonates of magnesia under ankerite, breunnerite, and mesitite (q.v.). Used in the manufacture of Epsom salts.

¶ Magnesite formerly included meerschaum (q.v.). Brongniart, in 1802, and subsequent French mineralogists, still used this name for the silicate.

măg-nē'-sĭ-ŭm (s as sh), *s.* [Latinised from Magnesia, a city in Asia Minor.]

Chem.: A diatomic metallic element; symbol, Mg; atomic weight, 24·4; sp. gr. 1·743. Fuses and volatilizes at a red heat. Magnesic sulphate (Epsom salts) was known in the middle of the seventeenth century, but the metal was first isolated by Davy. The compounds of magnesium are widely distributed in nature, occurring as magnesite, $MgO''CO$; ophite or serpentine, MgO''_3Si_2O; talc, $MgO''_4Si_5O_6$; dolomite, kainite, epsomite, &c. It may be obtained by the electrolysis of fused magnesium chloride, or by reducing magnesium chloride with metallic sodium. It is a brilliant metal, almost as white as silver, and preserves its lustre in dry air. It is more brittle than silver at ordinary temperature; but at a higher temperature it becomes malleable, and may be pressed into the form of wire or ribbon. Magnesium ribbon may be ignited at the flame of a candle, and burns with a dazzling bluish-white light, rich in chemically active rays, a property which has led to its use in photography. When burned in an atmosphere of carbonic acid gas, it decomposes the gas, forming magnesic oxide, and throwing down the carbon in powder. Magnesium dissolves in dilute acids, with violent evolution of hydrogen, but it does not decompose water even at 100°.

magnesium-chloride, *s.*
Min.: A mineral said to have occurred in the saline encrustations formed during the eruption of Vesuvius in 1855.

magnesium-diethyl, *s.*
Chem.: $Mg<^{C_2H_5}_{C_2H_5}$. A volatile liquid, smelling like garlic, prepared by digesting magnesium filings with ethylic iodide in absence of air. It is a colourless liquid, boiling at a higher temperature than ethylic iodide; inflames spontaneously in air, and is decomposed with explosive violence by water.

magnesium-dimethyl, *s.*
Chem.: $Mg<^{CH_3}_{CH_3}$. A volatile liquid, produced by the action of magnesium filings on methylic iodide. It is similar in its preparation and properties to magnesium diethyl.

magnesium-ethide, *s.*
Chem.: $Mg(C_2H_5)_2$. A colourless, mobile liquid, obtained by heating ethyl iodide with magnesium filings to 130°. It possesses an alliaceous odour, takes fire when exposed to the air, and is violently decomposed by water, with the formation of magnesium hydroxide.

magnesium-lamp, *s.* A lamp in which magnesium is burnt for illuminating purposes. They are of two kinds: one for the combustion of magnesium in the form of a ribbon; in the other magnesium is used in a state of powder, mixed with fine silver sand.

magnesium-light, *s.* The light produced by the combustion of magnesium. Its intensity is almost equal to that of the electric arc, but its flickering nature and the large quantity of magnesia vapour given off are objections to its use.

magnesium-methyl, *s.*
Chem.: $Mg(CH_3)_2$. A strongly smelling mobile liquid, produced when methyl iodide is heated with magnesium filings. It takes fire on exposure to the air, and is readily decomposed by water, with formation of marsh-gas and magnesium hydroxide.

magnesium-silicate, *s.*
Min.: The same as ENSTATITE, FORSTERITE, HUMITE, MEERSCHAUM, SERPENTINE, and TALC (q.v.).

magnesium-sulphate, *s.*
Min.: The same as EPSOMITE and KIESERITE (q.v.).

Harte · Thomas à Kempis; A Vision.

* **II.** *Magnetism:* A body possessing the property of magnetism (q.v.). Magnets are either permanent or temporary. Permanent magnets were originally natural pieces of magnetic iron-ore. [MAGNETITE.] They now usually consist of bars of steel, which are magnetized either by rubbing them with another magnet, or by coiling a wire round them in a helix, and then sending an electric current through the wire. The harder the steel the more difficult it is to magnetize, but the more completely does it retain its magnetism. Permanent magnets are either straight or are bent into the form of a horseshoe. In the latter form the two poles are close together, and are thus able to act simultaneously on the same magnetic substance. A magnet consisting of only one bar of steel is called a simple magnet; but since thin long magnets are more powerful in proportion to their weight, compound magnets are constructed by fastening together several thin steel bars previously magnetized. Some of these compound magnets are very powerful. Far more powerful than any permanent magnets are electro-magnets, which may be either straight or bent into the form of a horseshoe, and consist of a bar or core of soft iron, round which is coiled insulated copper wire. Through this wire an electric current is sent, and, so long as the current passes, the iron is a powerful magnet. The strength of an electro-magnet depends on the strength of the current and on the number of coils of wire round the core, and upon various other circumstances. Electro-magnets have been made capable of supporting more than a ton. When used for supporting weights, &c., a smooth piece of iron, termed an armature, is placed in contact with the poles of the magnet, the horseshoe form being generally used, and the armature is provided with a hook, to which the articles are attached.

măg-nĕt'-ĭc, *a.* & *s.* [Eng. *magnet; -ic.*]

A. *As adjective:*

I. *Literally:*

1. Of or pertaining to the magnet or magnetism; having the qualities of a magnet.

2. Pertaining to the earth's magnetism: as, the *magnetic* north.

B. *As subst.:* Any metal, such as iron, steel, nickel, cobalt, &c., which may receive the properties of the loadstone.

"Draw out with credulous desire, . . .
As the *magnetic* hardest iron draws."
Milton: P. R., ii. 168.

¶ (1) *Magnetic points of consequence:* The points (really the magnetic poles of the earth) which occupy the centre of lines of equal dip.

(2) *Magnetic poles of the earth:* Two nearly opposite points of the earth's surface when the dip of the needle is 90°. They are at a considerable distance from the poles of the earth.

(3) *Point of magnetic indifference:* A point near the centre of a magnet where no effect is produced.

magnetic-amplitude, *s.*
Astron.: The amplitude of a heavenly body as measured by the compass. It differs from the true amplitude by an amount equal to the variation of the compass.

magnetic-azimuth, *s.*
Navig.: The azimuth indicated by the compass.

magnetic-battery, *s.* A combination of several magnets with their poles similarly arranged; a compound magnet.

magnetic-bearing, *s.*
Naut.: The magnetic bearing of a course is the angle included between a course and a magnetic meridian, drawn through the first extremity of the course.

magnetic-compensator, *s.*
Ordnance.: A contrivance for neutralizing the effect of a ship's guns and other iron in deranging the bearing of the compass. That introduced by Prof. Airy consists of two magnets placed at right angles to each other below the compass, and a box of small iron chain. The position is determined by experiment. But as the magnetic effects of the ship and its contents vary from time to time, so the compensator has to be readjusted at frequent intervals.

magnetic-couple, *s.* [COUPLE.]

magnetic-curves, *s. pl.* A series of lines or directions which may be graphically denoted by iron filings scattered upon a card or pane of glass placed horizontally upon a magnet and gently tapped. The beautiful lines into which the filings are thrown indicate lines of magnetic force.

magnetic-declination, *s.* The variation of the magnetic needle at a particular place and time, E. or W. of the geographical meridian of the spot.

magnetic-dip, *s.* The dip of the magnetic needle. [DIP, *s.*]

magnetic-elements, *s. pl.* Intensity, declination, and dip.

magnetic-equator, *s.* A line passing round the globe near the equator, at every point of which the dip of the needle is nothing. The general inclination of the magnetic to the terrestrial equator is about 12°.

magnetic-field, *s.* The field of a magnet is the region affected by it. In one sense it may be said to be infinite; but the law of inverse squares diminishes the intensity so rapidly, that practically the term is limited to the region sensibly affected by the magnet. The amount of force exerted at any point is the intensity of the field at that point, and is measured by the force exerted upon a unit pole at the point.

* **magnetic-fluid,** *s.* A hypothetical term now disused, formerly denoting an hypothesis long ago abandoned.

magnetic-inclination, *s.* The same as MAGNETIC-DIP (q.v.).

magnetic-induction, *s.* The effect produced by a magnet upon magnetic bodies in its neighbourhood. Magnetic bodies are rendered magnetic by such neighbourhood, and still more by contact, which is called induced magnetism.

magnetic-intensity, *s.* The greater or less effect produced by a magnet, usually measured by its attractive force. This varies inversely as the square of the distance.

magnetic iron-ore, *s.*
Min.: The same as MAGNETITE (q.v.).

magnetic-ironstone, *s.* [MAGNETITE.]

magnetic-limit, *s.* A limit of temperature beyond which iron or any other magnetic metal ceases to be affected by the magnet.

magnetic-meridian, *s.* If a vertical plane be passed through the axis of a magnetic-needle, freely suspended at a point, its intersection with the surface of the earth is called a magnetic meridian of the point. The angle included between this meridian and the true meridian through the point, is called the variation of the needle.

magnetic-needle, *s.* A slender poised bar or plate of magnetized steel. The needle is suspended by a metallic or jewelled centre upon a hardened steel pivot. For other instruments needles are often suspended by fine silk threads or even spider-lines. The test of delicacy is the number of horizontal vibrations which the suspended needle will make before coming to rest.

magnetic-north, *s.* That point of the horizon indicated by the direction of the magnetic needle.

magnetic-poles, *s. pl.* [MAGNET.]

magnetic-pyrites, *s.*
Min.: The same as PYRRHOTITE (q.v.).

magnetic-saturation, *s.* The state of a bar or needle when it has received the greatest amount of magnetic force which can be permanently imparted to it.

magnetic-storms, *s. pl.* Magnetic disturbances felt simultaneously at places remote from each other.

magnetic-telegraph, *s.* [TELEGRAPH.]

magnetic-units, *s. pl.* In the C. G. S. system, the unit pole is one which repels a similar pole distant one centimetre with the force of one dyne. The unit moment is the moment of a magnet one centimetre long, having the unit pole above.

magnetic-variation, *s.* [VARIATION.]

măg'-nĕt-ĭzm, *s.* [Eng. *magnet*; *-ism.*]

1. The property capable of being imparted to certain bodies, especially iron, cobalt, and nickel, whereby they attract or repel one another according to certaiu laws.

2. The branch of science which treats of this property and its conditions or laws.

3. The attractive power itself.

¶ The property of magnetism was first discovered in the natural oxide of iron, called Magnetite (q.v.), or the Loadstone. The earth itself having magnetic properties, sueh a natural magnet pointed nearly north and south, when freely suspended, and also attracted small pieces of iron. It was subsequently diseovered that pieces of steel rubbed with natural magnets also became magnets; and these artificial magnets, besides being more convenient, may be made much more powerful, so that natural magnets are now only sought as curiosities. The attraction of a magnet for iron filings is most intense at a short distance from the ends, and decreases towards the middle; at the centre there is no attraction, and this centre is termed the eqnator of the magnet. The points at which the magnetism is most intense are termed the poles. It is evident that the magnetism at the two poles is different; and that pole which points to the north is termed the north-seeking pole, whilst that which points to the south is called the south-seeking pole. If two magnets are taken, and the north-seeking pole of one is brought near the north-seeking pole of the other, they repel each other; but if the north-seeking end of one is brought near the south-seeking end of the other, then they attract each other. Therefore *similar* poles repel, *dissimilar* poles attract each other. It is impossible to obtain a magnet with only one pole. If a magnetized needle is broken into a number of small pieces, each little piece is a magnet having a north-seeking and a south-seeking pole. Hence it would appear that every particle of a magnetized body is a little magnet, all having their south-seeking poles set in one direction, and their north-seeking poles in the opposite direction. Bodies may be divided into two classes: viz., magnetic bodies, which are attracted by magnets, and non-magnetic bodies, which are not attracted. The most magnetic bodies are the metals, iron, nickel, and cobalt. Some other metals, salts of iron and of other metals, porcelain, paper, oxygen gas, and ozone, are feebly magnetie. Other substances, as, for example, bismuth, antimony, copper, silver, gold, lead, sulphur, phosphorus, and water, are not only not attracted by a magnet, but are actually repelled: these are said to be diamagnetic. When a magnetic substance is brought near to or in contact with a magnet, it becomes converted into a magnet by magnetic induction (q.v.), just as a charge is induced in a conductor by an electrified body. The nearest pole thus induced is a dissimilar pole to the inducing pole, and the attraction of the magnet is thus due to the action already described of two dissimilar poles. When the inducing magnet is removed, most substances lose their magnetism, and hence are said to be temporarily magnetic; the perfection of this property in soft iron is of great importance to magneto-electric and dynamo-electric machines, which depend entirely for their effects upon rapid reversals of magnetic polarity. Steel and nickel retain the greater part of the induced magnetism, and are said to be permanently magnetic. Cast-iron also retains a large proportion of the magnetism imparted to it. Even so-called permanent magnets, however, lose a portion of their power gradually; but by "closing" their poles with pieces of soft iron, which thus become induced magnets with dissimilar poles in contact, the inducing effect of these pieces strengthens the magnetism; such pieces of iron are termed armatures. If magnetised steel is heated to redness, or is subjected to violent blows, it loses its magnetism. That a magnetic needle points approximately north and south is due to the fact that the earth itself is a huge magnet, whose conditions accordingly relate to what is called Terrestrial Magnetism. Thus, the North magnetic pole is not at present identical with the true North pole, but is situated within the Arctic circle in latitude 75° 5′ N., and long. 96° 46′ W. The position of the South magnetic pole has not yet been ascertained. In consequence of the different positions of the magnetic North pole and the geographical North pole, a magnetic needle does not point true north and south, but a little to the east or west, according to the locality. This is termed the declination of the needle, and in the British Isles varies from 17° to 20° W. The amount of declination varies from year to year, and in this country is at present diminishing at the rate of about 7′ per annum. When a needle is balanced on a horizontal axle, so that it can turn in a vertical plane, and is then magnetized, it is found to set itself at an angle depending on the locality, with the north-seeking pole pointing downwards if north of the equator, and the south-seeking pole pointing downwards if south of the equator. This is termed the inclination or dip of the needle, and a needle thus arranged is termed a dipping needle. The amount of the dip varies in differeut places; in London it is 71° 50′. Magnetic charts are maps on which are marked lines showing the distribution of the earth's magnetism. It is found that the three magnetic elements, as the declination, dip, and intensity of magnetic force are termed, vary not only in different places, but also in the same place, from year to year, from month to month, and even from hour to hour. Those changes which proceed gradually for several years are termed secular. Frequently disturbauees occur which produce a temporary irregular effect on all the needles over a considerable area: these are termed magnetic storms, and are often connected with manifestation of electrical phenomena, sueh as the aurora borealis, or a violent thunderstorm, and still more generally with those solar outbursts known as spots on the sun. All such changes in the earth's magnetism are now daily recorded at many stations by self-registering apparatus. Professor Œrsted, of Copenhagen, discovered that if an electric current were passed along a wire parallel to a freely-balanced magnetic needle, the needle was deflected to a position at right angles to the current. Subsequently it was discovered that a current passed at right angles to an iron wire magnetized the wire so long as the current passed. This effect was easily multiplied by coiling the wire conveying the current round the iron rod or wire in the form of a helix; thus producing magnetism enormously more powerful than could be contained in any permanent magnets. Still later it was found that the wire helix alone possessed nearly all the properties of a magnet. At a subsequent period Faraday discovered the converse relative phenomena, that the production, or cessation, or any variation in the intensity of magnetism, caused the production of an electric current, the developments of which are comprised in the subject of magneto-electricity.

Min.: An ore of iron sometimes found well crystallized in forms belonging to the isometric system, the octahedron being the most frequent, though the rhombic dodecahedron also occurs uncombined with others. Dodecahedral faces striated parallel to the longer diagonal; octahedrons frequently twinned. Hardness, 5·5 to 6·5; sp. gr. 4·9 to 5·2; lustre, metallic to submetallic; colour and streak, black, opaque, but when in excessively thin films sometimes nearly transparent, and of a smoky-brown colour; fracture subconchoidal and shining when pure. Strongly magnetic, and sometimes exhibiting polarity. Compos.: iron, 72·4; oxygen, 27·6, or sesquioxide of iron, 68·97; protoxide of iron, 31·03; represented by the formula $FeOFe_2O_3$. One of the most important of the ores of iron, occurs in beds often of immense extent in the Azoic rocks; that from Siberia and the Hartz district, Germany, afford the most powerfully magnetic varieties. Also found abundantly as sand, being derived from the weathering of crystalline and metamorphic rocks, in which it is distributed as minute crystals and grains.

magneto-electricity, *s.* The science which treats of the production of electricity by means of a magnet. It was discovered in 1831 by Faraday, who succeeded in generating an electric spark by suddenly separating a coiled keeper from a permanent magnet. He subsequently discovered that an electric current existed in a copper disc rotated between the poles and a magnet. This is not to be confounded with electro-magnetism, discovered by Œrsted, which investigates the action of an electric current on a magnet, the process being the converse one to that in the former case.

Wordsworth: Excursion, bk. ix.

¶ *Magnificence* lies not only in the number and extent of the objects presented, but in their degree of richness as to their colouring and quality; *splendour* is but a characteristic of *magnificence*, attached to such objects as dazzle the eye by the quantity of light, or the beauty and strength of colouring; *pomp* is the appendage of power, when displayed to public view.

măg-nĭf'-ĭ-çent, *a.* [Lat. *magnificens*=doing great things: *magnus* = great, and *faciens*, pr. par. of *facio* = to do; Ital. *magnificente.*]

* 1. Doing great or noble deeds or works; munificent, generous.

2. Grand in appearance; splendid.

"Sunk in the queuching gloom,
Magnificent and vast are heaven and earth,
Order confounded lies." *Thomson: Autumn*, 1,139.

* 3. Fond of splendour, show, or pomp.

4. Noble, splendid; exceedingly praiseworthy.

"This was thought and called a *magnificent* answer, down to the last days of Italian servitude."—*Byron: Childe Harold*, iv. 3. (Note.)

măg-nĭf'-ĭ-çent-lȳ, *adv.* [Eng. *magnificent*; *-ly.*] In a magnificent manner or degree; with magnificence; splendidly, grandly.

"The beauteous warrior now arrays for fight,
In gilded arms *magnificently* bright."
Pope: Homer; Iliad iii. 410.

măg-nĭf'-ĭ-cō, *s.* [Ital., from Lat. *magnificus.*]

* 1. A grandee of Venice.

"The *magnifico* is much beloved,
And hath in his effect a voice potential."
Shakesp.: Othello, i. 2.

2. A rector of a German university.

***măg-nĭf'-ĭ-coŭs,** *a.* [Lat. *magnificus*=magnificent (q.v.).] Magnificent, grand, pompous.

***măg-nĭf-ĭ-coŭs-lȳ,** *adv.* [Eng. *magnificous*; *-ly.*] Magnificently, grandly, pompously. (*Hooker.*)

măg'-nĭ-fī-ĕr, *s.* [Eng. *magnify*; *-er.*]

1. One who or that which magnifies, praises, or extols.

2. That which makes great or increases; an increaser.

"*Vena hilaris* is a great *magnifier* of honest mirth."—*Burton: Anat. of Melancholy*, p. 298.

3. A magnifying-glass (q.v.).

"One of our microscopes has been counted by several of the curious as good a *magnifier* as, perhaps, any in the world."—*Boyle: Works*, ii. 543.

măg'-nĭ-fȳ, ***mag-ni-fi-en,** *v.t.* & *i.* [Fr. *magnifier*, from Lat. *magnifico*=to make great; *magnus* = great, and *facio* = to make; Ital. *magnificare*; Sp. & Port. *magnificar.*]

A. *Transitive:*

1. To make great or greater; to increase the apparent size or dimensions of.

"And mighty warriors sweep along,
Magnified by the purple mist."
Longfellow: Tales of a Wayside Inn. (Prelude.)

† 2. To make or declare great, to extol; to declare the praises of; to glorify.

"Let thy name be *magnified* for ever."—*2 Samuel* vii. 26.

* 3. To raise in pride or pretensions.

"O Lord, behold my affliction: for the enemy hath *magnified* himself."—*Lamentations* i. 9.

4. To exaggerate; to represent as greater than reality.

"Each vainly *magnifies* his own success,
Resents his fellow's, wishes it were less."
Cowper: Tirocinium, 477.

B. *Intransitive:*

1. To have the power or quality of causing things to appear larger than reality; to increase the apparent size or dimensions of objects: as, This glass *magnifies* too much.

* 2. To have effect, to signify, to avail.

"My governess assured my father I had wanted for nothing, but I was almost eaten up with the greeu-sickness; but this *magnified* little with my father."—*Steele: Spectator*, No. 431.

măg'-nĭ-fȳ-ĭng, *pr. par., a., & s.* [MAGNIFY.]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As subst.:* The act of making greater or larger in appearance; the act of praising or extolling.

magnifying-glass, *s.*

Optics: A popular term for a convex piece of glass or a lens which has the property of magnifying.

* **măg-nĭl'-ŏ-quençe,** *s.* [Lat. *magniloquentia*, from *magnus* = great, and *loquens*, pr. par. of *loquor* = to speak.] Pompous or bombastic manner of speaking; a tumid or pompous style; grandiloquence, bombast.

"All the sects ridiculed this *magniloquence* of Epicurus."—*Bentley: Remarks*, § 44.

măg-nĭl'-ŏ-quent, *a.* [MAONILOQUENCE.] Using pompous or bombastic language; bombastic, tumid, grandiloquent; speaking loftily or pompously.

"She was a trifle more *magniloquent* than usual."—*Thackeray: Newcomes*, ch. xxiii.

† **măg-nĭl'-ŏ-quent-lȳ,** *adv.* [Eng. *magniloquently.*] In a magniloquent manner; with pompous, tumid, or bombastic language; grandiloquently.

* **măg-nĭl'-ŏ-quoŭs,** *a.* [Lat. *magniloquus*, from *magnus* = great, and *loquor* = to speak.] The same as MAONILOQUENT (q.v.).

* **măg'-nĭ-sōn-ant,** *a.* [Lat. *magnus* = great, and *sonans*, pr. par. of *sono* = to sound.] Great-sounding, high-sounding.

"That strange and *magnisonant* appellation."—*Southey: The Doctor; Cats of Greta Hall.*

măg'-nĭ-tūde, *s.* [Lat. *magnitudo*, from *magnus* = great.]

I. *Ordinary Language:*

1. The comparative size, bulk, extent, quantity, or amount of anything that may be measured; size.

"I behold this goodly frame, this world,
Of heav'n and earth consisting; and compute
Their *magnitudes*." *Milton: P. L.*, viii. 17.

2. Anything that can be measured; any quantity that can be expressed in terms of a quantity of the same kind taken as a unit. [II. 2.]

* 3. Greatness, with reference to a moral or intellectual standard.

"He with plain heroic *magnitude* of mind, . . .
Their armories and magazines contemns."
Milton: Samson Agonistes, 1,279.

4. Importance, consequence, weight.

"We commonly find in the ambitious man a superiority of parts, in some measure proportioned to the *magnitude* of his designs."—*Bp. Horsley*, vol. i., ser. 4.

II. *Technically:*

1. *Astron.:* A term applied to the apparent size of stars viewed from the earth. There are six magnitudes. [STAR.]

2. *Geom.:* This term was originally applied to signify the space occupied by a body As thus used, it applied only to those portions of space which possessed the three attributes of extension: length, breadth, and thickness, or height. By extension of meaning, it has come to signify anything that can be increased, diminished, and measured. Thus, a line or a surface, an angle or a number, are magnitudes. Time and weight are magnitudes; and, in general, anything of which greater or less can be predicated is a magnitude.

3. *Physics:* The same as EXTENSION (q.v.).

¶ *Apparent magnitude of an object:*

Optics: The angle which any object subtends at the eye of an observer. If O B be the object, and E the situation of the observer's eye, then the apparent magnitude of the former is the angle E—*i.e.*, O E B, formed by two visual rays drawn from the centre of the pupil to the extremities of the object.

* **măg'-nĭ-ŭm,** *s.* [MAGNESIUM.]

Chem.: Davy's name for magnesium.

măg-nō-chrō'-mīte, *s.* [Eng. *magn(esia)*; *o* connective, and *chromite*; Ger. *magnochromit.*]

Min.: A variety of chromite (q.v.), containing a large percentage of magnesia. Physical characters the same as chromite, excepting in the want of lustre and low density. From an analysis of a mixture of the mineral and its matrix, Websky deduces the following composition: alumina, 29·92; chromic acid, 40·78; protoxide of iron, 15·30; magnesia, 14·00; which agrees with the formula, $4(Al_2O_3, Cr_2O_3)$, $(3FeO, 5MgO)$. Found in rounded grains in a greeu matrix at Grochau, Silesia.

măg-nō-fĕr'-rīte, *s.* [MAGNESIOFERRITE.]

măg-nō'-lĭ-a, *s.* [Named after Pierre Magnol (1638–1715), professor of medicine at Montpellier, and author of several botanical works.]

Bot.: The typical genus of the tribe Magnoliæ and the order Magnoliaceæ. Sepals three, deciduous; petals six to nine; stamens and pistils many; carpels compacted in spikes or cones; seeds baccate, somewhat cordate, pendulous, with a long white umbilical thread. The species are trees or shrubs, with alternate leaves and large, terminal, odoriferous flowers. They are found in the United States and Asia. *Magnolia grandiflora*, the Great-flowered Magnolia, or Laurel Bay, is a fine evergreen tree, found from North Carolina to the Gulf States. Its flowers are very large. The species have large, beautiful, fragrant flowers. Those of *M. conspicua* are snow-white, and those of *M. pumila* brownish-green. De Candolle says that those of *M. tripetala* produce sickness and headache. Barton reports that *M. glauca*, the Dwarf Sassafras, or Beaver-tree, produces paroxysms of fever. The bark is intensely bitter, but has in it no tannin or gallic acid; it has the properties of Cinchona. Its "cones" are employed as a remedy in cases of chronic rheumatism. Those of *M. Yulan* are similarly used in China. The "cones" of *M. Frazeri*, called also *M. auriculata*, and *M. acuminata*, called, in the United States, Cu-

cumber-trees, are infused in brandy or whisky, and given in intermittent fevers and rheumatic affections. *M. excelsa* furnishes a valuable timber of fine texture, first greenish, then yellow.

"Faint was the air with the odorous breath of *magnolia* blossoms." *Longfellow: Evangeline*, II. 2.

măg-nō-lĭ-ā'-çĕ-æ, *s.* [Mod. Lat. *magnoli(a)*; Lat. fem. pl. adj. suff. *-aceæ*.]

Bot.: Magnoliads; an order of hypogynous exogens, alliance Ranales. It consists of trees or shrubs, having the scales of the leaf-bud face to face or rolled up; alternate, sometimes dotted, leaves, distinctly articulated with the stem, with deciduous stipules; flowers generally hermaphrodite, strongly odoriferous; sepals generally three to six; petals three or more; stamens indefinite, hypogynous; carpels several, on a torus above the stamens; one-celled, one or more seeded. Fruit dry or succulent, dehiscent or indehiscent, sometimes collected upon a cone upon a lengthened axis; seeds one or more in each carpel of the fruit. They are found chiefly in North America, whence they straggle to Japan, China, and India. Known genera, eleven; species, sixty-five. Most have a bitter, tonic taste. The order is divided into two tribes, Magnolieæ and Wintereæ (q.v.).

măg-nō'-lĭ-ăds, *s. pl.* [Mod. Lat. *magnoli(a)*; Eng. pl. suff. *-ads*.]

Bot.: The name given by Lindley to the order Magnoliaceæ (q.v.).

măg-nō-lĭ-ā'-çē-æ, *s. pl.* [Mod. Lat. *magnoli(a)*; Lat. fem. pl. adj. suff. *-eæ*.]

Bot.: The typical tribe of the order Magnoliaceæ (q.v.). The carpels are arranged in a cone; the leaves scarcely, if at all, dotted. (*Lindley.*)

măg'-nō-līte, *s.* [Named after the Magnolia district, Colorado; suff. *-ite* (*Min.*).]

Min.: A white mineral, occurring in silky tufts of very minute acicular crystals. Contains mercury and tellurium, and inferred to be a telluride of mercury. Found in the Keystone mine.

măg'-nŭm, *s.* [Lat., neut. sing. of *magnus* = great, large.] A bottle holding two English quarts.

"Between every two gur .s a portly *magnum* reared its golden head."—*A. Forbes*, in *English Illustrated Magazine*, Dec., 1884, p. 152.

magnum-bonum, *s.* [Lat. = great-good.]

1. A kind of large-sized barrel pen.

2. A large-sized oval plum, with a yellow skin, covered with a whitish bloom.

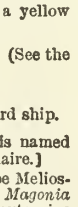
măg'-nŭs, *a.* [Lat. = great, large.] (See the etym.)

magnus-hitch, *s.*

Naut.: A kind of knot used on board ship.

ma-gō'-nĭ-a, *s.* [Don says that it is named after some botanist known to St. Hilaire.]

Bot.: A genus of Sapindaceæ, tribe Melioscmeæ. It consists of two trees, *Magonia glabrata* and *M. pubescens*, covering extensive tracts in Brazil. The leaves and an infusion of the bark of the roots are used for stupefying fish; the latter is employed also as a remedy in old ulcers, the stings of insects, &c.; the seeds are used in the manufacture of soap.



MAGOOTER.

ma-goŏ'-teĕ, *s.* [Hind.] An instrument used by the Pambatees or snake-charmers of the East Indies. It is composed of a hollow calabash, to one end of which is fitted a mouthpiece similar to that of the clarinet. To the other extremity is adapted a tube perforated with several holes, which are successively stopped by the fingers, like those of the flute, while the player blows into the mouthpiece. In the middle of the instrument is a small mirror, on which the serpents fix their eyes while dancing. Sometimes bright beads are attached, which serve the same purpose as the mirror.

"măg'-ôt (1), *s.* [Magoot.]

magot-pie, *s.* A magpie (q.v.).

măg'-ôt (2), *s.* [Fr.]

Zool.: The same as Barbary-ape (q.v.).

măg'-pīe, *s.* [Fr. *Margot*, a familiar form of *Marguerite* = Margaret, from Lat. *margarita*; Gr. μαργαρίτης (*margaritēs*) = a pearl. The syllable *pie* = Fr. *pie*, is from Lat. *pica* = a magpie.] [Pie (2), *s.*]

I. *Ordinary Language:*

1. *Lit.:* In the same sense as II. 1.

2. *Figuratively:*

(1) A halfpenny. (*Slang.*)

(2) A bishop, from the mingled black and white of his robes.

"Let not those silkworms and *magpies* have dominion over us."—*T. Brown: Works*, i. 107.

II. *Technically:*

1. *Ornith.:* A well-known bird of the family Corvidæ. It is the *Corvus pica* of Linn., *Pica caudata, melanoleuca*, or *rustica* of later ornithologists. It was once common throughout Great Britain, but its ravages among young poultry, the young of hares, rabbits, feathered game, and lambs have been so great that it is now almost exterminated in some parts, and is everywhere scarce. It is an extremely beautiful bird, the pure white of its scapulars and inner web of the flight-feathers contrasting vividly with the deep glossy black of the body and wings, while the long tail is lustrous with green, bronze, and purple reflections. It builds an almost impregnable nest, with a dome of firmly-interwoven sticks, and lays from six to nine bluish-green eggs, blotched with ash-colour.

"In a shady tree
Nine *magpies* perch'd lament their alter'd state."
Maynwaring: Ovid; Metamorphoses v.

2. *Mil.:* A shot striking the target in the division next to the outermost in a target divided into four sections; so called because signalled by the marker with a black and white disc.

magpie-lark, *s.*

Ornith.: [Little-magpie].

magpie-moth, *s.*

Entom.: The Gooseberry-moth, *Abraxas grossulariata*. Its expanded wings are about an inch and a half across. They are yellowish-white with black spots, and on the anterior pair a pale orange-coloured band. The body is orange with black spots. The eggs are deposited on gooseberry or currant bushes in July or August, and the caterpillars are hatched in September. They are yellowish-white, spotted with black, and have an orange stripe on each side. The chrysalis is black, relieved at the lip with orange circles. In addition to the September brood there is another at beginning of summer. If dusted with the powder of white hellebore, they are destroyed, but picking them off by hand is a more efficient process. [Abraxas.]

magpie-robin, *s.*

Ornith.: The name given in Ceylon to the *Copsychus saularis*, kept in cages, and used by the natives to fight.

ma-grē'-pha, *s.* [Heb.] An organ mentioned in the Talmud as having been in existence in the second century. It had ten ventages, each of which communicated with ten pipes, and it was played upon by means of a clavier.

măg'-rŭms, *s.* [Etym. doubtful; perhaps a corruption of *megrim* (q.v.).] A popular name in the State of New York for a singular convulsive affection resembling chorea. It rarely occurs before the adult age, never ceases spontaneously, and when fully developed is devoid of any paroxysmal character. (*Mayne.*)

măgş'-man, *s.* [Eng. *magg*, v., and *man*.] A swindler, a thief. (*Slang.*)

măg'-uay, măg-uey (uay, uey as wā), *s.* [Mexican *maguei*.]

Bot.: *Agave americana*. [Agave.]

măg'-uey (uey as wā), *s.* [Maguay.]

***mā'-gŭs**, *s.* [Lat.] One of the Magi (q.v.); a magian.

Măg'-yar, *s.* [Hung.]

1. One of a race of Asiatic origin, which invaded or settled in Hungary about the end of the ninth century, and is still the predominant race there.

2. The language of Hungary. It belongs to the Ugrian family of the Turanian class of languages.

*** măg'-ŷ-dăre**, *** mag-u-dere**, *s.* [Lat. *magydarius, magudarius*, from Gr. μαγύδαρις (*magudaris*).] Laserwort. [Laserpitium.]

ma'-ha, *s.* [Native name.]

Zool.: *Semnopithecus ursinus*, a native of the wooded hill-country of Ceylon. Its specific name has reference to its general bear-like appearance. [Wanderoo.]

ma-hạ-bha'-rat, *s.* [Sansc. *maha, mahat* = great, and *Bharat* (see def.).]

Hindoo Literature: One of the two great epic poems of India, the other being the Ramayan. Its leading theme is the contest, perhaps, in the main, historic, between the Kurus and the Pandus, two dynasties of ancient India, both descended from Bharat, King of Hustinapoor. Dhritarashtra, the father of Duryodhana and the Kurus, was the legitimate heir to the throne, but being blind, he was supplanted by his cousin Yudhistiras, the eldest of the five Pandu princes. Ultimately, by the aid of Krishna, the usurping Pandus were firmly established in the sovereignty of Northern India. With this main theme are interwoven episodes, moral reflections, and digressions of all kinds, constituting about three-fourths of the present poem. The discourse between Krishna and Urjoon on the eve of a battle constitutes the Bhagavat gita (q.v.). The roots of some portions of modern Hindooism are in the Mahabharat. The worship of Krishna, as one with Vishnoo and the universe, has its origin here.

Mah'-ạ-dê-vạ, Mah-ạ-dê'-ō, *s.* [Sansc. *maha, mahat* = great, and *deva* = a god.]

Hindoo Myth.: One of the many names given to Shiva, the third person of the Hindoo triad.

ma-hạ-ra'-jạh, *s.* [Sansc., from *mahat, maha* = great, and *rajah* = prince.] A title assumed by some Indian princes.

ma-har'-mah, *s.* [Turk.]

Fabric: A muslin wrapper worn over the head and across the mouth and chin by Turkish ladies when out of doors.

Măh'-dī, Măh'-dēe, Mŭh'-dēe (commonly pron. **Mā'-dī**), *s.* [Arab., as adj. = called (*Catafago*), as subst. = a director or leader (*Jaffur Shurreef*).]

1. *Muhammadan Theol.:* The surname of a second Muhammad, the last or twelfth Imaum (Head, Chief, or Leader). According to the Sheeahs (Muhammadan Scripturalists) of Persia, he is alive in the unseen world, and will appear with Elias the Prophet at the second coming of Jesus Christ. The generality of the Soonnees (Muhammadan Traditionalists) concur in the belief that the advent of the Mahdi is still future, while an Indian sect called Gyr Mahdis consider him to have already appeared in the person of Syud Muhammad, of Jounpoor. On the twenty-seventh night of the month Ramzan they recite the words "God is almighty, Muhammed is our prophet, and the Koran and Mahdi are just and true;" adding, "Imaum Mahdi has come and gone: whoever disbelieves this is an infidel." They are Soonnee Pathans, but there is a feud, sometimes leading to bloodshed, between them and the ordinary Soonnees. Petitions are sometimes written to the Imaum Mahdi on Friday, the Muhammadan Sunday, and committed to any river in the confident expectation that they will reach their destination.

2. *Hist.:* Muhammad Ali, governor of Egypt (the murderer of the Mamelukes), commenced, about the year 1821, the conquest of the Soudan, which was completed about a half century later by General Gordon, who ruled it so well as to preserve peace for a time. On his departure, the incapacity of his Egyptian successors drove the Soudanese into revolt. At first the rebellion was political, but a religious element speedily arose, and ultimately asserted its predominance. An individual gave out that he was the divinely-promised Mahdi [1], the Muhammadan Messiah, come for the deliverance of the faithful, and to convert all their unbelieving foes to Islamism, or utterly to destroy them. At that time the constraining force of events had brought Great Britain into entanglement with the affairs of Egypt. A military revolt, headed by an Egyptian, Arabi Pasha, had been attended by the massacre of many European Christians at Alex-

andria, and the British fleet had been sent out to prevent a fresh outbreak, or, if one arose, to bring off as many of the Christians as possible. New forts being built to threaten the ships, the fleet had bombarded and captured them, with the older fortifications, on July 11, 1882, whilst an army sent out had heavily defeated the Egyptians in a short but very bloody fight at Tel-el-Kebir, on Sept. 13, 1882. The British Government, then directed by Mr. Gladstone, advised Egypt to give up all attempts to reconquer the Soudan, which was about as large as France, Germany, and Spain taken together, besides being mostly desert. The advice was neglected, an Egyptian army, headed by an Englishman, Hicks Pasha, was sent out, but was almost immediately destroyed and its leader killed on Dec. 5, 1883. A second, under Baker Pasha (Colonel Valentine Baker), was put to flight with great slaughter on Feb. 4, 1884. The Egyptians were now willing to let the Soudan go, and as originally advised, include in it Khartoum, the capital of Nubia. But the Soudanese, not contented to obtain their independence, desired also to massacre the Egyptian garrisons, consistiug, it was believed, of about 20,000 men. Humanity shuddered at such a resolve, and public opinion urged that General Gordon should be sent out on a peaceful mission to negotiate for the withdrawal of the garrisons. He left for Egypt Jan. 18, 1884. He failed in his endeavour, and after defending himself with heroic courage and infinite fertility of resource in Khartoum for about a year, was overcome by treachery on Jan. 26, 1885, the Mahdi's troops being admitted within the fortifications, and Gordon and many others slain, just as a relieving army was approaching for his deliverance. Previous to this he had completely lost faith in peaceful negotiations, and declared that there would be no peace for Egypt unless the Mahdi was "smashed."

Mah'-dī-an, *s.* [Eng., &c. *Mahdi; -an.*] A follower or adherent of the Mahdi (q.v.).

"No hardy *Mahdian* got nearer than twenty yards."
—*Daily Telegraph*, March 21, 1885.

māize, *s.* [A word of American origin; it is Haytian.]

1. *Bot.: Zea Mays,* a cereal grass of the tribe Phalareæ. The leaves are broad, and hang down from the tops of sheaths. The flowers are monœcious. The males are in loose, terminal, compound racemes; the females in many rows on a spike, enveloped in bracts. Each grain is surmounted by a thread-like style, giving the spike a silky aspect. The seeds, when ripe, are compactly arranged in rows on a rachis. They are flattened at the apex, and may be pale-yellow, white, variegated, blood-red, or purple. The seeds are very firm, the outer part being horny and the central mass more or less brittle and soft. Maize is said to have come originally from Paraguay, but is now only known in a state of cultivation.

2. *Agric:* Maize, called also Indian-corn, is the staple grain of the warmer parts of America. It has been introduced into Southern Europe, India, and Australia, and it is believed to support a larger number of the human race than any grain, excepting rice. It is sown in rows two to four feet apart, and is repeatedly hoed. The grain is detached from the rachis by machinery; the leaves, and sometimes the steeped seeds are used for feeding, cattle, horses, &c. Maize is largely eaten in some parts of this country. When made into bread it is generally mixed with wheat. It is often boiled, stewed, or baked, and is also much used in the green state as a vegetable. Maize is largely exported to Europe. It is held in great veneration by the Indians. The mythic account of its origin is charmingly given by Longfellow (*Hiawatha*, v.).

3. *Veg. Pathol.:* Maize is often attacked by Ergot (q.v.).

majolica-ware, *s.*

Pottery: A species of fine pottery, composed of clay thickly and opaquely enamelled, suitable for receiving brilliantly coloured figures; fabricated at Ferrara (1436) and at Passaro (1450). It is sometimes called Raffaelle-ware. Majolica, until the time of Lucca della Robbia, was glazed with a plumbiferous glaze (*mezza majolica*), but Robbia invented a beautifully white, durable, enamelled, stanniferous glazing. Giorgio, by the combination of mineral colours, succeeded in producing beautifully iridescent ruby and golden tints. Of late years, the Staffordshire potters have succeeded in reproducing this ware, and slabs, friezes, tablets, vases, flower-pots, and other articles are now made of it.

"The 'mezza-maiolica' was the coarser ware, formed of potter's earth, covered with a white 'slip' upon which the subject was painted; then glazed with the common 'marza-cotto' or lead glaze, over which the lustre pigments were applied. The '*maiolica,*' on the other hand, was the tin-enamelled ware similarly lustred. These terms were originally used with reference only to the lustred wares, but towards the middle of the sixteenth century they seem to have been generally applied to the glazed earthenware of Italy. The word *maiolica* should be again restricted to the lustred wares, although in Italy and elsewhere it is habitually used to designate all the numerous varieties of glazed earthenware, with the exception of the more common 'terraglia' and in distinction from porcelain."—*C. D. Fortnum: Majolica*, p. 21.

mā'-jŏr, *a. & s.* [Lat., = greater; comp. of *magnus* = great; Sp. *mayor;* Port. *maior, mayor;* Ital. *maggiore;* O. Fr. *major;* Fr. *majeur.*]

A. *As adjective:*

I. *Ordinary Language:*

1. Greater in number, quantity, or extent; larger.

"The *major* part of your syllables."
Shakesp.: Coriolanus, ii. 1.

* 2. Greater in dignity or importance; more important.

"Fall Greeks; fall fame; honour or go or stay,
My *major* vow lies here."
Shakesp.: Troilus & Cressida, v. 1.

* 3. Of full age.

"The young king who had lately been declared *major.*"—*Godwin: Mandeville*, ii. 225.

II. *Music:* Greater. A major third consists of four semitones, a minor third of three. A major tone is the whole tone having the ratio 8 : 9; a minor tone, that having the ratio 9 : 10. Intervals have had the term major applied to them in a conflicting manner. [INTERVAL, MODE, MAJOR-SCALE.]

B. *As substantive:*

* 1. *Law:* A person of full age to manage his or her own affairs, that is, twenty-one years of age. It is the opposite of minor (q.v.).

2. *Logic:* The first proposition of a regular syllogism containing the major term.

* 3. *Hist.:* The mayor of a town.

"The *major* and companies of the citie receiued him at Shore-ditch."—*Bacon: Henry VII.*, p. 7.

4. *Mil.:* An officer, next above a captain, and below a lieutenant-colonel; in rank he is the lowest of the field-officers. The word major is much used in conjunction with other military titles: thus, major-general ranks next below a lieutenant-general; surgeon-major ranks the next above surgeon; sergeant-major is superior to a sergeant. Drum-major, trumpet-major, &c., are other titles.

¶ *Major and minor in a libel:*

Scots Law: The major proposition in a criminal libel names the crime to be charged; or, if it have no proper name, describes it at large, and as a crime severely punishable. The minor proposition avers the panel's guilt of this crime, and supports this averment by a narrative of the fact alleged to have been committed, it being necessary that the minor agree with the major. And the conclusion infers that on conviction he ought to be punished with the pains of law applicable to his offence.

major-domo, *s.* A person who takes charge of a household; a steward; a chief minister or great officer of a palace.

major-excommunication, *s.* The greater excommuncation. The same as ANATHEMA (q.v.).

major-orders, *s. pl.*

Eccles. & Church Hist.: The four superior orders of the Roman Church—bishops, priests, deacons, and subdeacons—are so called. The term is antithetical to Minor Orders (q.v.).

major-premise, *s.*

Logic: That premise of a syllogism which contains the major term.

major-proposition, *s.*

Logic: (See extract).

"The proposition which contains the predicate of the conclusion, connected with the middle term, is usually called the *major-proposition*, whereas the minor proposition connects the middle term with the subject of the conclusion."—*Watts: Logic*, pt. ii., ch. ii.

major-scale, *s.*

Music: A scale having a major third from the tonic in an ascending series.

major-term, *s.*

Logic: (See extract).

"The predicate of the conclusion is called the *major-term*, because it is generally of a larger extension than the minor term, or subject."—*Watts: Logic*, pt. iii., ch. ii.

major-third, *s.*

Music: [MAJOR, A. II.].

major-tone, *s.*

Music: [MAJOR, A. II.].

† mā'-jŏr, *v.i.* [MAJOR, *a.*] To talk and look big; to ape a military air.

* 1. The quality or state of being major or greater in number, quantity, or extent.

"It is not plurality of parts without *majority* of parts which makes the total greater."—*Grew: Cosmologia.*

2. The greater number; more than one-half.

"The whole body is supposed, in the first place, to have unanimously consented to be bound by the resolutions of the *majority*; that *majority*, in the next place, to have fixed certain fundamental regulations; and then to have constituted, either in one opinion, or in an assembly (the rule of succession or appointment being at the same time determined), a standing legislature."—*Paley: Moral Philosophy*, bk. iv., ch. iii.

3. The number by which one number or quantity exceeds another: as, The bill was passed by a *majority* of five.

4. Full age; that age at which, by the laws of any country, persons become competent to manage their own affairs.

* 5. Superiority, pre-eminence, first rank.

"Douglas, whose high deeds,
Whose hot incursions, and great name in arms,
Holds from all soldiers chief *majority*."
Shakesp.: 1 Henry IV., iii. 2.

6. The office, rank, or position of a major.

* 7. Ancestors, ancestry (Lat. *majores*).

¶ *To join* or *go over to the majority:* A euphemism = to die. The idea has come down to us from classic times. The expression ἐς πλεόνων ἰκέσθαι is found in Crinagoras (*Anthol. Palat.* 11, 42), and "penetrare ad plures" in Plautus (*Trin.*, ii. 2, 14). A correspondent of the *Illustrated London News* ("Echoes," Sept. 9, 1883) writes: "The phrase *joining the majority* is a free translation of the sepulchral formula, 'Abierunt ad multos,' used by the Roman legionaries in Britain;" but in all probability the English use of the expression comes from the following lines:

"Life is the desert, life the solitude;
Death *joins us to the great majority*."
Young: Revenge, iv. 1.

mā'-jŏr-shĭp, *s.* [Eng. *major*; *-ship.*] The office, rank, or commission of a major; majority.

ma-joun, *s.* [MADJOUN.]

ma-jŭs'-cu-læ, *s. pl.* [Lat.] Capital letters used in old Latin manuscripts; majuscules.

† ma-jŭs'-cu-lar, *a.* [MAJUSCULE.] Large, great; of more than ordinary size.

"Glasses get of size *majuscular*."
Leigh Hunt: Bacchus in Tuscany.

ma-jŭs'-cūle, *s.* [Lat. *majuscula* (*litera*) = a large or capital letter; from *majusculus*, dimin. from *major*, *majus* = greater.] A capital letter; as distinguished from a minuscule. Majuscules are found in Latin manuscripts of the sixth century and earlier.

*** māk'-a-ble, * mākе'-a-ble,** *a.* [Eng. *mak(e)*; *-able.*] Capable of being made; feasible, effectible.

"It is not to be understood of the accidents themselves that all are *makeable* and destroyable."—*Cudworth: Intellectual System*, p. 70.

*** mak-a-ron,** *s.* [MACAROON.]

mākе, * mak-en, * mak-i-en (pa. t. * *makede*, *made*; pa. par. * *maked*, * *maad*, * *mad*, *made*), *v.t. & i.* [A.S. *macian* (pa. t. *macode*, pa. par. *macod*); cogn. with Gr. *machen* = to make; O. H. Ger. *machôn*; Dut. *maken.*]

A. *Transitive:*

I. *Ordinary Language:*

1. To create; to cause to exist; to bring into being or existence.

17. To serve; to answer for; to do the part or office of.

"Thou would'st *make* a good fool."—*Shakesp.: Lear*, i. 5.

18. To pass over the distance of; to traverse, to travel over: as, He *made* five miles in the hour.

* 19. To represent; to consider as; to set down as.

"*Make* not impossible
That which but seems unlike."
Shakesp.: Measure for Measure, v.

20. To bring forward; to exhibit.

"She did not authorize her solicitor to *make* the charge."—*Daily Chronicle*, Dec. 6, 1884.

21. To go through the form of; to declare formally.

"Arrangements will be made for him to *make* an affidavit before the Rambler takes her departure."—*Daily Chronicle*, Dec. 6, 1884.

22. To fetch, as a price: as, Wheat *made* 30s.

¶ (1) *Make* is used periphrastically in conjunction with substantives to express an action of some sort, the nature of which is determined by the substantive, and the verb and substantive together are synonymous with a verb corresponding to the substantive. Thus, to *make* haste = to hasten; to *make* complaint = to complain; to *make* confession = to confess; to *make* demand = to demand; and to *make* abode = to abide.

"When from St. Albans we do *make* return,
We'll see these things effected to the full."
Shakesp.: 2 Henry VI., i. 3.

(2) *Make* is often used before an infinitive, expressed or understood, with a causative sense: as, He *made* me (to) work; The medicine *made* him (to be) sick.

II. *Naut.:* To reach, attain to, or arrive at; to come near or in sight of.

"Acosta recordeth, they that sail in the middle can *make* no land of either side."—*Browne: Vulgar Errours.*

B. *Intransitive:*

1. To do, to act, to be active, to operate.

"The less you meddle or *make* with them, why the more is for your honesty."—*Shakesp.: Much Ado About Nothing*, iii. 3.

2. To have effect; to contribute, to tend. (Followed by * *to*, *for*, or * *against.*)

"Considerations infinite do *make against* it."
Shakesp.: 1 Henry IV., v. 1.

3. To tend, to move in a direction, to direct one's course, to proceed, to go. (Followed by words indicating the direction or object; as, He *made for* home, he *made after* the boy.)

"As the wavee *make toward* the pebbled shore."
Shakesp.: Sonnet 70.

4. To rise, to flow: as, The tide *makes* fast.

* 5. To invent; specif., to compose or write poetry. [MAKER.]

"The god of shepherds, Tityrus, is dead,
Who taught me, homely as I can, to *make*."
Spenser: Shepheards Calender; June.

¶ Intransitively *make* is used periphrastically with adjectives, with the meaning of to be, to show one's self, to act as: as, To *make* merry, to *make* bold, &c.

¶ We cannot *make* without *doing*, but we may *do* without *making:* to *do* is simply to move for a certain end; to *make* is to *do*, so as to bring something into being, which was not before; we *make* a thing what it was not before; we *do* a thing in the same manner as we *did* it before: to *make* is the most general and unqualified term; to *form* signifies to give a *form* to a thing, that is, to *make* it after a given *form;* to *produce* is to bring forth into the light, to call into existence; to *create* is to bring into existence by an absolute exercise of power: to *make* is the simplest action of all, and comprehends a simple combination by the smallest efforts; to *form* requires care and attention, and greater efforts; to *produce* requires time, and also labour: whatever is put together so as to become another thing, is *made;* a chair or a table is *made:* whatever is put into any distinct *form* is *formed;* the potter *forms* the clay into an earthen vessel: whatever emanates from a thing, so as to become a distinct object, is *produced.*

¶ 1. *To make against:* To tend to injure; to operate against; to be adverse to; to tend to disprove.

Script. Biog.: The last of the Old Testament minor prophets. Of his history nothing is certainly known.

¶ *The Prophecies of Malachi:*

Old Test. Canon: The last prophetic book of the Old Testament. When it was penned, the Jewish people were under a governor instead of a king (i. 8), and the Temple rebuilt (i. 7, 10, iii. 1, 10). The governor was probably Nehemiah, during his second visit to Jerusalem. If so, then Malachi prophesied probably between 430 and 425 B.C., during the first part of the Peloponnesian war, and was a contemporary of Sophocles (496–405), Euripides (480–406), Herodotus (484–424), and Thucydides (471–396). In Malachi's time religion was at a low ebb. The priests were not pions or moral enongh to gain the respect of the people (ii. 7, 8, 9), who withheld tithes and offerings (iii. 8, 10), or, when they did pay them, selected from their flocks and herds the lame, the sick, or the torn. With absence of piety came low morality. Divorces were far too many (ii. 14, 16); adultery, false swearing, fraud upon the feeble and the dependent were common. The prophet sought to correct all these evils. He encouraged a small remnant who had remained faithful (iii. 16). He predicted the rise of "the Sun of righteonsness" (iv. 2), the advent of Jehovah to his Temple (iii. 1), a "messenger," "Elijah the prophet" preparing his way" (iii. 1, iv. 5, 6). We learn that this was fulfilled in the coming of John the Baptist (Matt. xi. 10–14, xvii. 10–13; Mark i. 2, ix. 11–13; Lnke i. 17, 76, vii. 27). Malachi i. 2, 3 is referred to in Rom. ix. 13. The Hebrew style of the book is argumentative rather than poetical. Its canonical authority has never been doubted.

măl'-ą-chīte, *s.* [Gr. μαλαχή, μολοχή (*malachē, molochē*) = mallow; suff. *-ite* (*Min.*); Ger. *malachit:* Old Ger. *molochit.*]

Min.: A monoclinic mineral rarely occurring in crystals, but mostly as fibrous or compact stalagmatic masses, with mammillary or botryoidal surfaces; or earthy. Crystals mostly twinned. Hardness, 3·5 to 4; sp. gr. 3·7 to 4·01. Lustre of crystals adamantine, of fibrons kinds, silky to dull; colonr, bright green; streak, paler; translucent to opaque. Compos.: carbonic acid, 19·9; protoxide of copper, 71·9; water, 8·2; yielding the formula, CuOCO + CuOHO. Found with other copper ores extensively distributed, in great abundance in the Ural Mountains, Russia. The Russian mines, those of Namaqnaland, West Africa, and the Burra Burra mines, South Australia, yield a close variety which takes a high polish and is much used in inlaying work.

malachite-green, *s.*

Chem: A greeu dye, consisting of the double zinc salt of a base, having the formula $C_{23}H_{24}N_2$. Malachite-green possesses many advantages over methyl-green, being cheaper, and less affected by soap, acids, or heat.

mą-lā'-chĭ-úm, *s.* [Mod. Lat., from Gr. μαλακός (*malakos*) = soft.]

Bot.: Formerly regarded as a genus of Caryophyllaceæ, but redneed by Sir Joseph Hooker to a sub-genus of Stellaria. The sepals are free to the base; the styles five, rarely three; the capsnle with five bifid valves. The old *Malachium aquaticum* is now *Stellaria (Malachium) aquatica.* It is from one to three feet high, with a brittle stem, membranous leaves, and dichotomous cymes of white flowers. Found in ditches, streams, &c., in England and elsewhere.

mą-lā'-chĭ-ŭs, *s.* [MALACHIUM.]

Entom.: A genus of Malacoderniidæ (q.v.) The species have the power of projecting from various parts of their thorax under excitement large fleshy vesicular appendages. Six or more are British.

măl-ą-chŏ-chăl'-çīte, *s.* [Gr. μαλαχή (*malachē*) = mallow, and χαλκός (*chalkos*) = brass.]

Min.: A name used by Glocker for a subdivision of the family Halochalcite. It included all the malachite-like minerals.

măl-ą-chŏ-dĕn'-drŏn, *s.* [Gr. μαλάχη (*malachē*) = mallow, and δένδρον (*dendron*) = a tree.]

Bot.: An old genus of Ternstromiaceæ, now called Stuartia (q.v.).

măl'-ą-chrą, *s.* [A name given by Pliny to a Persian tree producing a gnm. (*Paxton.*)]

Bot.: A genus of Malvaceæ, tribe Uraneæ. *Malachra capitata,* an Indian annual, with broad, heart-shaped leaves, covered with stiff hairs, and yellow or white flowers, yields a fibre eight or nine feet long, with a silvery lustre, and almost as soft as silk; it has been used in Bombay in jute manufactories. (*Prof. Watt.*)

* **măl-ą-çĭs'-sąnt,** *a.* [Lat. *malacissans,* pr. par. of *malacisso;* Gr. μαλακίζω (*malakizō*) = to make soft; μαλακός (*malakos*) = soft.] Making soft or tender; relaxing.

* **măl-ą-çĭs-sā'-tion,** *s.* [MALACISSANT.] A softening or mollifying.

"This *malacissation,* or supplying of the body, to be continued for one whole month."—*Bacon: Hist. Life & Death.*

măl-ą-cŏb-dĕl'-lą, *s.* [Gr. μαλακός (*malakos*) = soft, and βδέλλα (*bdella*) = a leech.]

Zool.: The typical genus of the family Malacobdellidæ (q.v.). *Malacobdella grossa* is a leech two inches long, found between the mantle and the branchiæ of the large bivalve mollusc, *Cyprina islandica.*

măl-ą-cŏb-dĕl'-lĭ-dæ, *s. pl.* [Mod. Lat. *malacobdell(a)* (q.v.); Lat. fem. pl. adj. suff. *-idæ.*]

Zool.: A family of Hirudinea (Leeches).

măl-ą-cŏ-çĕph'-ą-lŭs, *s.* [Gr. μαλακός = soft, and κεφαλή (*kephalē*) = the head.]

Ichthy.: A genus of fishes, family Macruridæ. The scales are very small, ctenoid; the snout is obtuse, and obliquely truncated.

măl'-ą-cŏ-dĕrm, *s.* [MALACODERMATA.]

Zool.: One of the MALACODERMATA (q.v.).

măl-ą-cŏ-dĕr'-mą-tą, *s. pl.* [Gr. μαλακός (*malakos*) = soft, and δέρματα (*dermata*), pl. of δέρμα (*derma*) = skin.]

1. *Entom.:* A sub-section or sub-tribe of beetles, section or tribe Pentamera. They have the integuments soft and flexible, without interlocking apparatus; hence the prothorax moves freely. The chief families are the Dascyllidæ and the Malacodermidæ.

2. *Zool.:* A sub-order of Zoantharia, containing the Sea-anemones (q.v.). Professor Martin Duncan calls it Actinaria, and includes under it the families Actiuidæ and Cerianthidæ.

* **măl-ą-cŏ-dĕr'-mēş,** *s. pl.* [MALACODERMATA.]

Entom.: One of Swainson's tribes or primary divisions of Coleoptera. It contains the soft-bodied Coleoptera, without reference to the number of joints in their tarsi. The elytra

are soft, flexible, and often very short. He doubtfully divides it into the five families, Lampyridæ, Cantharidæ, Lymexylonidæ, Mordellidæ, and Lycidæ.

măl-ą-cō-dĕr'-mĭ-dæ, *s. pl.* [Gr. μαλακός (*malakos*) = soft; δέρμα (*derma*) = skin, and Lat. fem. pl. adj. suff. *-idæ.*]

Entom.: The typical family of the sub-section or sub-tribe Malacodermata. It consists of long, soft-bodied beetles, with the mentum often indistinct; the abdomen with six or seven free segments. The type of organization is low. It contains the Glow-worm (q.v.), and other insects. British genera fourteen, including Telephora, Lampyris, &c. Sometimes called Telephoridæ (q.v.).

măl'-ą-cōid, *a.* [Gr. μαλακός (*malakos*) = soft, and εἶδος (*eidos*) = form.] Having a mucilaginous texture.

măl-ăc'-ō-līte, *s.* [Gr. μαλακός (*malakos*) = soft, and λίθος (*lithos*) = stone; Ger. *malakolith.*]

Min.: Formerly included bluish-gray, grayish-green, and whitish varieties of pyroxene from Sala, Sweden. Dana adopts the name for his first group of the Pyroxenes (q.v.), which contains little or no alumina, but consists essentially of a silicate of magnesia and lime. Named malacolite, because it was softer than the felspar with which it was found.

măl-ą-cŏl'-ō-ğĭst, *s.* [Eng. *malacolog(y); -ist.*] One versed or skilled in malacology.

măl-ą-cŏl'-ō-ğy, *s.* [Gr μαλάκια (*malakia*) = Aristotle's name for the mollusca, and λόγος (*logos*) = a discourse.] The science which treats of the mollusca, or soft-bodied animals.

măl'-ą-cŏn, măl'-ą-cōne, *s.* [G. μαλακός (*malakos*) = soft; Ger. *malakon.*]

Min.: An altered zircon, having hardness, 6·5; sp. gr. 3·9 to 4·047; lustre, vitreous; colour, brown. Found at Hitteroe, Norway, and Chauteloube, France, in aggregates of thin plates.

măl-ą-cŏp'-tĕr-ī, *s. pl.* [Gr. μαλακός (*malakos*) = soft, and πτερόν (*pteron*) = a wing, a fin.]

Zool.: In Professor Owen's classification, a sub-order of Teleostean Fishes. The endoskeleton ossified, the exoskeleton in most as cycloid, in a few as ganoid scales; fins supported by rays, all except the first, sometimes in the dorsal and pectoral, soft or jointed, abdominal or apodal; gills free operculate, a swim-bladder and air duct. Called by Müller Physostomi. Owen divides the order into two sub-orders: Apodes, with the families Symbranchidæ, Muræenidæ, and Gymnotidæ; and Abdominales, with the families Heteropygii, Clupeidæ, Esocidæ, Salmonidæ, Scopelidæ, Characini, Galaxidæ, Mormyridæ, Cyprinodontidæ, Cyprinidæ, and Siluridæ. (*Owen: Comp. Anat.; Fishes,* p. 48.)

măl-ą-cŏp'-tĕr-ŭs, *s.* [Gr. μαλακός (*malakos*) = soft, and πτερύξ (*pterux*) = a wing, a fin.]

Ichthy.: A genus of fishes, family Labridæ, from Juan Fernandez.

măl-ą-cŏp-tĕr-ўğ'-ĭ-ąn, *a. & s.* [Gr. μαλακός (*malakos*) = soft, and πτερύγιον (*pterugion*) = a little wing, a fin.]

A. *As adj.:* Of or belonging to the order Malacopterygii (q.v.); having soft fin-rays not pointed at the extremities.

B. *As subst.:* An individual of the order Malacopterygii.

măl-ą-cŏp-tĕr-ўğ'-ĭ-ī, *s. pl.* [Gr. μαλακός (*malakos*) = soft, and πτερύγιον (*pterugion*) = a little wing, a fin.]

Ichthyology:

1. In the classification of Cuvier the second order of Osseous Fishes. All the rays of the fins are soft and cartilaginous; they exhibit minute articulations, and are divided at the extremities into small fibres. Cuvier divided them into Abdominales, Sub-brachiales, and Apodes.

2. In the classification of Professor Müller a group or section of the sub-order Pharyngognatha, having soft fins. It contains only one family, the Scomberesocidæ (q.v.).

măl-ą-cŏp-tĕr-ўğ'-ĭ-oŭs, *a.* [Malacopterygii.] The same as Malacopterygian (q.v.).

măl-ą-cŏs'-tĕ-ŏn, *s.* [Gr. μαλακός (*malakos*) = soft, and ὀστεον (*osteon*) = a bone.]

Path.: Mollities ossium, a diseased softening of the bones, in which they are liable to become bent, without being fractured.

măl-ą-cŏs'-tĕ-ŭs, *s.* [Malacosteon.]

Ichthy.: A genus of fishes, family Stomiatidæ.

măl-ą-cŏs'-tō-moŭs, *a.* [Gr. μαλακός (*malakos*) = soft; στόμα (*stoma*) = a mouth, and Eng. adj. suff. *-ous.*] Having soft jaws without teeth. (Applied to certain fishes.)

măl-ą-cŏs'-trą-cą, *s.* [Gr. μαλακόστρακος (*malakostracos*) = soft-shelled: μαλακός (*malakos*) = soft, and ὄστρακον (*ostrakon*) = a shell.]

Zoology:

* 1. The term applied by Aristotle to the class Crustacea, because their integument was softer than the shell of the Mollusca.

2. The highest division of the Crustacea. They have a definite number of body segments, generally seven somites constituting the thorax, and an equal number, including the telson, forming the abdomen. It contains crabs, lobsters, shrimps, wood-lice, sand-hoppers, &c., and is divided into two great sections, the Edriopthalmata and the Podophthalmata (q.v.). Dr. Henry Woodward calls it Thoracipoda (q.v.).

măl-ą-cŏs-trą-cŏl'-ō-ğy, *s.* [Gr. μαλακός (*malakos*) = soft; ὄστρακον (*ostrakon*) = a shell, and λόγος (*logos*) = a discourse.] The division of zoology which has special reference to the Malacostraca (q.v.). [Crustaceology.]

măl-ą-cŏs'-trą-coŭs, *a.* [Malacostraca.] Of or pertaining to the Malacostraca (q.v.).

† **măl-ą-cŏt'-ō-mў,** *s.* [Gr. μαλάκια (*malakia*) = a mollusc, and τομή (*tomē*) = a cutting.]

Comp. Anat.: The anatomy of mollusca; a branch of Zootomy (q.v.).

măl-ąd-jŭst'-mĕnt, *s.* [Pref. *mal-*, and Eng. *adjustment* (q.v.).] An evil, bad, or defective adjustment.

măl-ąd-mĭn-ĭs-trā'-tion, * măle-ąd-mĭn-ĭs-trā'-tion, *s.* [Pref. *mal-*, and Eng. *administration* (q.v.).] Faulty or bad administration; bad management of public affairs; imperfect or faulty conduct in the administration of official duties; espec., of those prescribed by law.

"The violence of revolutions is generally proportioned to the degree of the *maladministration* which has produced them."—*Macaulay: Hist. Eng.,* ch. xiii.

măl'-ą-droît, *a.* [Fr., from *mal* = bad, and *adroit* = adroit (q.v.).] Not adroit or dexterous; awkward, clumsy.

măl'-ą-droît-lў, *adv.* [Eng. *maladroit; -ly.*] In a maladroit, awkward, or clumsy manner; awkwardly, clumsily.

măl'-ą-droît-nĕss, *s.* [Eng. *maladroit; -ness.*] The quality or state of being maladroit; awkwardness, clumsiness.

măl'-ą-dў, * mal-a-die, * mal-a-dye, *s.* [Fr. *maladie,* from *malade* = sick, ill, from Lat. *male habitus* = out of condition; *male* = badly, ill, and *habitus* = held, kept, pa. par. of *habeo* = to hold, to keep.]

1. A disease, sickness, or disorder of the body; a distemper or disorder of the body arising from impaired, defective, or morbid organic functions; espec., a lingering or deep-seated disorder or indisposition.

"O, wist a man how many *maladies*
Folwen of excesse and of glotonies
He wolde ben the more mesurable
Of his diete." *Chaucer: C. T.,* 12,447.

2. A moral defect or disorder; a corrupt state of the moral principles; disorder of the mind or understanding.

"Satire's strong dose the *malady* requires."
P. Whitehead: Epistle to Dr. Thomson.

mā'-lą fī'-dē, *adv. phr.* [Lat.] In bad faith; deceitfully, treacherously.

Mala fide possessor:

Scots Law: A person who possesses a subject not his own upon a title, which he knows to be bad, or which he has reasonable ground to suppose to be so.

mā'-lą fī'-dēş, *phr.* [Lat.] Bad faith.

măl'-ą-gą, *s.* [See def.] A kind of wine imported from Malaga, in Spain.

mą-lăg'-mą, *s.* [Gr., from μαλάσσω (*malassō*) = to make supple, to soften; μαλακός (*malakos*) = soft.]

Med.: A poultice.

măl'-ă-guĕt'-tą, măl-ą-guĕt'-ą (u as w), *s.* [Fr. *managuette, malaguette* = grains of paradise, from Malaguета, the Spanish name of a village in Guinea, where they are bought or sold.] (See etym. and compound.)

malaguetta-pepper, *s.*

Bot.: The seeds of Amomum, *Grana Paradisi,* and *A. Melegueta.* They have a warm and camphor-like taste, and are used to impart a fictitious strength to spirits and beer.

măl'-āiṣe, *s.* [Fr.] A feeling of uneasiness or discomfort, which frequently is a premonitory symptom of a serious malady.

Măl-ą-kā'-nēş, *s. pl.* [Russ.]

Ch. Hist.: A Russian sect who forbid making the sign of the cross and the use of images, and consider all wars unlawful. They observe the laws of Moses respecting meats, and are unorthodox on the sacraments. (*Shipley.*)

mą-lăm'-bō, mę-lăm'-bō, *s.* [The name given in New Granada to a kind of bark.] (See etym. and compound.)

malambo-bark, *s.* An aromatic, febrifugal bark imported from Santa Fé de Bogota, the capital of New Granada. It is believed to come from a species of Galipea, or some allied genus.

măl-ą-mē'-thāne, *s.* [Eng. *malam(ic),* and *ethane.*]

Chem.: $C_4H_8(C_2H_5)NO_4$. The ethylic ether of malamic acid, produced as a crystalline mass, when dry ethyl malate is saturated with ammonia gas.

măl-ăm'-ĭc, *a.* [Eng. *mal(ate); am(monia),* and suff. *-ic.*] Contained in, or derived from the malate of ammonium.

malamic-acid, *s.*

Chem.: $C_4H_7NO_4 = C_2H_3(H_2N)\begin{matrix}COOH\\COOH\end{matrix}$. It may be derived from the acid malate of ammonium by elimination of one atom of water. It is not known in the free state.

măl-ăm'-īde, *s.* [Eng. *mal(ic),* and *amide.*]

Chem.: $C_4H_8N_2O_3 = C_2H_3,\ OH\begin{matrix}CO(H_2N)\\CO(H_2N)\end{matrix}$. An amide of malic acid, obtained by passing ammoniacal gas into an alcoholic solution of ethylic malate. It is crystalline, and has a specific rotatory power of − 47·5. Malamide is metameric with asparagin.

măl-ăm'-ўl, *s.* [Eng. *mal(ic),* and *amyl.*] (See the compound.)

malamyl-nitrile, *s.*

Chem.: $(C_4H_3O_2)'''N$. A compound obtained by the action of heat on acid ammonium malate. It resembles the imide of fumaric acid, and when boiled with hydrochloric or nitric acids, yields compounds of those acids, with an optically inactive variety of aspartic acid.

măl-ą-mўl'-ĭc, *a.* [Eng., &c. *malamyl; -ic.*] Derived from malic-acid and amyl-alcohol.

malamylic-acid, *s.*

Chem.: $C_4H_5(C_5H_{11})O_5$. Amyl-malic acid. Obtained by heating a mixture of malic acid and amyl-alcohol to a temperature of 120°. It forms a syrup which crystallizes on cooling.

măl'-ăn-dĕrş, *s.* [Fr. *malandres,* from Lat. *malandria* = blisters or pustules on the necks of horses.]

Farr.: A dry scab on the pastern or at the bend of the knee of horses.

măl-ăn'-ĭl, *s.* [Eng. *mal(ic),* and *anil(ine).*]

Chem.: $C_{10}H_9NO_3 = (C_4H_3O_2)'''\begin{matrix}C_6H_5\\H\end{matrix}\Big\}O\atop N$. Phenyl-malimide. A compound obtained by melting a mixture of malic acid and aniline, and extracting by means of boiling water. It crystallizes from its aqueous solution in delicate needles, melts at 170°, and is very soluble in water, alcohol, and ether.

măl-ą-nĭl'-ĭc, *a.* [Eng., &c. *mal(ic),* and *anil(ine);* suff. *-ic.*] Contained in, or derived from malanil (q.v.).

malanilic-acid, *s.*

Chem.: $C_{10}H_{11}NO_4 = (C_4H_3O_2)'''\{^{H}_{C_6H_5H_2}\}^{O}_{O}N$. Phenyl malamic acid. Obtained as an ammonium salt by boiling malanil with aqueous ammonia. It crystallizes in white, faintly lustrous, minute needles, which melt at 145°. Soluble in water, slightly soluble in alcohol, but insoluble in ether. Its salts are distinguished by their great solubility in water. The barium salt crystallizes in round nodules of dazzling whiteness. The silver salt, $C_{10}H_{10}AgNO_4$, is a white powder, which soon becomes coloured by exposure to light.

măl-ăn'-ĭl-īde, *s.* [Eng., &c. *malanil* (q.v.); suff. *-ide.*]

Chem.: $C_{16}H_{16}N_2O_3 = \{^{H}_{(C_6H_5)_2H_2}\}^{(C_4H_3O_2)'''}_{O}N_2$. Diphenyl-malamide. A compound produced, together with malanil, by melting a mixture of malic acid and aniline, the malanil being separated by boiling water, in which it is soluble. It crystallizes in colourless needles, having a faint lustre; melts at 175°, and when set on fire, burns with a bright, smoky flame. It is insoluble in water, dilute hydrochloric acid, ammonia, and potash, but slightly soluble in alcohol and ether.

măl'-a-pĕrt, * **mal-a-perte,** *a.* & *s.* [Fr., from *mal* = badly, ill, and *apert* = open, expert, from Lat. *apertus* = open.]

A. *As adj.:* Pert, impudent, saucy, quick, forward.

"Untutor'd lad, thou art too *malapert*."
Shakesp.: 3 Henry VI., v. 5.

* **B.** *As subst.:* A pert, saucy, forward, or impudent person.

***măl'-a-pĕrt-lȳ, *mal-a-pert-lie, *mal-a-pert-lye,** *adv.* [Eng. *malapert; -ly.*] In a malapert, saucy, or impudent manner; pertly, saucily.

***măl'-a-pĕrt-nĕss,** *s.* [Eng. *malapert; -ness.*] The quality or state of being malapert; sauciness, impudence.

"Through his owne *malapertness* and brain-sicknesse."—*Holinshed: Henry II.* (an. 1164).

*** măl-ap-prō'-prĭ-āte,** *v.t.* [Pref. *mal-*, and Eng. *appropriate*, v.] To misapply; to misuse.

"She *malappropriated* several other articles of her craft."—*E. Brontë: Wuthering Heights*, ch. xxxiii.

măl'-a-prŏp, *s.* [Malapropos.] The name of a female character in Sheridan's *Rivals*, noted for her blunders in the use of words.

măl'-a-prŏp-ĭşm, †măl-ăp-rō-pō'-ĭşm, *s.* [Eng. *malaprop; -ism.*]

1. The act or habit of blundering in or misapplying words, through a desire to use big or fine language.

2. A word so misapplied.

"Sadly annoyed he is sometimes by her *malapropoisms*."—*Miss Edgeworth: Helen*, ch. xxv.

măl-ăp'-rō-pōs (*s* silent), *adv.* [Fr. *mal à propos*, from *mal* = badly, ill, and *à propos* = to the purpose.] Ill or badly for the purpose or occasion; unseasonably, unsuitably, out of place.

măl-ăp-tĕr-ür'-ŭs, *s.* [Mod. Lat., from Gr. μαλακός (*malakos*) = soft; πτερόν (*pteron*) = a wing, a fin, and οὐρά (*oura*) = the tail.]

Ichthy.: A genus of Siluroid fishes. Head and body naked; teeth small, congested into a crescentic row in each maxilla; branchiostegous membrane, with 7-8 rows; dorsal fin single, adipose, remote. *Malapterurus electricus* possesses a high degree of electrical power; it is found in the Nile, and other rivers in Africa, as far south as the Zambesi. The electric organ lies below the integument on each side of the body, between two tendinous membranes, of which the innermost covers a layer of loose conjunctive tissue, that has been regarded as a second electric organ. The electric organ proper consists of many cells, mostly rhomboidal, and receives its nerves from the *nervus vagus*. This fish attains a length of from one to two feet. It is noted for its fine flavour.

mā'-lar, *a.* & *s.* [Lat. *mala* = the cheek, from *mando* = to chew.]

A. *As adj.:* Of or pertaining to the cheek or cheek-bone.

B. *As substantive:*

Anat.: The strong quadrangular bone which forms the prominence of the cheek. In many of the lower animals it is permanently divided into two, the orbital and the malar parts. It serves also with the great wing of the sphenoid bone to constitute the outer wall of the orbit.

"The posterior angle of the *malar* extends well posteriorly."—*Trans. Amer. Philosoph. Soc.*, xiii. 205.

malar-bone, *s.* [Malar, *s.*]

ma-lär'-ĭ-a, *s.* [Ital. *mal' aria*, for *mala aria* = bad air; *mala* (Lat. *malus*) = bad, and *aria* = air.] A morbid poison of unknown character generated in paludal or littoral districts, affecting the system through the blood often as long as twelve months after one has been exposed to it, and exerting its deadly influence in many cases through life. Hydrophobia is the only other form of disease in which the period of incubation may be as long or longer. Malaria emanates from marshy land in a decomposed state under the influence of heat above 60° F. acting on the moisture; when thoroughly drained, flooded, or frozen, malaria is not generated. An elevation of from 1,000 to 1,200 feet is, generally speaking, a protection against it. Malaria causes ague, intermittent and congestive fevers, and one kind of yellow fever, marked by periodicity. The Roman Campagna and the West Coast of Africa are noted haunts of malaria and malarious fevers; and rice-fields are also well-known sources of it.

ma-lär'-ĭ-al, † **ma-lär'-ĭ-an,** *a.* [Eng. *malari(a); -al, -an.*] Pertaining to, of the nature of, produced or infected by malaria.

¶ There is a *malarial* cachexia and a *malarial* remittent fever.

ma-lär'-ĭ-oŭs, *a.* [Eng. *malari(a);* adj. suff. *-ous.*] Full of, or infected by malaria; causing or producing malaria.

"Till there is not a fever alley or a *malarious* ditch left in any British city."—*C. Kingsley.* (*Life*, ii. 279.)

măl-ąs-sĭm-ĭ-lā'-tion, *s.* [Pref. *mal-*, and Eng. *assimilation* (q.v.).]

Pathol.: Imperfect or defective assimilation of food; imperfect digestion, conversion, and appropiation of nutriment; cacochymia.

măl'-āte, *s.* [Eng. *mal(ic); -ate.*]

Chem.: A salt of malic acid.

*** măl'-ăx,** *v.t.* [Lat. *malaxo*, from Gr. μαλάσσω (*malassō*) = to soften.] The same as Malaxate (q.v.).

"Apply an emplash *malaxed* with unguent dialthææ."—*Wiseman: Surgery*, bk. i., ch. ix.

*** ma-lăx'-ate,** *v.t.* [Lat. *malaxatus*, pa. par. of *malaxo*, from Gr. μαλάσσω, μαλάττω (*malassō, malattō*) = to soften; μαλακός (*malakos*) = soft.] To soften; to knead to softness.

*** măl-ăx-ā'-tion,** *s.* [Lat. *malaxatio*, from *malaxatus*, pa. par. of *malaxo* = to soften.] [Malaxate.] The act of malaxating or softening; the act or process of forming ingredients into a mass for pills.

măl'-ăx-ā-tŏr, *s.* [Eng. *malaxat(e); -or.*] A mixing-mill. A cylinder having a rotating shaft and stirring-arms to incorporate materials. Mortar-mills, pug-mills, and many other machines come under this description—*e.g.* machines for mixing the ingredients of pills.

ma-lăx'-ĕ-æ, *s. pl.* [Mod. Lat. *malax(is);* Lat. fem. pl. adj. suff. *-æ.*]

Bot.: A tribe of Orchidaceæ (q.v.).

ma-lăx'-ĭs, *s.* [Gr. = a softening, in allusion to the softness of the plant.] [Malaxate.]

Bot.: Bog-orchis; a genus of Orchids, tribe Malaxeæ, family Liparidæ. The outer sepals spread widely; the lip is inferior, entire; spur wanting; pollen masses four, in a single row. *Malaxis paludosa*, a common form, has four to five oval, very concave leaves, and a spike of small greenish flowers. Found in bogs, &c., in England, Scotland, and other parts of Europe.

Ma-lāy', *s.* & *a.* [See def.]

A. *As substantive:*

1. A native of Malacca or the Malay Peninsula and adjacent islands.

2. The language spoken by the Malays.

B. *As adj.:* Of or pertaining to the Malays or their country.

Malay-apple, Malay apple-tree, *s.*

Bot.: Jambosa malaccensis.

Ma-lāy'-ąn, *a.* & *s.* [Eng. *Malay; -an.*]

A. *As adj.:* Of, pertaining, or relating to Malacca or the Malay Peninsula, or its inhabitants.

B. *As substantive:*

1. A native of Malacca or the Malay Peninsula.

2. The language spoken by the Malays.

Malayan-bear, Malayan sun-bear, *s.*

Zool.: Helarctos (*Ursus*) *malayanus*, a bear found in the Malayan peninsula, Borneo, Sumatra, and Java. It is about four feet and a half in length; the fur is black, fading into brown on the nose. The chest bears a crescentic white mark; the Bornean variety has an orange-coloured, heart-shaped patch. It usually feeds on grains and fruits, and is very fond of honey. It occasionally indulges in animal food; and is said to attack man, when hard pressed, and there is no means of escape.

Malayan-porcupine, *s.*

Zool.: Atherura fasciculata, a rat-like porcupine, about eighteen inches long. The spines of the body short and depressed; tail short and scaly.

Malayan sun-bear, *s.* [Malayan-bear.]

Malayan-tapir, *s.*

Zool.: Tapirus malayanus, the largest of the Tapiridæ. Maneless, general colour glossy black, back, rump, and sides white. Habitat Sumatra, Malacca, and the south-west provinces of China. Called also the Asiatic or Indian Tapir.

măl'-brŏŭck, *s.* [Fr. *malbrouc*, a corrupt. of *Marlborough.*]

Zool.: Cercocebus Cynosurus, the Dog-tailed Baboon of Shaw, found in Bengal. (*Griffith; Cuvier.*)

măl-cō'-hą, *s.* [Native name.]

Ornith.: An East Indian genus of Cuculidæ. The bill is long, thick, and rounded, with bristles at the base; nostrils orbicular and lateral; a large naked space round the eyes; tarsi slender, as are the claws.

măl-cŏn-for-mā'-tion, *s.* [Pref. *mal-*, and Eng. *conformation* (q.v.).] Disproportion of parts; imperfect or abnormal formation.

măl'-cŏn-tĕnt, * măle'-cŏn-tĕnt, *a.* & *s.* [Fr., from *mal* = ill, badly, and *content* = content, pleased.]

A. *As adj.:* Discontented, malcontented, dissatisfied.

"Yeelded leave, however *malcontent*."
Spenser: F. Q., IV. vi. 44.

B. *As subst.:* One who is discontented or dissatisfied; specif., one who is discontented with or murmurs against the government or its administration.

"The *malecontents* at the coffeehouses of London murmured at this profusion."—*Macaulay: Hist. Eng.*, ch. xxxiii.

*** măl-cŏn-tĕnt'-ĕd,** *a.* [Pref. *mal-*, and Eng. *contented* (q.v.).] Discontented, dissatisfied; specif., discontented with the government or its administration; seditious.

"Against mutinous and *malcontented* subjects."—*Bacon: Henry VII.*, p. 39.

*** măl-cŏn-tĕnt'-ĕd-lȳ,** *adv.* [Eng. *malcontented; -ly.*] In a discontented or dissatisfied manner; with discontent.

*** măl-cŏn-tĕnt'-ĕd-nĕss,** *s.* [Eng. *malcontented; -ness.*] The quality or state of being malcontented or discoutented; discontent, dissatisfaction; espec., with the government or its administration.

"They would ascribe the laying down my paper to a spirit of *malcontentedness*."—*Addison: Spectator*, No. 445.

măl-dā'-nĭ-æ, măl-dăn'-ĭ-dæ, *s. pl.* [A word of no etymology. (*Agassiz.*)]

Zool.: A family of Annulata, established by Savigny. It contains a single genus, Clymene. (*Van Beneden.*)

măl'-dŏn-ite, *s.* [Named after the place where found, Maldon; suff. *-ite* (*Min.*).]

Min.: A mineral occurring in small grains in quartz, and having an apparent cubic cleavage. Hardness, 1·5 to 2; sp. gr. 8·2 to 9·7 (?); colour, pinkish-white, tarnishing on exposure. Malleable. Compos.: by assay, gold, 64·5; bismuth, 35·5. Found at Nuggety Reef, Maldon, Victoria.

măl-ĕ-, *pref.* [Mal-.]

māle, *a.* & *s.* [O. Fr. *masle* (Fr. *mâle*), from Lat. *masculus* = male, from *mas* = a male creature, a man.]

A. *As adjective:*

I. *Ordinary Language:*

1. *Lit.:* Of or pertaining to the sex that procreates or begets young, as distinguished from the female, which conceives and bears young; masculine.

"Have ye not read that he which made them at the beginning made them *male* and female?"—*Matt.* xix. 4.

* 2. *Fig.:* Possessing some quality or attribute characteristic of males: hence, excellent, noble, superior.

II. *Bot.* (*Of an individual plant*): Bearing stamens but not fruit.

B. *As substantive:*

1. *Ord. Lang.:* One of that sex which procreates or begets young; a he-animal.

"When they brought forth children they openly slew all the *males*."—*Stow: Memorable Antiquities*, p. 20.

2. *Bot.:* A staminiferous plant or inflorescence.

male-fern, *s.*

Bot.: Nephrodium Filix Mas, a fern, one to three feet high; the stipes more or less scaly beneath; the segments entire or serrate at the tip; the frond generally bipinnate; the pinnules obtusely lobed. Found in woods and shady places, bearing fruit in July and August.

male-fluellin, *s.*

Bot.: Linaria spuria. It is a hairy or villous and glandular British plant, with ovate or orbicular leaves and yellow flowers, found in sandy and chalky cornfields.

male-rhymes, *s. pl.* Rhymes in which only the last syllables correspond; as, *disdain, complain.*

male-screw, *s.* A screw whose threads enter the grooves or channels of the corresponding or female screw.

* **male-spirited,** *a.* Having the spirit of a man; masculine, vigorous, manly.

"That *male-spirited* dame,
Their mother, slacks no means to put them on."
Ben Jonson: Sejanus, ii.

male-system, *s.*

Bot.: All the parts of a flower connected with the stamens; all appendages, processes, &c., forming part of the same series of organs, as the true stamens, or originating between them and the pistil. Called by Röper the androecium.

* **māle,** *s.* [Mail (2), *s.*]

măl'-ĕ-āte, *s.* [Eng. *male(ic); -ate.*]

Chem.: A salt of maleic acid.

* **măle-ad-mĭn-ĭs-trā'-tion,** *s.* [Maladministration.]

măle'-branch-ĭşm, *s.* [For etym. see def.]

Hist. & Philos.: A school of philosophy, so called from Nicholas Malebranche (1638–1715), a priest of the Oratory; occasionalism (q.v.).

* **măle-cŏn-for-mā'-tion,** *s.* [Malconformation.]

† **măle'-cŏn-tĕnt,** *a.* & *s.* [Malcontent.]

* **măl-ĕ-dī'-çen-çy,** *s.* [Lat. *maledicentia*, from *maledicens* = maledicent (q.v.); O. Fr. *maledicence*; Sp. & Port. *maledicencia*; Ital. *maldicenza.*] The quality of being maledicent; the act or practice of using evil, reproachful, or abusive language; proneness to slander or abuse.

"We are now to have a taste of the *maledicency* of Luther's spirit."—*Atterbury: Character of Luther.*

* **măl-ĕ-dī'-çent,** *a.* [Lat. *maledicens*, pr. par. of *maledico* = to speak ill or badly: *male* = badly, and *dico* = to say, to speak; Ital. *maldicente*; Sp. *maldiciente.*] Speaking reproachfully; using reproachful or slanderous language.

"Possessed with so furious, so *maledicent* and so slovenly spirits."—*Sir E. Sandys: State of Religion.*

* **măl-ĕ-dĭc'-tĕd,** * **măl'-ĕ-dĭct,** *a.* [Lat. *maledictus*, pa. par. of *maledico* = to speak ill.] Addressed with maledictions; accursed.

măl-ĕ-dĭc'-tion, * **mal-e-dic-ci-on,** * **mal-e-dic-cy-on,** *s.* [Fr. *malediction*, from Lat. *maledictionem*, accus. of *maledictio* = a curse, from *maledictus*, pa. par. of *maledico* = to speak ill against: *male* = badly, ill, and *dico* = to say, to speak; Ital. *maledizione*; Sp. *maldicion.*] Evil speaking, cursing; a curse, an execration, an imprecation.

"It is the *malediction* of Eve!"
Longfellow: Golden Legend, ii.

* **măl-ĕ-făc'-tion,** *s.* [Lat. *malefactio*, from *male* = badly, ill, *factio* = a doing, from *factus*, pa. par. of *facio* = to do.] A criminal deed; an offence against the laws; a crime.

"Guilty creatures, sitting at a play,
Have by the very cunning of the scene
Been struck so to the soul, that presently
They have proclaimed their *malefactions*."
Shakesp.: Hamlet, ii. 2.

măl-ĕ-făc'-tŏr, * **mal-e-fac-tour,** *s.* [Lat. *malefactor*, from *male* = badly, ill, and *factor* = a doer; *facio* = to do; Fr. *malefaiteur*; Ital. *malfattore.*]

1. An evil-doer; one who commits a crime or crimes; a criminal; one who offends against or violates the laws.

"If he were not a *malefactor*, we would not have delivered him up unto thee."—*John* xviii. 30.

* 2. One who does harm to another; the opposite to a benefactor.

"King Edward the Fourth, a *malefactor* to this College."—*Fuller: Hist. Cambridge*, iv. 19. (Margin.)

* **măle-fēa'-şançe,** *s.* [Malfeasance.]

* **ma-lĕf'-ĭc,** *a.* [Lat. *maleficus*, from *male* = badly, ill, and *facio* = to do.] Causing ill, harm, or mischief; mischievous, hurtful.

* **ma-lĕf'-ĭ-cāte,** *v.t.* [Lat. *maleficus* = a witch.] To bewitch.

"What will not a man do when once he is *maleficated*?"—*Taylor: Isaak Comnenus*, ii. 4.

* **măl'-ĕ-fĭçe,** *s.* [Fr., from Lat. *maleficium* = an evil deed, witchcraft, from *male* = badly, ill, and *facio* = to do.] Sp., Port. & Ital. *maleficio.*] An evil deed; a crime; artifice, enchantment.

"[He] fild their mouthes with meeds of *malefices*."
Spenser: Mother Hubberds Tale, 1,154.

* **ma-lĕf'-ĭ-çençe,** *s.* [Lat. *maleficentia*, from *maleficus*; Sp. *maleficiencia*; Ital. *maleficenza*; Fr. *malfaisance.*] The quality or state of being maleficent; the act of doing evil or harm.

"The Bishop of Lincoln felt it, who fell into trouble, not for want of innocence, but for want of a parliament to keep him from *maleficence*."—*Hacket: Life of Williams*, pt. ii., p. 85.

* **ma-lĕf'-ĭ-çent,** *a.* [Lat. *male* = badly, ill, and *faciens*, pr. par. of *facio* = to do.] Causing or apt to cause harm or hurt; given or prone to maleficence; hurtful, mischievous.

"Let us apply to the unjust, what we have said of a mischievous or *maleficent* nation."—*Burke: On the Policy of the Allies.* (App.)

* **măl-ĕ-fĭ'-çial** (c as sh), *a.* [Malefic.] Injurious, hurtful.

"Passing a law so *maleficial* unto them."—*Fuller: Church Hist.*, III. vi. 14.

* **măl-ĕ-fĭc'-ĭ-āte** (c as sh), *v.t.* [Low Lat. *maleficiatus*, pa. par. of *maleficio*, from Lat. *maleficium* = an evil deed, hurt, witchcraft.] To bewitch, to hurt, to harm.

"Every person that comes near him is *maleficiated*."—*Burton: Anat. of Melancholy*, p. 181.

* **măl-ĕ-fĭc-ĭ-ā'-tion** (c as sh), *s.* [Maleficiate.] A bewitching.

"A sixth may be a preceding incapacity of marriage duties; whether natural, or advantageous; whether by way of perpetual *maleficiation*, or casualty."—*Bp. Hall: Cases of Conscience*, dec. 4, ch. x.

* **măl-ĕ-fĭc'-ience** (c as sh), *s.* [Maleficence.] A doing harm or hurt; maleficence.

* **măl-ĕ-fĭc'-ient** (c as sh), *a.* [Maleficent.] Doing harm or hurt; hurtful, maleficent.

* **măle-fŏr-mā'-tion,** *s.* [Malformation.]

măl'-ĕ-ĭc, *a.* [Altered from Eng. *malic* (q.v.).] Derived from malic acid.

maleic-acid, *s.*

Chem.: $C_4H_4O_4 = C_2H_2{<}^{COOH}_{COOH}$. Pyromalic acid. A dibasic acid, obtained by the dry distillation of malic acid. It is isomeric with fumaric acid, and differs from malic acid only in the elements of water, $C_4H_6O_5 = C_4H_4O_4 + OH_2$. It crystallizes in oblique rhomboidal prisms, soluble in water, alcohol, and ether. It is colourless and inodorous, and its taste, sour at first, soon excites a very unpleasant sensation of nausea. Maleic acid forms indirectly substitution derivatives, of which monobromo-maleic acid is an example and type. It yields salts with the alkalis and metals, some of which are crystalline.

¶ (1) *Mono-ammonium maleate:*

Chem.: $C_4H_3(NH_4)O_4$. It forms crystalline laminæ, soluble in water, and slightly soluble in alcohol.

(2) *Di-ammonium-maleate:*

Chem.: $C_4H_2(NH_4)_2O_4$. It is obtained as a crystalline jelly on saturating a solution of the acid with ammonia.

(3) *Barium maleate:*

Chem.: $C_4H_2Ba''O_4$. It crystallizes in small shining needles united in stellate groups, sparingly soluble in cold water, but very soluble in boiling water.

maleic-anhydride, *s.*

Chem.: $C_4H_2O_3 = C_2H_2{<}^{CO}_{CO}O$. A compound obtained by the repeated distillation of fumaric or maleic acid, the first portion of each distillate being rejected. It is a colourless crystalline mass, which melts at 57°, and boils at 196°. When dissolved in water, it is reconverted into maleic acid.

* **mal-en-col-ye,** *s.* [Melancholy.]

* **măl'-ĕn-ĝĭne,** * **mal-en-gin,** * **mal-len-gyn,** *s.* [Fr. *malengin*, from Lat. *malus* = bad, and *ingenium* = disposition.] Guile, deceit.

"The florevn
Was moder first of *malengin*."
Gower: C. A., bk. iv.

* **măle-ō'-dour,** *s.* [Malodour.]

* **măle-pō-şĭ'-tion,** *s.* [Malposition.]

* **măle-prăc'-tiçe,** *s.* [Malpractice.]

măleş-hĕr-bĭ-ā'-çē-æ, *s. pl.* [Mod. Lat. *malesherbi(a)*; Lat. fem. pl. adj. suff. *-aceæ.*]

Bot.: Crownworts, an order of Hypogynous Exogens, alliance Violales. It consists of herbaceous or half-shrubby plants, with alternate lobed exstipulate leaves, and axillary or terminal solitary yellow or blue flowers; calyx, tubular, membranous, inflated, five-lobed; petals, five, persistent, arising from without; a short membranous rib or coronet, perigynous, imbricated; stamens, five or ten, perigynous; ovary, superior, with parietal placentæ; styles, three, long; fruit, capsular, one-celled, three-valved, membranous, many-seeded. Found in Chili and Peru. Known genera two, species five. (*Lindley.*)

* **măl'-ĕ-sŏn,** *s.* [Malison.]

* **măle'-swŏrn,** * **măl'-swŏrn,** *a.* [Pref. *mal-*, and Eng. *sworn.*] Forsworn, perjured.

* **măl'-ĕt,** *s.* [Fr. *mallette*, dimin. of *malle* = a sack, a bag.] [Mail (2), *s.*] A little bag or budget; a portmanteau.

* **măle'-tăl-ent,** *s.* [Maltalent.]

* **măle'-tōlt,** *s.* [Norm. & O. Fr., from Lat. *male* = badly, ill, and Low Lat. *tollita*, from Lat. *tollo* = to raise; Fr. *maletôte.*] An illegal exaction, toll, or imposition. The term was first applied to the exactions of Philip le Bel in 1290, for his war against the English.

* **măle-trēat',** *v.t.* [Maltreat.]

* **măle-trēat'-mĕnt,** *s.* [Maltreatment.]

ma-lĕv'-ō-lençe, *s.* [Lat. *malevolentia*, from *malevolens* = malevolent (q.v.); Sp. *malevolencia.*] The quality or state of being malevolent; ill will; ill feeling; evil disposition towards another; an inclination or disposition to injure or hurt others.

"*Malevolence*, therefore, commences with some idea of evil, belonging to and connected with the object; and it settles into a permanent hatred of his person, and of every thing relative to him."—*Cogan: On the Passions*, pt. i., ch. ii., § 3.

ma-lĕv'-ō-lent, *a.* [Lat. *malevolens*, from *male* = badly, ill; *volens*, pr. par. of *volo* = to wish.] Full of or disposed to malevolence; having an ill will or evil disposition towards

others; wishing ill, evil or injury to others; ill-disposed; rejoicing in the evil or misfortune of others; malicious, envious.

"This is Worcester,
Malevolent to you in all aspects."
Shakesp.: 1 Henry IV., i. 1.

ma-lĕv'-ō-lent-lȳ, *adv.* [Eng. *malevolent; -ly.*] In a malevolent manner; with malevolence; with ill-will; with a desire or disposition to injure others; maliciously.

"The oak vindicated him from aspersions *malevolently* cast upon him."—*Howel: Vocal Forest.*

* **ma-lĕv'-ō-lō,** *s.* [Ital., from Lat. *malevolus.*] A malicious person.

* **ma-lĕv'-ō-loŭs,** *a.* [Lat. *malevolus*, from *male* = badly, ill, and *volo* = to wish.] The same as MALEVOLENT (q.v.).

"Hitherto we see these *malevolous* critics keep their ground."—*Warburton: On Prodigies*, p. 109.

* **măl-ĕx-ĕ-cū'-tion,** *a.* [Pref. *mal-*, and Eng. *execution* (q.v.).] Evil, wrong, or faulty execution: maladministration.

măl-fēaṣ'-ạnce, *s.* [Fr. *malfaisance*, from *malfaire* = to do ill: *mal* (Lat. *male*) = badly, ill, and *faire* (Lat. *facio*) = to do.]

Law: The doing of an act which one ought not to do; evildoing; a wrong; an illegal act.

măl-for-mā'-tion, *s.* [Pref. *mal-*, and Eng. *formation* (q.v.).] A bad, faulty, irregular, or abuormal formation, conformation, or structure of parts; a deviation from the normal or regular structure or form of au organ.

măl-goô-zar-ee', *s.* [Native name.] Land subject to assessment. (*East Indies.*)

* **măl-grā'-cious,** *a.* [Pref. *mal-*, and Eng. *gracious.*] Ungracious, ungraceful. (*Gower.*)

* **mal-gre,** * **maul-gre,** *adv.* [MAUGRE.]

māl'-ĭc, *a.* [Lat. *mal(um)* = an apple; Eng. suff. *-ic.*] Derived from fruit.

malic-acid, *s.*

Chem.: $C_4H_6O_5 = C_2H_3OH \left\langle \begin{matrix} COOH \\ COOH \end{matrix} \right.$ Discovered by Scheele in 1785. It is very widely diffused through the vegetable kingdom, chiefly in combination with potassium and calcium. It is found in abundance in nearly all garden fruits, such as apples, cherries, and strawberries, and in many roots, as, for instance, marsh mallow, liquorice, and madder; also in carrots, lettuce, tobacco, poppy, sage, thyme, in the flowers of camomile, and elder, and in the seeds of parsley, flax, and pepper, &c. It can be prepared by precipitating the vegetable extract with lead acetate, and decomposing with sulphydric acid. The aqueous solutiou left to evaporate yields groups of colourless shining needles, or prisms, which melt at 100°. They are odourless, have a sour taste, and are soluble in alcohol. Active malic acid rotates the plane of polarisation to the left, [a] = - 5°. By the action of reducing agents it is converted into succinic acid. Malic acid yields neutral and acid salts, and possesses a strong tendency to form the latter.

¶ (1) *Ammonium malate:*

Chem.: The neutral salt is soluble and uncrystallizable.

(2) *Ammonium malate* (*acid salts*)*:*

Chem.: $C_4H_5(NH_4)O_5$. It crystallizes in transparent prisms with well defined and strongly reflecting faces. It deflects the plane of polarisation to the left [a] = - 6°.

(3) *Calcium malate:*

Chem.: $\left. \begin{matrix} C_4H_4O_3 \\ CaO_2 \end{matrix} \right\} 2OH_2$. The crystalline form of this salt is hemihedral, and it produces dextro-rotation. It is only slightly soluble in cold water.

malic-ether, *s.*

Chem.: $2C_2H_5,C_4H_4O_5$. Obtained by passing hydrochloric acid gas into an alcoholic solution of malic acid. It is soluble in water, and decomposed by distillation.

măl'-ĭce, *s.* [Fr., from Lat. *malitia* = badness, ill-will, from *malus* = bad; Sp. & Port. *malicia*; Ital. *malizia.*]

I. *Ordinary Language:*

1. An evil disposition; enmity of heart; a disposition to injure others without a cause, or only for the sake of personal gratification, or from a spirit of revenge; malevolence, maliciousness, malignity.

2. Enmity, hatred, ill-will.

"I never sought their *malice.*"
Shakesp.: Henry VIII., v. 2.

* 3. A malicious person.

"Shruggest thou, *malice!*"
Shakesp.: Tempest, i. 2.

II. *Law:* A premeditated or formed design to do mischief or injury to another, called also *malice prepense* or *aforethought.*

"Malice prepense, *malitia præcogitata*, is not so properly spite or malevolence to the deceased in particular, as any evil design in general; the dictate of a wicked, depraved, and malignant heart; and it may be either express or implied in law. Express malice is when one, with a sedate deliberate mind and formed design, doth kill another: which formed design is evidenced by external circumstances discovering that inward intention . . . Also in many cases where no malice is expressed, the law will imply it: as where a man wilfully poisons another; in such a deliberate act the law presumes *malice*, though no particular enmity can be proved."—*Blackstone: Comment.*, bk. iv., ch. 14.

* **măl'-ĭce,** *v.t.* [MALICE, *s.*] To feel malice towards; to regard with malice or ill-will.

"I neither envy his fortune nor *malice* his person."
—*Fourth Report Hist. MSS. Com.*, p. 291.

* **măl'-ĭce-lĕss,** *a.* [Eng. *malice; -less.*] Free from malice, ill-will, or malevolence.

"How few are there that have truly *maliceless* hearts and find this entire upright affection towards their brethren."—*Leighton: Com. on Peter* i. 22.

* **măl'-ĭ-chō,** * **măl'-lĕ-chō,** *s.* [Sp. *malhecho* = an evil action, from *mal* = bad, ill, and *hecho* = a deed, from Lat. *facio* = to do.] Mischief, hurt, wickedness.

"Marry, this is miching *malicho.*"—*Shakesp.: Hamlet*, iii. 2.

* **măl'-ĭç-ĭng,** *s.* [Eng. *malic(e); -ing.*] Malice, ill-will.

"And without any private *malicing.*"
Daniel: A Funeral Poem.

mạ-lĭ'-cious, * **mạ-lĭ'-tious,** *a.* [Fr. *malicieux*, from *malice* = malice; Sp. & Port. *malicioso*; Ital. *malizioso.*]

1. Feeling or disposed to malice; ill-disposed towards others; indulging malice, ill-will, or enmity against others; malignant, malevolent, spiteful.

"Oft have I mused what purpose bad
That foul *malicious* urchin had
To bring this meeting round."
Scott: Lay of the Last Minstrel, v. 13.

2. Characterized or inspired by malice; proceeding from malice or malevolence; done with the design of injuring or hurting another.

"*Malicious* slander is the relating of either truth or falsehood, for the purpose of creating misery."—*Paley: Moral Philosophy*, bk. iii., ch. xii.

* 3. Hurtful, evil.

"The air appearing so *malicious* in this morbifick conspiracy, exacts a more particular regard."—*Harvey: On Consumptions.*

malicious-abandonment, *s.*

Law: The desertion of a wife without cause.

malicious-mischief, *s.*

Law: The committing of an injury to public or private property, not for the purposes of theft, but from pure wantonness or malice. In some cases this is a felony, in others only a misdemeanour. The *malicious* destruction of machinery, or of goods in the process of manufacture, is an offence against public trade as well as against the property of the individual sufferer; the immediate object of the offender being often the destruction of property generally, irrespective altogether of its ownership. This crime, and all those of a like nature, are now prosecuted under the statute 24 & 25 Vict. c. 97, consolidating and amending the laws on this subject.

malicious-prosecution, *s.*

Law: A prosecution preferred maliciously or without sufficient cause or grounds. An action at law lies against the person who maliciously prosecutes another.

mạ-lĭ'-cious-lȳ, *adv.* [Eng. *malicious; -ly.*]

1. In a malicious manner; with malice or malevolence.

"Proud tyrants who *maliciously* destroy."
Somervile: Fable 12.

2. Like one full of hatred; with the strength of hate.

"I will be treble-sinew'd, hearted, breath'd,
And fight *maliciously.*"
Shakesp.: Antony & Cleopatra, iv. 11.

mạ-lĭ'-cious-nĕss, * **mạ-lĭ'-tious-nĕss,** *s.* [Eng. *malicious; -ness.*] The quality or state of being malicious; malice, malevolence, ill-will.

"Hee opened to them the *malitiousness* of the Londoners."—*Stow: Richard II.* (an. 1391).

* **mạ-lĭf'-ĕr-oŭs,** *a.* [Lat. *malum* = ill; *fero* = to bring, and Eng. adj. suff. *-ous.*] Bringing ill, evil, or harm; hurtful, pestilential.

mạ-līgn' (*g* silent), *a.* [O. F. *maling* (fem. *maligne*), from Lat. *malignus* = ill-disposed, wicked; from *maligenus* = ill-born: from *male* = badly, ill, and *gigno* (pa. t. *genui*) = to produce; Sp. & Port. *maligno*; Fr. *malin*, fem. *maligne.*]

* 1. Having an ill will or evil disposition towards others; malicious, malevolent.

"Instead
Of spirits *malign* a better race to bring."
Milton: P. L., vii. 189.

2. Unfavourable, unpropitious, pernicious; as, a *malign* influence.

* 3. Malignant.

"He that turneth the humours back . . . endangereth *malign* ulcers and pernicious impostbumations."—*Bacon: Essays.*

* 4. Hurtful, pernicious.

"The ground of damp *malign*,
Their bed nocturnal."
Hart: Psalm cvii. *paraphrased.*

mạ-līgn' (*g* silent), * **ma-ligne,** *v.t.* & *i.* [Lat. *maligno*; from *malignus* = ill-disposed.] [MALIGN, *a.*]

A. *Transitive:*

* 1. To regard with malice, malignity, or ill will; to treat with malice; to injure maliciously.

"Strangers conspired together against him, and *maligned* him in the wilderness."—*Ecclus.* xlv. 18.

2. To speak evil of; to traduce, to vilify, to slander, to defame.

"Though many foes did him *maligne* therefore
And with unjust detraction him did beard."
Spenser: F. Q., VI., v. 12.

* 3. To grudge, to envy.

"If the heavens did his dayes envie,
And my short blis *maligne.*"
Spenser: F. Q., III. iv. 39.

* **B.** *Intrans.:* To entertain malice, or a malicious disposition; to be malicious or malevolent. (*Milton.*)

mạ-lĭg'-nan-çy, * **ma-lig-nance,** *s.* [Eng. *malignant; -cy; -ce.*]

A. *Ordinary Language:*

1. The quality or state of being malignant; malevolence, malice, ill-will; bitter enmity towards others.

"Malignity seems rather more pertinently applied to a radical depravity of nature, and *malignancy* to indications of this depravity, in temper and conduct in particular instances."—*Cogan: On the Passions*, ch. ii., § 3.

* 2. The state of being a malignant; opposition to the Puritan government. [MALIGNANT, B.]

"During the sittings of the Long Parliament, again, a considerable number of members were disqualified for *malignancy.*"—*Daily Telegraph*, Feb. 22, 1882.

* 3. Unfavourableness, unpropitiousness.

"The *malignancy* of my fate might perhaps distemper yours."—*Shakesp.: Twelfth Night*, ii. 1.

B. *Med.:* Virulence; a tendency to mortification, or a fatal issue.

mạ-lĭg'-nant, *a.* & *s.* [Lat. *malignans*, pr. par. of *maligno* = to be ill-disposed; *malignus* = ill-disposed, malign (q.v.).]

ma-lig'-ni-ty, *** ma-lig-ni-tee**, *** ma-lig-ni-tie**, *s.* [Fr. *malignité* ; from Lat. *malignitatem*, accus. of *malignitas* = ill disposition ; *malignus* = ill-disposed ; Sp. *malignidad* ; Ital. *malignità.*]

1. The quality or state of being malignant ; malignancy ; extreme malevolence, enmity, or evil disposition towards others ; malice without cause or provocation.

"*Malignity* was in her a stronger passion than avarice."—*Macaulay : Hist. Eng.*, ch. xv.

* 2. Unfavourableness, unpropitiousness, pernicious influence.

3. Hurtfulness, destructive tendency, virulence ; deadly or pernicious nature or qualities.

"It was conceived not to be an epidemicke disease, but to proceed from a *malignitie* in the constitution of the aire."—*Bacon : Henry VII.*, p. 9.

4. Heinousness, enormity ; extreme evilness or wickedness.

"This shows the high *malignity* of fraud and falsehood."—*South : Sermons*, vol. i., ser. 12.

***ma-lign'-ly** (*g* silent), *adv.* [Eng. *malign*, a. ; *-ly.*] In a malignant manner ; malignantly ; with malice or ill-will.

"Yet, lest you think I rally more than teach,
Or praise *malignly* arts I cannot reach,
Let me for once presume t' instruct the times."
Pope : Satires, v. 339.

***măl-ĭn'-flū-ençe**, *s.* [Pref. *mal-*, and Eng. *influence* (q.v.).] Evil influence.

"Predisposed to any *malinfluence* whatever."—*De Quincey : Confessions of an Opium-eater.* (Appendix.)

ma-lĭn'-gẽr, *v.i.* [Fr. *malingre* = diseased, sickly, from *mal* = badly, ill, and O. Fr. *haingre*, *heingre* = thin, emaciated ; from Lat. *male* = badly, ill ; *ægrum*, accus. of *æger* = sick, ill.]

Med. : To pretend or sham illness in order to shirk duty.

ma-lĭn'-gẽr-ẽr, *s.* [Eng. *malinger* ; *-er.*]

Med. : A person (specif., a soldier, sailor, or prisoner) who feigns illness in order to escape duty or labour.

ma-lĭn'-gẽr-y, *s.* [Eng. *malinger* ; *-y.*]

Med. : The act or practice of pretending or shamming illness in order to shirk duty or any imposed task.

măl-ĭn-ŏfsk'-ite, măl-ĭn-ŏwsk'-ite (w as v), *s.* [Named after Señor Malinowski ; suff. *-ite* (*Min.*).]

Min. : A massive variety of tetrahedrite, of a gray colour and metallic lustre. An analysis showed the presence of 13·03 per cent. of lead, and 11·92 per cent. of silver. It belongs to the silver-lead tetrahedrites. Found in the district of Recuay, Peru.

măl'-ĭs, *s.* [Gr. = a distemper in horses and asses.]

Pathol. : A disease in which the cuticle is infested with animalcula. In Persia, the affection is produced by the Guinea-worm, in South America by the chigre, and in Europe, occasionally, by the louse (q.v.). [Phthiriasis.]

măl'-ĭ-sŏn, * măl'-ĭ-sŭn, *s.* [O. Fr. *malison*, *malichons*, *maldecon*, a doublet of *malediction* (q.v.).] A curse, a malediction, an execration. (Opposed to *benison.*)

"I gie God's *malison* and mine to a' sort o' magistrates."—*Scott : Rob Roy*, ch. xxv.

mâl'-kĭn, * mâul'-kĭn (*l* silent), *** mâw'-kĭn**, *s.* [A dimin. of *Mall*, *Moll* = Mary.]

* 1. A kitchen-wench.

"The kitchen *malkin* pins
Her richest lockram 'bout her reeky neck."
Shakesp. : Coriolanus, ii. 1.

2. A mop made of clouts for sweeping ovens.

* 3. A stuffed figure dressed up ; a scarecrow.

4. A sponge with jointed staff for ordnance.

mâll (1), *** mal, * malle, * maul, * mawl, * mealle, * melle**, *s.* [Fr. *mail*, from Lat. *malleum*, accus. of *malleus* = a hammer ; O. Sp. *mallo* ; Port. *malho* ; Ital. *maglio.*]

1. A large heavy wooden hammer or beetle.

"Some bad *malles* of lead."—*Berners : Froissart ; Cronycle*, vol. i., ch. ccccxxii.

* 2. A blow.

"With mighty *mall*,
The monster merciless him made to fall."
Spenser : F. Q., I. vii. 51.

*** mâll** (2), *s.* [From O. Fr. *palemaille* = a game wherein a round box bowle is with a mallet struck through a high arch of iron (*Cotgrave*), from O. Ital. *palamaglio*, *pallamaglio* = lit., a ball-mallet, from *palla* = a ball, and *maglio* = a mall, a mallet. The word is still preserved in Pall-*Mall*, and the *Mall* in St. James's Park.]

1. A public walk. (Originally a place where pall-mall was played.)

"This the beau monde shall from the *mall* survey."
Pope : Rape of the Lock, v. 133.

2. A court, a pleading-house.

*** mâll, * mâul**, *v.t.* [Mall (1), *s.*] To beat with or as with a mall ; to bruise, to maul.

"I'll *maull* that rascal, b' as out-brav'd me twice."
Beaum. & Flet. : Maid's Tragedy, ii.

măl'-lard, * mal-ard, * mal-arde, *s.* [O. Fr. *malard*, *malart* ; Fr. *maillard*, from O. Fr. *male* ; Fr. *mâle*, with suff. *-ard.*] The male of the wild duck ; a wild drake.

"The *mallard* is the stock from whence our tame breed [of ducks] has probably been produced."—*Goldsmith : Animated Nature*, bk. vii., ch. xii.

măl-lard'-ite, *s.* [Named after the French crystallographer, E. Mallard ; suff. *-ite* (*Min.*).]

Min. : A monoclinic mineral occurring in colourless crystalline masses, having a fine fibrous structure. Soluble in water. Effloresces on exposure and becomes opaque and pulverulent. Compos. : a hydrated sulphate of manganese. Found in a gray, clay-like stone, with quartz-sand and barytes, in the Lucky Boy silver mine, Utah.

măl-lẽ-a-bĭl'-ĭ-ty, *s.* [Fr. *malléabilité*, from *malléable* = malleable (q.v.).] The quality or state of being malleable ; susceptibility or capability of extension by beating. The most malleable of all metals is gold, which can be beaten out into leaves one three hundred thousandth of an inch thick.

"A body of such a peculiar colour and weight, with the *malleability* and fusibility."—*Locke ; Human Understanding*, bk. iii., ch. vi., § 6.

măl'-lẽ-a-ble, * mal-la-ble, *a.* [Fr., from Lat. * *malleo* = to beat with a hammer, from Lat. *malleus* = a hammer ; Sp. *maleable* ; Ital. *malleabile.*]

1. *Lit.* : Capable or susceptible of being spread, extended, or shaped by beating ; capable of extension by the hammer ; reducible to laminæ by beating.

"When a man says gold is *malleable*, he means and would insinuate something more than this, that what I call gold is *malleable*."—*Locke : Human Understanding*, bk. iii., ch. x., § 17.

* 2. *Fig.* : Pliant.

"Mark the effect produced on our councils by continued insolence and inveterate hostility, we grow more *malleable* under their blows."—*Burke : On a Regicide Peace*, let. 3.

malleable cast-iron, *s.* Iron cast from the pig into any desired shape, and afterwards rendered malleable, or partially so, by annealing. It can be brazed but not welded.

malleable-iron, *s.* Iron sufficiently pure to be drawn out into bars and welded.

malleable iron-castings, *s. pl.* Small cast-iron articles are made malleable, their brittleness being removed, by packing them in powdered hematite (peroxide of iron) in tight fire-brick cases, and subjecting them to a continued red heat for about a week. They are then allowed to cool slowly. The oxygen of the hematite combines with and removes a part of the carbon of the iron.

măl'-lẽ-a-ble-nẽss, *s.* [Eng. *malleable* ; *-ness.*] Malleability (q.v.).

"The metals which are distinguished from other bodies by their weight, fusibility, and *malleableness.*"—*Locke : Human Understanding*, bk. iii., ch. vi.

*** măl'-lẽ-ate**, *v.t.* [Lat. *malleatus*, pa. par. of * *malleo* = to beat with a hammer ; *malleus* = a hammer.] To beat with a hammer ; to hammer ; to shape or draw into a sheet, plate, or leaf by hammering.

"He first found out the art of melting and *malleating* metals, and making them useful for tools."—*Derham : Physico-Theology*, bk. v., ch. i.

măl-lẽ-ā'-tion, *s.* [Malleate.]

I. *Ordinary Language* :

1. The act or operation of beating into a plate or leaf, as a metal, by hammering ; extension by hammering or beating.

* 2. A beating, a pounding, a thrashing.

"His squire, by often *malleations* . . . might be beaten out into the form of a gentleman."—*Gayton : Festivous Notes*, p. 67.

II. *Pathol.* : An affection described by Morgagni and others as a form of chorea, characterized by constantly hammering, with one hand on the other, or on the knee of the same side. (*Dunglison.*)

măl'-lẽ-chō, *s.* [Malicho.]

măl-lẽ-mar'-ŏ-kĭng, *s.* [Etym. doubtful.]

Naut. : The visiting and carousing of seamen in the Greenland ships. (*Smyth : Sailor's Word-book.*)

măl'-lẽ-mŏke, *s.* [Sw. *mallemucke* = the storm petrel.] The fulmar (q.v.).

măl'-lẽn-dẽrş, *s. pl.* [Malanders.]

măl-lẽ-ō'-lar, *a.* [Lat. *malleolus*, dimin. of *malleus* = a hammer.]

Anat. : Of or pertaining to the ankle : as, *malleolar* arteries.

măl-lẽ-ō'-lŭs, *s.* [Lat. dimin. of *malleus* = a hammer.]

1. *Anat.* : One of two projections of the leg-bones at the ankle.

2. *Bot.* : A layer laid down for the propagation of a plant by the process of layering.

măl'-lẽt, * mal-ette, * mail-let, *s.* [Fr. *maillet*, dimin. of *mail* = a mall or beetle.]

I. *Ordinary Language* :

1. A wooden hammer, smaller than a mall or maul, used by stone-cutters, joiners, carpenters, printers, &c. The mallet is preferably of boxwood, but the wood of the apple and pear is often employed.

"And with his *mallet* and his file
To shape the point, employs awhile
The seventh and the last."
Cowper : An Enigma. (Trans.)

2. A stick with a wooden head like a hammer, used in striking the ball in croquet.

II. *Technically* :

1. *Dent.* : A plugger for compacting filling in carious teeth.

2. *Naut.* : A caulking-mallet is one used with a caulking-chisel or making-iron to drive oakum into the seams of a vessel. A serving-mallet is a cylindrical block of wood, by which spun-yarn is tightly coiled around a hawser or rope.

3. *Surg.* : A hammer used with a gouge in cutting bones.

măl'-lẽ-ŭs, *s.* [Lat. = a hammer, a mallet.]

1. *Anat.* : One of the small bones of the tympanum. [Ear.] The malleus consists of a head, neck, and handle (*manubrium*), with a long and short process, the *processus gracilis* and *processus brevis.*

2. *Zool.* : A sub-genus of Avicula (Wing-shell). It consists of six species from China and Australia, which when young do not much differ from any ordinary Avicula, but as they grow they develop "ears" to such an extent as to make the shell resemble a hammer. *Malleus vulgaris*, or *alba*, is the Hammer-oyster (q.v.).

măl'-lĭn-dẽrş, *s.* [MALANDERS.]

măl-lō-mō-năd'-ĭ-dæ, *s. pl.* [Mod. Lat. *mallomon(as)*; Lat. fem. pl. adj. suff. *-idæ.*]

Zool.: A family of Iufusoria, order Cilio-Flagellata. The body is elothed with long setose cilia, and there is a terminal flagellum.

măl-lō-mŏn'-ăs, *s.* [Gr. μαλλός (*mallos*) = a lock of wool, and μονάς (*monas*) = a unit.]

Zool.: The typical genus of the family Mallomonadidæ (q.v.).

măl-lŏph'-ą-gą, *s. pl.* [Gr. μαλλός (*mallos*) = a lock of wool, and φαγεῖν (*phagein*) = to eat.]

Entom.: A sub-order of orthopterous insects, parasitie on vertebrates, and especially on birds, whence they are sometimes called Bird-lice. They are small, flat, wingless insects; head, broad and horizontal; thorax, narrow; abdomen, broad, of nine or ten segments; legs, short and stout; tarsi, two-jointed, with one or two claws. Eyes, small, and usually simple; antennæ, three- to five-jointed. The mouth, situated beneath the head, contains mandibles and maxillæ, and a labium, with two-jointed palpi. There are two families: Philopteridæ and Liotheidæ (q.v.). (*W. S. Dallas*, in *Cassell's Nat. Hist.*, v. 147.) By some entomologists they are elevated into an order, and others regard them as a degraded group of Hemiptera.

măl-lō'-tŭs, *s.* [Gr. μαλλωτός (*mallōtos*) = furnished with wool, fleecy; μαλλός (*mallos*) = a lock of wool.]

† 1. *Bot.:* A genus of Euphorbiaceæ, tribe Crotoneæ. *Mallotus philippensis* is better known as *Rottlera tinctoria.* [ROTTLERA.]

2. *Ichthy.:* A genus of fishes, family Salmonidæ. The body is covered with minute scales, which in mature males become elongate, with free projecting points, forming villous bands. Cleft of the mouth wide; maxillary very thin, lamelliform; lower jaw the longer. Dentition very feeble. Pectoral fins large, horizontal, with broad base. *Mallotus villosus*, the Capelin, about nine inches long, is caught in immense numbers on the Arctic coasts of America and Kamtschatka. The natives dry it for use in the winter.

măl'-lōw, măl'-lōwş, *s.* [A.S. *malu* = a mallow, *mealwe* = mallows (*Bosworth*); Ger. *malve*, from Lat. *malva* (q.v.).]

Bot.: The genus Malva (q.v.).

¶ The Common Mallow is *Malva sylvestris*; the Dwarf Mallow, *M. rotundifolia*; and the Musk Mallow, *M. moschata*; all wild in Britain. The Marsh Mallow is the genus Althæa; the Tree Mallow, the genus, Lavatera (q.v.). The Indian Mallow is the genus Sida, also Urena, and in America Abutilon. The Jew's Mallow, *Corchorus olitorius* and *C. capsularis.*

mallow-rose, *s.*

Bot.: *Hibiscus moschatus.*

măl'-lŏw-wŏrts, *s. pl.* [Eng. *mallow*, and *worts.*]

Bot.: The name given by Lindley to the order Malvaceæ (q.v.).

malm (*l* silent), *s.* & *a.* [A.S. *mealm* = sand; Goth. *malma* = sand.]

A. *As substantive:*

1. A name given to a kind of soil found in the south-eastern counties of England, rich in lime, phosphoric acid, and potash, and especially suited for the cultivation of hops.

"A warm, forward, crumbling mould, called black *malm*, which seems highly saturated with vegetable and animal manure."—*White,: Selborne.*

2. A kind of soft, brittle stone.

3. Malm-rock (q.v.).

4. A malm-brick (q.v.).

B. *As adj.:* Composed of the soil malm: as, *malm* land.

malm-bricks, *s. pl.* The name given to those bricks, made in the neighbourhood of London, in which the clay is pulped, mixed with cream of lime, and incorporated with breeze before moulding.

malm-rock, *s.*

Petrol.: A pale calcareous sandstone from the Upper Greensand at Godstone and Merstham. From being well adapted for the floors of furnaces, it is called also firestone. It is, moreover, a durable building stone.

măl'-măg, *s.* [Native name.]

Zool.: Tarsius (q.v.).

măl-mĭ-gnătte' (**gn** as **ny**), *s.* [Corrupted from *marmagnato*, or *marmignatto*, the name of the spider in Corsica.]

Zool.: Latrodectus malmignattus, a large spider, black, with about thirteen spots on the abdomen, which occurs in the south of Europe, and feeds on grasshoppers and other insects. It is found in Corsica, Sicily, &c.

malm'-seỳ (*l* silent), * **malme-say,** * **malve-sie,** * **malme-sie,** *s.* [A corrupt. of Fr. *malvoisie* = malmsey, from *Malvasia* (now *Napoli di Malvasia*) = a town on the east coast of Lacedæmonia, in the Morea; Sp. *malvasia*; Ital. *malvagia.*] A kind of grape; also a kind of strong, fiue-flavoured, sweet, white wine made in Madeira of grapes which have been allowed to shrivel on the vine.

"Metheglin, wort, and *malmsey.*"
Shakesp.: Love's Labour's Lost, v. 2.

măl-ō-bī-ūr'-ĭc, *a.* [Eng. *malo(nic)*; *biur(et)*, aud suff. *-ic.*] (See the compouud.)

malobiuric-acid, *s.*

Chem.: $C_5H_5N_3O_4 = N_3\begin{cases}(CO)_2\\(C_3H_2O_2)'''.\\H_3\end{cases}$ An acid analogous in constitution and mode of formation to biuret, $N_3(CO)_2H_4$, produced by heating a mixture of barbituric acid aud urea to a temperature of 150°-170°

$$\underset{\text{Barbituric acid;}}{C_4H_4N_2O_3} + \underset{\text{Urea;}}{CH_4N_2O} = \underset{\text{Ammonium malobiurate;}}{C_5H_4(NH_4)N_3O_4}$$

dissolving the ammonium malobiurate in potash, and supersaturating the solution with hydrochloric acid. It is a granular powder, slightly soluble in water, but very soluble on the addition of a few drops of bromine.

măl-ō'-dŏr, *s.* [Pref. *mal-*, and Eng. *odor* (q.v.).] An ill or offensive odor.

măl-ō'-dŏr-ŏŭs, *a.* [Pref. *mal-*, and Eng. *odorous* (q.v.).] Having a bad or unpleasant odor.

măl-ō'-dŏr-ŏŭs-nĕss, *s.* [Eng. *malodorous*; *-ness.*] The quality or state of being malodoros.

"In vain will it smell at the top of its voice, till you can positively hear its *malodourousness* half a meadow off."—*Daily Telegraph*, Nov. 13, 1883.

măl-ŏn'-ą-mĭde, *s.* [Eng. *malon(ic)*, and *amide.*]

Chem.: $C_3H_6N_2O_2 = CH_2(CONH_2)_2$. A crystalline body obtained by digesting methyl malonate in aqueous ammonia, evaporating to dryness, and extracting by means of hot dilute alcohol. It melts at 170°, is insoluble in absolute alcohol, and in ether, but soluble in hot dilute alcohol, from which it separates on cooling in the form of needles, having a silky lustre. When boiled in water, with repeated additions of ammonia, it is converted into ammonium malonamate, $CONH_2{\cdot}CH_2{\cdot}COO(NH_4)$.

măl'-ō-nāte, *s.* [Eng. *malon(ic)*; *-ate.*]

Chem.: A salt of malonic acid.

măl-ŏn'-ĭc, *a.* [Eng. *mal(ic)*, aud probably *(kel)on(e)*; suff. *-ic.*]

Chem.: $C_3H_4O_4 = CH_2{\cdot}^{CO\cdot OH}_{CO\cdot OH}$. An acid produced by the action of alkalis on cyanacetic ether, or by carefully oxidizing malic acid, with a cold solution of potassic dichromate. It crystallizes in large rhombohedral crystals, easily soluble in water and alcohol; melting at 132°, and decomposing at 145° into carbonic anhydride and acetic acid. The alkali salts, only of this acid, are easily soluble in water. The baric salt, $CH_2{\cdot}(CO{\cdot}O)_2Ba,H_2O$, crystallizes in groups of needles, sparingly soluble in cold water. The silver and lead salts are crystalline, but quite insoluble in water.

măl'-ō-nўl ų-rē'-ą, *s.* [BARBITURIC-ACID.]

ma'-lōo, *s.* [Hind.] [See the compound.]

maloo-creeper, *s.*

Bot.: Bauhinia racemosa.

măl'-ō-pē, *s.* [Gr. μαλός (*malos*) = white (?), woolly (?), or soft (?), and ὠπή (*ōpē*) = view, sight, look.]

Bot.: The typical genus of the malvaceous tribe, Malopeæ (q.v.). *Malope malacoides*, is a plant with large crimson flowers found in Barbary and the south of Europe.

ma-lō'-pĕ-æ, *s. pl.* [Mod. Lat. *malop(e)*; Lat. fem. pl. adj. suff. *-aceæ.*]

Bot.: A tribe of Malvaceæ.

măl-pĭgh'-ĕ-æ, *s. pl.* [Mod. Lat. *malpigh(ia)*; Lat. fem. pl. adj. suff. *-eæ.*]

Bot.: The typical tribe of the order, **Malpighiaceæ** (q.v.).

măl-pĭgh'-ĭ-ą, *s.* [MALPIGHIAN.]

Bot.: The typical genus of the order Malpighiaceæ (q.v.). Calyx five-cleft, partly glandular; petals, five-stalked; stameus, ten, united in a tube; ovary, three-celled; fruit, fleshy, with three crested stones. The bark of *Malpighia Moureila*, called also *Byrsonima crassifolia*, is used in Cayenne as a febrifuge. *M. glabra* is the Barbadoes cherry of the West Indies. It is eaten, as is *M. urens.*

măl-pĭgh-ĭ-ā'-çē-æ, *s. pl.* [Mod. Lat., &c. *malphigi(a)*; Lat. fem. pl. adj. suff. *-aceæ.*]

Bot.: Malpighiads, an order of hypogynous exogens, alliance Sapindales. It cousists of trees or shrubs, occasionally climbing, generally having opposite or whorled leaves with glands on the stalk below. Flowers yellow, red, white, or very rarely blue; calyx, five-parted, as a rule glandular; petals five, unguiculate; stamens generally ten, often monadelphous; carpels, three, two, or four; styles, distinct or united; fruit, a drupe, a woody nut, or a samara. At least 400 are found in South America, others in Africa, Asia, Polynesia, &c. Known genera, 42; species, 555.

măl-pĭgh-ĭ-ā'-ceoŭs (ce as **sh),** *a.* [Mod. Lat. *malpighiace(æ)*; Eng. adj. suff. *-ous.*]

1. *Gen.:* Of or belonging to the Malpighiaceæ.

2. *Spec.:* Having, like them, peltate hairs.

măl-pĭgh'-ĭ-ădş, *s. pl.* [Mod. Lat. *malpigh(ia)*; pl. suff. *-ads.*]

Bot.: The name given by Lindley to the order Malpighiaceæ (q.v.).

Măl-pĭgl'-ĭ-ąn, *a.* [See def.] Discovered by, or in any way connected with, Marcello Malpighi, an eminent Italian anatomist (1628-1694). He was professor of medicine at Bologna, Pisa, and Messina, and, for the last three years of his life, physician to Pope Innocent XII.

Malpighian-bodies, *s. pl.*

Anatomy:

1. *Of the kidneys:* Small reddish granules, occurring in the cortical substance.

2. *Of the spleen:* White spherical bodies, which may be regarded as lymph follicles. They disappear in badly-nourished subjects, hence, their presence in man has been denied. Carpenter, however, asserts that they are normally present in the human spleen, as in that of the lower mammalia.

Malpighian-capsule, *s.*

Anat.: The dilated extremity of each uriniferous tubule of the kidney.

Malpighian-corpuscles, *s. pl.*

Anat.: Oval enlargements of the lymphoid tissue surrounding the branches of the splenic artery. These bodies are sometimes thickenings on the sides of the arterioles; more commonly they surround the vessels. Their interior consists of fine reticulum, and is filled with lymphoid cells, possessing amœboid movements. (*Holden.*)

Malpighian-layer, *s.*

Anat.: Rete mucosum (the mucous net), the mucous substance situated between the derma and the epidermis, which gives colour to the skin; it is best demonstrated in the negro, in whom it is, of course, black.

Malpighian-pyramids, *s. pl.*

Anat.: Conical, medullary masses, occurring in the cortical substance of the kidney. Their broad bases are directed towards the surface, and their points towards the sinus, where they form prominent papillæ. Each pyramid represeuts what was originally an independent lobe. In man these lobes coalesce, though the pyramidal arrangement of the tubes remains. In the lower vertebrates the lobes are permanently separate.

Malpighian-tubes, *s. pl.*

Compar. Anat.: A number of cæcal convoluted tubes behind the pyloric aperture of the stomach, and opening into the intestine,

in Masticating Insects. These tubes are now regarded as performing renal functions, and as being analogous with the kidneys of higher animals.

Malpighian-tuft, *s.*

Anat.: An arterial vascular tuft enclosed in the Malpighian-capsule (q.v.) It is about $\frac{1}{150}$ inch in diameter, and visible to the naked eye as a minute red point.

* **măl-pō-şĭ'-tion,** *s.* [Pref. *mal-*, and Eng. *position* (q.v.).] A wrong position.

măl-prăc'-tĭçe, *s.* [Pref. *mal-*, and Eng. *practice* (q.v.).].

1. An evil practice or action; illegal or immoral conduct; actions or practice contrary to law or established customs.

2. *Med.:* Incorrect or injudicious treatment of a case; treatment that is injurious, illegal, or immoral.

mâl'-stĭck, *s.* [Maulstick.]

mâlt, *s.* & *a.* [A.S. *mealt*, in compos. *mealthûs* = a malt-house, from *mealt*, pa. t. of *meltan* = to melt; cogn. with Dut. *mout*; Icel. *malt* = malt, *melta* = to malt; Dan. & Sw. *malt* = malt; Ger. *malz.*]

A. *As substantive:*

1. Grain, usually barley, steeped in water and fermented, by which the starch of the grain is converted into saccharine matter, dried on a kiln, and then used in brewing ale, stout, beer, or porter, and in the distillation of whiskey.

2. Liquor brewed from malt; beer, malt-liquor.

B. *As adj.:* Pertaining to, containing, or made of malt.

malt-barn, *s.* A barn in which malt is made or kept.

malt-drink, *s.* Liquor made from malt; beer.

malt-dryer, *s.* A device to hasten the drying of malt by artificial heat.

malt-dust, *s.* The grains or remains of malt.

"*Malt-dust* is an enricher of barren land, and a great improver of harley."—*Mortimer: Husbandry.*

* **malt-floor,** *s.* The floor of an oast or malt-drying room.

"Empty the corn from the cistern into the *malt-floor*."—*Mortimer: Husbandry.*

* **malt-horse,** *s.* A horse employed in grinding malt: hence, a dull, stupid fellow.

"He has no more judgment than a *malt-horse*."—*Ben Jonson: Every Man in His Humour*, i. 5.

malt-house, *s.* A house in which malt is made.

malt-kiln, *s.* A heated chamber in which malt is dried, in order to check the germination of the grain after having undergone the preliminary processes of steeping, couching, and flooring; an oast.

malt-liquor, *s.* The same as Malt-drink (q.v.).

* **malt-mad,** *a.* Maddened with drink; intoxicated, drunken; given to drink.

"These English are so *malt-mad*."—*Beaum. & Flet.: The Pilgrim*, iii. 6.

malt-mill, *s.* A mill for grinding malt.

malt-vinegar, *s.* Vinegar made from an infusion of malt.

mâlt, *v.t.* & *i.* [Malt, *s.*]

A. *Trans.:* To make or convert into malt.

"To mash the *malted* harley and extract
Its flavour'd strength." *Dodsley: Agriculture*, i.

B. *Intransitive:*

1. To make malt; to follow the trade of a maltster.

2. To be converted into malt.

"To house it green it will mow-burn, which will make it *malt* worse."—*Mortimer: Husbandry.*

*3. To drink malt liquor.

"On principle never *malted*."
Hood: Miss Kilmansegg

* **mal-ta-lent,** * **male-ta-lent,** *s.* [O. Fr.]

1. Ill-humour, ill-will, spleen, spite.

"In him bewrayed great grudge and *maltalent*."
Spenser: F. Q., III. iv. 61.

2. A evil inclination.

Mâl-tēşe', *a.* & *s.* [Eng. *Malt(a)*; *-ese.*]

A. *As adj.:* Of or pertaining to the island of Malta, or its inhabitants.

B. *As subst.:* A native or inhabitant of Malta; the people of Malta.

Maltese-cross, *s.* A cross formed of four arrow-heads meeting at the points; the badge of the Knights of Malta. The eight points of this cross are said to symbolize the eight beatitudes.

MALTESE-CROSS.

Maltese-dog, Maltese-terrier, *s.* A small variety of spaniel, with long, silky hair, most frequently white. The muzzle is rouud.

Maltese-mushroom, *s.*

Bot.: Cynomorium coccineum.

măl'-thą, *s.* [Gr. μαλθή (*malthē*) = soft wax.]

* 1. *Ord. Lang.:* Mortar.

2. *Min.:* According to Pliny, this name was used for an inflammable mud which flowed from a pool at Samosata, Commagene, North Syria, and resembling naphtha. It has since been used to designate the viscid bitumens. Dana includes it among his Pittoliums.

măl'-thą-çīte, *s.* [Gr. μαλθακός (*malthakos*) = soft; Ger. *malthacit, malthazit, maltazit.*]

Min.: A variety of Smectite (q.v.), occurring in thin laminæ, or scales, among blocks of weathered basalt, at Steindörfel, Lausitz, Germany.

măl'-thē, *s.* [Maltha.]

Ichthy.: A genus of Acanthopterygians, family Pediculati. Anterior portion of the body very broad and depressed; the anterior part of the snout produced into a more or less prominent process, beneath which there is a tentacle, retractile into a cavity. Jaws and palate with villiform teeth. Skin with numerous conical protuberances. Soft dorsal fin, and very short gill. The carpal bones are produced, and support the pectorals, which somewhat resemble short legs. Habitat, American shores of the Atlantic. *Malthe vespertilio* is a tropical, and *M. cubifrons* a northern species. (*Günther.*)

Măl-thūş'-ĭ-ąn, *a.* & *s.* [For etym. see def.]

A. *As adj.:* Pertaining to, or in any way connected with the teachings of the Rev. Thomas Robert Malthus (1766-1834). His *Essay on the Principle of Population* was first published in 1798, and has gone through many editions.

"Mr. Sadler's two principal works . . . in which the *Malthusian* doctrines were impugned."—*Cates: Dict. Gen. Biog.* (1875), p. 984.

B. *As subst.:* A follower of Malthus; one who holds that some check is necessary to prevent over-population.

"Defer marriage till late in life, as advocated by the old *Malthusians* of the ascetic school."—*Dr. H. A. Allbutt: Malthusian Tracts*, No. 4.

Măl-thūş'-ĭ-ąn-ĭşm, *s.* [Eng. *Malthusian* (q.v.); *-ism.*] It is a noteworthy fact that a corresponding word does not exist in French.]

Social Science: The teaching of Malthus, or of any other writer holding similar views, on the popnlation qucstion. The first principle of Malthus may be thus enuuciated: That while the increase of the means of subsistence is in an arithmetical, the increase of population is in a geometrical ratio. This leads him to consider checks to population—a subject which has occupied the minds of thinkers from the days of Plato (*Laws*, v., *Repub.*, v.) and Aristotle (*Polit.*, vii. 16) to our own time. These may be classed under three heads: (1) moral restraint; (2) vice; and (3) misery. Malthus unhesitatingly rejects the second, and endeavours to eliminate the third check by inculcating the necessity of moral self-restraint. He emphatically teaches that parentage involves weighty responsibility, and that it is not only imprudent, but immoral to bring human beings into the world without a fair prospect of being able to provide for them. The statement of Malthus, that population, unchecked, increases in a geometrical ratio, is inexact; but the fact remains that population tends to increase beyond the means of subsistence.

"A writer in the *Revue des Deux Mondes* had recently attacked him severely for *Malthusianism*."—*The Public Health*, Aug., 1868, p. 209.

mâlt'-ĭn, *s.* [Eng. *malt*; *-in.*]

Chem.: A nitrogenous ferment, said by Dubrunfaut to be present in malt and in all cereal grains, and to be much more active than diastase. It is precipitated from a concentrated extract of malt by alcohol 60 o.p. Dubrunfaut further asserts that diastase is merely a product of the decomposition of maltin, and that the latter is really the active principle of malt.

mâlt'-ĭng, *pr. par., a., & s.* [Malt, v.]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As substantive:*

Chem.: The process by which barley, wheat, rye, or any other description of grain is converted into malt. It consists of four operations: viz., steeping, couching, flooring, and kiln-drying. The grain is steeped in water for from 30 to 50 hours, according to the temperature of the air, to enable it to take up enough moisture to soften it. The water is then drained from the cistern, and the softened grain thrown out into a rectangular vessel called a couch, where it remains until germination has fairly commenced. As this must not be allowed to proceed too rapidly, the grain is at the end of 20 or 24 hours thrown on the floor to a depth varying from 10 or 12 inches to 3 or 4 inches according to the season. On the floor the germination is regulated, the grain being turned every four or five hours, so that the whole of it may be brought under similar conditions as to heat, light, and moisture. When the acrospire has reached about three-fourths the length of the seed, the grain is then spread more thinly on the floor, that it may wither, and that germination may be arrested. At the end of five or six days after the grain has left the cistern, it is thrown on the kiln, where it is subjected to a gradual heat, not exceeding 60° for pale malt, 77° for amber malt, and 93° for brown or porter malt. The object of malting is not, as stated in many old works, to convert the starch of the grain into sugar, but to develop certain soluble albuminous bodies which possess the power of rapidly changing starch into sugar in presence of water at a temperature of 57° to 70°. Good barley yields about eighty per cent. by weight, or 109 per cent. by measure of dry malt.

malting-apparatus, *s.*

Brewing: A vessel in which ground malt is steeped to make the infusion known as wort; this, with the addition of decoction of hops and fermentation, becomes beer.

* **mâlt'-măn,** * **malte-man,** *s.* [Eng. *malt*, and *man.*] A maltster (q.v.). (*Gascoigne: Steel Glas*, p. 79.)

* **mâlt'-mas-tĕr,** *s.* [Eng. *malt*, and *master.*] A maltster (q.v.). (*Adams: Works*, ii. 246.)

* **mal-tolt,** *s.* [Maletolt.]

mâlt'-ōse, *s.* [Eng. *malt*; *-ose.*]

Chem.: $C_{12}H_{22}O_{11}$. Malt-sugar. A form of sugar obtained by the action of malt extract or diastase on starch paste. It is not so soluble as dextrose, and much less sweet than cane sugar. It is incapable of direct fermentation, but by the continued action of yeast it is converted into glucose, which then yields alcohol. Its optical rotatory power is 139° for the sodium ray, and 150° for the transition tint, and its copper reducing power about 62°.

măl-trēat', *v.t.* [Fr. *maltraiter*, from Lat. *male* = badly, ill, and *tracto* = to handle, to treat; Ital. *maltrattare.*] To treat badly or roughly; to ill-use, to abuse.

"It was a little hard to *maltreat* him after."—*Sterne: Tristrum Shandy*, vol. ii., ch. xvii.

măl-trēat'-mĕnt, *s.* [Pref. *mal*, and Eng. *treatment* (q.v.).] The act of maltreating; the state of being maltreated; ill-treatment, abuse, ill-usage.

mâlt'-stĕr, *s.* [Eng. *malt*; *-ster.*] A man whose occupation is to make malt

* **mâlt'-wŏrm,** *s.* [Eng. *malt*, and *worm.*] One who is over-fond of or indulges in malt or other liquor; a tippler.

"Mad mustachio, purple-hued *maltworms*."—*Shakesp.: 1 Henry IV.*, ii. 1.

* **mâlt'-ў,** *a.* [Eng. *malt*; *-y.*] Pertaining to or connected with malt.

"In an auriferous and *malty* shower."—*Dickens: Bleak House*, ch. xl.

* **mą-lŭm** (pl. **mā-lą**), *s.* [Lat. neut. sing of *malus* = bad.] Evil.

¶ (1) *Malum in se:* An evil in itself.

(2) *Malum prohibitum:* An act wrong because prohibited by law; a prohibited wrong.

* **măl'-ure,** *s.* [Fr. *malheur.*] Misfortune, ill luck.

"A woful wight full of *malure.*"
Chaucer: Dreame.

* **măl-ụ-rī'-næ,** *s. pl.* [Mod. Lat. *malur(us);* Lat. fem. pl. adj. suff. *-inæ.*]

Ornith.: Soft-tailed Warblers. According to Gray a sub-family of Sylviadæ, his first family of dentirostral insessorial birds, of which alurus (q.v.) is the typical genus.

măl-ụ-rīne, *a.* [Mod. Lat. *malur(us);* Eng. adj. suff. *-ine.*] Belonging to or having the characteristics of the sub-family Malurinæ (q.v.)

"Perhaps the most curious example of the *malurine* birds is the beautiful little Emeu Wren."—*Wood: Illus. Nat. Hist.,* ii. 274.

mą-lūr'-ŭs, *s.* [Gr. μαλός (*malos*) = soft, and οὐρά (*oura*) = a tail.]

Ornith.: The typical genus of Gray's sub-family Malurinæ. All the species are from Australia or Tasmania. The males are distinguished by brilliant plumage. Malurus is included in the Linnæan genus Motacilla (q.v.).

măl'-vą, *s.* [Lat., from Gr. μαλάχη (*malachē*) = a mallow; μαλάσσω (*malassō*) = to soften; from the relaxing properties of the mallows, or from their downy leaves.]

Bot.: Mallows, the typical genus of the tribe Malveæ and the order Malvaceæ. Calyx surrounded by a three-leaved involucre, carpels numerous, circularly arranged, one-seeded. Sixteen species are known. Three, *Malva sylvestris, M. rotundifolia,* and *M. moschata* are British. The first has three to seven-lobed crenate-serrate leaves, and large pale, purple, or blue flowers; the second has reniform obscurely-lobed crenate leaves, pale lilac or whitish flowers, and the third five to seven-partite leaves and pinnatifid lobes, and rosy or white flowers. Cavanilles found that the bark of a foreign species, *M. crispa,* could be made into cordage. *M. parviflora* is eaten by the natives of India, in times of scarcity, as a potherb. The seeds are used as a demulcent in coughs and ulcers of the bladder. *M. rotundifolia* and *M. sylvestris,* both of which grow in India as well as elsewhere, are also employed as demulcents; the seeds of the former are applied externally in skin diseases.

măl-vā'-çē-æ, *s. pl.* [Fem. pl. of Lat. *malvaceus* = pertaining to mallows, like mallows, mallow-shaped.]

Bot.: Mallowworts: an order of hypogynous exogens, the typical one of the alliance Malvales. It consists of herbs, shrubs, or trees, with alternate more or less divided stipulate leaves, the hairs, if any are present, stellate. Peduncles usually axillary, flowers large, showy, surrounded by bracts. Sepals five, three, or four, valvate in æstivation. Petals, as many as the sepals. Stamens, indefinite, monadelphous; authers one-celled, reniform, bursting transversely; ovary consisting of many carpels, arranged around a common axis; styles as many as the carpels. Fruit, capsular or baccate; seeds, one or more in each carpel. Found largely in the tropics, and in smaller numbers in temperate climates. They are mucilaginous, and without exception wholesome (*Lindley*). Known genera 60, species 700 (*Sir Joseph Hooker*). Most abundant in America.

măl-vā'-ceoŭs (ce as sh), *a.* [Malvaceæ.] Of, belonging to, or resembling the order Malvaceæ.

măl'-vąl, *a.* [Lat. *malv(a);* Eng. suff. *-al.*]

Bot.: Of, belonging to, or resembling the genus Malva (q.v.).

¶ *The Malval Alliance:* [Malvales]. (*Lindley.*)

măl-vā'-lēş, *s. pl.* [Pl. of Mod. Lat. *malvalis,* from Lat. *malva* (q.v.).]

Bot.: An alliance of hypogynous exogens. They have monodichlamydeous flowers; placentæ in the axil of the fruit; a valvate calyx; an imbricated or twisted corolla, definite or indefinite stamens, and little or no albumen. Lindley included under it the orders Sterculiaceæ, Byttneriaceæ, Vivianiaceæ, Tropeolaceæ, Malvaceæ, and Tiliaceæ.

măl-vē-æ, *s. pl.* [Lat. *malv(a);* fem. pl. adj. suff. *-eæ.*]

Bot.: The typical tribe of the order Malvaceæ (q.v.).

măl-vēr-sā'-tion, *s.* [Fr., from *malverser* = to behave ill in office; Lat. *male* = badly, ill, and *versor* = to dwell, to be engaged in.] Evil, wicked, or improper conduct; mean artifices; fraudulent tricks; espec., improper conduct or misbehaviour in an office or employment: as, fraud, breach of trust, extortion, &c.

"A man turned out of his employment . . . for *malversation* in office."—*Burke: On Mr. Fox's East India Bill.*

* **măl'-vē-sīe,** *s.* [Malmsey.]

măm, *s.* [Mamma.]

mą-ma', **mąm-ma',** *s.* [See def.; cf. Sp. *mama;* Ital. *mamma;* Dut. *mama;* Fr. *maman;* Ger. *mama, mämme, memme;* Wel. *mam* = mother; Lat. *mamma* = the breast.] [Mamma.] An infantine term for mother, composed of a repetition of one of the earliest articulations of the human voice.

măm'-ą-lūke, măm'-ĕ-lūke, * **mąm-louk,** * **mem-louk,** *s.* [Fr. *mamaluc,* from Arab. *mamlūk* = a purchased slave, from *malaka* = he possessed; Sp. *mameluco;* Ital. *mammaluco.*] One of the former mounted soldiers of Egypt, consisting originally of Circassian slaves of the Bey, introduced in the thirteenth century. In 1254 they had increased so much in power, that one of their number became Sultan, the dynasty lasting till 1517. They continued, however, even after its overthrow by Selim I., to be the virtual ruling class in Egypt. In 1811 they were treacherously butchered to the number of 470 by Mehemet Ali, Viceroy of Egypt at Cairo, and soon after practically disappeared from history.

mą-măn'-īte, *s.* [Named after the place where found, Maman; suff. *-ite* (*Min*).]

Min.: A mineral resembling polyhalite in physical characters, but differing in having the potash, magnesia and lime in the ratio of 1 : 2 : 3. Occurs in nodules at the salt mine of Maman, Persia, associated with carnallite.

* **măm'-blĭng,** *s.* [Prob., the same as Mumbling.] [Mumble.] A mumbling.

"In such a *mambling* of profession."—*Bp. Hall: Christian Moderation,* bk. ii., § 2.

măm'-ĕ-lŏn, *s.* [Fr., from Lat. *mamma* = the breast.] A small hill or mound, so called from its resemblance to a woman's breast. The word acquired a position in the English language owing to the fact that one of the defensive works of Sebastopol was called the Mamelon.

mą-mĕs'-trą, *s.* [The name of a city, formerly the capital of Lower Armenia. (*Mc Nicoll.*)]

Entom.: A genus of Moths, family Apamidæ. The fore wings are dark gray, varied with black, and with a white line and spot, shaped like U. Expansion of wings an inch and three quarters. Larva feeds in August and September on the heart of cabbages, geraniums, &c.; the perfect insect appears in the following May. *Mamestra persicariæ* is the Dot. It is blackish, purplish, and with yellow dots. Its expansion of wing is about an inch and a half. Found in the south of England, &c.

măm-ĭl-lär'-ĭ-ą, **măm-mĭl-lär'-ĭ-ą,** *s.* [Lat. *mamill(a),* dimin. of *mamma* = a breast, a teat; suff. *-aria.*]

Bot.: A genus of Cactaceæ, having a fleshy stem covered with teat-like projections, spirally arranged, with radiating spines from each teat, and flowers from the axils of the upper ones. The species are mostly Mexican.

măm'-ĭl-lą-ry, *a. & s.* [Mammillary.]

* **măm'-ĭsh,** *a.* [Eng. *mam; -ish.*] Foolish, effeminate.

"Some *mamish* monsters can question it."—*Bp. Hall: Works,* v. 464.

măm'-mą (*pl.* **măm'-mæ),** *s.* [Lat. *mamma* = the breast.] [Mama.]

1. *Ord. Lang.:* The same as Mama (q.v.).

"'And who's blind now, *mamma?*' the urchin cried."
Prior: Venus Mistaken.

2. *Anat. (Pl.):* The breasts; they exist in the male as well as in the female, but in a rudimentary state. In the female they increase in size until about the twentieth year, but do not secrete milk until after pregnancy has taken place. In structure the mammary gland is conglomerate, consisting of lobes held together by firm, dense areolar tissue, the lobes are composed of lobules, and they of minute cæcal vesicles, the ultimate terminations of the excretory duct. Near the centre of each mamma is the nipple, surrounded by an areola of a coloured tint, at first pink, but after impregnation becoming permanently brown.

măm'-mæ-form, *a.* [Lat. *mammæ* = breasts, teats, and *forma* = form.]

Bot., &c.: Teat-shaped, conical with a rounded apex, mamillary.

măm'-mąl, *s.* [Mammalia.]

Zool.: An animal belonging to the class Mammalia (q.v.).

măm-mā'-lĭ-ą, *s. pl.* [Neut. pl. of Lat. *mammalis* = of or for the breasts, good for diseases of the breast; among modern naturalists = having breasts, from *mamma* = a breast, a teat, a dug of animals.]

1. *Zool.:* Mammals: the highest class of the Vertebrate sub-kingdom. The individuals are characterized by the possession of mammæ (teats), enabling them to suckle their young. The class is sometimes popularly but erroneously called Quadrupeds (four-footed animals). So, however, are some reptiles, as lizards and crocodiles, and some amphibians, as frogs and newts. On the other hand, whales are not four-footed, yet they are akin to the warm-blooded quadrupeds, and like them suckle their young, which are brought forth alive. On this account Linnæus introduced the term Mammalia, now universally accepted. They have red, warm blood, in this respect agreeing with Birds, but differing from Reptiles, Amphibians and Fishes. The mouth is concealed by lips and armed with bony and enamelled teeth; each ramus of the mandible is composed of a simple piece of bone. The covering is of hair. Normally, there are four limbs, which in some aquatic members of the class are modified into fins. The toes are generally five. Most of the bones are solid or have cavities filled with marrow, the air-cells which aid in imparting lightness to the bones of birds being, as a rule, absent. The bones of the cranium and of the face are immovably fixed to each other. The cranium is larger than in other vertebrates, the lower jaw consists of only two pieces. The vertebral column may be divided into five regions, the cervical, the dorsal, the lumbar, the sacral, and the caudal vertebræ. [Vertebra.] Like birds and reptiles, the Mammalia have an amnion. The allantoid ceases to exist at an early period of fœtal life, or is placcutiferous. The brain possesses a corpus callosum. The heart has two auricles and two ventricles. The respiration is by lungs. There is a complete diaphragm. Linnæus divided the class into seven orders: Primates, Bruta, Feræ, Glires, Pecora, Belluæ, and Cete: Cuvier into Bimana, Quadrumana, Carnassiers, Marsupialia, Rodentia, Edentata, Pachydermata, Ruminantia, and Cetacea. Prof. (Sir Richard) Owen divided them, in 1857, on the structure of the brain, into Lyencephăla, Lisseucephala, Gyreucephala, and Archencephala. The first includes the Monotremata and Marsupialia; the second contains the Rodentia, Insectivora, &c.; the third Carnivora, Quadrumana, &c., and the fourth, Man. Prof. Huxley thus classified them: Sub-class 1. Ornithodelphia, having the single order Monotremata; 2. Didelphia, also with one order, Marsupialia; 3. Monodelphia (q.v.), containing the other Mammalian orders. For the classification of J. Dwight Dana, see Megasthena.

2. *Palæont.:* As most of the older geological strata are marine, and the greater number of mammals terrestrial, it is not to be expected that many remains of the latter will be found. Besides the animals so highly organized probably came late upon the scene. A mammalian genus, Microlestes, appears in the Upper Trias of England, and Dromotherium in the Trias of America. Mammalian remains exist in the Stonesfield Slate of the Lower Oolite, and in the Upper Oolite of America. Most of them seem to have been marsupial. Cretaceous forms have not yet been found. In 1871, Sir Charles Lyell made a census of the known secondary mammals, reckoning four in the Upper Trias of Wurtemberg, Somersetshire, and North Carolina, four in the Great Oolite of Stonesfield, and fourteen in the Middle Purbeck Oolite of Swanage. Every division of the Tertiary has its appropriate mammals, nearly all placental, pachyderms being specially prominent. [Myth.]

măm-mā'-lĭ-ăn, *a.* [Mod. Lat. *mammali(a)*; Eng. adj. suff. *-an.*] Of or pertaining to the mammalia or mammals.

† **măm-mă-lĭf'-ĕr-ŏŭs,** *a.* [Lat., &c. *mammalia*; *fero* = to bear, to produce, and Eng. adj. suff. *-ous.*] Containing the remains of mammals: as, a *mammaliferous* crag. [NORFOLK-CRAG.]

"According to *mammalogical* eyetems, which at differeut times have been proposed."—*Owen: Class. Mammalia*, p. 34.

† **măm-măl'-ŏ-jĭst,** *s.* [Eng. *mammalog(y)*; *-ist.*] One versed in mammalogy; one who writes or treats of mammiferous animals or the mammals.

† **măm-măl'-ŏ-jy,** *s.* [Eng. *mammal*, and Gr. λόγος (*logos*) = a treatise, a discourse.] A treatise on mammals; the science or doctrine of mammals or mammiferous animals.

măm'-mă-rў, *a.* [As if from a Lat. *mammarius*, from *mamma* = the breast.]

Anat.: Of or pertaining to the breast or paps: thus there are *mammary* glands, *mammary* arteries, &c.

măm'-mĕe, *s.* [Native name in tropical America.]

Bot.: Lucuma mammosum. [MARMALADE.]

mammee-apple, mammee-tree, *s.* [MAMMEA.]

* **măm-mĕl'-ĭêre** (i as y), *s.* [Fr. *mamellière*, from *mamelle* = Lat. *mamilla*, dimin. of *mamma* = the breast.]

Old Armour: A plate of steel secured to the hauberk, beneath the cyclas, for additional protection. Also one of two circular plates placed on the breast-plate, to which the helmet, sword, or dagger was secured by a chain to prevent its loss by a sudden blow.

* **măm'-mĕr,** *v.i.* [Prob. an imitative, as if from the repetition of the syllables *ma* or *mam*; cf. Mid. Eng. *mamelen*, *momelen*, Ger. *mammeln*, Dut. *mommelen* = to mumble (q.v.).] To hesitate; to stand as one muttering and in doubt.

"What you could ask me, that I should deny,
Or stand so *mammering* on?"
Shakesp.: Othello, iii. 3.

* **măm'-mĕr-ĭng,** * **mam-er-ing,** * **mam-er-yng,** *s.* [MAMMER.] A state of hesitation or doubt.

"She etode still in a doubte and in a *mameryng* which way she might take."—*Sir T. More: Workes*, p. 760.

* **măm'-mĕt,** * **măm'-mŏt,** *s.* [O. Fr. *Mahommet* = an idol, from *Mohammed* or *Mahomet*, from the false idea that Mahommedans were idolaters.] [MAUMET, MAWMET.]

1. An idol. Great injustice was done in making the name of Mohammed synonymous with an idol, while one great distinctive feature of the religion introduced by the great Arabian, was its uncompromising hostility to every kind of idolatry. But almost the only one of the non-Christian faiths of the world practically known to our ancestors was Mohammedism, and it was made to stand as the type of all false religions, idolatrous as well as non-idolatrous.

2. A doll, a puppet; a figure dressed up.

"I care not for thee, Kate: this is no world,
To play wit i *mammets*, and to tilt with lips."
Shakesp.: 1 Henry IV., ii. 3.

* **măm'-mĕt-rŏŭs,** *a.* [Eng. *mammetr(y)*; *-ous.*] Idolatrous.

"Their most monstrous mass or *mammetrous* mazan."—*Bale: Select Works*, p. 165.

* **măm'-mĕt-rў,** *s.* [MAHOMETRY, MAUMETRY.]

1. Mohammedism.

2. Idolatry. [MAMMET.]

"Heretofore they call'd images mammets, and the adoration of images *mammetry*; that is Mahomet and Mahometry; odious names."—*Selden: Table Talk; Popery.*

măm'-mĭe, măm'-mў, *s.* [MAMMA.] A child's name for mother.

măm'-mĭ-fĕr, *s.* [Lat. *mamma* = a breast, and *fero* = to bear.] An animal which has breasts or paps for suckling its young; a mammal.

"*Mammifer*, in trias near Stuttgart."—*Lyell: Manual Elem. Geol.* (ed. 4th), p. 508.

¶ M. de Blainville's name for Mammalia being Mammifera, the term mammifer is more comuon in France than here.

măm-mĭf'-ĕr-ŏŭs, *a.* [Eng. *mammifer*; adj. suff. *-ous.*] Having breasts or paps, and suckling its young; having the distinguishing characteristics of a mammal. (*Lyell.*)

măm'-mĭ-form, *a.* [Lat. *mamma* = a breast, and *forma* = form, shape; Fr. *mammiforme.*] Having the form or shape of paps.

măm-mĭl'-lą (pl. **măm-mĭl'-læ**), *s.* [Lat., dimin. of *mamma* = a breast.]

I. *Anat.:* The nipple.

II. *Botany:*

1. (*Sing.*) The apex of the nucleus of an ovule.

2. (*Pl.*) Teats like tubercles on the surface of plants, as on Mamillaria.

măm'-mĭl-lą-r-ў, mą-mĭl'-lą-r-ў, *a. & s.* [Lat. *mamillaris*, from *mamilla*, dimin. of *mamma* = a breast.]

A. *As adjective:*

1. *Ord. Lang.:* Of or pertaining to the breasts or paps; resembliug a pap.

2. *Geol.:* Having the surface studded over with rounded projections. (*Lyell.*)

3. *Min.:* An imitative shape resembling that of the breast, mostly occurring in minerals having a stalagmitic origin. The surface consists of a group of rounded prominences, and is distinguished from botryoidal (q.v.), by a portion only of the globule or sphere being visible on the surface of the mass.

B. *As substantive:*

Geol.: A surface studded over with rounded projections.

mammillary-eminences, *s. pl.*

Anatomy:

1. More or less marked prominences on the inner surface of the boues of the crauium, which correspoud to the aufractuosities of the cranium.

2. White round medullary tubercles, of the size of a pea, situate at the base of the brain, behind the gray substance, from which the infuudibulum arises. (*Danglison.*)

mammillary-process, *s.*

1. *Anat.:* A tubercle projecting backwards from each superior articular process of certain vertebræ. Called by Owen Metapophysis (q.v.).

2. *Bot.:* [MAMMÆFORM].

măm'-mĭl-lāte, măm'-mĭl-lāt-ĕd, *a.* [As if from a Lat. *mammillatus.*]

1. *Min.:* The same as MAMMILLARY, A. 3.

2. *Pathol.:* Having mammiform projections on its surface.

3. *Zool.:* (*Of the apex of some shells*): Rounded like a nipple.

mammillated-liver, *s.*

Pathol.: Cirrhosis (q.v.).

măm-mĭl-lā'-tion, *s.* [Eng. *mammill(ate)*; *-ation.*]

Pathol.: A term adopted as the translation of the French *état mammilloné.* A corrugated condition of the gastric mucous membrane, which, if slight, may be pathological; but, if more extensive, may be pathognomic of polypus of the stomach. (*Dunglison.*)

măm'-mĭl-lōid, *a.* [Lat. *mamilla* = a little breast, a pap, and Gr. εἶδος (*eidos*) = appearance, form.] Shaped like or resembling a pap or nipple. (*Owen.*)

* **măm'-mŏck,** * **mam-moc,** * **mam-ock,** *s.* [Prob. from Gael. *mam* = a round hill, a handful, with dimin. suff. *-ock* (as in hillock).] A shapeless piece.

"King John he vallantly subdued,
The miserable French and there in *mammocs* hewed."
Drayton: Poly-Olbion, s. 17.

* **măm'-mŏck,** *v.t.* [MAMMOCK, *s.*] To tear in or into pieces; to fall to pieces.

"He did so set his teeth, and tear it; O, I warrant, how he *mammocked* it!"—*Shakesp.: Coriolanus*, i. 3.

măm'-mŏ-dĭs, *s.* [Hind. *mahmúdi* = a kind of fine muslin.]

Fabric: Coarse, plain Indian muslins.

Măm'-mŏn, măm'-mŏn, *s.* [Lat. *mammona*, from Gr. μαμωνᾶς (*mamōnas*), from Syrian *mamóná* = riches. Cf. Heb. מְטְמוֹן (*matmón*) = a treasure, from צָפַן (*taman*) = to hide; Chaldee *mammón*, *mâmón.*]

1. *Script. & Poetry* (*Of the form* Mammon): According to Schleusner, the Syrian God of riches, but no traces have been obtained of an idol actually worshipped under that name in Syria. The word is, therefore, now held to be a mere personification of riches. It is used in this latter sense in Matt. vi. 24, and Luke xvi. 9. Miltou poetically makes Mammon a fallen angel of sordid character.

"*Mammon* led them on
Mammon the least erected spirit that fell
From heaven." *Milton: P. L.*, i. 678.

2. *Ord. Lang.* (*Of the form* mammon): Riches, wealth.

"*Mammon* is richee or aboundance of goods."—*Tyndall: Workes*, p. 233.

* **măm'-mŏn-ĭsh,** *a.* [Eng. *mammon*; *-ish.*] Devoted to the service of mammon or the pursuit of riches; iuspired or actuated by mammonism (q.v.).

* **măm'-mŏn-ĭşm,** *s.* [Eng. *mammon*; *-ism.*] Devotion to the service of mammou or the pursuit of riches.

"If all except *mammonism* be a vain grimace."—*Carlyle: Past & Present*, bk. ii., ch. xvi.

* **măm'-mŏn-ĭst,** *s.* [Eng. *mammon*; *-ist.*] One devoted to the service of mammon or the pursuit and acquisitiou of riches; a worldly person; a worldling.

"When I'd arrive the very top of all
The mistaken *mammonists* miscall."
Brome: A Paraphrase upon Ecclesiastes i.

* **măm'-mŏn-īte,** *s.* [Eng. *mammon*; *-ite.*] The same as MAMMONIST (q.v.).

"Wheu a *Mammonite* mother kills her babe for a burial fee." *Tennyson; Maud*, I. i. 45.

* **măm'-mŏn-ī-zā'-tion,** *s.* [Eng. *mammoniz(e)*; *-ation.*] The act or process of mammouizing; a rendering mammouish or devoted to the pursuit and acquisition of wealth.

* **măm'-mŏn-īze,** *v.t.* [Eng. *mammon*; *-ize.*] To render mammouish; to actuate with a spirit of mammuonism.

* **măm'-mōse,** *a.* [Lat. *mamma* = a breast.] Having the form or shape of a breast; breast-shaped.

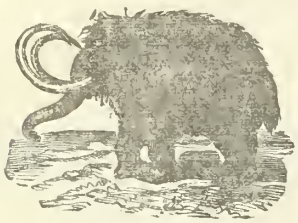
măm'-mŏth, *s.* & *a.* [Russ. *mamant'* = a mammoth (*Skeat*); Tartar *mamma* = the earth, because the Tungooses and Yakoots believed this animal worked its way iu the earth like a mole (*Webster*). Skeat dismisses as absurd the etymol. from Arab. *behemoth* or *mehemoth*; but for the other side see *Geol. Mag.* (1880), p. 408. Littré says the word is of unknown origin.]

A. *As substantive:*

Palæont.: Elephas primigenius. The first mammoth discovered was found imbedded in ice in 1799 on the shores of the Lena, by a Tungoosian fisherman named Schumachoff. A Russian engineer, named Benkendorf, thus describes a mammoth unearthed from a tundra (q.v.) in the north of Siberia, where so many lie buried in the same manner as do the remains of *Cervus megaceros* in the peat-bogs of Ireland:—

"Picture to yourself an elephant, with a body covered with thick fur, about thirteen feet in height, and fifteen in length, with tusks eight feet long, thick, and curving outwards at their ends, a stout trunk of six feet in length, colossal limbs of a foot and a half in thickness, and a tail naked to the end, which was covered with thick tufty hair. His parchment-like large naked ears lay fearfully turned up over the head; about the shoulders and back he had stiff hair, about a foot in length like a mane. . . . Under the outer hair there appeared everywhere a wool, very soft, warm, and thick, and of a yellow-brown colour. As compared with our Indian elephants, the head was rough, the brain-case low and narrow, but the trunk and mouth were larger."

Prof. W. Boyd Dawkins (*Quar. Journ. Geol. Soc.*, xxxv. 138, *sqq.*), treating of the range of the mammoth in time and space, comes to the conclusion that it existed in Britain before, during, and after the Glacial period. Its remains are found in France in "enormous abundance;" there it was contemporary with the Cave-men of the Pleistocene, as is proved by a spirited engraving of it on a piece of mammoth ivory found in the Cave of La Madeleine, Dordogne (Figured in *Lubbock's Orig. of Civil.*, p. 41); it has been found in nearly every county in England; and, broadly speaking,



MAMMOTH.

its range extended "over the whole land of the northern hemisphere." It is a noteworthy fact that the teeth of the mammoth found in the northern regions have narrow plates, while the plates of those discovered further south are broad. This Prof. Darwin attributes to difference of food. He is also of opinion "that the mammoth may be taken as the ancestor of the Indian elephant." To show how plentiful these animals once were in Asiatic Russia, Mr. H. H. Howorth (*Geol. Mag.* (1880), p. 500) says, that from 1825 to 1831 there were never less than 1,500 poods of fossil ivory sold at Yakutsk, and one year the sale reached 2,000 poods; and similar ivory was offered for sale in Khiva as early as the tenth century.

B. *As adj.:* Resembling the mammoth in point of size; gigantic, immense: as, the Mammoth Cave in Kentucky, the Mammoth Tree in California.

mammoth-tree, *s*

Bot.: Sequoia gigantea, a great Californian tree, surpassed in height only by the Eucalyptus (q.v.) of Australia. The largest known specimen, that in the Mammoth Grove at Calaveras in Upper California, where it was discovered by a party of Americans in 1850, was 327 feet high by 90 in circumference. It is the largest of known trees, and is believed to be from 3,000 to 4,000 years old. It belongs to the order Coniferæ (Pinaceæ), tribe Abietinæ.

* **măm'-mō-thrĕpt,** *s.* [Gr. μαμμόθρεπτος (*mammothreptos*), from μάμμα (*mamma*) = a mother, a grandmother, and τρέφω (*trephō*) = to nourish.] A child brought up by its grandmother; a spoilt child.

"We are the *mammothrepts* of Sinne."
Davies: Holy Roode, p. 15.

măm'-mỹ, *s.* [Mammie.]

măm'-pĕ-lŏn, *s.* [Native name.]

Zool.: Cynogale Bennettii, one of the Viverridæ, from Borneo. It differs from other members of the family in being stout and plump. Colour yellowish-brown, lighter on the under-side of the head and over the eyes; darker on the legs. The snout is long and pointed, the muzzle bald, the ears very short, the whiskers well developed. It frequents the neighbourhood of water, and is a good climber.

măn (pl. **mĕn**), * **mon,** *s.* & *a.* [A.S. *mann, mon*; cogn. with Dut. *man*; Icel. *madhr* (for *mannr*), *man*; Sw. *man*; Dan. *mand*; Goth. *manna*; Ger. *mann*; Lat. *mas* (for *mans*) = a male; Sansc. *mana*. The sense is "thinking animal" from the root *man* = to think, found unchanged in Sansc.; cf. also Eng. *mind*, *mean*; Lat. *memini*, &c.]

A. *As substantive:*

I. *Ordinary Language:*

1. An individual of the human race; a human being; a living person.

"The people gathered themselves together as one *man* to Jerusalem."—*Ezra* iii. 1.

2. A male adult of the human race as distinguished from a woman.

"Neither was the *man* created for the woman; but the woman for the *man*."—1 *Corinthians* xi. 9.

3. A male adult of the human race as distinguished from a boy or child.

"The nurse's legends are for truths received,
And the *man* dreams but what the boy believed."
Dryden: Cock & Fox, 335.

4. A husband.

5. A male servant or attendant; a workman; an adult male in the employ or under the direction of some person.

"One of my husband's *men*."
Shakesp.: Rape of Lucrece, 1,291.

6. The human race; mankind; human beings collectively.

"*Man* has been studied more carefully than any other organic being, and yet there is the greatest possible diversity amongst capable judges whether he should be classed as a single species or race, or as two (Virey) as, three (Jacquinot), four (Kant), five (Blumenbach), six (Buffon), seven (Hunter), eight (Agassiz), eleven (Pickering), fifteen (Bory St. Vincent), sixteen (Desmoulins), twenty-two (Morton), sixty (Crawfurd), or as sixty-three, according to Burke."—*Darwin: Descent of Man*, i. 226.

7. A male who possesses the characteristics of manhood or manliness.

"The man that dares tradnce, because he can
With safety to himself, is not a *man*."
Couper: Expostulation, 433.

8. A vassal, liege, subject, or tenant.

9. *Man* is used as a word of familiar address, frequently conveying the idea of impatience, contempt, or disparagement.

"You may partake of anything that we say:
We speak no treason, *man*."
Shakesp.: Richard III., i. 1.

10. *Man* is used loosely or indefinitely (like the French *on*) in the sense of one, any one, a person.

"A *man* would expect to find some antiquities."—*Addison: On Italy.*

II. *Technically:*

1. *Script., Anthrop., Ethnol., &c.:* Since the middle of the nineteenth century there has been a growing tendency to refer all the sciences relating to man to one comprehensive science, Anthropology. Scripture teaches that on the sixth day of creation "God created man in his own image" (Gen. i. 27), a little lower than the angels (Psalm viii. 4, 5), planted for him a garden (Gen. ii. 8), gave him leave to eat of its fruits with the exception of one, of which he was forbidden to partake on pain of death (ii. 16, 17, iii. 2, 3). Both his wife (Eve) and he disobediently ate the fruit, became liable to death, and were expelled from Eden (iii. 6–24). The duration of human life was then nearly a thousand years (v. 4, 8, 10, 14, 27, 31, &c.). But after the flood, brought on by the wickedness of the antediluviau world (vi. 3, 5, 6, 7, &c.), it was gradually curtailed (xi. 11, 13, 15, 17, 19, 23, 25), till finally it reached the limits which still continue (Psalm xc. 10). God selected for himself as his special people the Jewish race, one of those descended from Abraham (Gen. xii. 1–3, xvii. 21, xxviii. 4, Exod. v. 1, &c.). "God so loved the world that he gave his only-begotten Son, that whosoever believeth in him should not perish but have everlasting life" (John iii. 16), thus to some extent at least counteracting the influence on mankind of Adam's sin (Rom. v. 19). A distinction is drawn between the "spirit" of man and that of the inferior animals (Eccles. iii. 21). An obscure passage in the New Testament may perhaps have some bearing on the case of the latter (Rom. viii. 19–23). Mr. Darwin is of opinion that man sprung from one of the naked molluscs called Ascidians, the line of descent or ascent running through some humble fish like the lancelet, then up through the ganoids and other fish, the amphibians, reptiles and birds, the Monotremata, the lowest Mammals, the Marsupialia, the Placental Mammalia, the Lemurs, the Simiadæ, and the Anthropoid Apes. (*Darwin: Descent of Man.*) [For the time at which remains of man first appear in the geologic strata, see *Antiquity of Man*, Flint-implements, &c. For his zoological characteristics, see Anthropidæ and Homo. For the question whether man constitutes one species with several varieties, or more species than one, see the example under A. I. 6.] Blumenbach divided mankind into five races, the Caucasian, the Mongolian, the Ethiopian, the American, and the Malay. Cuvier reduces the five to three, the Caucasian, the Mougolian, and the Ethiopian. Dr. Pritchard extended them to seven, the Iranian (the same as the Caucasian), the Turanian (the same as the Mongolian), the Native Americans, the Hottentots, the Negroes, the Papuas or Woolly-headed Polynesians, the Alfourou and Native Australians. Dr. Latham divides mankind into three varieties, Mongolidæ, Atlantidæ, and Japetidæ. Prof. Huxley's classification of mankiud is into the Australoid, Negroid, Mongoloid, Xanthochroic, and Melanochroic races. (For other inquiries, see the several sciences relating to man.)

2. *Games:* A piece with which a game, as chess or draughts, is played.

B. *As adj.: Man* is used adjectively in a few compounds to denote the male sex; male.

"Every *man* child shall be circumcised."—*Genesis* xvii. 10.

¶ *Man* is found frequently in compounds, the meanings of most of which are sufficiently obvious.

man-ape, *s.* A popular name for any anthropoid ape. [Anthropoid.]

* **man-at-arms,** *s.* A soldier, especially one in the middle ages, fully armed and equipped; a heavy-armed soldier.

* **man-case,** *s.* A body.

"He had a handsome *man-case*."—*Fuller: Church History*, III. vii. 13.

man-dram, *s.* A preparation used in the West Indies, like bitters, to excite languid appetites. It consists of a mixture of sliced cucumbers, shallots, or onions cut very small, a little lime-juice and Madeira wine, with a few pods of bird-pepper, well mashed, and mixed with the liquor. (*Loudon.*)

man-eater, *s.*

1. *Ord. Lang.:* A cannibal.

2. *Zool.:* A name applied to either of the two great Felidæ, notably to the tigers, when, in old age leaving their natural food, they prey by preference upon man.

¶ The Anglo-Indian view is that a tiger when its teeth decay with age is no longer able to pierce the hide of a bullock or an antelope. Driven to desperation by hunger it ventures timidly to attack a child or a woman, and is astonished to find how feeble is the resistance it meets with. Its fear of man, which in its vigorous days was very great, now vanishes, and, unless destroyed, it makes dreadful slaughter of the human race. It is probably the same with the lion. (See the example.)

"A *man-eater* is invariably an old lion. And when he overcomes his fear of man so far as to come to villages for goats, the people remark, His teeth are worn, he will soon kill men."—*Prof. Parker*, in *Cassell's Nat. Hist.*, ii. 27.

man-eating, *a.* & *s.*

A. *As adj.:* An epithet applied to old lions or tigers, which, by preference, attack man.

B. *As subst.:* The practice of attacking and devouring man in preference to any of the larger mammals.

"The lion is said sometimes to develop the taste for *man-eating*, which makes the tiger so terrible."—*Prof. Parker*, in *Cassell's Nat. Hist.*, ii. 25.

man-engine, *s.* A mechanical lift for raising and lowering men in the shafts of mines. It consists of a vertical rod worked from the engine-beam alternately up and down in the mine-shaft. On this rod are handles and stepping-places at distances equal to the stroke of the rod; similar handles and steps are fixed at the side of the shaft or on another rod which rises and falls in the reverse way to the first rod. By stepping in turn from one set of steps to the other, the miners ascend or descend the mine. In practice it has proved to be fruitful of accident. In this country the man-engine is being superseded by cages or, as in some of the mines on Lake Superior, by cars.

man-fungus, *s.*

Bot.: Geaster (q.v.).

* **man-huxter,** *s.* The same as Man-mercer (q.v.).

"Be so, and no more, you *man-huxter*."
Beaum. & Flet.: Custom of the Country, iv. 1.

* **man-mender,** *s.* A ludicrous or contemptuous name for a physician or surgeon.

"Whither go all these *men-menders*, these physicians?"
Beaum. & Flet.: Monsieur Thomas, ii. 1.

* **man-mercer,** *s.* A woollen draper; one who deals by retail in clothes, &c., for male attire.

man-midwife, *s.* A man who practises obstetrics; an accoucheur. (*Byron: Vision of Judgment*, lxxvii.)

* **man-milliner,** *s.* A male maker of milliuery; hence, one who busies himself

with trifling or effeminate occupations or embellishments.

"An empty-pated fellow, and as conceited as a *man-milliner*."—*Theodore Hook: All in the Wrong*, ch. ii.

*** man-minded,** *a.* Having the mind or qualities of a man.

*** man-monster,** *s.* A monster in the service of any person.

"My *man-monster* hath drowned his tongue in sack."—*Shakesp.: Tempest*, iii. 2.

*** man-mountain,** *s.* A man of gigantic proportions; a giant. (*Swift: Gulliver; Lilliput.*)

man-of-war, *s.* An armed ship; a ship of war.

"Supported by a British *man-of-war* from Labuan and two gunboats."—*Times*, Nov. 10, 1878.

Man-of-war bird: [FRIGATE-BIRD].

Man-of-war's man: A seaman belonging to a ship of war.

man-of-straw, *s.* A man of no substance, influence, weight, or means; one put forward as a puppet or decoy.

man-orchis, *s.*

Bot.: Aceras anthropophora. A fanciful resemblance is pointed out between the tip of this orchis and a man hung by the head. It is British. [ACERAS.]

man-rent, *s.* [MANRED.]

man-rope, *s.*

Naut.: A rope suspended by stanchions on each side of a gangway, and used in ascending or descending a ship's side, hatchways, &c.

man-shaped, *a.* Having the external conformation more or less closely resembling that of man.

Man-shaped apes:

Zool.: A popular name for the Anthropoid Apes. [ANTHROPOID.]

"In the great order of the Primates, after man, stand the *man-shaped*, or anthropomorphous *apes*."—*Prof. Duncan*, in *Cassell's Nat. Hist.*, i. 6.

man-tiger, *s.*

Anthrop.: A person credited with having the power of assuming the shape of a tiger at will. The belief that certain individuals have such power is common in India, and the Khonds say that a man-killing tiger is either an incarnation of the Earth-goddess, or a transformed man. [LYCANTHROPY.]

"It is thus with the Lavas of Birma, supposed to be the broken-down remains of a cultured race, and dreaded as *man-tigers*."—*Tylor: Prim. Cult.* (1873), i. 113.

man-trap, *s.* An engine or contrivance for catching trespassers. Their use is now illegal, unless set in a dwelling-house between sunset and sunrise.

man-worship, *s.* Undue reverence, respect, or adulation paid to a man; extreme obsequiousness.

măn, *v.t.* [MAN, *s.*]

1. To furnish with men; to supply with a sufficient force or complement of men, as for management, service, defence, &c.

"She was so formidably *manned* that all attempts to hoard her failed."—*Macaulay: Hist. Eng.*, ch. xviii.

* 2. To furnish or provide with a man or servant.

"I was never *manned* with an agate till now."—*Shakesp.: 2 Henry IV.*, i. 2.

* 3. To act or play the husband to.

"Do yon think I could *man* a hussy yet?"—*The Coalman's Courtship to the Creel-wife's Daughter*, p. 4.

* 4. To accustom to man; to tame, as a hawk.

"Another way I have to *man* my haggard,
To make her come, and know her keeper's call."
Shakesp.: Taming of the Shrew, iv. 1.

† 5. To fortify, to strengthen; to supply with strength for action.

"He *mann'd* himself with dauntless air."
Scott: Lady of the Lake, iv. 10.

* 6. To brave; to bear or face like a man."

"I must *man* it out." *Dryden: All for Love*, ii.

¶ *To man the yards:*

Naut.: To send a sufficient number of men upon the yards to reef or furl the sails; also to range men in a standing position along the tops of the yards, as a mark of respect to some person, or on some memorable occasion.

*** măn'-ą-ble,** *a.* [Eng. *man*, s.; *-able.*] Of age for marriage or a husband; of a marriageable age.

"That's woman's ripe age; as full as thou art
At one and twenty; she's *manable*, is she not?"
Beaum. & Flet.: Maid of the Mill, ii. 1.

măn'-ą-ca, *s.* [Brazilian Portuguese.]

Bot.: Franciscea uniflora. [FRANCISCEA.]

*** man-ace,** *s.* & *v.* [MENACE.]

măn'-ą-cle, * măn'-ĭ-cle, * man-y-cle, *s.* [Fr. *manicle*, from Lat. *manicula*, dimin. of *manica* = a long sleeve . . . a manacle, from *manus* = the hand; Ital. *manetta*; Sp. *maniota.*] Handcuffs for criminals. The two pieces of metal are hinged together, the upper portion of which is curved so as to fit the wrist, and the lower portion is straight, except at a point near its outer end, where it is slightly bent. (The word is seldom used except in the plural.)

"Knock off his *manacles*; bring your prisoner to the king."—*Shakesp.: Cymbeline*, v. 4.

măn'-ą-cle, *v.t.* [MANACLE.]

1. *Lit.:* To put manacles or handcuffs on, in order to confine the hands; to shackle, to handcuff, to fetter the limbs.

"We'll bait thy bears to death,
And *manacle* the hearward in their chains."
Shakesp.: 2 Henry VI., v. 1.

2. *Fig.:* To restrain or confine in any way; to fetter.

"Spirits when they please
Can either sex assume, or both: so soft
And uncompounded is their essence pure;
Not tied or *manacled* with joint or limb."
Milton: P. L., i. 426.

măn'-age (age as **ĭj),** *v.t.* & *i.* [MANAGE, *s.*]

A. *Transitive:*

1. To have under direction; to direct, to guide, to conduct, to carry on, to administer, to handle, to transact.

"Tell the nations, in no vulgar strain,
What wars I *manage*, and what wreaths I gain."
Prior: Henry & Emma.

2. To have under control; to be able to guide or direct.

"His dragoons had still to learn how to *manage* their horses."—*Macaulay: Hist. Eng.*, ch. xiv.

3. To treat; to put to use.

"Who then thy master, say, and whose the land
So dress'd and *manag'd* by thy skilful hand?"
Pope: Homer; Odyssey xxiv. 303.

4. To wield; to have under command; to understand the use of.

"It was found that not one in four of the English soldiers could *manage* his piece at all."—*Macaulay: Hist. Eng.*, ch. xiv.

5. To train in the manage, as a horse; to train generally.

* 6. To contrive, to effect, to treat of.

"Mark how the genius of a Virgil has *managed* a war after a Homer."—*Mickle: Dissertation on the Lusiad*, &c.

* 7. To make subservient.

8. To husband; to treat or use with caution or sparingly.

9. To treat with caution or address; to use cautiously or wisely.

"Oft times nothing profits more
Than self esteem, grounded on just right
Well *managed*." *Milton: P. L.*, viii. 573.

B. *Intransitive:*

1. To carry on, control, or direct affairs.

"Leave them to *manage* for thee, and to grant
What their unerring wisdom sees thee want."
Dryden: Juvenal, sat. x.

2. To contrive.

*** măn'-age (age** as **ĭj),** *s.* [Fr. *manége* = the training or management of a horse, from Sp. *maneggio* = a managing, a handling, a riding school, from *mano* = the hand; Lat. *manus*; Ital. *maneggiare* = to manage.]

1. The treatment, training, or management of a horse.

"They are fair with their feeding, they are taught their *manage*, and to that end riders dearly hired."—*Shakesp.: As You Like It*, i. 1.

2. Conduct, management, direction, administration.

"Lorenzo, I commit into your hands
The husbandry and *manage* of my house."
Shakesp.: Merchant of Venice, iii. 4.

3. Treatment.

"Now for the rebels, which stand out in Ireland;
Expedient *manage* must be made, my liege."
Shakesp.: Richard II., i. 4.

măn-age-ą-bĭl'-ĭ-tў (age as **ĭj),** *s.* [Eng. *manageable*; *-ity.*] The quality or state of being manageable; tractability.

măn'-age-ą-ble (age as **ĭj),** *a.* [Eng. *manage*; *-able.*]

1. Capable of being managed; easy to be turned or directed towards, or used for its proper purpose.

"Were education else so sure to fail,
Conducted on a *manageable* scale?"
Cowper: Tirocinium, 709.

2. Capable of being easily managed, governed, or turned; tractable, docile: as, a *manageable* child.

3. Easily made subservient to one's views or designs.

*** măn'-age-ą-ble-nĕss (age** as **ĭj),** *s.* [Eng. *manageable*; *-ness.*] The quality or state of being manageable; tractableness, docility.

B. *As adjective:*

1. Conducting, guiding, controlling, or administering.

2. Economical, frugal, contriving, planning.

"*Vir Frugi* signified, at one and the same time, a sober and *managing* man, an honest man, and a man of substance."—*Goldsmith: The Bee*, No. 5.

C. *As subst.:* The same as MANAGEMENT (q.v.).

"And let the goodness of the *managing*
Rase out the blot of foul attaining quite."
Daniel: Civil Wars, iv.

măn'-ą-kĭn, *s.* [O. Dut. *manneken*, a dimin. from *man*; Fr. *mannequin*; Ger. *mannchen.*]

1. *Ord. Lang.:* A little man, a dwarf, a mannikin (q.v.).

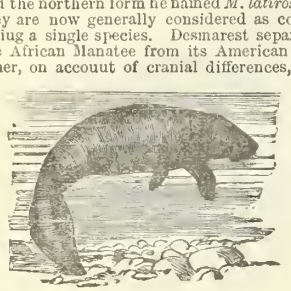
"This is a dear *manakin* to you, Sir Toby."—*Shakesp.: Twelfth Night*, iii. 2.

2. *Ornith.:* Pipridæ, a family of Mesomyodi, containing some sixty species; closely allied to the Tyrants. They are all of small size, somewhat shy in their habits, and are found in the wooded portions of South America.

*** man-ase,** *s.* & *v.* [MENACE.]

măn-ą-tee', † **măn-ą-tî'**, * **măn'-ą-tĭn**, *s.* [Etym. doubtful. Agassiz says from the native name; McNicoll adopts the etym. given in the extract, as does Prof. Flower in *Encyc. Brit.* (ed. 9th), xv. 456.]

Zool.: Any individual of the genus Manatus (q.v.), more particularly *M. australis* (*americanus*), first discovered by the early Spanish colonists. Dr. Haslan was of opiuion that there were two species of Manatus in America, and the northern form he named *M. latirostris;* they are now generally considered as constitutiug a single species. Desmarest separated the African Manatee from its American congener, on accouut of cranial differences, not,



MANATEE.

however, of great importance, and called it *M. senegalensis.* Manatees are found in the creeks, lagoons, and estuaries of some of the West India islands, on the American coast, from Florida as far as 20° S., in the great rivers of Brazil, on the coast of Africa from 16° N. to 10° S., and in Lake Tchad. They are slow and inactive, and quite inoffensive; they browse on aquatic, preferably fluviatile, plants in shallow water. Their numbers are rapidly diminishing, as they are hunted for the sake of their skin, the oil they yield, and their flesh. The Manatee measures from 10 to 12 feet in length. It has a thick, wrinkled, hairless hide, of a dark bluish gray color. The eyes are small and deeply sunk, and the nostrils are valved slits at the end of the snout.

"Its most remarkable feature is the forepaw, occupying the usual place of the cetacean fin, but bearing so close a resemblance to a human hand that the name *manatee* is generally supposed to have been conferred on it by the first Spanish explorers on this account."—*Wilson: Prehistoric Man*, i. 374.

† **măn-ą-tî'**, *s.* [Manatee.]

mą-năt'-ĭ-dæ, *s. pl.* [Mod. Lat. *manat(us);* Lat. fem. pl. adj. suff. *-idæ.*]

Zool.: Sea-cows; the single family of Illiger's Sirenia, the Herbivorous Cetacea of F. Cuvier. The Manatidæ, however, differ from Whales in many important particulars. The family contains three genera: Halicore, Manatus, and the recently extinct Rhytina.

* **măn'-ą-tĭn**, *s.* [Manatee.]

* **mą-nā'-tion**, *s.* [Lat. *manatio*, from *mano* = to flow out.] The act of issuing or flowing out of something else.

măn'-ą-tŭs, *s.* [Mod. Lat., from *manatee* (q.v.).]

1. *Zool.:* The typical genus of the family Manatidæ (q.v.). Body piseiform, ending in a shovel-like tail with rounded edges; no traces of hind limbs, either externally or iuternally; no dorsal fin. The fore limbs are flattened paddles, without traces of fingers, but with three diminutive flat nails near their extremities. The upper tip is tumid, cleft into two lobes, which are divaricated to receive food, and contracted to seize it and convey it into the mouth. Eyes and ear-orifice minute. Skin gray, wrinkled, covered with delicate hairs; upper and under-lip setigerous. Two, if not three, species are known. They feed solely on aquatic vegetation. [Manatee.]

2. *Paleont.:* (See extract).

"Extinct species of *Manatus* have been found in the Post-pliocene deposits of Eastern North America from Maryland to Florida."—*Wallace: Geog. Distrib. of Animals*, ii. 210.

măn'-ą-wą, *s.* [Maori.] The green aromatic resin of *Avicennia tomentosa*, eaten by the New Zealanders.

* **măn-bote**, *s.* [A.S. *man*, and *bote.*]

Feudal Law: Compensation paid for the killing of a man; espec., compensation paid to a lord for the killing of his man or vassal.

* **măn'-cą**, *s.* [Mancus.]

manche (1), **maunch**, *s.* [Fr. *manche*, from Lat. *manica* = a long sleeve, from *manus* = the hand.]

* 1. *Ord. Lang.:* A sleeve with long, hanging ends to it.

2. *Her.:* A bearing representing such a sleeve.

"That *manch*, that moone, this martlet, and that mound." *Herrick: Hesperides*, p. 316.

* **manche-present**, *s.* A greedy fellow; a parasite.

măn'-çhē (2), *s.* [Native name.]

Naut.: An East Indian boat used on the Malabar coast. It has masts raking forward and a flat bottom.

Măn'-çhĕs-tĕr, *s.* [See def.]

Geog.: A city in the south-west division of Lancashire.

Manchester School, *s.*

Politics: A name applied by their opponents to the early advocates of Free Trade, whose head-quarters were at Manchester. Their distinctive tenet was Free Trade, notably in corn [Corn Laws]; but through their chief leaders, Messrs. Cobden and Bright, they were also identified with protests against a spirit of militarism (q.v.), which led to their being called the "peace-at-any-price" party.

"What they mean by the *Manchester School* is merely copying a phrase of Mr. Disraeli, which refers, I suppose, really to the foreign policy which was more prominently, perhaps, advocated by Mr. Cobden and myself some years ago than by any other two men probably in the country."—*Right Hon. J. Bright: Speech at Birmingham*, Jan. 29, 1855.

Manchester-yellow, *s.*

Chem.: Naphthaline yellow, jaune d'or, Martius yellow. This dye is the calcium or sodium compound of binitro-naphthalinic acid ($C_{10}H_6(NO_2)_2O$). It is obtained by adding sodic nitrite to a solution of hydrochlorate of naphthylamine, until all the naphthyline has been converted into diazonaphthol. Manchester-yellow imparts to wool and silk permanent yellow hues, varying from lemon yellow to a deep golden colour. It is superior to picric acid dye in not being volatilized by steam.

* **mănçh'-ĕt**, * **mainch-et**, *s.* & *a.* [Etym. doubtful. Probably connected with Fr. *mangcr* = to eat.]

A. *As subst.:* A small loaf of fine bread.

"Of bread made of wheat we have sundrie sorts dailie brought to the table, whereof the first and most excellent is the *mainchet*, which we commonlie call white bread."—*Holinshed: Description of England*, bk. ii., ch. vi.

B. *As adj.:* Fine and white. (Said of bread or flour.)

"Thyrtie quarters of *manchet* floure."—3 *Kings* iv. (1551).

măn-chĭ-neĕl', *s.* [Fr. *mancenillier, manzanille;* Ital. *mancinello;* Port. *mancenilheira*, Sp. *manzanillo*, from *manzana* = an apple, from *malum Matianum*, a kind of apple, which the manchineel resembles.]

Bot.: Hippomane Mancinella, a euphorbiaceous tree, forty or fifty feet high, growing on the sandy coasts of the West Indian Islands, Venezuela, Panama, &c. It has ovate or elliptical shiniug leaves, with small, inconspicuous flowers. It is very poisonous. If a single drop of the white juice fall upon the skin it will cause a wound extremely difficult to heal. The juice of the fruit similarly burns the lips of any one who bites it. Deleterious as it is, its venomous effects have been much exaggerated by credulity. *Bignonia leucoxylon* is said to be an antidote to the poison.

¶ *Bastard Manchineel:*

Bot.: Cameraria latifolia, one of the Apocynaceæ.

Măn-çhoô', **Măn'-çhû**, **Măn-tçhoô'**, *s.* [Native name.]

1. A native of Manchooria, a territory belouging to the Empire of China.

2. The language spoken by the natives of Manchooria.

Măn-çhû'-rĭ-ąn, **Mănt-çhû'-rĭ-ąn**, *a.* & *s.* [Manchoo.]

A. *As adj.:* Belonging to or found in Manchooria.

B. *As subst.:* The same as Manchoo (q.v.).

Manchurian-crane, *s.*

Ornith.: Grus viridirostris. It is a favourite bird among the Chinese, and a considerable number of them are kept in captivity at Pekin. It is one of the commonest subjects chosen by Chinese artists, and their studies of it are extremely vigorous.

Manchurian sub-region, *s.*

Geog. & Zool.: An interesting and very productive district, corresponding in the east to the Mediterranean sub-region in the West, or rather perhaps to all western temperate Europe. Its limits are not very well defined, but it probably includes all Japan: the Corea and Mancburia to the Amour river, and to the lower slopes of the Khingan and Peling mountains. (*Wallace: Geog. Dist. of Animals*, i. 220.)

măn'-çĭ-nīte, *s.* [Named by Jacquot after the place where it was ststed to have been found, Mancino; suff. *-ite* (*Min.*). (See def.)]

Min.: Supposed by Jacquot to be a trisilicate of zinc, but since shown to be a mixture, and not to have been found at Mancino, Livorno, but at Campiglia, Tuscany. Berthier states that the mineral was named after the family Mancini.

* **măn'-çĭ-pāte**, *v.t.* [Lat. *mancipatus*, pr. par. of *mancipo* = to dispose of, from *manceps* = one who acquires anything at an auction: *manu* = in the hand, and *capio* = to take.] To enslave, to bind, to fetter, to tie.

"It is no marvel if those have *mancipated* their minds to the judgments of some whom they overadmire."—*Bp. Hall: Episcopacy by Divine Right*, § 2.

* **măn-çĭ-pā'-tion**, *s.* [Mancipate.] The act of mancipating or enslaving; slavery; involuntary servitude.

* **măn'-çĭ-ple**, *s.* [O. Fr. *mancipe*, from Lat. *mancipem*, accus. of *manceps* = one who acquires anything at an auction. The *l* is inserted, as in *syllable*, from Lat. *syllaba*, *participle*, from Lat. *participium*, &c.] A steward, a purveyor; espec., the steward or purveyor of a college or inn of court.

"Their *manciple* fell dangerously ill,
Bread must be had, their grist went to the mill:
This simkin moderately stole before,
Their steward sick, he robb'd them ten times more."
Betterton: Miller of Trompington.

* **măn'-cŭs**, * **măn'-cą**, *s.* [A.S. *mancus.*] The Anglo-Saxon mark, a coin current both in silver and gold. A gold mancus of thirty pence was equal to about 7s. 6d. sterling, and the silver mancus, weighing about the fifth part of an ounce, was about equal to our shilling.

* **mănd**, *s.* [Lat. *mando* = to command, to direct.] A demand; a question.

măn-dā'-mŭs, *s.* [Lat. = we command or direct; 1st pers. pl. pres. indic. of *mando* = to command or direct.]

Law: (See extract).

"The prerogative writ of *mandamus* is a command issuing in the name of the sovereign from the Queen's Bench, and directed to any person, corporation, or inferior court of judicature requiring them to do some particular thing therein specified, which appertains to their office and duty, and which the Queen's Bench has previously determined, or at least supposes to be consonant to right and justice. A *mandamus* lies, for instance, to compel the admission or restoration of the party applying to any office or franchise of a public nature, whether spiritual or temporal, to academical degrees; to the use of a meeting-house, &c.; for the production, inspection, or delivery of public books and papers. A *mandamus* may therefore he had to the courts of the City of London, to enter up judgment; to the quarter sessions, to hear an appeal; to the spiritual courts, to swear a churchwarden, and the like. This writ is grounded on the oath of the party injured, of his own right, and the denial of justice below: whereupon a rule is usually made, directing the party complained of to show cause why a writ of *mandamus* should not issue: and, if he shows no sufficient cause, the writ itself is issued, at first in the alternative, either to do thus, or signify some reason to the contrary; to which a return, or answer, must be made at a certain day. And, if the inferior judge, or other person to whom the writ is directed, returns or signifies an insufficient reason, then there issues in the second place a peremptory *mandamus*, to do the thing absolutely: to which no other return will be admitted, but perfect obedience."—*Blackstone: Comment.*, bk. iii., ch. 4.

* **mănd'-ąnt**, *s.* [Lat. *mandans*, pr. par. of *mando* = to command, to direct.] The same as Mandator (q.v.).

măn-dą-rĭn', *s.* [Port. *mandarin*, from Malay *mantri* = a counsellor, a minister of state, from Sansc. *mantrin* = a counsellor, from *mantra* = a holy text, a charm, counsel, from *man* = to think, to mind, to know.] A general name for a Chinese magistrate, or public official, civil or military.

mandarin-duck, *s.*

Ornith.: Dendronessa (*Aix*) *galericulata*, a beautifully plumaged species from the country north of Pekin and the basin of the Southern

Amour. It is highly prized in China, and Sir John Bowring, in 1850, had extreme difficulty

MANDARIN-DUCK.

in obtaining a few couples for transmission to England. The mandarin-duck breeds freely in captivity.

mandarin-orange, *s.*

Bot.: *Citrus nobilis*, a variety of *Citrus Aurantium*.

măn-dą-rĭn′, *v.t.* [MANDARIN, *s.*]

Dyeing: To give an orange colour to silk or wool by the action of nitric acid, which partially decomposes the surface of the fibre.

* **măn-dą-rĭn′-ĕss,** *s.* [Eng. *mandarin*; *-ess.*] A female mandarin. (*Lamb.*)

* **măn-dą-rĭn′-ĭc,** *a.* [Eng. *mandarin*; *-ic.*] Of or pertaining to a mandarin; befitting a mandarin.

* **măn-dą-rĭn′-ĭşm,** *s.* [Eng. *mandarin*; *-ism.*] Government by mandarins; the spirit or character of mandarins.

măn′-dą-tar-ў, măn′-dą-tōr-ў, *s.* [Fr. *mandataire*, from Lat. *mandatum* = a mandate (q.v.); Sp. & Ital. *mandatorio.*]

* **I.** *Ord. Lang.:* A person to whom a command, charge, or mandate has been given.

"Sending their *mandatory* with a musqueteer to Doctor Hammond's lodging."—*Fell: Life of Hammond*, p. viii.

II. *Technically:*

1. *Canon Law:* A person to whom the Pope has, by his prerogative, given a mandate or order for his benefice.

2. *Common Law:* One who is authorized, and undertakes without a recompense, to do some act for another in respect to the thing bailed to him.

măn′-dāte, *s.* [Fr. *mandat*, from Lat. *mandatum* = a charge, order, or command, neut. sing. of *mandatus*, pa. par. of *mando* = to command; Sp. & Ital. *mandato.*]

I. *Ord. Lang.:* An order, a command, a charge, an injunction, a commission.

"Oh, that my mind were equal to fulfil
The comprehensive *mandate* which they give."
Wordsworth: White Doe of Rylstone. (Introd.)

II. *Technically:*

1. *Canon Law:* A rescript of the Pope commanding the ordinary collator to put the person therein named in possession of the first vacant benefice in his collation.

2. *Eng. Law:* A judicial charge, command, or commission; abatement of goods without reward, to be carried from place to place, or to have some act performed about them.

3. *Scots Law:* A contract by which one person employs another to act for him in the management of his affairs, or in some particular department of them, which employment the person accepts, and agrees to act. The person giving it is called the mandant or mandator, and the person undertaking the mandatory.

* **măn-dā′-tōr,** *s.* [Lat., from *mandatus*, pa. par. of *mando* = to command, to direct.]

I. *Ord. Lang.:* A director; one who gives orders or directions.

"A person is said to be a client to his advocate, but a master and a *mandator* to his proctor."—*Ayliffe: Parergon.*

II. *Law:*

1. A bailer of goods.

2. A person who deputes another to perform a mandate. [MANDATE, II. 3.]

măn′-dą-tōr-ў, *a.* & *s.* [Lat. *mandatorius.*]

A. *As adj.:* Containing a mandate, command, precept, or injunction; directory.

"He usurped more than a *mandatory* nomination of the bishop to be consecrated."—*Abp. Usher: On Ordination.*

B. *As subst.:* The same as MANDATARY (q.v.).

măn-dĕl′-ą-mīde, *s.* [Eng. *mandel(ic)*, and *amide.*]

Chem.: $C_8H_7O_2{\cdot}NH_2$ = $C_6H_5{\cdot}CHOH{\cdot}CONH_2$.

Obtained by heating to 180° in a sealed tube, a mixture of benzoic aldehyde, hydrogeu cyanide, and water. It crystallizes in rhombic or hexagonal tables, soluble in water and boiling alcohol, slightly soluble in ether, and melts at 131°. Heated with baryta water to 186°, it is converted into barium mandelate $(C_8H_7O_3)_2Ba$, which crystallizes in rhombic tables, soluble in water.

măn′-dĕl-āte, *s.* [Eng., &c., *mandel(ic)*; *-ate.*]

Chem.: A salt of mandelic acid.

¶ Ammonic mandelate is a yellowish-white powder, difficult to crystallize. Soluble in water and alcohol. Baric mandelate crystallizes in needles, slightly soluble in water, insoluble in alcohol. The copper salt is a beautiful light blue powder, which, when heated, gives off bitter almond oil.

măn-dĕl′-ĭc, *a.* [Ger. *mandel* = an almond; Eng. suff. *-ic.*] (See the compound.)

mandelic-acids, *s. pl.*

Chem.: $C_8H_8O_3$ = $C_6H_5{\cdot}CH(OH){\cdot}CO{\cdot}OH$. Phenylglycollic acid. Formobenzoic acid. An acid prepared by heating bitter almond oil with hydrochloric or sulphuric acids, and extracting by means of ether. It crystallizes in prisms or tables, very soluble in water, alcohol, and ether, and melts at 115° with loss of water into a yellow oil, which on cooling solidifies to a gum. Heated above its melting point, it diffuses an agreeable odour resembling white-thorn blossoms. Mandelic-acid contains the elements of bitter almond oil and formic acid. It neutralises bases completely, and expels carbonic acid from its compounds.

* **mande-ment, * maunde-ment,** *s.* [COMMANDMENT.] A command, a commandment, a mandate.

"He schewed the Erle Rogere the pape's *mandement.*"
Robert de Brunne, p. 307.

man-der, *s.* [MAUNDER.]

măn′-dĕr-ĭl, *s.* [MANDREL.]

măn′-dē-vĭlle, *s.* [Prob. a corrupt. of O. Fr. *mandil*, *mandille.*] [MANDIL.] The same as MANDILION (q.v.).

măn′-dĭ-ble, *s.* [From. Lat. *mandibula* and *mandibulum*, from *mando* = to chew; Fr. *mandibule*; Prov. & Sp. *mandibula.*]

Anatomy:

1. *Human:* The inferior maxilla, or two mandibles may be said to be united in the inferior maxilla or lower jaw. (*Quain.*)

2. *Comparative:*

(1) (*Among Vertebrates in general*): The lower jaw answering to the *maxilla inferior* in man. [1.] (*Huxley.*)

(2) (*Among Birds, pl.*): The upper aud lower rostra of the beak. (*Huxley.*)

(3) (*Among Arthropoda, pl.*): The upper pair of cephalic appendages used as jaws. (*Huxley.*) In insects the term is restricted to the upper and outer pair of jaws. (*Owen.*)

(4) (*Among Molluscs*): Used of the beak in Cephalopoda. (*Nicholson.*)

măn-dĭb′-ų-la (pl. **măn-dĭb′-ų-læ**), *s.* [Lat. = a jaw.] A mandible (q.v.).

măn-dĭb′-ų-lar, *a.* [MANDIBULA.] Pertaining or belonging to the jaw. Thus there is a *mandibular* arch.

măn-dĭb-ų-lā′-tą, *s. pl.* [Neut. pl. of Mod. Lat. *mandibulatus*, from Lat. *mandibula*, *mandibulum.*] [MANDIBLE.]

Entom.: According to Clairville, Stephens, &c., a primary division or sub-class of insects containing those which have jaws for mastication, as distiuguished from those which have a suctorial mouth. [INSECT.]

măn-dĭb′-ų-late, *a.* & *s.* [MANDIBULAR.]

A. *As adjective:*

Entom.: Having mandibles, as distinguished from a suctorial mouth.

B. *As substantive:*

Entom.: An insect of the sub-class Mandibulata (q.v.).

măn-dĭb′-ų-lāt-ĕd, *a.* [MANDIBULATE.] The same as MANDIBULATE, *a.* (q.v.).

măn-dĭ-bū′-lĭ-form, *a.* [Lat. *mandibula*, *mandibulum* = a jaw, and *forma* = form.]

1. *Zoology:* Having the form of a mandible.

2. *Entom.:* Having the lower jaws hard, horny, and like the upper jaws in form.

* **măn′-dĭl,** *s.* [O. Fr. *mandil*, *mandille*, from Lat. *mantellum*, *mantelum* = a table-cloth, a cloak, a mantle.] A sort of cloak or mantle.

* **măn-dĭl′-iŏn** (i as y), *s.* [O. Fr. *mandil*; Ital. *mandiglione.*] A kind of loose garment; a soldier's cloak.

"A *mandilion*, that did with buttons meet,
Of purple, large, and full of folds, curl'd with a warmful nap." *Chapman: Homer; Iliad* x.

măn′-dĭ-ŏc, măn′-ĭ-ŏc, *s.* [From *mandioca*, its name in Brazil.]

Bot.: A euphorbiaceous plant, *Manihot utilissima.* [CASSAVA, MANIHOT.]

mandioc-plant, *s.* [MANDIOC.]

* **mand-ment,** *s.* [MANDEMENT.]

măn′-dō-lĭne, măn′-dō-lĭn, *s.* [Fr. *mandoline*, *mandole*, *mandore*, from Ital. *mandola*, *mandora.*]

Music: An Italian fretted guitar, so called from its almond shape. There are several varieties, each with different tunings. The Neapolitan, considered the most perfect, has four strings tuned like the violin, *i.e.*, G, D, A, E. The Milauese, next in favour, has five double

MANDOLINE.

strings tnned G, C, A, D, E. A plectrum is used in the right hand, and the left is employed in stopping the strings. It is written on the G clef. In the Neapolitan maudoline the E strings are of catgut, the A strings of steel, the D strings of copper, and the G strings of catgut covered with copper-wire. The compass is about three octaves.

* **măn′-dŏm,** *s.* [Eng. *man*; *-dom.*] The state of being a man; manhood; meu collectively. (*E. B. Browning.*)

măn′-dōre, *s.* [Fr.]

Music: The same as MANDOLINE (q.v.).

măn-drăg′-ōr-ą, *s.* [Gr. μανδραγόρας (*mandragoras*).]

1. *Ord. Lang.:* A soporific potion prepared from some plant of the genus described under 2. [MANDRAKE.]

"Give me to drink *mandragora.*"
Shakesp.: Antony & Cleopatra, i. 5.

2. *Bot.:* A genus of Solanaceæ, tribe Atropeæ. *Mandragora officinalis* is the mandrake.

măn′-drāke, *s.* [MANDRAGORA.]

1. *Anthrop. & Folk-lore:* From the rude resemblance of the bifurcated root to the human figure many superstitious notious have gathered round this plant. Columella calls it *semihomo* (v. 19), and Pliny speaks of the precautions with which it was to be plucked up (*H. N.*, xxv. 94). Bulleine's *Bulwark of Defence* is a mine of quaint lore on the subject, and Browne (*Vulgar Errours*, bk. ii., ch. vi.) follows in his track. On being torn from the ground, the mandrake was feigned to utter groans inspiring horror (*Cyril Tournour: Atheist's Tragedy*, v. 1), causing madness (*Shakesp.: Rom. & Jul.*, iv. 3; *Webster: Duchess of Malfi*, ii. 5), or even death (*Shakesp.*: 2 *Henry IV.*, iii. 2). It was an emblem of incontinence (*Shakesp.*: 2 *Henry IV.*, iii. 2); soporific qualities were attributed to it (*Marlowe: Jew of Malta*, v. 1); it was used in magic (*Nabbes: Microcosmus*, iv.), and formed an ingredient in love-potions (*Burton: Anat. of Melan.* (ed. 1881), p. 550).

2. *Scrip.:* Heb. דּוּדָאִים (*dhudhaim*), a pl. word, correctly rendered in the A. V., mandrakes (Genesis xxx. 14, 15, 16; Song of Solomon vii. 13).

mandrake-apple, *s.*

Bot.: The fruit of the mandrake. It is beautiful, fragrant, and in no way poisonous.

măn'-drĕl, măn'-drĭl, * **măn'-dĕr-ĭl,** *s.* [A corrupt. of Fr. *mandrin* = a punch, a mandrel, prob. from Gr. μανδρα (*mandra*) = an enclosed space, a sheepfold, the bed in which the stone of a ring is set.]

1. *Lathe:* An arbor or axis on which work is temporarily placed to be turned. The arbor which revolves in the head-stock of a lathe and carries the upper pulley, and also the chuck or face-plate if one be used.

2. *Mach.:* The revolving spindle of a circular saw or a circular cutter. As the annular bush slips upon the mandrel, its conical face penetrates the central orifice in the saw and maintains its concentricity; an elastic packing intervenes between the bush and the end collar.

3. *Forg.:* A round rod of any desired diameter, used in giving an interior cylindrical form to a forging, as a nut or hollow spindle.

4. *Cast.:* A plug around which a body of metal or glass is cast.

mandrel-lathe, *s.* A lathe adapted for turning hollow work, which is clasped by a chuck on the end of the mandrel in the head-stock; or for turning long work which is supported by the head and tail centres. It is the usual form of well-made lathes for metal and wood-turning.

măn'-drĭll, *s.* [Fr. *mandrille*, from the native name. (*Buffon.*) Huxley thinks the English is from *man*, and *drill* = a man-like ape (*Man's Place in Nature*, p. 10).]

Zool.: Cynocephalus Maimon (*Mormon*), an African baboon. It was well known to the ancients, and Aristotle speaks of it (*H. A.*, 2, 11, 2) under the name of Chœropitheens (Hog-Ape). A full-grown male measures about five feet, when erect; the hair is light olive-brown above, and silvery-white beneath. It has a small pointed yellow beard, and a tuft of hair on the top of the head, which gives the whole face a triangular appearance. Nicholson says (*Zoology*, p. 733) that it is "rendered probably without exception the most disgustingly hideous of living beings by the possession of large blood-red natal callosities, and of enormous cheek-protuberances striped with brilliant colours in alternate ribs." Mandrills are insectivorous; and, in addition to their immense canine teeth, approach the Carnivora in many points of anatomical detail.

* **măn'-dū-cā-ble,** *a.* [Fr., from Lat. *manduco* = to chew; Sp. *manducable.*] Capable of being manducated or chewed; fit for eating.

† **măn'-dū-cāte,** *v.t.* [Lat. *manducatus*, pa. par. of *manduco*, an extension of *mando* = to chew.] To chew, to masticate, to eat.

"When he *manducates* such unwholesome, such unpleasant fruit."—*Bishop Taylor: Sermons*, p. 252.

† **măn-dū-cā'-tion,** *s.* [Lat. *manducatio*, from *manducatus*, pa. par. of *manduco* = to chew; Fr. *manducation;* Sp. *manducacion;* Ital. *manducazione.*] The act of chewing, masticating, or eating.

"The sum then of Archbishop Cranmer's doctrine on this head is: 1. That John vi. is not to be interpreted of oral *manducation* in the sacrament."—*Waterland: Works*, vii. 141.

† **măn'-dū-cā-tŏr-ў,** *a.* [Eng. *manducat(e)*; *-ory.*] Pertaining to, fit for, or employed in chewing or masticating: as, *manducatory* organs.

măn-dū'-cŭs, *s.* [Lat. = a glutton.]

Greek & Roman Antiq.: A comical figure, representing a glutton or gormandizer, carried in processions and comedies to create laughter.

māne, *s.* [Icel. *mön* (genit. *manar*, pl. *manar*); cogn. with Sw. & Dan. *man;* Dut. *maan;* O. Dut. *mane;* Ger. *mähne;* O. H. Ger. *mana;* Wel. *mwngen* = a mane, from *mwn* = the neck.] The long hair growing on the upper part of the neck of some animals, as horses, lions, &c., and hanging down on one or both sides.

"Each wave was crested with tawny foam,
Like the *mane* of a chestnut steed."
Scott: Lay of the Last Minstrel, i. 28.

mane-sheet, *s.* A sort of covering for the upper part of a horse's head.

māned, *a.* [Eng. *man(e); -ed.*] Having a mane.

maned ant-eater, *s.* [Ant-eater.]

maned fruit-bat, *s.*

Zool.: Pteropus jubatus, a native of the Philippine islands.

* **māne'-faire,** *s.* [O. Fr.]

Old Armour: Armour for the mane of a horse.

ma-nêge' (ge as **zh),** *s.* [Fr. *manège* or *manege*, from Ital. *maneggio* = management of a horse.] A school for training horses and for teaching horsemanship; a riding-school; the art or science of breaking, training, and riding horses; horsemanship. [Manage, *s.*]

* **ma-nêge' (ge** as **zh),** *v.t.* [Manege, *s.*] To break in and train a horse for riding or for graceful performances.

ma'-nĕh, *s.* [Heb. מָנֶה (*maneh*); cf. Gr. μνᾶ (*mna*).] [Mina.]

Weights & Measures: A weight among the ancient Hebrews. Its amount cannot be precisely determined; the passage (Ezek. xlv. 12) relating to the subject being ambiguous. It may mean that there were three manehs, one of twenty shekels, one of twenty-five shekels, and one of fifteen; or it may signify that the maneh was = 20 + 25 + 15 = 60 shekels. Gesenius thinks the former to be the more probable hypothesis.

măn'-ĕ-quĭn (qu as **k),** *s.* [Fr. *mannequin* = a manikin (q.v.).] An artist's model made of wood or wax.

* **man-ere,** * **man-er,** *s.* [Manner.]

* **mą-nĕr'-ĭ-ąl,** *a.* [Manorial.]

mā'-nēș, *s. pl.* [Lat., prob. from * *manis*, * *manus* = good; the first form survives in *immanis* = huge, immense; the second in Genita *Mana* = the good mother, to whom, Pliny (*Hist. Nat.*, xxix. 14) says, the Romans used to sacrifice a puppy.]

Roman Myth.: The Good Ones, a euphemistic expression for the infernal deities (as benevolent spirits) opposed to larvæ and lemures (q.v.). In the description of the funeral rites of Polydorus, Virgil (*Æn.* iii. 62-68) has a noted passage on the ceremonies with which the Manes were worshipped. The term was also applied to shades not yet deified. The Manes might be called up by magic (*ib.* iv. 490), they were invoked to be present at funeral rites (v. 99), and from them came deceptive dreams (vi. 897). Tylor (*Prim. Cult.*, 1872, ii. 120), mentioning that the Romans inscribed on their tombs "D. M." (*Diis Manibus*), remarks that "the occurrence of this 'D. M.' in Christian epitaphs is an often noticed case of religious survival."

manes-gods, *s. pl.*

Compar. Religions: The Dii Manes of the Romans. [Manes.]

"The early Romans, ascribing to their *manes-gods* a love of human blood, duly administered to it."—*Herbert Spencer: Prin. of Sociol.*, i. (App., p. *l.*)

manes-worship, *s.*

Anthrop.: The term adopted by Tylor to denote the worship of the dead, whether of an ancestor of the particular worshipper, or of some deified hero of his race. It has a very wide range both in time and space. Herbert Spencer (*Prim. Sociol.*, vol. i., ch. xx.) thinks it developed from the universal—or almost universal—belief in an other-self, which survived after death, and that manes-worship was the outcome of a desire and endeavour to propitiate the ghost. He brings forward evidence as to its existence among Turanians and Aryans, and notes that among the Jews the offerer of first-fruits to Jehovah was required to say that he had not "given thereof for the dead." (Deut. xxvi. 14; cf. Eccles. vii. 33; Tobit iv. 17.) Sir John Lubbock (*Orig. of Civil.*, 1882, p. 318) says of manes-worship that it "is a natural development of the dread of ghosts," and both Tylor (*Prim. Cult.*, 1873, ii. 120) and Spencer (*loc. cit.*) see in the cultus of saints in the Roman Church "a survival of the manes worship of a less advanced age." [Hagiolatry.]

"To sum up the whole history of *manes-worship*, it is plain that in our time the dead still receive worship from far the larger half of mankind, and it may have been much the same ever since the remote periods of primitive culture in which the religion of the manes probably took its rise."—*Tylor: Prim. Cult.* (1873), ii. 23.

manes-worshipper, *s.* One who worships the spirits of the departed; one who practises manes-worship (q.v.).

"The Chinese *manes-worshipper* may see the outer barbarians come back . . . into sympathy with his time-honoured creed."—*Tylor: Prim. Cult.* (1873), i. 143.

¶ A copious bibliography will be found in Lubbock and Tylor.

mą-nĕt'-tĭ, *s.* [Etym. donbtful.]

Hort.: A variety of rose, used as a dwarf stock in budding.

mą-nĕt'-tĭ-ą, *s.* [Named after Xavier Manetti, prefect of the botanical garden at Florence, and author of *Regnum Vegetabile*, 1756. (*Paxton.*)]

Bot.: A genus of Cinchonaceæ, family Cinchonidæ. It consists of climbing undershrubs from tropical America. The root of *Manettia cordifolia* is valued in Brazil as a medicine in dropsy and dysentery.

* **măn'-fûl,** * **măn'-fûll,** *a.* [Eng. *man*, and *full.*] Having the spirit of a man; bold, spirited, daring, brave, courageous.

"Ne great emprises for to take in hand,
Sheding of blood, ne *manfull* hardinesse."
Chaucer: Complaint of the Black Knight.

măn'-fûl-lў, *adv.* [Eng. *manful; -ly.*] In a manful, brave, or courageous manner; like a man; boldly, bravely.

"His long red coat, well brushed and neat,
He *manfully* did throw." *Cowper: John Gilpin.*

măn'-fûl-nĕss, * **măn'-fûl-nĕsse,** *s.* [Eng. *manful; -ness.*] The quality or state of being manful; manliness, bravery, boldness, courage, spirit.

"Daniell, then Byshoppe of Wynchestre, sent this Wenefride to Rome with his letters of commendacion for his *manfulnesse* ther shewed."—*Bale: English Votaries*, pt. i.

măng, *prep.* [A.S. *gemang.*] In the midst of, among (q.v.).

"Au' out a handfu' gie him;
Syne bade him slip frae 'mang the folk,
Sometime when nae ane see'd him."
Burns: Halloween, 17.

măn'-gą-beў, *s.* [From Mangabey in Madagascar, of which place Buffon supposed it to be a native.]

Zool.: Cercopithecus Æthiops, an African monkey. Colour reddish-brown, becoming red on the top of the head. There is a white band between the eyes, which is continued on each side to the back of the neck, whence its popular name, White Eyelid Monkey. The last molar in each lower jaw resembles those of Semnopithecus.

măn'-gą-nāte, *s.* [Eng., &c. *mangan(ic), -ate.*]

Chem.: A salt of manganic acid.

măn'-gą-nēșe, *s.* [A word formed by Gahn by metathesis, from *magnesium*, the name which he first gave it.]

Chem.: Symbol, Mn; atomic weight, 55. A diatomic metallic element, proved by Pott, in 1740, to be distinct from iron, but the metal itself was first eliminated by Gahn (1774). It occurs chiefly in the form of peroxide (black oxide of manganese), and as sulphide and carbonate. The metal has been prepared in two ways: first, by reducing the oxide with oil and charcoal in a closed crucible, and also by reducing the fluoride by sodium in a hessian crucible heated in a blast furnace. The metal obtained by the first method is soft and brittle, and has a specific gravity of 8·013; that by the second is brittle, but hard enough to scratch glass, sp. gr. = 7·206. Both varieties have a grayish-white colour, but by exposure to the air speedily becomes oxidized. Manganese enters into compounds both as a base and also as an acid radical. It forms several well-characterized oxides.

manganese-apatite, *s.*

Min.: A variety of apatite (q.v.) found at Horrsjöberg, Wermland, Sweden, and said to contain a notable amount of protoxide of manganese.

manganese-brucite, *s.*

Min.: A variety of Brucite (q.v.), containing over 14 per cent. of protoxide of manganese. Occurs with hansmannite at the Jakobsberg mine, Wermland, Sweden.

manganese-chloride, *s.*

Min.: According to Scacchi, this mineral occurred, associated with chloride of magnesium, in the saline encrustations or sublimations formed at Vesuvius at the eruption of 1855.

manganese-hedenbergite, *s.*

Min.: A variety of hedenbergite (q.v.), containing above six per cent. of protoxide of manganese. Occurs at Vester-Silfberget, Dalarne, Sweden.

manganese-idocrase, *s.*

Min.: A variety of Vesuvianite (q.v.), occurring in brown slender crystals at Ala, and San Marcel, Piedmont. According to an analysis by Sismonda, it contains over seven per cent. of protoxide of manganese.

manganese-oxide, *s.*

Min.: The same as BRAUNITE, HAUSMANNITE, MANGANITE, PSILOMELANE, and PYROLUSITE (see these words).

manganese-phosphate, *s.*

Min.: The same as TRIPLITE (q.v.) and TRIPHYLINE (q.v).

manganese-silicate, *s.*

Min.: The same as RHODONITE (q.v.), and TEPHROITE (q.v.).

manganese-sulphide, *s.*

Min.: The same as ALABANDITE (q.v.), and HAUERITE (q.v.).

manganese-tantalite, *s.*

Min.: A variety of Tantalite (q.v.), or Columbite (q.v.), of a reddish to blackish-brown colour, by transmitted light a fine red. An approximate analysis yielded, tantalic (columbic) acid, 85·5; protoxide of manganese, 9·01; protoxide of iron, 3·42; lime, 1·14. Occurs, with various other minerals, at Utoe, Sweden.

¶ Manganese-alum = *Apjohnite;* Manganese-Amphibole = *Rhodonite;* Manganese-arsenide = *Kaneite;* Manganese-blende, Manganese-glance = *Alabandite;* Manganese-borate = *Sussexite;* Manganese-carbonate = *Rhodochrosite;* Manganese-chrysolite = *Tephroite:* Magnesite-epidote = *Piedmontite;* Manganese-garnet = *Spessartite;* and Manganese-spar = *Rhodonite.*

măn-gą-nēs′-ĭ-ąn, *a.* [Eng. *manganes(e); -ian.*] Pertaining to, or consisting of manganese; having the qualities of manganese.

măn-gą-nēs′-ĭc, *a.* [Eng. *manganes(e); -ic.*] The same as MANGANIC (q.v.).

măn-gą-nēs′-ĭ-ŭm, *s.* [MAGNESIUM.]

măn-găn′-ĭc, *a.* [Eng. *mangan(ese); -ic.*] Obtained from mangauese (q.v.).

manganic-acid, *s.*

Chem.: This acid cannot exist in the free state. It is found in combination when canstic-potash is fused with levigated manganic oxide, but the salt is very unstable.

manganic-dioxide, *s.*

Chem.: MnO_2. A neutral substance occurring in the minerals pyrolusite and varvicite. The facility with which it parts with a portion of its oxygen renders it a very valuable oxidizing agent in the chemical laboratory, as well as in some manufactures.

manganic-oxide, *s.*

Chem: Mn_2O_3. Occurs in nature as the mineral braunite.

măn′-gąn-īte, *s.* [Ger. *mangan* = manganese; suff. *-ite* (*Min.*). Named by Haidinger; Ger. *manganit.*]

Min.: An orthorhombic mineral occurring in crystals longitudinally striated. Crystals sometimes twinned. Hardness, 4·0; sp. gr. 4·2 to 4·4; lustre, sub-metallic; colour, dark steel-gray to iron-black; streak, reddish-brown, opaque, though sometimes translucent in thin splinters. Compos.: sesquioxide of manganese, 89·8; water, 10·2; corresponding with the formula Mn_2O_3HO. Occurs in metalliferous veins in many parts of the world, the finest crystallized specimens, however, having been found in veins traversing felsite at Ilfeld, Hartz, Germany.

măn-gā′-nĭ-ŭm, *s.* [MANGANESIUM.]

măn-gąn-ō-, *pref.* [MANGANESE.]

măn-gąn-ō-căl′-çīte, *s.* [Pref. *mangano-*, and Eng. *calcite;* Ger. *manganocalcit.*]

Mineralogy:

1. A mineral occurring in rhombic prisms and sheaf-like groups of crystals, also diverging, and resembling aragonite (q.v.). Hardness, 4 to 5; sp. gr. 3·037; lustre, vitrcous; colour, flesh-red to white faintly tinged with red; streak, colourless. Compos.: a carbonate of manganese, with carbonates of lime, magnesia, and iron. Found at Schemnitz, Hungary.

2. A variety of calcite (q.v.), containing variable amounts of carbonate of manganese.

măn′-gąn-ō-līte, *s.* [Pref. *mangano-*, and Gr. λίθος (*lithos*)=a stone; Ger. *manganolith.*]

Min.: The same as RHODONITE (q.v.).

măn-gąn-ō-phўll′-īte, *s.* [Pref. *mangano-*, and Gr. φυλλόν (*phullon*) = a leaf; Ger. *manganophyll.*]

Min.: A micaceous mineral, occurring in thin scales. Colour, bronze to copper-red; streak, pale red. Compos.: silica, 38·50; alumina, 11·0; protoxide of manganese, 21·40; protoxide of iron, 3·78; lime, 3·20; magnesia, 15·01; potash and soda, 5·51; loss by ignition, 1·60. Dissolves in hydrochloric acid, silica separating in the form of the original scales. Closely related to Alurgite (q.v.). Found with many mineral species at Pajsberg, Filipstad, Sweden.

măn-gąn-ō-sĭ-dēr′-īte, *s.* [Pref. *mangano-*, and Eng. *siderite.*]

Min.: A variety of rhodochrosite (q.v.) containing carbonate of iron. An approximate analysis yielded a result which corresponded nearly with the formula $2MnCO_3 + FeCO_3$. Found in globular forms resembling sphærosiderite (q.v.) at various places in Hungary.

măn-găn′-ō-sīte, *s.* [Pref. *mangano-*; *s* connective, and suff. *-ite* (*Min.*).]

Min.: An isometric mineral, occurring in minute octahedral and dodecahedral crystals, but rarely in cubes. Cleavage, cubic. Hardness, 5 to 6; sp. gr. 5·18; lustre, vitreous; colour, emerald-green when fresh broken, but becoming black on exposure. Compos.: protoxide of manganese, 98·04; protoxide of iron, 0·42; magnesia, 1·71; lime, 0·16, the resulting formula being MnO: isomorphous with periclase (q.v.). Found with various minerals in a manganesian dolomite, also in calcite and brucite (q.v.), in localities in Sweden.

măn-gąn-ō-stĭb′-ĭ-īte, *s.* [Pref. *mangano-*; Lat. *stibium*, from Gr. στιβι (*stibi*) = antimony, and suff. *-ite* (*Min.*).]

Min.: A black granular mineral resembling hausmannite, but of a blacker colour. Crystallization probably orthorhombic. Compos.: antimonic acid, 24·09; arsenic acid, 7·44; protoxide of manganese, 55·77; protoxide of iron, 5·0; lime, 4·62; magnesia, 3·0, conducting to the formula, $10MnO(Sb,As)_2O_5$.

măn′-gąn-oŭs, *a.* [Eng. *mangan(ese); -ous.*] (See the compound.)

manganous-oxide, *s.*

Chem.: MnO, is a basic body, obtained by heating the carbonate in a current of hydrogen.

măn-gąn-sklĕr′-īte, *s.* [Ger. *mangan* = manganese; Gr. σκληρός (*sklēros*) = hard, and suff. *-ite* (*Min.*).]

Min.: The same as RHODONITE (q.v.).

*** măńg′-corn, * mĕńg′-corn, * mong-corn,** *s.* [A.S. *mengan* = to mix, to mingle (Prov. Eng. *meng, ming*), and Eng. *corn.*] A crop of several varieties of corn grown together; a mixture of wheat and rye or other species of corn.

*** mănġe,** *v.t.* [Fr. *manger*, from Lat. *manduco* = to chew.] [MANDUCATE.] To eat.

"Ye have *manged* overe muche that maketh yow be syke." *Piers Plowman*, p. 142.

mănġe, *s.* [From the adj. *mangy* (q.v.); Fr. *mangeson.*]

Vet. Surg.: A disease of the skin occurring in dogs, horses, cattle, &c., and similar to the itch in human beings.

"Don Carlos his pockets so amply had filled,
That his *mange* was quite cured."
Rochester: Trial of the Poets for the Baye.

măń′-gęl wŭr′-zęl, *s.* [MANGOLD-WURZEL.]

mān′-ġēr, *s.* [Fr. *mangeoire*, from *manger* = to eat, from Lat. *manduco* = to chew.]

1. *Ord. Lang.:* A trough or box in which corn or fodder is placed for horses or cattle; usually accompanied by a rack for hay.

"As though they were not fallen in a puddle of dirte, but rubbed and layde in litter vnder the *manger* at theyr ease."—*Sir T. More: Workes*, p. 1139.

2. *Shipwright.:* A space abaft the hawse-holes on the working-deck, bounded by planks lying athwartships, and serving to preveut the water that comes in at the hawse-holes from flooding the rest of the deck.

manger-board, *s.*

Naut.: The board or bulkhead on a ship's deck that separates the manger from the other part of the deck.

*** mān′-ġēr-ў, * man-ger-ie,** *s.* [Fr. *manger* = to eat.] The act of eating.

"All the while that Gamelyn
Had held his *mangerie.*"
Chaucer: Coke's Tale.

măn-ġĭf′-ĕr-ą, *s.* [Mod. Lat., from Eng., &c. *mango*, and Lat. *fero* = to bear, to produce.]

Bot.: A genus of Anacardiaceæ, consisting of trees of alternate, stalked, entire leaves, and panicles of small pinkish or yellowish flowers. *Mangifera indica* is the Mango (q.v.). The fruit of *M. sylvatica* is used in India medicinally. The coarse-flavoured fruit of *M. fœtida* is eaten in Tenasserim, of which the tree is a native, and where it is cultivated.

mān′-ġĭ-lў, *adv.* [Eng. *mangy; -ly.*] In a mangy manner; foully, meanly.

"Oh, this sounds *mangily*,
Poorly, and scurvily in a souldier's mouth."
Beaum. & Flet.: The False One, ii. 3.

mān′-ġĭ-nĕss, * maun-gy-nesse, *s.* [Eng. *mangy; -ness.*] The quality or state of being mangy; the state of being infected with the mange.

măń′-gle (1), *v.t.* [A weakened form of *mankelen*, a freq. from Mid. Eng. *manken* = to maim, from A.S. *be-mancian* = to mutilate, from Lat. *mancus* = maimed, mutilated.]

1. *Lit.:* To maim, to mutilate; to cut with repeated blows so as to leave a ragged or jagged wound; to hack, to lacerate; to disfigure by cutting or hacking.

"Had thy *mangled* bleeding corse been found,
Thy relics had reposed in Trojan ground."
Pitt: Virgil; Æneid, vi.

2. *Fig.:* To destroy the symmetry or completeness of; to mutilate; to spoil or mar by bungliug, ignoraace, or mismanagement.

"The organ part was thoroughly *mangled.*"—*Athenæum*, Feb. 25, 1882.

măń′-gle (2), *v.t.* [Dut. *mangelen* = to roll with a rolling-pin; *mangel-stok* = a rolling-pin; Ital. *mangano;* a modification of Low Lat. *manganum*, *manganus* = a mangonel (q.v.), from Gr. μάγγανον (*magganon*).] To roll or smoothe clothes with a mangle; to calender.

"Might have got up my linen as I came along—ha! ha!—not a bad idea that—queer thing to have it *mangled* when it's on one."—*Dickens: Pickwick*, ch. xv.

măń′-gle, *s.* [MANGLE (2), *v.*] A machine in which damp clothes are smoothed by roller pressure. The old-fashioned mangle had a box weighted with stones and reciprocating upon rollers which ran to and fro upon the clothes, spread upon a polished table beneath. The improved maugle for smoothing and stretching woven goods previous to starching aud calendering, has a number of rollers fixed in a strong frame, and capable of being forced together by levers or screws. In some mangles, the bottom rollers have grooves diverging from the centre, so as to spread the cloth outwardly towards each edge as it passes through, removing the creases.

"Regular *mangle*—Baker's patent—not a crease in my coat."—*Dickens: Pickwick*, ch. xv.

mangle-rack, *s.*

Mach.: A rack having teeth or opposite sides engaged by a pinion, which meshes with the opposite sides alternately. Thus the continuous rotary motion of the pinion is converted into a reciprocating motion.

mangle-wheel, *s.* A wheel used in mangles for pressing clothes, having a curved double rack upon it, the object being to drive the weighted box, by means of a continuous rotary motion of the driving-pinion, to the shaft of which a handle is attached. As the pinion is rotated, it passes from the inside to the outside teeth of the rack alternately, giving a reciprocating rotary motion to the wheel, which drives the box to and fro. The shaft of the pinion traverses a groove in the wheel as the piuion passes from one side of the rack to the other.

măń′-glēr (1), *s.* [Eng. *mangl(e)* (1), v.; *-er.*]

1. One who mangles, mutilates, or breaks in cutting; one who mutilates or disfigures.

"Coarse *manglers* of the human face divine,
Paint on." *Tickell: To Sir Godfrey Kneller.*

2. A machine for grinding meat, to render it more easy to masticate or stew. A masticator.

măn'-glēr (2), *s.* [Eng. *mangl(e)* (2); *-er.*] One who uses or works a mangle; a calenderer.

măn-glī-ĕt'-ī-a, *s.* [Latinised from the Javanese name of the species defined.]

Bot.: A genus of Magnoliaceæ, tribe Magnolieæ, consisting of five species, from tropical Asia. They are tall trees, with entire leaves and showy flowers. The white solid wood of *Manglietia glauca* is made into coffins in Java, being supposed to preserve the corpses put into them from decay.

măn'-gō, *s.* [Native name *mangha.*]

I. *Botany:*

1. The fruit of the Mango tree, also the tree itself. It is *Mangifera indica*, an umbrageous tree, wild on the Western Ghauts, in the Chutia Nagpore Hills and the Naga Hills, and cultivated all over India. The fruit is considered one of the very best in India; it is laxative. The bark of the root and, to a certain extent, of the stem is used in diarrhœa, &c. The young leaves are good for pectoral complaints, the old ones for cleaning the teeth. The seeds are anthelmintic and the resin of the bark antisyphilitic. The seeds contain gallic acid. The bark and the leaves yield an inferior yellow dye. The dry unripe fruit is used as a mordant, especially in dyeing with safflower. The leaves and the bark are used in parts of India in tanning. The bark and kernel are given in diarrhœa. The galls of the kernel, if snuffed, stop bleeding from the nose. The kernel is an anthelmintic; it is used also in bleeding piles and menorrhagia. (*Lindley,* and *Calcutta Exhib. Report.*)

"What lord of old would bid his cook prepare
Mangoes, portargo, champignons, cavare?"
King: On Cookery.

2. A green musk melon pickled.

¶ The Mountain Mango is *Clusia flava*, the Wild Mango (1) *Clusia flava*; (2) some species of Irvingia.

II. *Ichthy.:* The same as MANGO-FISH (q.v.).

mango-bird, *s.*

Ornith.: A popular name for the Indian Oriole (*Oriolus kundoo*).

mango-fish, *s.*

Ichthy.: Polynemus paradiseus or *longifilis*, known in India as the Tupsee. It is about eight or nine inches in length, and is found in the Bay of Bengal, ascending the Ganges and other rivers to a considerable extent. Its popular English name has reference to its beautiful yellow colour, resembling that of a ripe mango.

mango-ginger, *s.*

Bot.: Curcuma Amada.

măn'-gōld wŭr'-zĕl, măn'-gel wŭr'-zel, *s.* [Ger. *mangold* = beet, and *wurzel* = root.]

Bot. & Agric.: Beta vulgaris, variety *macrorhiza.* It is cultivated chiefly as fodder for cattle. The roots are used for food; they have sugar enough in their composition to be profitably extracted, as is the case with ordinary beet.

***măn'-gō-nĕl,** ***man-ga-nel,** ***mang-nel,** *s.* [O. Fr., from Ital. *manganello, mangano*, from Low. Lat. *manganum, manganus, mangona*, from Gr. μαγγάνον (*mangganon*) = a machine for defending fortifications.] An engine of war employed to batter down walls and hurl stones and other missiles.

"Mid *manganels* & ginnes hor either to other caste."
Robert of Gloucester, p. 566.

***măn'-gō-nīzm,** *s.* [MANGONIZE.] The act of mangonizing, or setting off to advantage.

"Let gentlemen and ladies who are curious, trust little by *mangonisms,* insuccations, or medicine, to alter the species, or indeed the forms and shapes of flowers considerably."—*Evelyn: Kalend. Hortense; March.*

***măn'-gō-nĭst,** *s.* [MANGONIZE.]

1. One who mangonizes or furbishes up worthless articles for sale.

"The *mangonist* doth feed and graith his horse."—*Money Masters all Things* (1698), p. 77.

2. A slave-dealer.

"One that sells human flesh, a *mangonist.*"
Revenge, or a Match in Newgate, i.

***măn'-gŏn-īze,** *v.t.* [Lat. *mangonizo*, from *mango* = a dealer who furbishes up worthless things for sale; a slave-dealer.]

1. To furbish up for sale; to set off to advantage.

2. To fatten, as slaves for sale.

măn'-gō-steēn, măn'-gō-stăn, *s.* [Malay *mangostans,* the name of the fruit. (*Laurent Garcin,* M.D., F.R.S.)]

Botany:

1. (*Of the two forms*): The fruit of *Garcinia Mangostana*, a fruit about the size of an orange, filled with a sweet pulp. The tree bearing it grows in Malacca, and is cultivated in South Tenasserim. The rind of the tree is used as an astringent in diarrhœa and dysentery, especially in the chronic diarrhœa of children.

2. (*Of the form* mangostan): *Amaranthus Mangostana.*

¶ *Wild mangosteen:*

Bot.: Embryopteris glutinifera.

mangosteen-oil, *s.* An oil obtained from *Garcinia indica.*

măn'-gō-stĭn, *s.* [Eng. *mangost(ana); -in* (*Chem.*).]

Chem.: $C_{29}H_{22}O_5$. A golden yellow crystalline body contained in the husk of the fruit of *Garcinia Mangostana.* The dried husks are boiled in water to remove the tannin, and then treated with hot alcohol. On evaporating the alcoholic solution, mangostin is deposited as a yellow crystalline substance, destitute of taste and smell. It is insoluble in water, but soluble in alcohol and ether, forming neutral solutions. It melts at 190°, without loss of water, to a dark-coloured liquid, which solidifies on cooling to an amorphous mass. It reduces gold and silver from their solutions, but is not precipitated by any metallic salt, excepting basic acetate of lead. The precipitate thrown down by the lead salt appears to have the formula $4C_{29}H_{22}O_5{\cdot}5Pb_2O$.

mañgue, *s.* [Native name.]

Zool.: Crossarchus obscurus. This single species of its genus is from tropical Africa. It is much smaller than the Mampelon, not exceeding fifteen inches from snout to root of tail, which is about eight inches. The body is thick and stout, the fur brown, lighter on the head; the ears short, the snout long, flexible, and projecting, like that of the Coati. The secretion from the anal glands is extremely fetid.

măn-goûste', *s.* [Fr., from *mungoos,* the name of the animal in various Indian languages.]

Zool.: Herpestes (*Viverra*, Linn.) *ichneumon.* [ICHNEUMON.]

măn'-grōve, *s.* [Malay *manggi, manggi.*]

Botany:

1. *Sing.: Rhizophora Mangle.* It has aerial roots. It covers immense tracts of coast within the tropics, rooting down to low water mark. The seed germinates on the tree, sending down roots into the water.

2. *Pl.:* The order Rhizophoraceæ (q.v.).

¶ Black or Olive Mangrove is *Avicennia tomentosa.* (*Treas. of Bot.*) The Brazil or White Mangrove is *Avicennia tomentosa* (*Paxton*), though sometimes that name is given to *Laguncularia racemosa.* (*Treas. of Bot.*)

mangrove-bark, *s.*

Bot. & Comm.: The bark of *Rhizophora mucronata, Bruguiera gymnorhiza, Avicennia officinalis, Ceriops candolleana, C. Roxburghiana,* and *Kandellia Rheedii.* They are valuable for tanning. (*Prof. Watt.*)

mangrove-hen, *s.*

Ornith.: Rallus longirostris, a South American and West Indian bird. Above it is of a faint ash-colour, with the chin nearly white; beneath it is white with a ferruginous tint.

mān'-ġŷ, *mān'-ġlē, *maunge, *a.* & *s.* [Fr. *mangé* = eaten, pa. par. of *manger* = to eat.]

A. *As adj.:* Infected with the mange; scabby, mean.

"Away, thou issue of a *mangy* dog."
Shakesp.: Timon of Athens, iv. 3.

***B.** *As subst.:* Mange.

"The dog whose *mangy* eats away his haire."
Stapylton: Juvenal, viii. 42.

măn-hā'-dĕn, *s.* [MENHADEN.]

măn'-hā-tĕr, *s.* [Eng. *man,* and *hater.*] One who hates man or society; a misanthrope.

"Rousseau, of Geneva, a professed *manhater,* or more properly speaking, a philosopher enraged with more than half of mankind."—*Goldsmith: On Polite Learning,* ch. viii.

măn'-heīm, *s.* [MANNHEIM.]

măn'-hōle, *s.* [Eng. *man,* and *hole.*] A hole in a cesspool, drain, iron boiler, tank, or a recess in an electric subway, or again a chamber or compartment of an iron ship, designed to allow the entrance of a man for examination, cleansing, and repairs. In boilers and tanks it is usually secured by a bridge and bolt, so as to render it water, steam, or air tight, as the case may be. In drains, the cover is a lid with a stink-trap joint.

manhole-door, *s.* The cover or lid of a manhole in a boiler or tank.

măn'-hoŏd, *man-hode, *s.* [Eng. *man; -hood.*]

1. Human nature, as opposed to a divine or spiritual nature or being.

2. The state or quality of being a man, as opposed to the state or condition of one of the lower animals.

3. The state or quality of being a man as opposed to a woman; the opposite of *womanhood.*

"Fit you to your *manhood.*"
Shakesp.: Cymbeline, iii. 4.

4. The state or quality of being a man as opposed to a boy or child; the state of being an adult male.

"Thy prime of *manhood* daring, bold, and venturous."
Shakesp.: Richard III., iv. 4.

* 5. The qualities that become a man; manly qualities: as, bravery, fortitude, honour, &c.

"And holds their *manhoods* cheap, while any speaks,
That fought with us upon Saint Crispian's day."
Shakesp.: Henry V., iv. 3.

mā'-nĭ-ą, *ma-nie, *s.* [Lat. *mania,* from Gr. μανία (*mania*) = madness, frenzy, from the same root as Gr. μένος (*menos*) = mind, spirit; Eng. *mind,* &c.]

I. *Ordinary Language:*

1. Madness, frenzy; intense excitement.

"A *mania* of which the symptoms were essentially the same with those of the *mania* of 1720."—*Macaulay: Hist. Eng.,* ch. xix.

2. A vehement desire or longing for something; a craze: as, To have a *mania* for collecting old china, &c.

II. *Mental Pathol.:* A disorder of the impulses or propensities ending in disordered intellect with excitement. The mind is usually a complete chaos, and kindness or affection only seems to irritate, instead of soothing. All the faculties are usually involved, differing thus from monomania. The most frequent forms are homicidal, suicidal, pyromania, kleptomania, nymphomania, and mania-a-potu.

mania-a-potu, *s.* Madness from drinking; delirium tremens.

*** măn'-ĭ-ą-ble,** *a.* [Fr., from *manier* = to handle, to manage; Lat. *manus* = the hand.] Manageable, tractable, docile.

mā'-nĭ-ăc, * mā'-nĭ-ăk, *a.* & *s.* [Fr. *maniaque,* as if from a Lat. *maniacus,* from *mania* = madness; Sp., Port., & Ital. *maniaco.*]

A. *As adj.:* Raving with madness; having a disordered intellect; mad, crazy, lunatic.

B. *As subst.:* One who has a disordered intellect; a madman, a lunatic.

"All their symptoms agree with those of epileptics and *maniacs,* who fancied they had evil spirits within them."—*Farmer: Demoniacs of the New Testament,* ch. i., § 8.

*** mą-nĭ'-ą-cąl,** *a.* [Eng. *maniac; -al.*] The same as MANIAC, *a.* (q.v.).

"Epilepsis and *maniacal* lunacies usually conform to the age of the moon."—*Grew: Cosmo. Sacra.*

măn-ĭ-căr'-ĭ-ą, *s.* [From Lat. *manicæ* = the long sleeves of a tunic, serving for gloves. From the appearance of the spathe.]

Bot.: A genus of Palms, tribe Borasseæ, and that section of it characterized by having pinnated leaves. When young, however, they are generally entire. *Manicaria saccifera,* the Bussu, is a palm from the lower part of the Amazon. Its stem is about fifteen or twenty feet, its leaves are occasionally thirty feet long. They are used by the Indians for thatching their huts, and the spathes are made into bags, whence the appropriate specific name saccifera.

măn'-ĭ-cāte, *a.* [Lat. *manicatus* = sleeved, from *manica* = a long sleeve; *manus* = the hand.]

Bot.: Interwoven in a mass, which can be easily separated from the surface, as *Cecalia canescens,* or *Buplcurum giganteum.* (*Lindley.*)

Măn-ĭ-chæ'-ăn, *a. & s.* [From Gr. Μανιχαίος (*Manichaios*); Lat. *Manichæus*, from *Mani* or *Manes*, an Oriental philosopher, said to have been born in Babylon about the beginning of the third century, and crucified circ. A.D. 276. Prof. Adolf Harnack says "that the name has not yet been explained, and that it is uncertain if the word be of Persian or Semitic origin."]

A. *As adj.:* Pertaining to, or in any way connected with the tenets of Manichæism (q.v.).

B. *As substantive:*

Church Hist. (Pl.): Originally, the followers of Mani or Manes; later, the word came to bear a much wider significance, including those who held any form of dualism, or the Gnostic notion of the hatefulness of matter which Manes adopted.

"The Pope's legate marched with a great army against the Albigenses, whom he called *Manichæans.*" —*Jortin: Eccles. Hist.* (ed. 1846), ii. 302.

Măn-ĭ-chæ'-ĭşm, † Măn-ĭ-cheē'-ĭşm, *s.* [Eng. *Manichæ(an)* (q.v.), † *Manichee*; *-ism.*]

Church Hist.: The religious system founded by Mani or Manes, who either claimed to be or was regarded by his followers as the Paraclete promised by Jesus (John xiv. 16, 17). The system is Dualism tempered with Gnosticism rather than a lapse from primitive Christianity. Mani postulated two primal beings, Light (God) and Darkness, under the similitude of kingdoms, and from the latter Satan and his angels were born. Adam owed his being to Satan. Continual conflict exists between the two kingdoms, and, when the Kingdom of Light is victorious, the world will be destroyed by fire, and the supremacy of God established. The ethics of the system were severely ascetic. The Manichæans were divided into two classes—the "elect" and the "hearers." The former were bound to observe the three seals: (1) Of the mouth, forbidding animal food, the use of wine and milk, and impure speech; (2) of the hands, forbidding the destruction of life, whether animal or vegetable; and (3) of the bosom, forbidding (probably) marriage (certainly offspring), since woman was regarded as the gift of the demons. The hearers were less strictly bound. The Old Testament was rejected, and only so much of the New taken as suited the peculiar tenets of the sect. They had a kind of hierarchy, fasting was practised, and among the later Manichæans rites existed analogous to baptism and the Eucharist. The sect spread rapidly in the East, extended to Northern Africa, where the persecution of the Vandals, in the latter part of the fifth century, stamped them out, and to Southern Europe, where some of their tenets reappeared later in the doctrines of the Paulicians, and later still in those of the Albigenses.

Măn-ĭ-cheēş', *s. pl.* [Manichæan.]

Ch. Hist.: The same as Manichæan, B.

"The *Manichees* rejected the Old Testament altogether."—*Addis & Arnold: Cath. Dict.*, p. 541.

măn'-ĭ-chord, măn-ĭ-cor'-dŏn, *s.* [O. Fr. *manicordon*; Fr. *manichordion*, from Gr. μονόχορδον (*monochordon*), from μόνος (*monos*) = alone, single, and χορδή (*chordē*) = a string; Ital. *monocordo*; Sp. & Port. *manicordio.*]

Music: An instrument resembling the spinet and harpsichord.

* **măn'-ĭ-cŏn,** *s.* [Lat., from Gr. μανικός (*manikos*) = pertaining to madness; μανία (*mania*) = madness.] A species of nightshade, so called from its juice being supposed to produce madness.

măn'-ĭ-cüre, *s.*

1. The professional care or treatment of the hands and nails. [Pedicure.]

2. One who manicures.

măn'-ĭ-cüre, *v.i. & t.*

A. *Intrans.:* To attend to the hands and the nails, treating the blemishes of the former, trimming and polishing the latter, &c.

B. *Trans.:* To care for (used only for the hands and nails.)

măn'-ĭ-dæ, *s. pl.* [Mod. Lat., &c. *man(is)* (q.v.); Lat. fem. pl. adj. suff. *-idæ.*]

Zool.: Pangolins. The second of the three families into which the order Edentata, in some classifications, is divided. It contains but one genus, Manis (q.v.).

* **manie,** *s.* [Mania.]

măn'-ĭ-fĕst, * **man-i-feste,** *a. & s.* [Fr. *manifeste*, from Lat. *manifestus* = manifest, evident; properly, that may be struck by the hand, palpable, from *manus* = the hand, and **festus*, from an obsolete verb, **fendo* (seen in *defendo, offendo*) = to strike; O. Sp., Port., & Ital. *manifesto*; Sp. *manifiesto.*]

A. *As adjective:*

1. Plain, open, not concealed; not doubtful or obscure; evident to the eye or obvious to the understanding; not difficult to be seen or understood.

"God was *manifest* in the flesh."—1 *Timothy* iii. 18.

* 2. Detected, convicted.

"You heard not he was false: your eyes beheld
The traitor *manifest*; the bribe revealed."
Dryden: Ovid; Metamorphoses xiii.

* 3. Followed by *of* before the crime or charge.

"Calistho there stood *manifest of* shame,
And, turned a bear, the northern star became."
Dryden. (*Todd.*)

B. *As substantive:*

* 1. *Ord. Lang.:* A public declaration, a manifesto.

"But you, authentic witnesses I bring,
Before the gods, and your ungrateful king,
Of this my *manifest.*"
Dryden: Homer; Iliad i. 473.

2. *Comm.:* A ship's manifest is a formal statement of a cargo for the use of the Custom-house officers, and usually contains a list of all the packages on board, with their distinguishing marks, numbers, and descriptions, all of which details are indicated by a printed form.

măn'-ĭ-fĕst, *v.t.* [Manifest, *a.*]

1. *Ord. Lang.:* To make manifest, clear, or plain to the eye or understanding; to show plainly, to make obvious; to display, to discover, to make known.

"For there is nothing hid, which shall not be *manifested.*"—*Mark* iv. 22.

2. *Comm.:* To exhibit the manifest of, or declare at the Custom-house: as, To *manifest* a cargo.

* **măn'-ĭ-fĕst-a-ble, * măn'-ĭ-fĕst-ĭ-ble,** *a.* [Eng. *manifest*; *-able, -ible.*] That may or can be manifested, or made clear or plain.

"There is no other way then this that is *manifestable* either by Scripture, reason, or experience."—*More: Def. of Moral Cabbala*, ch. iii.

măn-ĭ-fĕs-tā'-tion, *s.* [Lat. *manifestatio*, from *manifestus* = manifest; Fr. *manifestation*; Sp. *manifestacion*; Ital. *manifestazione.*] The act of manifesting, disclosing, or discovering that which is unseen, secret, or obscure; the act of making plain, evident, or clear to the eye or obvious to the understanding; display, revelation, exhibition, discovery.

Spenser: F. Q., II. iii. 1.

măn'-ĭ-fōld-lў, *adv.* [Eug. *manifold*; *-ly.*] In a manifold manner or degree; in many ways.

"The scarfs and the bannerets about thee did *manifoldly* dissuade me from believing thee a vessel of too great a burthen."—*Shakesp.: All's Well that Ends Well*, ii. 3.

măn'-ĭ-fōld-nĕss, *s.* [Eng. *manifold*; *-ness.*] The quality or state of being manifold; multiplicity.

* **măn'-ĭ-form** (1), *a.* [Lat. *manus* = the hand, and *forma* = shape.] Shaped like the hand.

* **man'-ĭ-form** (2) (a as ĕ), *a.* [Eng. *many*, and *form.*] Of many forms or shapes; multiform. (*C. Reade.*)

* **maniglion** (as mą-nĭl'-yŏn), *s.* [Ital. *maniglio* = a handle; dimin. from Lat. *manus* a hand.] [Manilio.]

Ordn.: One of two handles on the back of a piece of ordnance, cast after the German form. (*Bailey*).

măn'-ĭ-hŏt, măn'-ĭ-hŏc, *s.* [The Brazilian name of the plant.]

Botany:

I. A genus of Euphorbiaceæ, tribe Crotoneæ. *Manihot utilissima*, the *Jatropha manihot* of Linnæus, the manioc or mandioc, is a shrub about three feet high, extensively cultivated over the tropics. The root, weighing about thirty pounds, is full of deleterious juice, but being rasped, bruised, washed, and heated on iron plates, the poison is expelled, the harmless residue constituting Cassava (q.v.). The powder which floats off in the water when it is washed is a pure starch, and, when it settles down, becomes Tapioca. Arnotto was formerly regarded as an antidote to the poison of the manioc.

2. *Hibiscus Manihot.*

măn-ĭ-hŏt'-ĭc, *a.* [Eng., &c., *manihot*; *-ic.*] Contained in or derived from manihot (q.v.).

manihotic-acid, *s.*

Chem.: An acid said to have been obtained from the root of the *Jatropha manihot.* It crystallizes in prisms, having an acid taste, and forms neutral salts with lime, baryta, and magnesia.

măn'-ĭ-kĭn, măn'-a-kĭn, * măn'-nĭ-kĭn, *s.* [O. Dut. *mannekēn*, a double dimin. from *man* = man; Ger. *männchen.*]

I. *Ord. Lang.:* A little man; a dwarf, a pigmy.

"Forth rush'd the maddling *mannikin* to arms."
Beattie: Battles of the Pigmies & Cranes.

2. *Art, &c.:* An artificial figure representing the human body, and capable of being dissected to show the relative position and proportions of the parts of the body it is designed to illustrate. It is frequently of papier-maché, the detachable pieces being painted in imitation of the viscera and other organs. A manikin in illustration of obstetric subjects

has an elastic perineum, uterus, and fœtal head, so that the artificial parts may simulate the natural action of parturition.

măn'-ĭl, mą-nĭl'-ą (1), *s.* [MANILIO].

ma-nĭl'-i-ō, *s.* [Ital. *maniglio* = a handle, from Lat. *manus* = a hand.]

1. A ring or bracelet worn by Africans as an ornament for the legs or arms.

† **ma-nĭp'-ų-lā-tŏr-ў,** *a.* [Eng. *manipulat(e)*; *-ory*.] Of or pertaining to manipulation.

mā'-nĭs, *s.* [Lat. **manis*, from the dismal appearance of the animals, and because they seek their food by night.] [MANES.]

Zool.: Pangolin, or Scaly Ant-eater; a genus of edentate mammals, belonging to the group Effodientia (Diggers). There are no teeth, the ears small and indistinct, the tongue round and exsertile. The body and tail covered with horny imbricate scales; tail long. They can roll themselves into a ball, and are then protected by their scales, which are capable of inflicting pretty severe injuries. The genus is confined to Africa and India, and the best-known species are described in this dictionary under their popular names.

Măn'-ĭ-tō, Măn'-ĭ-toû, *s.* [Indian.] Among American Indians the name given to a spirit, god, or devil, or whatever is an object of religious awe or reverence. Two spirits are especially spoken of by this name: one, the spirit of good and life, the other the spirit of evil.

"Gitche *Manito*, the mighty,
He the Master of Life, was painted
As an egg, with points projecting
To the four winds of the heavens.
Everywhere is the Great Spirit,
Was the meaning of this symbol.
Mitche *Manito* the Mighty,
He the dreadful Spirit of Evil,
As a serpent was depicted,
As Kenabeek, the great serpent.
Very crafty, very cunning
Is the creeping Spirit of Evil,
Was the meaning of this symbol."
Longfellow: Hiawatha, xiv.

măn'-ĭ-trŭnk, *s.* [Lat. *manus*, (genit. *manī*) = the hand, and *truncus* = the trunk.]

Entom.: The anterior segment of the thorax in insects.

măn'-kĭll-ĕr, *s.* [Eng. *man*, and *killer*.] One who kills a human being; a manslayer, a murderer.

măn-kīnd', * man-kinde, * man-kynde, * man-kĭn, *s.* & *a.* [A.S. *mancynn*, from *man* = man, and *cynn* = kind, race. The *d* is excrescent.]

A. *As substantive:*

1. The human race; man taken collectively; man.

"The proper study of *mankind* is man."
Pope: Essay on Man, ii. 2.

2. The male part of the human race; men collectively, as distinguished from women.

"Thou shalt not lie with *mankind* as with womankind."—*Leviticus* xviii. 22.

* 3. Humanity, human feelings, manliness.

"O you, whose minds are good,
And have not forced all *mankind* from your breasts."
Ben Jonson: Sejanus, v. 10.

* **B.** *As adjective:*

1. Resembling man or men in form or nature; not womanly; unwomanly, masculine, bold.

"So, so, 'tis as 't should be, are women grown so *mankind*? Must they be wooing?"—*Beaum. & Fl.: Woman Hater*, iii. 2.

2. Ferocious, strong.

măńks, *s.* & *a.* [MANX.]

* **măn'-lĕss,** *a.* [Eng. *man*; *-less*.]

1. Destitute of men.

"The world was void . . .
Seasonless, herbless, treeless, *manless*, lifeless."
Byron: Darkness.

2. Not manned with men.

"It was no more but a stratagem of fire-boats, *manless*, and sent upon them by the favour of the wind in the night-time."—*Bacon: Of a War with Spain.*

3. Unbecoming a man; unmanly, base, cowardly, mean.

* **măn'-lĕss-lў,** *adv.* [Eng. *manless*; *-ly*.] In an unmanly or inhuman manner; inhumanly, cruelly.

"She saw her Hector slain, and hound
T' Achilles chariot; *manlessly* drag'd to the Grecian fleet." *Chapman: Homer; Iliad* xxii.

* **măn'-lĭke, * man-liche, * man-lyche,** *a.* [A.S. *manlic*.]

1. Resembling a man in form, shape, or appearance.

"Under his forming hands a creature grew,
Manlike, but different sex." *Milton: P. L.*, viii. 476.

2. Having the qualities or character proper to a man, as distinguished from a woman; manly.

"Elizabeth, the next, this falling sceptre hent;
Digressing from her sex, with *manlike* government,
This island kept in awe."
Drayton: Poly-Olbion, s. 17.

măn'-lĭ-nĕss, *s.* [Eng. *manly*; *-ness*.] The quality or state of being manly; the attributes or qualities proper to a man; dignity.

"Whilst her fond husband strove to lend relief
In all the silent *manliness* of grief."
Goldsmith: Deserted Village.

* **măn'-lĭng,** *s.* [Eng. *man*; dimin. suff. *-ling*.] A little man.

"A man [Horace] so gracious, and in high favour with the Emperour, as Augustus often called him his wittie *manling* (for the littleness of his stature)."—*Ben Jonson: Discoveries.*

măn'-lў, *a.* & *adv.* [Eng. *man*; *-ly*.]

A. *As adjective:*

1. Of or pertaining to a man.

"But, generous youth, sincere and free declare
Are you, of *manly* growth, his royal heir."
Pope: Homer; Odyssey i. 268.

2. Becoming or befitting a man; manlike, brave, firm, stout, undaunted, fearless.

"And scarce did *manlier* nerve uphold
The hero Zal in that fond hour."
Moore: Fire-Worshippers.

3. Having the qualities or attributes proper to men; brave, stout, strong.

"Now, clear the ring, for, hand to hand,
The *manly* wrestlers take their stand."
Scott: Lady of the Lake, v. 23.

* **B.** *As adv.:* Like a man; manfully, courageously, boldly, fearlessly.

"The tune goes *manly*." *Shakesp.: Macbeth*, iv. 3.

măn'-ną, *s.* [Gr. μάννα (*manna*); Heb. מָן (*man*), an abbreviation of מָן הוּא (*man hu*) = what is this? because the Israelites, when they first saw it, "said one to another, It is manna: for they wist not what it was." (Exod. xvi. 15, 31.)]

1. *Scrip.:* "A small, round thing, as small as the hoar frost," which lay upon the face of the wilderness every morning except on the Sabbath (Exod. xvi. 14, 26, 27), sent by Jehovah as bread rained from heaven (ver. 4, 5), and continued during the whole forty years of the Israelite wanderings in the wilderness (ver. 35). It melted when the sun became hot (ver. 21), and if left till next day bred worms and stank (ver. 20). An omer of it was preserved to show to future generations the nature of the food divinely provided in the desert. Attempts have been made to identify it with some of the other substances now named manna [2]. Some of these are purgatives rather than food; only two are esculents—viz., *Lecanora* (*Parmelia*) *esculenta* and *L. affinis*, two lichens. These are sometimes supposed to be manna. They are natives of Armenia, Asia Minor, the Sahara, and Algeria. [LECANORA.]

"And when the dew fell upon the camp in the night, the *manna* fell upon it."—*Numbers* xi. 9.

2. *Bot.:* A concrete discharge from the bark of *Fraxinus rotundifolia* and some other species of the genus, including in the south of Europe the Common Ash, *F. excelsior*. The sweetness is due to the presence not of sugar, but of mannite (q.v.). A kind of manna is produced by a species of Camel's-thorn, and is obtained by shaking the branches. It is found only in Persia and Bokhara, not in India, Arabia, or Egypt. *Eucalyptus mannifera*, an Australian tree, exudes a substance like manna, but less nauseous.

¶ Manna of Briançon is an exudation from the Common Larch. Manna of Mount Sinai is an exudation produced by the puncture of an insect, *Coccus manniparus* on *Tamarix mannifera*. The sweetness arises not from mannite, but from sugar. In Persia a similar insect produces a kind of manna on *T. gallica*. Poland manna is *Glyceria fluitans*.

3. *Chem.:* A saccharine juice which exudes from certain species of ash, chiefly *Fraxinus*

ornus, found growing in the south of Europe and in Asia Minor. It has an odour resembling that of honey, and tastes nauseously sweet, with a slight acridity. It is soluble in water and alcohol, and its aqueous solution readily undergoes fermentation, yielding a liquid with a peculiar odour and containing butyric acid. The analysis of manna shows it to consist of manna-sugar, mucilage, a reddish-brown resin, a sweet gum, and not more than four per cent. of inorganic matter.

4. *Pharm.:* Manna, the exudation from the incised bark of *Fraxinus rotundifolia* and *F. ornus*, is a very mild laxative, suitable for children. It is mixed also with some purgatives like senna, but tends to produce flatulence and griping. (*Garrod.*)

manna-ash, *s.*

Bot.: Ornus europœa or *Fraxinus ornus*. It grows on the skirts of mountains in Calabria. Between the middle of June and the end of July the manna gatherers make an incision in the bole of the tree, which they deepen the second day, inserting a maple leaf to receive the gum. Sometimes bits of reed or twigs are applied, on which the manna hardens in tubular pieces called canali; these being considered purer than the rest, fetch a higher price. (*Loudon.*)

manna-croup, *s.* The prepared seeds of *Glyceria fluitans*. [Glyceria.]

manna-seeds, *s. pl.*

Bot.: Glyceria fluitans.

manna-trungebeen, *s.*

Bot.: A kind of manna found in Mesopotamia and the adjacent regions on *Hedysarum Alhagi*. (*Loudon.*)

mănned, * **măn'd**, *pa. par.* or *a.* [Man, *v.*]

A. *As pa. par.:* (See the verb).

B. *As adjective:*

1. Furnished or supplied with men.

* 2. Blocked up with men or bodies.

"So long till all the entry was with bodies *mand*.
Spenser: F. Q., VI. xi. 46.

măn'-nĕr (1), * **man-er**, * **man-ere**, *s.* [Fr. *manière*, from O. Fr. *manier* = habitual, accustomed to, from *manier* = to manage, to handle, from *main*; Lat. *manus* = the haud; Sp. *manera*; Port. *maneira*; Ital. *maniera*.]

1. The mode in which anything is done; mode of action; mode or way of performing, doing, or effecting; method, style.

"A resolution condemning the *manner* in which his accounts had been kept."—*Macaulay: Hist. Eng.*, ch. xxiv.

2. The customary or characteristic style of acting or conducting one's self; habitual style, bearing, or conduct; use, custom.

"Paul, as his *manner* was, went in unto them."—*Acts* xvii. 2.

3. The characteristic style of writing or thought in an author, or the characteristic peculiarities of an artist.

4. (*Pl.*): General mode of life or living; conduct.

"Morals and *manners* were subjected to a code resembling that of the synagogue."—*Macaulay: Hist. Eng.*, ch. i.

5. (*Pl.*): Behaviour, carriage, deportment; especially ceremonious, polite, or respectful deportment; civility, politeness, breeding.

"I dare your worst objections: if I blush,
It is, to see a nobleman want *manners*."
Shakesp.: Henry VIII., iii. 2.

6. Sort, kind, fashion.

"What *manner* of man is this, that even the wind and the sea obey him?"—*Mark* iv. xl.

7. Certain degree, fashion, measure, or sense.

"It is in a *manner* done already;
For many carriages he hath dispatch'd
To the sea-side."
Shakesp.: King John, v. 7.

¶ *By any manner of means:* By any kind of means; by any means. (*Colloq.*)

măn'-nĕr (2), *s.* [Mainour.]

măn'-nĕred, *a.* [Eng. *manner*; *-ed.*]

1. *Ord. Lang.:* Having manners, carriage, or deportment; disposed, minded, affected.

"[It] shall make your lord
That which he is, new o'er: and he is one
The truest *manner'd*."
Shakesp.: Cymbeline, i. 2.

2. *Art:* Exhibiting or characterized by the peculiar style or manner of an author or artist; exhibiting mannerism.

"A *mannered* piece, showing silvery evening twilight on a pool and dancing in the shadow."—*Athenæum*, April 1, 1882.

* **măn'-nĕr-hood**, *s.* [Eng. *manner*; *-hood.*] Manner, way, custom.

"This did wonderfully concerns the might and *mannerhood* of the kingdome."—*Bacon: Henry VII.*, p. 74.

măn'-nĕr-ĭşm, *s.* [Eng. *manner*; *-ism.*] Adherence to the same manner; tasteless uniformity; adherence to a peculiar style or manner; a characteristic mode of action, bearing, or treatment carried to excess.

"*Mannerism* is pardonable, and is sometimes even agreeable, when the manner, though vicious, is natural."—*Macaulay: Essays; Boswell's Johnson.*

† **măn'-nĕr-ĭst**, *s.* [Eng. *manner*; *-ist.*] One who adheres to a peculiar style or manner; one addicted to mannerism; one who follows one uniform and unvaried style or manner, whether natural or copied.

"He sometimes succeeded well, though a strong *mannerist*."—*Walpole: Anecdotes of Painting*, vol. iv., ch. iii.

măn'-nĕr-lĭ-nĕss, *s.* [Eng. *mannerly*; *-ness.*] The quality or state of being mannerly, civil, or polite in behaviour or deportment; politeness, civility, complaisance.

"Others out of *mannerliness* and respect to God, though they deny this universal soul of the universe, yet they devised several systems of the universe."—*Hale: Orig. of Mankind*, p. 34.

măn'-nĕr-lў, *a.* & *adv.* [Eng. *manner*; *-ly.*]

A. *As adj.:* Having or showing good manners; polite, civil, courteous; not rude or vulgar.

"*Mannerly* devotion shows in this."
Shakesp.: Romeo & Juliet, I. 5.

B. *As adv.:* In a mannerly manner; politely, civilly, courteously; with civility or politeness.

"We'll *mannerly* demand thee of thy story."
Shakesp.: Cymbeline, iii. 6.

măn'-nĕrş, *s. pl.* [Manner, *s.*]

* **manners-bit**, *s.* A portion of a dish left by guests that the host may not believe himself reproached for failure to make sufficient provision.

* **măn'-nĕr-sŏme**, *a.* [Eng. *manners*; *-some.*] Mannerly, polite, well-behaved.

"Mary was obliged to bite her tongue to keep it in any way *mannersome*."—*Blackmore: Cripps the Carrier*, ii. 96.

Mănn'-heĭm, Măn'-heĭm, *s.* [See def.] The name of a town in Baden, where the substance described below was first made.

Mannheim-gold, *s.* A brass used by jewellers, as an imitation of gold. Copper, 3; zinc, 1; tin, a small quantity.

măn'-nĭde, *s.* [Eng. *mann(itc)*; suff. *-ide.*]

Chem.: $C_6H_{10}O_4 = C_6H_{14}O_6 - 2H_2O$. A compound obtained by boiling mannite with butyric acid. It is a syrupy liquid, which is at first sweet to the taste, but afterwards bitter. It is very soluble in water and in absolute alcohol, and differs from mannitan in being much more volatile, evaporating rapidly at 140°.

măn'-nĭ-kĭn, *s.* [Manikin.]

măn'n-ĭng, *s.* [Eng. *man*; *-ing.*]

1. The act of furnishing or supplying with men: as, the *manning* of a ship.

2. A day's work of a man.

† **măn'-nĭsh**, * **măn'-ĭsh**, * **mann-ishe**, *a.* [Eng. *man*; *-ish.*]

1. Having the nature or qualities of man; proper to the human species; human.

"But yet it was a figure
Most liche to *mannisshe* creature."
Gower: C. A., vi.

2. Resembling a man as distinguished from a woman; hence, bold, masculine.

"The horrible mistaks of adopting the *rôle* of a *mannish* woman."—*Literary World*, March 27, 1885, p. 296.

3. Putting on or simulating the character or appearance of manhood.

"We'll have a swashing and a martial outside,
As many other *mannish* cowards have."
Shakesp.: As You Like It, i. 3.

4. Proper or peculiar to man; characteristic of man; human.

"To don sinne is *mannish*, but cerces for to persevere long in sinne is worke of the divel."—*Chaucer: Tale of Melibeus.*

5. Characteristic of the age of manhood; manly.

"And let us, Polydore, though now our voices
Have got the *mannish* crack, sing him to the ground."
Shakesp.: Cymbeline, iv. 2.

* **măn'-nĭsh-lў**, *adv.* [Eng. *mannish*; *-ly.*] In a mannish manner; like a man.

* **măn'-nĭsh-nĕss**, * **măn'-ĭsh-nĕsse**, *s.* [Eng. *mannish*; *-ness.*] The quality or state of being mannish; masculineness, boldness.

"But, alas! the painted faces, and *manishnesse*, and monstrous disguisednese of ons sex."—*Bp. Hall: Impresse of God.*

măn'-nĭ-tăn, *s.* [Eng. *mannit(e)*; suff. *-an.*]

Chem.: $C_6H_{12}O_5 = C_6H_8(OH)_4O$. A syrup with a slightly sweetish taste, obtained by heating mannite to 200°, or by boiling it with concentrated hydrochloric acid. It is very soluble in water and alcohol, insoluble in ether. By long contact with water, or more quickly, by boiling with baryta water, it is reconverted into mannite. Its specific rotatory power for the transition tint is $(a)_j + 36{\cdot}5$.

măn'-nĭ-tāte, *s.* [Eng. *mannit(ic)*; *-ate.*]

Chem.: A salt of mannitic acid.

măn'-nīte, *s.* [Eng. *mann(a)*; suff. *-ite.*]

Chem.: $C_6H_{14}O_6 = C_6H_8(OH)_6$. Mannitol, Sugar of Manna, Sugar of Mushrooms. A sugar very widely disseminated in the vegetable kingdom, occurring in the leaves of *Ligustrum vulgare*, in numerous bulbs, in fungi, in sea-weeds, in the sap of the apple and cherry-trees, limes, &c. It is most readily obtained from manna by treating it with boiling alcohol, filtering, and allowing the alcoholic solution to crystallize. From alcohol it crystallizes in fine silky needles; from water in large transparent rhombic prisms. It has an intensely sweet taste, is soluble in cold water, very soluble in boiling water, but insoluble in ether. It melts between 160° and 170°, and boils at 200°, distilling with very little decomposition. Mannite may be prepared artificially from grape sugar by the action of hydrogen evolved by sodium amalgam.

măn-nĭt'-ĭc, *a.* [Eng. *mannit(e)*; suff. *-ic.*] Derived from or contained in mannite (q.v.).

mannitic-acid, *s.*

Chem.: $C_6H_{12}O_7 = C_5H_6(OH)_5{\cdot}CO{\cdot}OH$. A monobasic acid, isomeric with gluconic acid, produced together with mannitose, when a concentrated aqueous solution of mannite is oxidized by platinum black. It is a colourless gummy mass, soluble in water and alcohol, almost insoluble in ether. It forms salts, which contain two equivalents of a metal, but these have not yet been obtained in the crystalline form.

mannitic-anhydride, *s.*

Chem.: $C_{12}H_{26}O_{11} = \left.\begin{matrix}(C_6H_4)^{vi}\\(C_6H_8)^{vi}\\H_{10}\end{matrix}\right\} O_{11}$. Mannitic ether. A slightly yellowish compound, having the consistence of turpentine, formed by heating mannite with water in a sealed tube to 280° for three hours. It has a bittersweet taste, is very soluble in water and alcohol, but insoluble in ether. It is unfermentable, lævogyrate $(a)_j = -5{\cdot}59$, and does not reduce potassio-cupric solution. It is a true ether of mannite.

mannitic-ether, *s.* [Mannitic-anhydride.]

măn'-nĭ-tŏl, *s.* [Mannite.]

măn'-nĭ-tōne, *s.* [Eng. *mannit(e)*; *-one.*]

Chem.: $C_6H_{12}O_5$. A crystalline body, isomeric with mannitan, prepared by heating mannite with water in a sealed tube for three hours to 180°. It has a sweet taste, is soluble in water and alcohol, does not reduce copper solutions, and has a specific rotatory power $= (a)_j - 25$.

măn'-nĭ-tōse, *s.* [Eng. *mannit(e)*; *-ose.*]

Chem.: $C_6H_{12}O_6 = C_6H_7(OH)_5O$. An uncrystallizable sugar, isomeric with glucose, produced by the oxidation of mannite in contact with platinum black. It is soluble in water and alcohol, is fermentable, but has no action on polarized light.

manœuvre (as **mą-nô'-vĕr**), *s.* [Fr. = a work of the hand, a manœuvre, from Low Lat. *manuopera*, *manopera*, from Lat. *manu* = with the hand, and *opera* = work; *operor* = to work; Lat. *opus* (genit. *operis*) = work; Sp. *maniobra* = handiwork; *maniobrar* = to work with the hands, to manœuvre; Ital. *manovra* = the working of a ship; *manoviare* = to steer a ship.]

1. A regulated movement, evolution, or change of position, as of a body of troops, a number of ships, &c.; a military or naval evolution or movement for the purpose of distributing the forces in the best manner to meet the enemy.

"This bold and masterly *manœuvre* proved decisive." —*Belsham: Hist. Great Britain* (April 8, 1782).

2. An artful, adroit, or skilful move, proceeding or action; skilful management.

"By which *manœuvre* I took the credit of having travelled like a gentleman."—*Observer*, No. 93.

3. A silly affected trick to attract notice. (*Scotch.*)

manœuvre (as **mą-nō'-vẽr**), *v.t.* & *i.* [MANŒUVRE, *s.*]

A. *Intransitive:*

1. To perform manœuvres; to move or change positions amongst troops or ships for the purpose of securing advantage in attack or defence, or in military exercises for training and discipline.

2. To manage or contrive matters with address, art, or skill; to employ intrigue or stratagem to effect a purpose.

B. *Trans.:* To cause to perform manœuvres or evolutions; to change the positions of in manœuvres.

"Sir George Rodney . . . now *manœuvred* the fleet with such skill, as to gain the windward of the enemy." —*Belsham: Hist. of Great Britain* (April 8, 1782).

manœuvrer (as **mą-nō'-vrẽr**), *s.* [Eng. *manœuvr(e)*; *-er.*] One who manœuvres or intrigues.

"This charming widow Beaumont is a *manœuvrer*." —*Miss Edgeworth: Manœuvring*, ch. i.

mą-nŏm'-ĕ-tẽr, *s.* [Gr. μανός (*manos*) = thin, rare, not dense; and μέτρον (*metron*) = a measure.] An instrument for measuring the elastic force of gases or steam. It consists of a graduated tube in which a body of confined air is compressed by the gas or steam under experimental test, a body of mercury intervening between the air in the tube and the gas or steam whose elastic force is to be ascertained. The tube containing the confined air, of a certain volume at a given temperature, is maintained at the said temperature by a bath, and is tested for the graduation of the tube by means of a column of mercury. It is then ready for the connection by a tube with the reservoir or boiler which contains the gas or steam whose elastic force is to be ascertained. A steam-gauge. Called also a manoscope.

măn-ō-mĕt'-rĭc, măn-ō-mĕt'-rĭc-ąl, *a.* [Eng. *manometer*; *-ic*, *-ical.*] Of or pertaining to a manometer; made or determined by the manometer: as, *manometric* observations.

măn'-ŏr, * man-er, * man-ere, * man-oire, * man nor, * man-our, *s.* [O. Fr. *manoir*, *maneir*, *maner* = a manor-house, a mansion; prob. a place to dwell or abide in, from O. Fr. *manoir*, *maneir* = to dwell, Lat. *maneo* = to remain, to dwell.]

* **I.** *Ord. Lang.:* A dwelling, a residence, a habitation.

"Trouth himself over al and al
Had chose his *maner* principall
In her, that was his resting place."
Chaucer: Dreame.

II. *Technically:*

1. *Eng. Law:* A lordship or barony held by a lord and subject to the jurisdiction of a court-baron held by him.

"A *manor*, manerium, a manendo, because the usual residence of the owner, seems to have been a district of ground, held by lords or great personages; who keep in their own hands so much land as was necessary for the use of their families, which were called terræ dominicales, or demesne lands, being occupied by the lord or dominus manerii and his servants." —*Blackstone: Commentaries*, bk. ii., ch. 6.

2. *Amer. Law:* A tract of land occupied by tenants who pay a fee-farm rent to the proprietor, sometimes in kind, and sometimes perform certain stipulated services. (*Burrill.*)

manor house, manor-seat, *s.* The house or mansion attached to a manor.

mą-nōr' ĭ-ąl, * mą-nēr'-ĭ-ąl, *s.* [Eng. *manor*; *-ial.*] Of or pertaining to a manor.

"This tenure is also usually embarrassed by the interference of *manorial* clahus." —*Paley: Moral Philosophy*, bk. vi., ch. xl.

măn'-ō-scōpe, *s.* [Gr. μανός (*manos*) = thin, rare, not dense, and σκοπέω (*skopeō*) = to see, to observe.] The same as MANOMETER (q.v.)

mą-nŏs'-cō-pỹ, *s.* [MANOSCOPE.]

Phys.: That branch of physics which deals with the determining of the density of vapours and gases.

* **mą-nō'-vẽr-ỹ,** *s.* [MANŒUVRE.]

Law: A device or manœuvring to catch game illegally.

* **măn'-quĕll-ẽr,** *s.* [A.S. *mancwellere*, from *man* = man, and *cwellan* = to kill.] A mankiller or mauslayer; a murderer.

* **măn'-quĕll-ĭng,** *s.* [MANQUELLER.] The act of killing a man; murder, homicide.

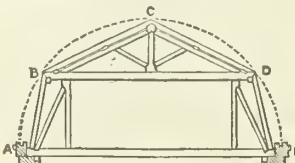
"Here are shewed li. manera of *manquelling*, one done wyllingly and of set purpose, the other vnwyllingly." —*Deuteronomy*, xix. (1551.)

* **măn'-rĕd, * măn'-rĕnt,** *s.* [A.S. *manrede*, from *man* = man; suff. *-red*, *-rede* = state, as in kin*dred*, hat*red*.]

Scots Law: Personal service or attendance. It was the token of a species of bondage, whereby free persons became bondsmen or followers of those who were their patrons or defenders.

măn'-sard, *s.* [The name of a French architect, died 1666, by whom this style of roof was invented.]

Arch.: A style of roof, also called the French curb, or hip-roof. It was designed to make



MANSARD-ROOF.

Four pieces of timber connected at points A B C D E, and strengthened by tie-beams A E and B D.

the attics available for rooms, in consequence of a municipal law limiting the height of front walls in Paris.

mănse, *s.* [Low Lat. *mansa* = a farm, from *mansus*, pa. par. of *maneo* = to remain.]

* 1. A house or dwelling with or without land.

2. The dwelling-house reserved or built for a Presbyterian minister. (*Scotch.*)

"To grip for the lucre of foul earthly preferment, sic as gear and *manse*, money and victual."—*Scott: Heart of Mid-Lothian*, ch. xliii.

* ¶ *Capital manse:* A manor-house, a lord's court.

măn'-sẽr-vant, *s.* [Eng. *man*, and *servant.*] A male servaut.

"But the seventh day is the sahbath of the Lord thy God: in it thou shalt not do any work, thou, nor thy son, nor thy daughter, thy *manservant*, nor thy maidservant, nor thy cattle, nor thy stranger that is within thy gates."—*Exodus* xx. 10.

măn'-sion, * man-si-oun, *s.* [O. Fr. *mansion* = a dwelling-place, from Lat. *mansionem*, accus. of *mansio* = an abiding, a place of abode, from *mansus*, pa. par. of *maneo* = to remain, to dwell; Ital. *mansione*; Fr. *maison.*]

1. A dwelliug-house, a place of residence; specif., applied to a house of considerable size and pretension.

"And in that *mansion* children of his own,
Or kindred, gathered round him."
Wordsworth: Excursion, bk. vii.

And in one grave their *mansions* keep."
Denham: On Mr. Abraham Cowley.

mansion-house, *s.*

1. The house in which one resides; an inhabited house.

"The place must be, according to Sir Edward Coke, a *mansion-house*; and, therefore, to account for the reason why breaking open a church is burglary, . . ." he qualifly observes that it is *domus mansionalis Dei.*" —*Blackstone: Comment.*, bk. iv., c. 16.

2. A manor-house.

"This party purposing in this place to make a dwelling, or, as the old word is, his *mansion-house*, or his manor-house, did devise how he might make his land a complete habitation to supply him with all maner of necessaries."—*Bacon: Use of the Law.*

¶ *The Mansion House:* The title given to the official residences of the Lord-Mayors in London and Dublin.

* **măn'-sion,** *v.t.* [MANSION, *s.*] To dwell, to remain, to abide.

"As also the rest of the creatures *mansioning* therein."—*Mede: Paraphrase of St. Peter* (1642), p. 16.

* **măn'-sion-ąr-ỹ,** *a.* & *s.* [Eng. *mansion*; *-ary.*]

A. *As adj.:* Resident, residing: as, a *mansionary* canon.

B. *As subst.:* (See extract).

"They might be perhaps the habitations of the *mansionaries* or keepers of the Church."—*Archæologia*, xiii. 293.

* **măn'-sion-rỹ, * man-son-ry,** *s.* [Eng. *mansion*; *-ry.*] Abode or abiding in a place.

"The temple-haunting martlet does approve,
By his loved *mansionry*, that the heaven's breath
Smells woolngly here." *Shakesp.: Macbeth*, i. 6.

măn'-slâugh-tẽr (*gh* silent), *s.* [Eng. *man*, and *slaughter.*]

1. *Ord. Lang.:* The slaughter or killing of a human being or beings; homicide.

"*Manslaughter* shall be held the highest pitch
Of human glory." *Milton: P. L.*, xi. 869.

2. *Law:* (See extract).

"*Manslaughter* is therefore thus defined, the unlawful killing of another without malice either express or implied: which may be either voluntarily, upon a sudden heat, or involuntarily, but in the commission of some unlawful act."—*Blackstone: Comment.*, bk. iv., ch. 14.

măn'-slāy-ẽr, * man-sle-or, *s.* [Eng. *man*, and *slayer.*] One who slays a human being; a mankiller, a homicide, a murderer.

"He was a *mansleor* fro the begynnyng."—*Wycliffe: Jon* 8.

măn'-stēal-ẽr, *s.* [Eng. *man*, and *stealer.*] One who steals or kidnaps human beings, generally for the purpose of selling them into slavery.

măn'-stēal-ĭng, *s.* [Eng. *man.* and *stealing.*] The act or crime of stealing or kidnapping human beings for the purpose of selling them into slavery.

măn'-suēte (u as w), * man-suette, *a.* [Lat. *mansuetus*, from *manus* = the hand, and *suetus*, pa. par. of *suesco* = to accustom.]

1. Tame, gentle; not wild, not ferocious.

"This holds not only in domestick and *manuete* birds: for then it might be thought the effect of circuration or institutiou, hut also in the wild."—*Ray: On the Creation.*

2. Gentle, kind, meek, courteous, mild.

"Thou lover true, thou maiden *manuete*."
Chaucer (?) Letter of Cupide.

* **măn'-suē-tūde (u as w),** *s.* [Fr., from Lat. *mansuetudo*, from *mansuetus* = mansuete (q.v.).]

1. Tameness, gentleness.

2. Geutleness, meekness, mildness.

"A vertue that cleped is *manuetude*, that is debonairtee."—*Chaucer: Persones Tale.*

* **măn'-swēar,** *v.i.* [A.S. *mánswerian.*] To swear falsely; to perjure oneself.

* **măn'-swŏrn,** *a.* [MANSWEAR.] Foresworn, perjured.

Mănt'-çhoô, *s.* [MANCHOO.]

* **măn'-teau** (pl. **măn'-teaus,** or **man-teaux**) (**eau, eaus, eaux** as **ō**), * **man-to,** *s.* [Fr.] A mantle, a cloak.

"Prescribe new rules for knots, hoops, *manteaus*, wigs." *Warton: Fashion, a Satire.*

măn'-teēle, *s.* [MANTLE, *s.*]

măn'-tęl, *s.* [O. Fr. *Mantel* and *mantle* are the same words, the difference in spelling being apparently made only to mark the difference in sense.] The ornamental facing and shelf arouud a fireplace.

mantel-piece, *s.* A beam across the opening of a fireplace, serving as a lintel to support the chimney-breast.

mantel-shelf, *s.* A shelf above the facing of a fireplace.

* **mantel-tree,** *s.* The lintel of a fireplace.

măn'-tĕl-ĕt, măn't'-lĕt, *s.* [A dimin. of *mantle* (q.v.).]

* **I.** *Ord. Lang.:* A small mantle or cloak.

"A *mantelet* upon his shouldres hanging,
Bret-ful of rubies red, as fire sparkling."
Chaucer: C. T., 2,165.

II. *Fortification:*

1. A movable blind constructed of planks, and sometimes plated, to cover a body of

pioneers and protect them from small shot; a sap-roller is now used.

2. A protection of woven rope, to protect gunners at embrasures.

***măn'-tĕl-ĭne,** *s.* [A dimin. from *mantle* (q.v.)]. A little mantle worn by knights at tournaments.

măn-tĕl'-lĭ-ą, *s.* [Named after Dr. Gideon Algernon Mantell (1790–1852); successively of Lewes, Brighton, and London, an eminent palæontologist and geologist.]

Palæont.: A genus of Cycads. *Mantellia nidiformis* is found in the Purbeck Dirt-bed. The specific name refers to the aspect they present when cracked, as they always are more or less, by the superincumbent strata. For the same reason quarrymen call them petrified birds' nests.

***măn'-tĭc,** *a.* [Gr. μαντικός (*mantikos*), from μάντις (*mantis*) = a prophet.] Pertaining or relating to prophecy or divination, or to a prophet or divine; prophetic.

"The *mantic* faculty belongs to the part of the soul settled in the liver."—*Robertson Smith: Old Testament in Jewish Church*, lect. x., p. 428.

măn'-tĭ-chor, măn'-tĭ-cor, *s.* [MANTIGER.]

măn-tĭ-cŏr'-ą, *s.* [Lat. *mantichora;* Gr. μαντιχώρας (*mantichōras*), μαντιχόρας (*manti-chŏras*), μαντιχώρος (*mantichōros*), μαντιχόρος (*mantichoros*) = the Persian mardkhora, a fabulous animal, mentioned by Ctesias, apparently compounded of a lion, a porcupine, and a scorpion, with a human head.]

Entom.: A genus of Cicindelidæ, Tiger-beetles. The species which are large, black, and wingless, inhabit the deserts of South Africa.

măn'-tĭ-dæ, măn'-tĭ-dēs, *s. pl.* [Mod. Lat. *manti(s);* Lat. fem. pl. adj. suff. *-idæ*, or masc. and fem. *-ides.*]

1. *Entom.:* A family of Orthopterous Insects, tribe Cursoria. The first pair of limbs are very peculiarly modified, the coxa being greatly elongated, while the femur bears on its curved underside a channel armed on each edge by strong movable spines. Into this groove the tibia closes like the blade of a penknife, the sharp serrated edges being adapted to cut and hold. Prothorax generally exceeding the mesothorax in length. Antennæ mostly setaceous. Elytra and wings in all. Chief genera: Mantis, Empusa, and Eremophila (q.v.).

2. *Palæont.:* Dr. Henry Woodward considers *Lithomantis carbonarius*, of the English Coal Measures, to belong to this family.

măn'-tĭ-ġĕr, măn'-tĭ-chor, măn'-tĭ-cor, *s.* [MANTICORA.]

1. *Her.:* A monster, with a human face, the body of a lion or tiger, a scorpion's tail, and long spiral horns.

2. *Zool.:* An unidentified (possibly imaginary) monkey.

"Near these was placed, by the black prince of Monomotapas's side, the glaring cat-a-mountain, and the man-mimicking *mantiger*."—*Arbuthnot & Pope.*

măn-tĭl'-lą, *s.* [Sp.]

1. A hood; a covering for the head and shoulders, worn also as a veil by Spanish ladies.

2. A light cloak or covering thrown over the dress of a lady.

măn'-tĭs, *s.* [Gr. μάντις (*mantis*) = (1) a soothsayer, (2) a kind of locust or grasshopper, with long, thin fore-feet, perhaps *Mantis religiosa.* (*Liddell & Scott.*)]

Entom.: Soothsayer, or Praying Insect; the typical genus of the family Mantidæ (q.v.). Two species occur in Southern Europe: *Mantis religiosa*, from two to two and a half inches in length, and *M. oratoria*, a smaller species. Others are found in the warmer regions of the world. The popular names by which they are known in different countries have reference to their supposed power of indicating the way to a lost traveller, and derive their force from the religious significance attributed to the slow and solemn motions of the insect. But the seemingly devotional attitude of the Mantis is that in which it watches for its prey, seizing unfortunate insects between its femur and tibia, thus maiming, and then devouring them. They are very pugnacious; the Chinese are said to keep them in cages, and match them against each other, as western nations used to do with game-cocks.

mantis-crab, mantis-shrimp, *s.*

Zool.: Squilla mantis. Its popular name is a translation of the scientific name given it by some writers, *Cancer mantis* (*digitalis*). [LOCUST-SHRIMP.]

mantis-shrimp, *s.* [MANTIS-CRAB.]

măn-tĭs'-ĭ-ą, *s.* [Named from the insect *mantis*, to which the flowers bear some resemblance.]

Bot.: ▲ genus of Zingiberaceæ. *Mantisia saltatoria*, Opera Girls' Mantisia, a plant introduced into greenhouses from the East Indies in 1808, derives its specific name from the fanciful notion that the flowers are like a dancing figure attached to a wire.

măn-tĭs'-pą, *s.* [MANTIS.]

Entom.: A genus of Neuropterous Insects, closely allied to the Hemerobiidæ, with which group some writers class them. They differ, however, from that group in the structure of the fore-legs, which are elongated and converted into raptorial organs like those of the Mantidæ (q.v.). The prothorax is also elongated, and the head is rather broad, with prominent eyes. The species, which are of moderate size and not very numerous, are found in all the warmer parts of the world. *Mantispa paganus* is common in Southern Europe.

măn-tĭs'-pĭ-dæ, *s. pl.* [Mod. Lat. *mantisp(a);* Lat. fem. pl. adj suff. *-idæ.*]

Entom.: A group of Neuropterous Insects erected for the reception of the genus Mantispa (q.v.).

măn-tĭs'-są, *s.* [Lat. = a worthless addition, a makeweight.]

Math.: The decimal part of a logarithm. Thus, the logarithm of 900 being 2·95424, the part ·95424 is the mantissa.

măn'-tle, *man-tel, *man-tell, *s.* [O. Fr. *mantel* (Fr. *manteau*) = a cloak, a mantel of a fireplace; from Lat. *mantellum* = a napkin, a means of covering, a cloak (fig.); *mantele, mantile* = a napkin, a towel; Low Lat. *mantum* = a short cloak; Ital. & Sp. *manto;* Fr. *mante* = a mantle; Dut., Dan., & Sw. *mantel;* Sp. *mantilla.*]

Ornithology:

1. *Sing.:* Any individual of the Manucodia, whether considered as a group embracing two genera, or as a separate genus.

2. *Plural:*

(1) As applied by Montbeillard (*Hist. Nat., Oiseaux*, iii. 192), the name was restricted to the King Bird-of-Paradise, and three allied species.

2) The Manucodia (q.v.).

"As with members of the Paradiseidæ generally, the midification of the *Manucodes* is still shrouded in mystery."—*Prof. Newton*, in *Encyc. Brit.* (ed. 9th), xv. 505.

măn-ụ-cō'-dĭ-ą, *s.* [Manucodiata.]

Ornith.: A group of birds either belonging or closely allied to the Paradiseidæ, and peculiar to the Papuan sub-region. The plumage is glossy steel-blue; the outer and middle toes are united for some distance, and there is an extraordinary convolution of the trachea in the males, to which the loud and clear voice of the birds is owing. Mr. Sharpe divides the Manucodia into two genera: Phonygama (q.v.) and Manucodia proper, of which four species are admitted. *Manucodia chalybeata* (*chalybea*), from the north-west, and *M. comrieï*, from the south-west of New Guinea; *M. atra*, widely distributed over the Papuan sub-region, and *M. jobiensis*, peculiar to the island whence it derives its specific name.

"The land is *manured*, either by pasturing the cattle upon it or by feeding them in the stable, and from thence carrying out their dung to it."—*Smith: Wealth of Nations*, bk. i., ch. xi., p. 307.

ma-nūre', *s.* [Manure, *v.*]

Agric. & Chem.: A term applicable to any material which may be used for accelerating vegetation or increasing the production of plants. The cultivation of plants, year after year, tends to exhaust the soil of its air-food and ash constituents. It becomes, therefore, necessary to replace these by addition of manure. This, to some extent, proceeds naturally by the absorption of air-food by the soil in the form of ammonia and carbonic acid, and also by the decomposition of the mineral matter of the soil under the influence of time and tillage. The air-food is supplied by nitrogenous matters, chiefly in the form of ammoniacal salts, and the ash constituents by the use of salts of phosphoric acid and potash, in the form of preparations from boue or in the use of a mineral phosphate, such as coprolites. Those substances which furnish both classes of food comprise guano, stable manure, fish, seaweed, refuse of towns, and artificial saline mixtures, &c. Generally speaking, phosphates are held to favour the production of a large root crop, and nitrogenous manures to increase the production of corn.

"Though many a load of marle and *manure* layd
Revived this barren leas, that erst lay dead."
Bp. Hall: Satires, bk. v., sat. 1.

manure-drag, *s.*

Agric.: An implement drawn by a horse, and having teeth which catch into a bunch of manure, and drag it to a place where it may be loaded or piled.

B. *As adj.:* Of or pertaining to the native inhabitants of New Zealand.

Maori-rat, *s.*

Zool.: A murine rodent, occurring in New Zealand; it is identical with the Black Rat (*Mus rattus*).

***maor'-mor (ao** as **a),** *s.* [Gael. *maer, maor* = a royal steward; *mor* = great.] A royal steward of high dignity and power, placed by

the King of Scotland over a province instead of a thanage, and exercising the office of royal deputy, enjoying a third part of its revenues.

ma-oū'-tĭ-ą, *s.* [Named after Emmanuel Le Maout.]

Bot.: A genus of Urticaceæ. *Maoutia Puya* is a shrub with very white leaves, growing in the Himalayas. It yields a strong fibre of good quality, used for making fishing-nets, nut-bags, twine, and cloth. (*Calcutta Exhibition Report.*)

măp, ***mappe,** *s.* [Fr. *mappemonde*, from Lat. *mappa mundi* = a map of the world; *mappa* = a napkin; Ital. *mappamondo.*]

1. *Lit.:* A representation of a portion of the earth's surface, or of a portion of the heavens upon a plane. There are, therefore, two kinds of maps, terrestrial and celestial. Terrestrial maps are of two kinds, those which represent portions of land and water together, which are properly called *maps*, and those which represent portions of the ocean, only indicating the directions of currents, soundings, anchorages, rocks, shoals, buoys, lighthouses, &c.; these are called hydrographical maps or charts. A map of the earth, or of a portion of the earth, generally shows the physical features of the country, as rivers, mountains, lakes, &c., the situation of towns, cities, &c., relatively to each other, and by means of the lines of latitude and longitude relatively to every other point on the earth's surface. Maps are also prepared for special purposes, as geological, statistical, ethnological, or historical *maps.* It being impossible to represent a spherical surface on a plane, so that the parts shall have to each other their proper relative positions, the representation is, in all cases, conventional. Various devices have been resorted to, each of which has its own peculiar advantages and disadvantages. A representation of the meridians and circles of latitude forms, in all cases, the skeleton or basis of every map of an extensive portion of the earth's surface, and it is upon a correct delineation of these that the accuracy of any map depends. The principal methods of projection are the orthographic, the stereographic, the globular, the conical, and the cylindrical or Mercator's projection, besides various combinations and modifications. In the first three cases the plane upon which the map is to be drawn is called the primitive plane, and is supposed to be passed through the centre of the earth. The various lines are projected upon this plane, by lines drawn through their different points and some fixed point, called the point of sight. Upon the location of the point of sight depends the peculiarities of the three methods of projection.

2. *Fig.:* A distinct and precise representation of anything.

map-holder, *s.* A frame for the display of maps or charts. In one form the maps are on an endless web of cloth; in another they are hung from separate rollers in the manner of window-blinds.

map-measurer, *s.* An instrument with a little wheel of known circumference, which is made to roll along a line and indicate its length, the number of revolutions being counted, and the fraction, if any, observed by reference to the pointer and graduated perimeter. [Opisometer, Perambulator.]

map-mounter, *s.* One who mounts maps by backing them with canvas, varnishing them, and fixing them on rollers.

măp, ***mappe,** *v.t.* [Map, *s.*]

1. *Lit.:* To draw or delineate a map or chart; to lay down in a map.

2. *Fig.:* To point out, describe, or set down accurately, generally followed by *out.*

"I am near to the place where they should meet, if Pisanio have *mapped* it truly."—*Shakesp.: Cymbeline*, iv. 1.

mā'-plc (1), *s.* [A.S. *mapulder, mapolder*, from *mapul* = maple, and *tréow* = tree; Ger. *maz-holder.*] The genus Acer (q.v.).

"Unmolested worked the women,
Made their sugar from the *maple.*"
Longfellow: Hiawatha, xiii.

¶ Of the Maples of the United States may be named *Acer striatum*, the Striped Bark Maple, which often forms great part of the undergrowth in woods, and *A. saccharinum*, the Sugar Maple, which abounds in the northern part of this country. Its wood is satiny in texture and is much used by cabinet-makers. When finely marked with undulating fibres it is called Bird's-eye Maple. *A. campestre* is the Common Maple of Europe. There are other common species.

maple-sugar, *s.*

Chem.: Maple saccharose. A coarse sugar, used by the inhabitants of the Northern States of America, obtained from the sugar-maple (*Acer saccharinum*), by boring a hole into the wood in the spring, and inserting a spout to convey the juice into a vessel placed for its reception. On boiling down the liquid, a dark-coloured crystalline mass is deposited. This sugar rarely finds its way into commerce.

***mā'-ple** (2), *s.* [Mop.] A little mop.

"As broade as ecullers' *maples.*"—*Nashe: Lenten Stuffe.* (Dedic.)

măpped, *pa. par.* [Map, *v.*]

***măp'-pẽr-ў,** *s.* [Eng. *map; -ery.*] The study or planning of maps or charts; bookish theory.

"They call this, bed-work, *mappery*, closet war."
Shakesp.: Troilus & Cressida, i. 3.

***măp'-pĭst,** *s.* [Eng. *map; -ist.*] A maker of maps.

"Learned *mappists* on a paper small
Draw (in abridgement) the whole type of all."
Sylvester: Little Bartas, 311.

mą-proû'-nĕ-ą, *s.* [Named by Aublet, probably from a Guiana name. (*Britten.*)]

Bot.: A genus of Euphorbiaceæ, tribe Hippomaneæ. *Maprounea brasiliensis* yields a fugitive black dye. A decoction of the root is given in derangements of the stomach.

maqui (as **măk'-wē),** *s.* [Native name.]

Bot.: Aristotelia, a Chilian shrub of the order Tiliaceæ, used for making musical instruments, the strings of which are formed of the tough bark. A wine made from the berries is prescribed in malignant fever.

mar, ***marre,** ***merre,** *v.t.* [A.S. *merran*, in comp. *ámerran, ámyrran* = to dissipate, to waste, lose, hinder, obstruct; *mirran* = to impede; *gemeurr* = an impediment; cogn. with O. Dut. *merren* = to stay, to retard; Dut. *marren* = to tarry; O. H. Ger. *marrjan* = to hinder, to disturb, to vex; Fr. *marri* = sad, vexed.] To injure, to spoil, to hurt, to damage, to disfigure.

"*Marring* all the festal mirth."
Scott: Lady of the Lake, ii. 8.

* **mar** (1), ***marr,** *s.* [Mar, *v.*] A blot, a blemish, an injury.

"I trust my will to write shall match the *marrs* I make in it."—*Ascham: To Edward Raven*, May, 1551.

* **mar** (2), *s.* [Mere.] A lake.

ma'-rą (1), *s.* [Patagonian-cavy.]

ma'-rą (2), *s.* [Icel. = a nightmare.]

Norse Mythol.: A demon who torments and tortures men with visions, and even crushes them to death. [Mare, 2.]

măr-ą-bôu', *s.* [Native African name.]

Ornith.: The popular name for at least two species of Storks of the genus Leptoptilus, the vent feathers of which were formerly much esteemed as ornaments, and for ladies' headdresses. *Leptoptilus argala* is the Asiatic marabou or Adjutant (q.v.). *L. Marabou*, a smaller species, is from tropical Africa, where it assists the vultures in consuming the filth of the negro villages. It is, if possible, uglier than its Asiatic congener, but its delicate vent feathers are equally valued.

măr-ą-boût', măr-ą-boôt', *s.* [Arab.] A Muhammadan who devotes himself to a religious life. He considers it a merit to fight for his faith. Many such exist in Northern Africa. They pretend to supernatural powers.

ma'-rąh, *s.* [Heb. = bitterness.]

1. *Lit.:* The name given to a place on the east of the Red Sea.

"They could not drink of the waters of *Marah*, for they were bitter: therefore the name of it was called *Marah.*"—*Exod.* xv. 23.

* 2. *Fig.:* Bitterness; bitter water.

"Slaked its thirst with *marah* of its tears."
Longfellow.

mą-rāi', *s.* [A native word.] A sacred inclosure or temple among the islanders of the Pacific Ocean.

mar'-ą-nāde, *v.t.* [Marinate.]

măr-ą-na'-thą, *s.* [Gr. Μαρανάθά (*Maranatha*); Aramaic מָרָן אֲתָא (*Maran atha*) = the Lord cometh.]

Scrip.: A term used by St. Paul, at the conclusion of his first Epistle to the Corinthians, in connection with an anathema. *Anathema Maranatha* = Let him be accursed at the coming of the Lord.

măr'-ąn-īte, *s.* [Etym. doubtful.]

Min.: The same as Chiastolite or Macle (q.v.).

mą-rănt', *s.* [Maranta.]

Bot. (Pl.): The name given by Lindley to the order Marantaceæ (q.v.).

mą-răn'-tą, *s.* [Named after B. Maranti, a Venetian physician and botanist, who died in 1554.]

Bot.: Marant, the typical genus of the order Marantaceæ (q.v.). *Maranta arundinacea, M. Allouya*, and *M. nobilis*, furnish arrowroot in the West Indies, and *M. ramosissima* in the East Indies. The split stems of *M. dichotoma*, a native of India and Burmah, are made into mats.

măr-ăn-tā'-çē-æ, *s. pl.* [Mod. Lat. *marant(a)*; Lat. fem. pl. adj. suff. *-aceæ.*]

Bot.: An order of Endogens, alliance Amomales. It consists of herbaceous tropical plants without aroma. There is often a tuberous rhizome, full of starch; the stem generally branched; the leaves are simple, sheathing with a single midrib, from which numerous veins diverge at an acute angle, running parallel to each other to the margin of the leaf; inflorescence a dense spike, a raceme, or a panicle either termiual or radical; flowers arising from spathaceous membranous bracts; calyx short, inferior; sepals three; corolla tubular, irregular, with the segments in two whorls, the outer three-parted, equal, the inner very irregular; stamens three, petaloid, only one fertile; anther one-celled; ovary one to three-celled; ovules one or many, erect; fruit capsular. Found in tropical America, Africa, and India. They are of economic value from the starch in which they abound. Known genera six, species 100. (*Lindley.*)

mą-răs'-cą, *s.* [Ital. = a kind of sour cherry, from Lat. *amarus* = bitter.] A small, black, wild, variety of cherry, from which maraschino is distilled.

măr-ąs-chī'-nō, *s.* [Ital. *marasca* = marasca (q.v.).] A delicate spirit or liqueur distilled from cherries; the best is from Zara in Dalmatia.

mą-răş'-mĭ-ŭs, *s.* [Mod. Lat. = pertaining to decay, from *marasmus* (q.v.).]

Bot.: A genus of fungi, akin to Agaricus. Some foreign species are finely coloured. *Marasmius Oreades* is the Champignon, which is eatable; *M. scorodonius* is used as a condiment.

mą-răş'-mō-līte, *s.* [Gr. μαρασμός (*marasmos*) = decaying; suff. *-lite* (*Min.*).]

Min.: A blende (q.v.) partially decomposed, and containing some free sulphur.

† **mą-răş'-mŭs,** *s.* [Gr. μαρασμός (*marasmos*) = decay.]

Pathol.: The wasting away of the body without obvious cause. Now it is assumed that this must be brought about by some local disease, and investigations are made to ascertain which it is.

măr-ąs-quē'-nō (**qu** as **k**), *s.* [Maraschino.]

Mą-rath'-ī, *s.* [The native name.] [Mahratta.] The language spoken by the Mahrattas. Called also Mahratta (q.v.).

"Second comes *Marathi* which remained a Prakrit till the twelfth or even thirteenth century."—*Beames: Comp. Gram. Aryan Lang. of India*, i. (1872), p. 120.

mą-răt'-tĭ-ą, *s.* [Named after L. F. Maratti, of Vallombrosa in Tuscany, who wrote upon ferns.]

Bot.: The typical genus of the order Marattiaceæ (q.v.). Hind says that the rhizomes of *Marattia alata* are eaten by the Sandwich Islanders in time of scarcity.

mą-răt-tĭ-ā'-çē-æ, *s. pl.* [Mod. Lat. *maratti(a)*; Lat. fem. pl. adj. suff. *-aceæ.*]

Bot.: The same as Danæaceæ (q.v.).

† **mą-râud',** *v.i.* [Fr. *marauder* = to beg, to play the rogue, from *maraud* = a rogue, a beg-

gar.] To rove in quest of plunder or booty; to pillage, to plunder.

"Their gain, their glory, their delight,
To sleep the day, *maraud* the night."
Scott: Marmion, v. 4.

ma-râud'-ẽr, *s.* [Eng. *maraud*; *-er.*] One who marauds; one who roves in search of plunder; a pillager, a plunderer.

"No labourer dared bring any thing for sale lest some *marauder* should lay hands on it by the way."—*Macaulay: Hist. Eng.*, ch. xii.

1. A Spanish copper coin, value less than one farthing sterling.

2. A Spanish gold coin, value about fourteen shillings sterling.

mar'-ble, *mar-bel, *mar-bre, *mar-bre-ston, *s.* & *a.* [Fr. *marbre*, from Lat. *marmorem*, accus. of *marmor* = marble; Gr. μάρμαρος (*marmaros*) = a glistening white stone, from μαρμαίρω (*marmairō*) = to sparkle, to glitter.]

A. *As substantive:*

I. *Ordinary Language:*

1. In the same sense as II. 2.

2. A column, tablet, pillar, &c., of marble or other stone, remarkable for some inscription or sculpture.

3. A little ball of marble, stone, clay, &c., used by children as a plaything.

"Nor fear'd the *marbles*, as they bounding flew."
Gay: Lamentation of Glumdalclitch.

II. *Technically:*

1. *Art:* A plate of stone used by painters; a slab on which raw colours are ground with a muller.

2. *Geol., Petrol., Sculp., & Building Stones:* A popular name for any limestone which is sufficiently hard to take a fine polish. (*Lyell.*) Any calcareous or even any other rock which takes a good polish, and is suitable for decorative or architectural purposes. (*Rutley.*) Fine marbles are very abundant in the United States, not only those adapted to building purposes, but statuary marble equal to that of Italy being found. Beautiful colored marbles are produced in Tenuessee and other states. Marble may be of one color, white or some other shade, of two colors closely mingled, or of many colors. Some contains shells, corals, &c. Some of the fossiliferous limestones furnish excellent marbles. For instance, the encrinital limestones of the Carboniferous formation have the fossils white in a dark gray or black matrix. Nonfossiliferous crystalline marbles consisting of sedimentary calcareous strata, altered by metamorphism, also furnish good marbles. The statuary marble of Italy may be of this character. [STATUARY MARBLE.] The purest kinds are used for statues, those less pure as building material. The Carrara and Parian marbles are of this type. Other marbles are the Verd Antique, the Fire Marble or Lunachelle, the Giallo Antico, Madreporic Marble, &c.

¶ (1) *Finished marble* is that which is ready for its place.

(2) *Polished marble:* [MARBLE-POLISHING].

(3) *Rough marble* is in the shape of blocks from the quarries.

(4) *Rough-hewn marble* is cut with the saw or squared with the stoue axe.

3. *Glass-man.:* A stone or iron plate on which glass is rolled to shape it; a marver.

4. *Printing:*

(1) A printer's imposing-stone.

(2) A style of colouring, for paper and book edges.

¶ (1) *Arundel* or *Arundelian marbles:* [ARUNDELIAN].

(2) *Elgin marbles:* A collection of bassorelievos and fragments of statuary brought from the Parthenon at Athens to England by Lord Elgin in 1814. They were afterwards purchased by the British Government, and are now in the British Museum. They consist chiefly of the metopes, representing for the most part the combats of the Centaurs and Lapithæ, and the statues or fragments of statues, which ornamented the tympana of the pediments of the Parthenon, or Temple of Minerva. To these were added the frieze from the temple of Nikê Apteros, a series of casts from the temple of Theseus, and the choragic monument of Lysicrates.

B. *As adjective:*

I. *Literally:*

1. Composed or consisting of marble.

"As o'er the *marble* courts of kings."
Moore: Light of the Harem.

2. Variegated, veined, or streaked like marble.

II. *Figuratively:*

1. Hard like marble; cold, insensible: as, a *marble* heart.

*2. Pure, pellucid.

"[He]. . . into the world's first region throws
Through the pure *marble* air his oblique way."
Milton: P. L., iii. 564.

¶ *Artificial Marble:* An indurated composition of gypsum, alum, isinglass, and colouring materials incorporated into a paste and moulded into form.

***marble-cutter**, *s.* One who cuts or hews marble; a workman in marble; a machine for cutting marble.

marble-edge, *s.*

Bookbind.: A mode of ornamenting the edges of bound books. [MARBLE-PAPER.]

marble-edged, *a.* Having the edges marbled, as a book, &c.

marble-handsaw, *s.* A blade without teeth, and having a block haudle at the back. It is used with sand for cutting slabs into pieces or slips.

***marble-hearted**, *a.* Having a cold, cruel heart; hard-hearted, insensible.

"Ingratitude! thou *marble-hearted* fiend,
More hideous, when thou shew'st thee in a child,
Than the sea-monster!" *Shakesp.: Lear*, i. 4.

marble-paper, *s.* Paper ornamented with a coloured pattern resembling marble; or ornamented by a process similar to that of marbling, with patterns bearing no analogy to those of marble, but assuming certain conventional forms, in which the colours are singularly blended and contrasted.

marble-rubber, *s.* A block or tray with a flat sole, moved above the marble slab with a combined rotary and reciprocating motion.

marble-scourer, *s.* A rubber for surfacing marble slabs.

mar'-ble, *v.t.* [MARBLE, *s.*] To variegate, stain, or vein like marble; to give an appearance of marble to.

mar'-bled (bled as **beld)**, *a.* [MARBLE, *v.*]

1. *Ord. Lang.:* Variegated, spotted.

"Those fine covers of books that, for their resemblance to speckled marble, are wont to be called *marbled*."—*Boyle: Works*, iii. 448.

2. *Bot., &c.:* Having the surface traversed by irregular veins of colour, like a block of marble.

marbled-beauty, *s.*

Entom.: Bryophila perla, a small whitish moth, dappled with bluish-gray.

marbled tiger-cat, *s.*

Zool.: Felis marmorata. Habitat, the Sikkim Himalayas, the hilly parts of Assam, Burmah, Malayana, and Java. Head and body from eighteen inches to two feet long; tail about fifteen inches. Dingy tawny to yellowish-gray, with loug, wavy, black spots, somewhat clouded or marbled; belly, yellowish-white; tail spotted and tipped with black.

marbled white-butterfly, *s.*

Entom.: Arge Galathea, a rare butterfly, the wings of which are creamy white, marbled and veined with black.

***mar'-ble-ize**, *v.t.* [Eng. *marble*; *-ize.*] To colour in imitation of variegated marble.

mar'-bling, *s.* [MARBLE, *v.*]

1. The act or process of staining, colouring, or variegating in imitation of marble.

2. Any marking resembling that of veined marble.

***mar'-bly**, *a.* [Eng. *marbl(e)*; *-y.*] Resembling marble in appearance or structure.

***mar-bul**, *s.* [MARBLE, *s.*]

marc (1), *s.* [MARK (1), *s.*] A weight of gold or silver; a money of account.

marc (2), *s.* [Fr., from Lat. *emarcus* = a kind of vine.] The refuse matter remaining after the pressure of fruit, as of grapes, olives, &c.

mar'-ca-site, * mar'-cha-site, *s.* [A word of Arabic origin; O. Ger. *marchasita*; Mod. Ger. *markasit.*]

Min.: This name formerly included all crystallized pyrites, but Haidinger, in 1845, confined it to the orthorhombic varieties. It is found either in crystals mostly twinned, or as globular or reniform masses with fibrous structure, and massive. Hardness, 6 to 6·5; sp. gr. 4·678 to 4·847. Lustre, metallic; colour, pale bronze yellow to greenish-gray; streak, grayish or brownish-black. Fracture uneven. Brittle. Compos.: as in pyrites, sulphur, 53·3; iron, 46·7; formula, FeS_2. The German mineralogists distinguish seven varieties, resulting mainly from their habit of crystallization: (1) Radiated (*Strahlkies*); (2) Cockscomb Pyrites (*Kammkies*); (3) Spear Pyrites (*Speerkies*); (4) Capillary Pyrites (*Haarkies*); (5) Hepatic Pyrites (*Leberkies*); (6) Cellular Pyrites (*Zellkies*); (7) Arsenical Pyrites, the same as KYROSITE (q.v.). The pyrites of sedimentary rocks mostly belongs to this species, and that of metamorphic and igneous rocks to Pyrites (q.v.). More prone to decomposition than pyrites. Occurs abundantly in clays of various formations, and in the chalk.

mar-ca-sīt'-ĭc, mar-ca-sīt'-ĭc-al, *a.* [Eng. *marcasit(e)*; *-ical.*] Of or pertaining to marcasite; of the nature of marcasite.

"The place that abounds with these *marchasitical* minerals."—*Boyle: Works*, iii. 333.

mar-căs'-sĭn, *s.* [Fr.]

Her.: A young wild boar.

mar'-çĕl-îne (1), *s.* [Fr., from Lat. *marceo* = to be weak or thin.]

Fabric: A thin silk tissue used for linings, &c., in ladies' dresses.

mar'-çĕl-îne (2), *s.* [Named after the place where found, San Marcel, Val d'Aosta, Piedmont; suff. *-ine* (*Min.*).]

Mineralogy:

1. The impure form of braunite (q.v.), containing 10 per cent. of sesquioxide of iron.

2. An altered form of Rhodonite (q.v.) by oxidation; the same as HETEROCLINE (q.v.).

Mar-çĕl'-lĭ-an, *s.* [For etym. see def.]

Church Hist. (*Pl.*): Followers of Marcellus, Bishop of Ancyra, in the fourth century, who, in his zeal against Arianism, ran into the opposite error of Sabellianism. (*Shipley.*)

mar-çĕs'-çent, *a.* [Lat. *marcescens*, pr. par. of *marcesco* = to fade, incept. of *marceo* = to be thin or weak.]

*1. *Ord. Lang.:* Withering, fadiug, decaying.

2. *Bot.:* Withering or fading, not falling off until the part which bears it is wholly matured, as the flowers of Orobanche (q.v.). (*Lindley.*)

***mar-çĕs'-çĭ-ble**, *a.* [Lat. *marcesco* = to wither.] Liable to wither or decay.

marc-grā'-vĭ-ą, *s.* [Named after George Marcgrave, a German, who, in 1718, published a Natural History of Brazil.]

Bot.: The typical genus of the order Marcgraviaceæ (q.v.). In the West Indies the stem, root, and leaves of *Marcgravia umbellata* are regarded as diuretic and antisyphilitic.

marc-grā-vĭ-ā'-çĕ-æ, *s. pl.* [Mod. Lat. *marcgravi(a)*; Lat. fem. pl. adj. suff. *-aceæ.*]

Bot.: Margraviads; an order of hypogynous exogens, alliance Guttiferales. It consists of trees or shrubs, sometimes climbing, with alternate, simple, entire, coriaceous, exstipulate leaves; flowers regular, in umbels, racemes, or terminal spikes, generally in bag-shaped or hooded bracts; sepals two to seven; corolla of five imbricated petals, or gamopetalous; stamens generally indefinite; ovary superior, three or many-celled; style one; stigma simple or capitate; fruit generally succulent, with many seeds imbedded in the pulp. Natives chiefly of tropical America. Known genera four, species twenty-six. (*Lindley.*)

marçh (1), ***marche**, *v.i.* [MARCH (1), *s.*] To border, to be contiguous, to run side by side.

"I know the estates well; they *march* with my own."—*Scott: Bride of Lammermoor*, xvii.

marçh (2), *v.i.* & *t.* [Fr. *marcher*, a word of doubtful origin, perhaps from Lat. *marcus* =

a hammer, and so referring to the regular tramp of a marching body of men; otherwise from Fr. *marche* = a boundary, as in the phrase, *aller de marche en marche* = to go from land to land, to make expeditions; O. H. Ger. *marcha*.] (March (1), *s.*)

A. *Intransitive:*

1. To move by steps, and in regular order, as soldiers; to walk or move forward with a steady, regular tread.

"Our word is Laws and Liberty!
March forward, one and all."
Scott: War Song.

2. To walk or move in a grave, steady, or deliberate manner.

"Doth York intend no harm to us,
That thus he *marcheth* with thee arm in arm?"
Shakesp.: 2 Henry VI., v. 1.

B. *Transitive:*

1. To cause to move in military order or in regular procession, as soldiers.

2. To cause to go anywhere at one's command, and under one's guidance.

"Cyrus *marching* his army for divers days over mountains of snow, the dazzling splendour of its whiteness prejudiced the sight of very many of his soldiers."—*Boyle: On Colours.*

marçh (1), **marche**, *s.* [Fr. = a frontier; O. H. Ger. *marcha*; A.S. *mearc* = a mark, a boundary.] A frontier or boundary of a territory; especially applied to the boundaries or confines of political divisions, or to the country lying near and about such. The term is most commonly applied to the borderland of England and Wales, and of England and Scotland, the latter of which was divided into two divisions, the western and the middle marches, each of which had courts peculiar to itself, and a governor, called the warden or lord of the marches. In Scotland the term is applied to the boundaries, or marches which determine them, of conterminous estates or lands, whether large or small.

¶ *Riding of the Marches:* A practice still observed in some parts of Scotland, for the purpose of preserving in the memory of the inhabitants the boundaries of a parish, town, &c., for which purpose the magistrates of the burgh and chief men ride in procession along the boundaries of the property belonging to the burgh, and perform certain ceremonies.

* **march-man**, *s.* A person living on the marches or borders of two countries; a borderer.

"Now Bowden Moor the *march-man* won."
Scott: Lay of the Last Minstrel, i. 50.

* **march-ward**, *s.* A warden of the marches; a marcher.

marçh (2), *s.* [March (2), *v.*]

I. *Ordinary Language:*

1. *Lit.:* [II. 1.].

2. *Figuratively:*

(1) A stately or deliberate way or movement; rhythmical movement.

"The varying verse, the full resounding line,
The long majestic *march*, and energy divine."
Pope: Satires, v. 269.

(2) Progress, advancement, progressive development: as, the *march* of intellect.

II. *Technically:*

1. *Mil.:* The amount of ground covered by a body of troops in one day. Fifteen miles is the ordinary distance; anything above that is a forced march, but it also depends on weather, state of roads, and length of column. Large armies usually move with a complete division on the main roads; but these columns are within supporting distance of each other, and should not be separated by intervening obstacles that would prevent easy concentration for battle. Rate of march, 2½ to 3 miles an hour, including a brief halt after the first half-hour, and a halt of five minutes every succeeding hour. Flank marches are those made in proximity to the enemy, but across his general front.

2. *Mus.:* A musical composition so arranged as to be suitable for accompanying troops in walking. There are quick and slow marches in duple and treble time, besides marches peculiar to certain nationalities.

"The drums presently striking up a *march*, they make no longer stay, but forward they go directly."—*Knolles: Hist. of the Turks.*

3. *Weav.:* One of the short laths laid across the treadles under the shafts.

¶ *To make a march:* In cuchre, to take all the tricks of a single deal.

march-past, *s.* A marching past a reviewing officer or some high personage on parade.

Marçh (3), *s.* [Low Lat. *Marcius*, from Lat. *Martius* (*mens*) = (the month) of Mars; Fr. *Mars.*] The third month of the year.

¶ *Mad as a March hare:* As mad as it is possible to be.

March-dagger, *s.*

Entom.: A moth, *Chimabacche fagella*. The wings of the female are only partially developed, the four wings terminating in a sharp point. They are whitish-gray, yellowish, or brownish.

* **March-mad**, *a.* Very mad; crazy, demented.

"He is *March-mad*; farewell, monsieur."
Beaum. & Flet.: The Noble Gentleman, i. 1.

marçh (4), *s.* [A.S. *merce* = balm, mint, parsley. (*Somner.*)]

Bot.: Parsley.

* **mar-chande**, *s.* [Merchant.]

mar-çhănt'-ĕ-æ, *s. pl.* [Mod. Lat. *marchanti(a)*; Lat. fem. pl. adj. suff. *-eæ.*]

Bot.: The typical tribe of the order Marchantiaceæ (q.v.). The spore cases are capitate; the involucels membranous, regularly slit. (*Lindley.*)

măr-çhănt'-ĭ-ą, *s.* [Named by Nicholas Marchant after his father, John Marchant, a French botanist, admitted to the Academy of Sciences in Paris in 1666.]

Bot.: The typical genus of the tribe Marchanteæ and the order Marchantiaceæ (q.v.). *Marchantia polymorpha* is a small plant, occurring in bright green thin lamellæ, with their outline irregularly lobed. The frond is attached to the ground by radical hairs descending from its lower surface. The plant occurs not uncommonly on the borders of springs, in damp shady courtyards, &c.

măr-çhănt-ĭ-ā'-çē-æ, *s. pl.* [Mod. Lat. *marchanti(a)*; Lat. fem. pl. adj. suff. *-aceæ.*]

Bot.: Liverworts; an order of Acrogens, tribe Muscales. It consists of cellular plants, with broadish lobed thalloid fronds, emitting roots from their underside. From the bifurcations of the frond arise stems bearing sporanges with spores mingled with elaters, but having no columella. The male fruit is mersed in sessile or stalked discoid or peltate receptacles. The Marchantiaceæ grow on the earth or trees in damp places. They are found in all but the driest climates; two grow in Melville Island. Lindley enumerates fifteen genera, and estimates the known species at twenty. He divides the order into two suborders, Marchanteæ and Targioneæ; Berkeley into three, Targonieæ, Jecorarieæ, and Lunulariеæ. The order belongs to the wide-spread class, Hepaticæ.

* **marçh'-ēr** (1), *s.* [Eng. *march* (1), s.; *-er.*] The governor or warden of the marches or borders.

¶ *Lords marchers:* Noblemen living on the marches or border-lands of England and Wales, who had their own courts and laws, as petty kings, until they were abolished by statute in the reign of Henry VIII.

marçh'-ēr (2), *s.* [Eng. *march* (2), v.; *-er.*] One who marches; a soldier.

"They take away a *marcher's* knees."
Chapman: Homer; Iliad xix. 161.

marçh'-ĕş (1), *s. pl.* [March (1), *s.*]

* **marçh'-ĕş** (2), *s.* [Marquis.]

* **marçh'-ĕt**, *s.* [Low Lat. *marcheta* = a fee of a mark (q.v.).]

Feudal law: A pecuniary fine paid by a tenant to his lord for the marriage of one of the tenant's daughters. The custom prevailed both in England and Scotland

"He [Malcome] abrogated that wicked law, established by King Ewin the third, appointing halfe a marke of siluer to be paid to the lorde of the soile, in redemption of the woman's chastitie, which is vsed to be paied yet vnto this day, and is called the *marchets* of woman."—*Holinshed: Historie of Scotland* (an. 1086).

marçh'-ĭng, *pr. par.* & *a.* [March (2), *v.*]

marching regiment, *s.* A colloquial term for an infantry or foot regiment of the line. (Generally used in disparagement.)

mar'-çhlŏn-ĕss, *s.* [Low Lat. *marchionessa*, from *marchionem*, accus. of *marchio* = a prefect of the marches, with fem. suff. *-issa.*] The wife or widow of a marquis; a lady holding the rank or dignity of a marquis (q.v.).

* **marçh'-pāne**, *s.* [O. Fr. *marcepain*; Fr. *massepain*; Ital. *marzapane*; Sp. *mazapan*; Ger. *marcipan, marzipan.* Origin doubtful; perhaps *Martius panis* = the bread of Mars.] A kind of sweet bread or biscuit; a macaroon; a spice-cake composed of sugar, nuts, pine-apple, almonds, sometimes with poppy-seeds and Indian corn.

"Good thou, save me a piece of *marchpane*."—*Shakesp.: Romeo & Juliet*, i. 5.

* **mar'-çĭ-ąn**, *a.* [Low Lat. *marcius*; Lat. *martius* = pertaining to Mars.] Under the influence of Mars; martial.

Măr-çĭ-ąn-ĭst, *s.* [For etym. see def.]

Church Hist. (Pl.): The followers of a certain Marcianus Trapezita in the time of Justinian. They kept the Jewish Sabbath as a fast. They are not to be confounded with the Marcionists (q.v.).

* **mar'-çĭd**, *a.* [Lat. *marcidus*, from *marceo* = to fade, to pine; Ital. & Sp. *marcido.*]

1. Withered, faded, wasted away, drooping.

"He on his own fish pours the noblest oil;
That to your *marcid* dying herbs assigned,
By the rank smell and taste betrays its kind."
Dryden: Juvenal, sat. v.

2. Causing wasting or feebleness.

* **mar-çĭd'-ĭ-tў**, *s.* [As if from a Lat. *marciditas*, from *marcidus* = withered, wasted.] The quality or state of being withered, wasted, or faded; leanness, meagreness.

Mar'-çĭ-ŏn-īte, *s.* [For etym., see def.]

Church Hist. (Pl.): The followers of Marcion, a Roman gnostic, who flourished about the middle of the second century. He taught that matter was the origin of evil, that there were two opposing principles of good and evil, and a creator independent of God. Eleutherus, Bishop of Rome, expelled him from the Church about A.D. 177.

Mar-çĭ-ŏn-ĭt'-ĭc, *a.* [Eng. *Marcioni(te)*; suff. *-tic.*] Of or pertaining to Marcion. [Luke, Marcionite.]

"Some idea as to the contents of the *Marcionitic* gospel."—*W. Sanday: Fort. Rev.* (1876), p. 859.

Mar'-çĭte, *s.* [Marcosian.]

mar-cō-brŭn'-nĕr, *s.* [See def.] A celebrated Rhine wine, possessing much body and aroma, so called from the Markobrunn vineyards, between Mainz and Bingen.

Mar'-cō Pō'-lō, *s.* [See def.] A celebrated Venetian traveller of the thirteenth century.

Marco Polo's sheep, *s.*

Zool.: Ovis poli, one of the finest species of the genus. Habitat, the high lands of the Thian Shun mountains, north of Kashgar and Yarkand. In winter this sheep is grayish-brown, white below, white mane, and white disc on tail. In summer the gray changes to brown. There is a well-defined dark dorsal line. The horns are spiral, and sometimes measure as much as four feet and a half from tip to tip.

* **mar'-cōr**, * **mar'-coūr**, *s.* [Lat. *marcor*, from *marceo* = to be thin or lean, to wither, to fade.] A state of withering or wasting; leanness; loss of flesh.

"The exolution and languor ensuing that act in some, the extennation and *marcour* in others, and the visible acceleration it makes of age in most."—*Browne: Vulgar Errours*, bk. iii., ch. ix.

Mar-cō'-şĭ-ąn, *s.* [For etym., see def.]

Church Hist. (Pl.): The followers of Marcus, an Egyptian Judaizing Christian of the second century. They possessed a number of apocryphal books, and their opinions seem to have resembled those of the Sociniaus.

mar'-cŭs, *s.* [Lat.] A large iron-headed hammer.

mar'-çў-līte, *s.* [Named after R. B. Marcy; suff. *-lite* (*Min.*).]

Min.: An impure atacamite of a black colour, probably resulting from the alteration of copper-glance. From the south of the Red River, Arkansas, U.S.A.

märe (1), * **mcre**, *s.* [A.S. *mere*, fem. of *mearh, mearg, mear* = a horse; cogn. with

Icel. *merr* = a mare; *mer-hross, mer-hryssi* = a mare-horse, used as the fem. of *marr* = a steed; Dan. *mär* = a mare; Sw. *märr* = a mare; Dut. *merrie;* Ger. *mähre;* O. H. Ger. *merihá* = a mare, fem. of *marah* = a battle-horse; Gael. *marc;* Wel. & Corn. *march* = a horse.] The female of the horse or other species of the genus Equus.

"The other *mares* running and flinging through the camp, came to stay right against them."—*North: Plutarch*, p. 247.

mare's-nest, *s.* An absurd discovery, having no real foundation in fact; a discovery which turns out to be a boax or delusion.

mare's-tail, *s.*

1. *Bot.* (*Sing.*): The genus Hippuris (q.v.).

2. *Meteor.* (*Pl.*): A popular name for the cloud called Cirrus (q.v.).

***märe** (2), *s.* [A.S. *mara* = an incubus; Icel. *mara* = the nightmare; Ger. *mar, nachtmar* = the nightmare (q.v.).] A kind of torpor or stagnation which seems to oppress the stomach with a weight; a nightmare (q.v.).

"Musbrooms cause the incubus, or the *mare* in the stomach."—*Bacon: Nat. Hist.*

† märe'-blŏbs, *s.* [Eng. *mare,* and *blob* = that which is blunt; a lily.]

Bot.: Caltha palustris.

mą-rē'-cą, mą-rī'-cą, *s.* [Etym. of first form doubtful; the second probably the name of a nymph, the fabled mother of the Latins. (*Virgil: Æn.* vii. 47.)]

Ornith.: A genus of Anatidæ, sub-family Anatinæ. The bill is very short and small, of equal breadth throughout, the tip not narrowed; the tail long, pointed. *Mareca Penelope* is the Widgeon (q.v.).

mär'-ĕ-kąn-īte, *s.* [Named from Marekan, in the Gulf of Kamschatka, where it occurs.]

Petrol.: Obsidian in the form of little grains, of the size of peas, of a pearly-white colour; occurring in this concentric layers. A kind of Pearlstone. (*Phillips.*)

mą-rĕm'-mą (pl. **mą-rĕm'-mê),** *s.* [Ital.] A name given to tracts of country in Italy, uninhabitable in summer on account of the exhalations of sulphur and alum from the soil. The term is also sometimes used for the malaria or unhealthy exhalations from such a soil.

mą-rē'-ną, mą-rœ'-ną, *s.* [Etym. doubtful.]

Ichthy.: Coregonus marœna, the muzzle of which, though obtuse, still advances beyond the mouth.

*** mar'-ę-schąl,** *s.* [Fr.] A marshal (q.v.).

"Great *mareschal* to Henry the Sixth."
1 *Shakesp.: Henry VI.*, iv. 7.

mär-gär'-ĭc, *a.* [Eng., &c. *margar(ine); -ic.* (See the compound.)

margaric-acid, *s.*

Chem.: $C_{17}H_{34}O_2 = C_{15}H_{31}{\cdot}CH_2.CO.OH$. Cetyl carbonic acid. The name formerly given to an acid supposed to exist in natural fats, but now only applied to an acid obtained by boiling cetylic cyanide with potassic hydrate solution. It resembles palmitic acid, forming white crystals, which melt at 59°·9, and boil at 277° under a pressure of 100 mm. Very few of the salts of margaric-acid have been prepared. The sodium salt, obtained by adding a boiling aqueous solution of pure sodic carbonate to a boiling alcoholic solution of margaric acid, forms a jelly-like mass. The barium and silver salts, prepared from the sodium salt, are white amorphous powders.

margaric-ether, *s.*

Chem.: A term incorrectly applied to what is probably only a mixture of stearic and palmitic ethers.

mär'-gąr-īne, *s.* [Margarite.] A peculiar pearly substance extracted from hogs' lard. The name is now applied to artificial butter made from a mixture of animal fat and oil.

† mar-gär-ĭ-tā'-çē-oŭs (or **ceous** as **shŭs**), *a.* [Mod. Lat. *margaritaceus;* Lat. *margarita* = a pearl; *-aceus.*] Pearl-bearing.

mär'-gą-īte, *s.* [Lat. *margarita;* Gr. μαργαρίτης (*margaritēs*) = a pearl; Pers. *mervaria* = a pearl; Fr. *marguerite;* Ital. & Sp. *margarita.*]

* I. *Ord. Lang.:* A pearl.

"Neither cast ye youre *margarites* before swyn."—*Wycliffe: Matthew* vii.

II. *Mineralogy:*

1. A mineral species included by Dana in his margarophyllite section. Crystallization, orthorhombic. Cleavage, basal, eminent. Hardness, 3·5 to 4·5; sp. gr. 2·99. Lustre of cleavage surfaces, pearly; elsewhere, vitreous; colour, grayish, reddish-white, yellowish; translucent; laminæ brittle. Compos.: silica, 30·1; alumina, 51·2; lime, 11·6; soda, 2·6; water, 4·5. Occurs with chlorite at the Greinerberg, Tyrol; with emery (emerylite) at Isle of Naxos, Grecian Archipelago, and Asia Minor, also in the United States.

2. The same as Œllacherite (q.v.).

3. A name used by Glocker for his family of Micas.

† mar-gär-ĭ-tif'-ĕr-oŭs, *a.* [Lat. *margarita* = a pearl; *fero* = to bear, to produce, and Eng adj. suff. *-ous.*] Producing pearls.

mar-gąr-ō-, *pref.* [Margarone.] (See the compound.)

margaro-nitrile, *s.*

Chem.: $C_{16}H_{31}CN$. Cetylic cyanide. A compound prepared by the action of cetylic iodide on potassic cyanide.

mar-gär'-ō-dīte, *s.* [Gr. μαργαρώδης (*margarōdēs*) = pearl-like.]

Min.: A hydrous mica resembling muscovite (q.v.) in crystallization and physical characters, but having a more pearly lustre, and a more or less silvery white colour. It appears to be the result of a hydration of a mica, mostly muscovite.

mar'-gąr-one, *s.* [Eng. *margar(ic); -one.*]

Chem.: The acetone of margaric acid.

mar-gąr-ō-phyll'-īte, *s.* [Gr. μαργαρίτης (*margaritēs*) = pearl, and φύλλον (*phullon*) = a leaf.]

Min.: A name used by Dana for a section of the hydrous silicates which, when crystallized, are micaceous or foliated. A large number of minerals, however, are included which appear to be chemically allied, though at present these are only found in a compact amorphous condition.

mar-gär'-ŷ-lēne, *s.* [Eng. *margar(ic),* and *(all)ylene.*]

Chem.: $C_{11}H_{22}$. A hydrocarbon obtained by the dry distillation of menhaden-oil soap. It boils at 195°.

mar'-gāy, *s.* [Native name.]

Zool.: Felis tigrina, a feline from Brazil and Guiana, where it is known as the Tiger-cat. It is smaller than the Ocelot (*Felis pardalis*), to which it has a general resemblance, though it is not so handsome. It is capable of domestication, and is a capital ratter.

*** marge,** *s.* [Fr., from Lat. *margo* = a margin.] An edge, a margin, a brink.

"He drew his flaming sword, and struck
At him so fiercely, that the upper *marge*
Of his sevenfold shield away it took."
Spenser: F. Q., II. v. 6.

*** mar'-ġent,** *s.* [The same word as *margin,* but with an excreseent *t,* as in *tyrant,* &c.]

1. A margin, an edge.

"A sheet of paper,
Writ on both sides the leaf, *margent* and all."
Shakesp.: Love's Labour's Lost, v. 2.

2. The margin or side of a page or leaf.

"Me thinketh it better to put a declaration in the *margent.*"—*Tyndall: Works*, p. 32.

*** mar'-ġent,** *v.t.* [Margent, *s.*] To enter, note, or set down in the margin.

"Succession of yeares, which I have *margented* through the whole story."—*Mirrour for Magistrates*, p. 755.

mar'-ġĭn, *s.* [Lat. *margo,* genit. *marginis;* cogn, with Eng. *mark;* Ital. *margine;* Fr. *marge.*]

I. *Ordinary Language:*

1. *Lit.:* A border, a brink, an edge, a verge; espec. applied to the edge or side of a page or book left blank, or partly occupied with notes.

"To have interrupted my text or crowded my *margin* with references to every author."—*Paley: Moral Philosophy*, vol. i. (Dedic.)

2. *Figuratively:*

(1) A sum or quantity left or set aside to meet unforeseen contingencies, casualties, expenses, or results; a certain latitude on which to work or depend.

"A sufficient *margin* of stability was not provided in the original design."—*Brit. Quarterly Review*, vol. lvii. (1873), p. 111.

(2) The difference between the prime cost of an article and its selling price, which leaves room for profit.

II. *Technically:*

II. *Technically:*

1. *Mil.* (*Pl.*): Troops enlisted for service either on board ship or on shore, and under the authority of the Naval Department, but drilled, disciplined, clothed, equipped, and paid similarly to the land forces. In garrisons or when serving with regular troops in the field, they are under the army rules for discipline and rank by army seniority; on board ship they are under the naval discipline, but no undue interference with them can be made by the naval officers, nor can the men be ordered to go aloft. Their duties are to maintain the necessary guards, man some of the guns, form part of the armed crews of the various boats when called away for service, and form a permanent force for landing with the seamen if necessary. In all these matters they are commanded by their own officers. The marines of the European nations are not designed for service permanently on board ship; the American navy is the only one besides that of England in which the marine forms a necessary and definite fraction of a ship's company.

* 2. *Paint.:* A sea-piece (q.v.).

Tell that to the marines: An expression signifying utter disbelief in a statement made or story told. It arose from the fact that marines, being ignorant of seamanship, were made butts of by the sailors.

marine-governor, *s.* A governor for marine engines, intended to overcome the effects of the motion of the vessel on a governor of ordinary construction.

marine hospital-service, *s.* This service, established in 1798, as the medical bureau of the Treasury Department, has the duty of providing relief for sick and disabled seamen of the United States merchant marine. It is under the direction of a supervising surgeon-general, appointed by the President, and responsible to the Secretary of the Treasury for his official acts. Its purpose is to encourage fit persons to become seamen by assuring them of proper care and maintenance when sick or disabled, and to relieve municipalities of the task of providing for this class of persons. Marine hospitals have been established in a number of cities, the fund for the support of which is largely derived from a tax laid on merchant and naval seamen, and officers and marines of the naval service, who are included as beneficiaries of the fund. The duties of the officers of the service have increased, until they now include the management of quarantine, the examination of pilots for color-blindness, examination of life-saving surfmen, and various others.

"At four years old cometh the *mark of tooth* in horses, which hath a hole as big as you may lay a pea within it; and weareth shorter and shorter every year, till at eight years old the tooth is smooth."—*Bacon: Nat. Hist.*

(3) *To make one's mark:* To make one's influence felt; to attain to a position of influence and distinction.

(4) *Marks and deeps:*

Naut.: The mode of indicating lengths on the hand lead-line. The marks have certain indications; the deeps are the estimated fathoms in the intervals of the marks:—

Mark 2, leather; mark 3, blue hunting; deep 4, mark 5, white bunting; deep 6, mark 7, red hunting; deep 8, 9, mark 10, leather; deep 11, 12, mark 13, blue bunting; deep 14, mark 15, white hunting; deep 16, mark 17, red bunting; deep 18, 19, mark 20, two knots.

Mark (3), *s.* [Gr. Μάρκος (*Markos*), from Lat. *Marcus.*]

Scrip. Biog.: The evangelist whose name is prefixed to the second gospel. He was almost certainly the same as the "John whose surname was Mark," mentioned in Acts xii. 12, 25. The name John was Jewish; Mark (Marcus) was Roman. [JOHN.] John Mark's mother lived at Jerusalem, her house being a resort of Christians (Acts xii. 12). He was nephew, cousin, or other relative of Barnabas (Col. iv. 10). He seems to have been converted by Peter (1 Pet. v. 13), and also to have been the young man so nearly captured on the evening of our Lord's betrayal (Mark xiv. 51, 52). On the first missionary journey of Paul and Barnabas, he went as their minister, but, while they were at Perga, left them, and returned to Jerusalem (Acts xii. 25; xiii. 13). Paul considering him fickle, would not accept him as an attendant; while Barnabas, his relative, believed him thoroughly trustworthy. In consequence of this difference of opinion, Paul and Barnabas separated, Paul going in one direction on a mission tour, and Barnabas, accompanied by Mark, on another. Ultimately Mark gained anew the good opinion of St. Paul, and attended on him during his final imprisonment (Col. iv. 10; Phil. 24). We read of him as being with Peter "at Babylon" (1 Pet. v. 13). Afterwards Paul desired his return to Rome (2 Tim. iv. 11). Tradition is scanty and contradictory as to his subsequent career.

¶ *The Gospel according to St. Mark:*

New Test. Canon: The second of the gospels, almost universally attributed to the John Mark of this article. Papias, Ireuæus, Clement of Alexandria, Tertullian, Origen, Eusebius, and other Christian fathers, allege that a connection existed between Peter and Mark, the latter probably deriving from the former the chief materials for his work. This view is probable, when it is observed that more prominence is given to censures upon St. Peter than on commendatory statements regarding him (cf. Mark viii. 33 with Matt. xvi. 17–20). The writer was evidently a Jew, or at least familiar with Judæa; but his gospel was specially designed for the Gentiles. Except in recording the discourses of Jesus, he nowhere shows that any incident narrated fulfilled Old Testament prophecy, and the term "law," in the sense of the Mosaic law, nowhere occurs. Statements likely to give offence to the Gentiles are also omitted (cf. Matt. x. 5, 6 with Mark vi. 7–11). His gospel seems to have been written at Rome, though there are a few suffrages in favour of Alexandria. If addressed especially to any Gentile nationality, it was to the Romans. While there are Aramæisms, in the Greek there are Latin expressions too, as κῆνσος (*kēnsos*) = Lat. *census*, and κεντυρίων (*kenturiōn*) = Lat. *centurio*. Mark records the miracles more than the discourses of Jesus. His style is more precise and graphic than that of the other evangelists. The language approaches more closely to that of St. Matthew than to that of St. Luke. The general opinion of the Christian church for many centuries was, as it still is, that it was the second gospel in point of time; though the opinion is gaining strength that it was the first instead of the second. Till the question be settled, it is useless to attempt to fix its date. The last twelve verses of St. Mark (xvi. 9–20) are of doubtful authenticity. External testimony is perhaps slightly in their favour, but internal evidence is strongly against them; hence, in the Revised Version, they are separated by an interval from the rest of the book.

II. *English Law:* The privilege of having a market. Market is defined by statute to be "the liberty of grant or prescription whereby a town is enabled to set up and open shops, &c., at a certain place therein for buying and selling, and better provision of such victuals as the subject wanteth." Public marts, or places of buying and selling, such as markets and fairs, with the tolls thereunto belonging, can only be set up by virtue of the grant of the crown, or by long and immemorial usage and prescription, which presupposes such a grant. The general rule of the law is that all sales and contracts of anything vendible, in fairs or markets overt, that is, open, shall not only be good between the parties, but also be binding on all those that have any right of property therein. Market overt in the country is only held on the special days provided for particular towns by charter or prescription; but in London, every day, except Sunday, is market-day. The market-place, or spot of ground set apart by custom for the sale of particular goods, is also in the country the only market overt; but in London in every shop in which goods are exposed publicly to sale, is market overt, for such things only as the owner professes to trade in. In Scotland no such privilege attaches to goods sold in market-overt; and the owner of goods sold by one who has stolen them, or to whom they may have been lent, may reclaim them from the purchaser.

2. *Fig.:* The ground, the earth.

"To support uneasy steps
Over the burning *marl*." *Milton: P. L.*, i. 296.

II. *Technically:*

Geol.: Clay with much calcareous matter in its composition. Sometimes it is soft, sometimes hard, in the latter case being called Indurated Marl. It sometimes contains carbonate of lime to the extent of 40 or 50 per cent. If composed largely of shells, or fragments of shell, it is called Shell Marl. It is largely used as a fertilizing material, and other beds of sand and clay which are useful as fertilizers are popularly called marls, even when lacking the special character of marl proper. The green sands of New Jersey, whose value is due to a green silicate of iron and potash, with occasionally some phosphate of lime, are thus called marls. Marl is found in nearly every country, being due to the deposits in clay or mud of the shells of mollusks and other animals. It exists in enormous deposits in central New York and along the Hudson, and extensively in Ohio. The cretaceous and tertiary beds of New Jersey and the Southern Atlantic and Gulf States contain it in great deposits, a nearly continuous belt extending from upper New Jersey to Texas. There are small deposits in other states. Only the marls of New Jersey are used to any important extent. Here nearly a million of tons are used annually, the greensand bed being 90 miles long and from 6 to 10 wide. Deposits of phosphatic marls have been opened in Alabama, which are said to be very valuable as fertilizers.

marl-brick, *s.* The same as MARL-STOCK (q.v.).

marl-slate, *s.*

each hair, which is dusky at the root, reddish in the middle, and gray at the tip. The head is small, the nose flat, the face black, with a long tuft of white hair sticking out from each side. The tail is long and bushy, marked with alternate rings of ash-colour and black. *H. humeralifer* is the Cloaked Marmoset. The fore part of the body is white; the hands gray; the rump and underside deadish-tawny; tail banded with gray and black. Called also Ouistiti. [MIDAS.]

mar'-mŏt, * **mar-mŏt'-tō,** *s.* [Fr. *marmotte*, from Lat. *mus montanus* = the mountain mouse.]

Zoology:

1. *Sing.:* A popular name for any individual of the genus Arctomys (q.v.), but more particularly confined to *Arctomys marmota*, the Common or Alpine Marmot, inhabiting the higher regions of the Alps, Pyrenees, and Carpathians. It is about twenty inches in length; dark brown above, and lighter below. The Hoary Marmot, an American species, ranging as far north as the Arctic Circle, is *A. pruinosus.* Marmots live in large societies in extensive burrows. They are very active in the summer, and pass the winter in a state of torpidity.

"Hence also some beasts, as the *Marmotto* or *Mus Alpinus*, a creature as big or bigger than a rabbet, which absconds all winter, doth (as Hildanus tells us) live upon its own fat."—*Ray: On the Creation*, pt. ii.

2. *Pl.:* The genus Arctomys, or True Marmots: less properly, Arctomyinæ, the second sub-family of Sciuridæ (q.v.).

* **mar-mō-zĕt',** *s.* [MARMOSET.]

ma-rōne', *a.* [MAROON, *a.*] One of a class of impure colours, composed of black and red, black and purple, or black and russet pigments, or with black and any other denomination of pigments in which red predominates.

marone-lake, *s.* A preparation of madder, of great depth, transparency, and durability of colour: it works well in water, glazes, and dries in oil, and is in all respects a good pigment; its hues are easily given with other pigments, but it is not much used.

* **mär'-ŏn-ĭst,** *s.* [After Publius Virgilius Maro, commonly called Virgil.] A disciple of Virgil: a Virgilian.

"Like some imperious *maronist.*"
Bp. Hall: Satires, I. vi. 7.

Mär'-ŏn-īte, *a.* & *s.* [For etym. see def.]

A. *As adj.:* Belonging to or characteristic of the sect of the Eastern Christians described under B.

"There is also a *Maronite* college at Rome."—*Addis & Arnold: Cath. Dict.*, p. 543.

B. *As substantive:*

Church Hist.: A body of Eastern Christians of Mount Lebanon, probably deriving their name from one Maro, a Syrian monk contemporary with Chrysostom. They adopted Monothelite errors, but were united to the Roman Church in 1182, though they soon fell away through Greek influence. In 1216 they again submitted, and the connection has subsisted ever since. They have excited more attention in Europe than other Oriental Christians, on account of the persecutions they have suffered at the hands of the Druses (q.v.). In 1860, 1,300 Maronites were killed, and 100,000 driven from their homes. Since then the governor of the Lebanon has been nominated by the Sultan of Turkey. In 1865 the Maronites numbered about 150,000. Arabic is the vulgar, and Syriac the liturgical language.

ma-roōn' (1), *a.* & *s.* [Fr. *marron* = a runaway slave; an abbrev. of Sp. *cimarron* = wild, unruly, from *cima* = a mountain-top.]

A. *As adj.:* Fugitive.

"A warrant of the Lord Chief Justice broke up the *Maroon* village for a short time."—*Macaulay: Hist. Eng.*, ch. xxiii.

B. *As substantive:*

I. The name given to negroes in the West Indies. In many cases by taking to the forests and mountains they rendered themselves formidable to the colonists, and sustained a long and brave resistance against the whites. When Jamaica was conquered by the English in 1655, about 1,500 slaves retreated to the mountains, and were called Maroons. They continued to harass the island till the end of the last century, when bloodhounds were employed to track them to their hiding-places. (*Bartlett.*)

2. A bright white light used for signals in the East Indies.

maroon-party, *s.* A party of pleasure, differing from a picnic in that it occupies several days instead of one.

ma-roōn', *v.t.* & *i.* [MAROON, *a.*]

A. *Trans.:* To put ashore and leave on a desolate island by way of punishment, as was done by the buccaneers, &c.

B. *Intrans.:* To go on a maroon-party; to picnic.

"A *marooning* party . . . is a party made up to pass several days on the shore or in the country."—*Bartlett: Americanisms*, p. 334.

ma-roōn' (2), *a.* & *s.* [Fr. *marron* = the great chestnut, from Ital. *marrone.*]

A. *As adj.:* Of a brownish-crimson colour; claret-coloured.

"It is of a deep almost *maroon* green."—*Gardener's Chronicle*, xvi. (1881), 599.

B. *As subst.:* A rocket having the case bound round with tarred twine, so that it explodes with a great noise.

ma-roōn'-ẽr, *s.* [Eng. *maroon* (q.v.); *-er.*] A runaway slave; a maroon.

"On the south shore dwelt a *marooner*, that modestly called himself a hermit."—*Byrd: Westover Papers*, p. 13.

mar'-plŏt, *s.* [Eng. *mar*, v., and *plot.*] One who, by officious interference, mars or spoils a plot or design.

Mar'-pŭrg, Mar'-bŭrg, *s.* [See def.] A town of Hesse Cassel.

Marpurg Conference, *s.* [REFORMATION, ZWINGLIANISM.]

marque (que as k), * mark, *s.* [Fr. *marque* = a boundary, a distress or seizure of goods; from O. H. Ger. *marcha* = a march, a boundary.] [MARCH (1), *s.*] A licence to make reprisals on the belongings of a public enemy, generally in the phrase *letters of marque* or *letters of marque and reprisal*, which meant originally a licence or commission to pass over the boundary or frontier, into an enemy's country, and capture or destroy the persons or goods of the

enemy, in reprisal for goods or persons captured or destroyed by him. The meaning now is an extraordinary licence or commission granted by the government of one country to its subjects to make reprisals at sea on the subjects of another country in return for injuries it has received or suffered; a licence to engage in privateering: a private vessel commissioned to attack and capture the vessels of an enemy; a privateer.

"But the granting of *letters of marque* has long been disused, the conference which met at Paris in 1856, after the close of the war with Russia, having recommended the entire abolition of privateering."—*Blackstone: Comment.*, bk. i., ch. 7.

mar-queē' (qu as k), *s.* [Fr. *marquise* = (1) a marchioness, (2) an officer's tent, a marquee. The *s* has been dropped from a mistaken idea that marquees, the proper form, was a plural; so we have *sherry* for *sherris*, *pea* for *pease*, &c.]

1. An officer's field tent.

2. A large field tent or covering made of strong canvas to keep off the rain; generally with a second canvas or fly a little above the tent proper.

† **mar'-quĕs-al,** *a.* [Eng. *marquess; -al.*] Pertaining or belonging to a marquis.

"To see all eyes, not royal, ducal, or *marquesal*, fall before her own."—*Trollope: Barchester Towers*, xxxvii.

mar'-quĕss, *s.* [Marquis.]

mar'-quĕt-rў (qu as k), **mar-quet-ēr'-ie,** *s.* [Fr. *marqueterie*, from *marqueter* = to inlay, to variegate, from *marque* = a mark (q.v.).] Inlaid work. It includes parquetry, reiseur work, buhl, mosaic. (See these words.) The manner of executing this work consists in cutting the designs out of pieces of wood or plates of metal and inserting pieces of a different colour. When the inlays are inserted, the work is levelled with the toothing-plane, and then scraped with the joiner's scraper applied obliquely at the joints of the wood.

"The royal apartments were richly adorned with tapestry and *marquetry*."—*Macaulay: Hist. Eng.*, ch. xx.

mar'-quĭs, mar'-quĕss, *march-es, *mar-kis, *mar-quesse, *s.* [O. Fr. *markis, marchis* (Fr. *marquis*) = the goveruor of a frontier, a warden of the marches, a marquis, from Low Lat. *marchensis* = a prefect of the marches, from *marcha* = a march, a boundary, from O. H. Ger. *marcha* = a march [March (1), *s.*]; Sp. *marques*; Port. *marquez*; Ital. *marchese.*]

*1. An officer whose duty it was to guard and defend the marches or borderland of a country; a warden or prefect of the marches; a marcher.

2. A title of nobility in England, ranking next below a duke, and above an earl. It is also a title of dignity in France, Italy, and Germany. The eldest son of a marquis in Great Britain is usually styled by courtesy an earl, and the younger sons and daughters lords and ladies. The wife of a marquis is called a marchioness. The title of marquis is often attached as a second title to a dukedom, and is held by the eldest son of a duke during his father's lifetime. The coronet of a marquis consists of a richly-chased circle of gold, with four strawberry leaves and four balls of pearls set on short points on its edge; the cap, crimson velvet with a gold tassel on the top, and turned up with ermine.

"The *Marquess* was the falsest, . . . the most pusillanimous, of mankind."—*Macaulay: Hist. Eng.*, xiii

*¶ *Lady marquess:* A marchioness. (*Shakespeare: Henry VIII.*, v. 2.)

mar'-quĭs-ate, *s.* [Fr. *marquisat*, from *marquis.*] The seigniory, dignity, or lordship of a marquis.

"The duke made a sudden attempt upon the *marquisate* of Montserrato."—*Reliquiæ Wottonianæ*, p. 415.

* **mar'-quĭs-dŏm, *mar-ques-dome,** *s.* [Eng. *marquis; -dom.*] A marquisate.

"Other nobles of the *marquesdome* of Saluce."—*Holinshed: Hist. Scotland* (an. 1483).

* **mar-quīse'** (qu as k), *s.* [Fr.] The wife of a marquis, a marchioness.

marquise-ring, *s.* A lady's ring, having somewhat the shape of a vesica (q.v.).

* **mar'-quĭs-shĭp, *marqueship,** *s.* [Eng. *marquis; -ship.*] A marquisate.

"But as for the *marqueship* of Corke . . . he would not as then nor yet thought it good to deale therein."—*Holinshed: Hist. Ireland* (an. 1586).

Mar'-quoi (quoi as **kwâ),** *s.* (See the compouud.)

Marquoi's rulers, *s. pl.* A set of rulers devised by an artist named Marquoi, for the purpose of facilitating the operations of plotting and plan drawing. The set consists of a triangular ruler, whose hypothennse is three times as long as the shorter side of the triangle, and several rectangular rulers, graduated into equal parts, accordiug to different scales. The rulers are made of hard wood, ivory, or metal, and the graduation lines are cut close to the edges of the rectangular rulers for facility of application.

* **mar-quys,** *s.* [Marquis.]

mar-ram, *s.* [Marum.]

marred, *pa. par.* or *a.* [Mar, *v.*]

marr'-ĕr, *marr'-ar, *s.* [Eng. *mar*, v.; *-er.*] One who mars, spoils, or defeats anything.

"For he sayeth yt they may be ye *marrars* & distroyers of the realme."—*Sir T. More: Workes*, p. 295.

* **măr'-rĭ-ą-ble, *măr'-ĭ-ą-ble,** *a.* [Eng. *marry; -able.*] Fit to be married; marriageable.

"Thither shortly after came ambassadours from the emperour, requiring the king's daughter affianced vnto him and being now viripotent or *mariable*, desired she might be delivered vnto them."—*Holinshed: Henry I.* (an. 1115).

măr'-rĭaġe, *măr'-ĭaġe, *s.* [Fr. *mariage*, from Low Lat. *maritaticum, maritagium* = a woman's dowry.]

I. *Ordinary Language:*

1. *Lit.:* The act of marrying or uniting a man and woman as husband and wife; the legal union of a man and woman for life; the state or condition of being married; wedlock.

2. *Figuratively:*

*(1) A wedding-feast; a feast on the occasion of a marriage.

"A certain king which made a *marriage* for his son."—*Matthew* xxii. 2.

(2) Intimate union.

II. *Technically:*

1. *Anthrop.:* Herbert Spencer (*Prin. of Sociol.*, i. § 279) says that "the marital relations . . . have gradually evolved;" and that the first stage was promiscuity (q.v.), which "may be called indefinite polyandry, joined with indefinite polygyny" (i. § 297); to that succeeded polyandry (q.v.), "in some cases the husbands being strangers, in others akin, and usually brothers" (i. § 297); higher in rank stands polygyny, "with which Hebrew history made us acquainted in our childhood" (i. § 304); and in due time was evolved monogamy, "the natural form of sexual relation for the human race" (i. § 314). Sir John Lubbock believes that "our present social relations have arisen from an initial stage of hetairism or communal marriage" [¶ 1]; and says:

"I believe that communal marriage was gradually superseded by individual marriage founded on capture, and that this led firstly to exogamy, and then to female infanticide . . . Endogamy and regulated polyandry, though frequent, I regard as exceptional, and as not entering into the normal progress of development."—*Origin of Civilisation* (1882), p. 103.

Mr. J. F. McLennan's *Primitive Marriage* is devoted to the subject of marriage by capture [¶ 3]. Bachofen (*Das Mutterrecht*) has no idea of marriage being the result of social evolution. He considers that:

"At first . . . human beings lived in a state of hetairism. The women, by nature nobler and more sensitive than the men, were at last disgusted with this life, and under the impulse of a strong religious aspiration, combined to put an end to hetairism and introdnce marriage. They succeeded, and established monogamy, but not without an appeal to force."—*Bachofen* in *McLennan: Studies in Anc. Hist.*, p. 413.

2. *Law:* In law marriage is regarded in no other light than a civil contract. The law allows it to be valid where the parties were willing to contract, able to contract, and did contract in the form required by law. Disabilities to contract were formerly considered as either canonical or civil. Consanguinity, affinity, and corporal infirmity were canonical disabilities, making the marriage voidable, but not *ipso facto* void, until sentence of nullity had been obtained. The last of these is now, however, the only canonical disability on which marriages, otherwise regular, can be declared void. The others have by statute been declared civil disabilities, which make the contract void *ab initio*. Besides consanguinity and affinity, there are three other civil disabilities: (1) A prior marriage, in which case, besides the penalties consequent upon it as a felony, the scoond uarriage is void. (2) Want of age, which is sufficient to avoid all other contracts, *a fortiori* it ought to avoid this, tbe most important contract of auy . . . . But it is nevertbeless so far a marriage that if at tbe age of conseut the parties agree to continue together, they need not be married again. (3) Want of reason. The statute 6 and 7 William IV. c. 85 provided for places of religious worship being registered for the solemnization of marriage, and permits of this contract being entered into before a registrar of marriages, without any religious sanction whatever. But whether solemnized in church, celebrated in a place of worsbip, or entered into before the registrar, a marriage must in all cases be preceded and accompanied by certain circumstances of publicity, or be entered into in virtue of a licence, which is obtainable only on oath being made that there is no legal impediment. By marriage the legal existence of the woman is incorporated and consolidated into that of the husband, under whose protection and cover she performs everything, and is therefore called in our law-Freneh a *feme-covert*, *femina viro cooperta*, and her condition during her marriage is called her *coverture*. Marriages are dissolved by death or divorce. "A husband can present a petition for the dissolution of his marriage on the ground that his wife has been guilty of adultery; and a wife may seek the same relief on the ground that her husband has been guilty of incestuous or bigamous adultery, rape, or unnatural crimes, or of adultery coupled with such cruelty as would have entitled her to a divorce *a mensa et thoro*, or of adultery coupled with desertion without reasonable excuse for two years and upwards." (*Macqueen.*) In Scotland marriages are either regular or irregular, the latter being by mere consent without the intervention of a clergyman, the parties expressing a solemn acceptance of each other as man and wife, in writing or verbally in the presence of witnesses.

¶ (1) *Communal marriage:*

Anthrop.: Sir John Lubbock's name for the condition whicb some other autbors call Hetairism or Promiscuity.

"The primitive condition of man, socially, was one in which marriage did not exist, or, as we may perhaps for convenience call it, of *communal marriage*, where all the men and women in a small community were regarded as equally married to one another."—*Lubbock: Origin of Civilisation* (1882), p. 98.

(2) *Complex marriage:* The domestic relationship between the sexes existing in the American sect calliug themselves Perfectionists.

"The central domestic fact of the household is the *complex marriage* of its members to each other, and to all: a rite which is to be understood as taking place on the entrance of every new member, whether male or female, into association; and which is said to convert the whole body into one marriage circle: every man becoming the husband and brother of every woman; every woman the wife and sister of every man."—*Hepworth Dixon: Spiritual Wives.*

(3) *Marriage by capture:*

Anthrop.: "The practice of getting wives by theft or force" (*McLennan: Studies in Anc. Hist.*, p. 41). Two notable cases are the Rape of the Sabines (Liv., i. 9) and the abduction of the daughters of Shiloh by the sons of Benjamin (Judges xx., xxi.) (See *Smith: Bible Dict.*, s.v. *Marriage*)

"*Marriage by capture* is the third form of marriage specially recognised by ancient Hindoo law."—*Lubbock: Origin of Civilisation* (1882), p. 108.

¶ Obvious compounds: *Marriage-bond, marriage-day, marriage-hour, marriage-tie.*

marriage-articles, *s. pl.* The same as Marriage-contract.

marriage-bed, *s.* The bed appropriated to a man and woman on their marriage.

marriage-bell, *s.* Joy-bells rung on the occasion of a wedding.

And all went merry as a *marriage-bell.*"
Byron: Childe Harold, iii. 21.

* **marriage-brokage,** *s.* A consideration paid for arranging a marriage. It is illegal, as contrary to public policy.

† **marriage-broker,** *s.* One who arranges or contrives marriages.

marriage-contract, *s.* The contract or agreement on which a marriage is founded.

marriage-favor, *s.* A wedding-favor; a knot or bunch of white ribbons or flowers worn at a wedding.

marriage-license, *s.* A license for the solemnization of a marriage. Marriage licenses differ in the different states, in some no license being required, while others have strict license requirements. This diversity of laws opens the way to evasion of the laws of any particular state. Thus the license law of Pennsylvania is evaded by crossing the Delaware and contracting an unlicensed marriage in New Jersey.

¶ In England licenses are of three kinds:

1. Special license, granted only by the Archbishop of Canterbury, which dispenses with all restrictions as to time or place. It is granted as a right to peers, &c., and as a favor to other persons.

2. Ordinary license, granted by the Bishop of a diocese, through a surrogate. It dispenses with the publication of banns. A declaration must be made that no impediment exists, and the residence of one of the contracting parties in the district in which the marriage is to be solemnized is required for "the fifteen days last past," before the issue of the license.

3. License of the Superintendent Registrar. This license applies to any building registered for the solemnization of marriage. Declaration as to impediments, and residence of one of the persons, are required.

marriage-lines, *s. pl.* A common name for a marriage certificate.

"I took out of my bosom . . . my *marriage-lines.*" *Reade: Cloister & Hearth,* ch. lv.

marriage-portion, *s.* A portion given to a woman on her marriage; a dowry.

marriage-settlement, *s.* An arrangement usually made before marriage, and in consideration of it, whereby a jointure is secured to the wife, and portions to the children, in the event of the husband's death.

marriage-vow, *s.* The vow taken by the man or woman at their marriage.

măr'-rĭaġe-ą-ble, *a.* [Eng. *marriage; -able.*]

1. Fit for marriage; of age to be married.

"The proportion of children which any *marriage-able* man or woman may be presumed shall have."—*Graunt: Bills of Mortality.*

* 2. Suited or suitable for close union.

"They led the vine
To wed her elm; she, spoused, about him twines
Her *marriageable* arme." *Milton: P. L.,* v. 217.

măr'-rĭaġe-ą-ble-nĕss, *s.* [Eng. *marriageable; -ness.*] The quality or state of being marriageable.

măr'-rĭed, *pa. par.* & *a.* [Marry, *v.*]

A. *As pa. par.:* (See the verb).

B. *As adjective:*

1. United in marriage.

"The *married* offender incurs a crime little short of perjury."—*Paley: Moral Philosophy,* bk. iii., ch. iv.

2. Formed or constituted by marriage; conjugal: as, the *married* state.

* 3. Joined, concordant, in harmony

"Lap me in soft Lydian airs,
Married to immortal verse."
Milton: L'Allegro.

¶ *Married Women's Property Act:*

Law: In most of the states of the United States, the earnings of a married woman are to be deemed her own separate property, as are her deposits in savings banks, &c. On the other hand, a husband is not liable for the debts of his wife, contracted before marriage, but the wife is liable to be sued and her separate property taken to satisfy those debts.

* **măr'-rĭ-ẽr,** *s.* [Eng. *marry,* v.; *-er.*] One who marries.

* **măr'-rŏn,** * **mar-roon,** *a.* & *s.* [Maroon, *a.*]

măr'-rŏn, *s.* [Fr.]

Pyrotech.: A paper box strongly wrapped with twine and filled with powder; it is intended to imitate the report of a cannon, and is fired by a piece of quickmatch projecting externally.

măr'-rôt, marre, *s.* [Etym. doubtful.]

Ornith.: A popular name for *Alca impennis,* the Great Auk. [Auk.]

măr'-rōw (1), * **mar-ow,** * **mar-we, marughe,** * **marwhe,** * **mary,** *s.* [A.S. *mearh;* cogn. with Dut. *merg* = marrow, pith; Icel. *mergr;* Sw. *merg;* Dan. *maro;* Ger. *mark;* M. H. Ger. *marc;* O. H. Ger. *marag;* Wel. *mer;* Cor. *maru.*]

I. *Ordinary Language:*

II. *Technically:*

1. *Anat. & Physiol.:* Medulla or fat filling the large internal cavities of the various bones, especially in the cavities of the long ones, in the spongy tissue, and the articular extremities of these and the short rounded ones. It is an oily fluid contained in bundles of vesicles.

2. *Bot.:* [¶ 2 (1)].

¶ 1. *Spinal Marrow:*

Anat.: The spinal cord (q.v.).

2. *Vegetable marrow:*

Botany:

(1) *Cucurbita ovifera.* It has greenish-yellow flowers. Its native country is Persia, but it is cultivated in many other countries, Britain not excepted. It is tender and sweet. It is boiled when half ripe, and served with sauce; or it is gathered young, and fried in batter.

(2) *Persea gratissima.*

Marrow Controversy, s.

Scottish Church Hist.: A controversy regarding an old book called the *Marrow of Modern Divinity,* written by a Puritan soldier under the Commonwealth, and recommended in the year 1717 by the Rev. Thos. Boston. It was re-published in 1718 by the Rev. James Hog of Carnock, with a preface from his pen. Some of the leading men in the Scottish Church, especially Principal Haddow, of St. Andrews, objected to its teachings. The moderate party were against the volume, the evangelical party in its favour. It was condemned by the General Assembly of 1720. A representation was given in by twelve ministers in 1721, with a petition that the act of condemnation might be withdrawn. The excitement produced by this controversy was one of the causes which ultimately led, in 1733, to the deposition of four ministers, and that again to the creation of the Secession Church. [Secession.]

Marrow-men, *s. pl.*

Scottish Church Hist.: The twelve ministers who signed the petition to the General Assembly against the condemnation of the *Marrow of Modern Divinity.* [Marrow Controversy.] They are known also as the Twelve Bretbren and the Representers.

(1) To unite in marriage or wedlock; to join for life as man and wife; to constitute husband and wife according to the laws or customs of the country.

"What! shall the curate controul me? Tell him, that he shall *marry* the couple himself."—*Gay: What d'ye call it?*

(2) To give or dispose of in marriage or wedlock.

"Would I had never *married* my daughter there."
Shakesp.: Tempest, ii. 1.

(3) To take as husband or wife: as, A man *marries* a woman, or a woman *marries* a man.

* 2. *Fig.:* To write intimately or closely; to join, to associate.

"*Marrying* his sweet notes with their silver sound."
Browne: Britannias Pastorals, bk. i., s. 5.

II. *Naut.:* To splice.

"To *marry,* in splicing ropes, is to join one rope to another for the purpose of reeving it, which is performed by placing the end of each close together, and then attaching them by worming."—*Falconer,* in *Annandale.*

B. *Intransitive:*

1. To enter into the state of matrimony or wedlock; to take a husband or wife.

"I will *marry* one day."
Shakesp.: Comedy of Errors, ii. 1.

* 2. Formerly it was followed by *with* or *to.*

"I'll to the doctor; he hath my good will,
And none but he to *marry with* Nan Page."
Shakesp.: Merry Wives of Windsor, iv. 4.

* **măr'-rў,** *exclam.* [A corrupt. of *Mary,* from the practice of swearing by the Virgin Mary.] Indeed, forsooth.

"Yea, *marry,* shalt thou, and with all my heart."
Cowper: Epistle to Joseph Hill.

măr'-rў-ĭng, *pr. par.* & *a.* [Marry, *v.*]

A. *As pr. par.:* (See the verb).

B. *As adj.:* Inclined or disposed to marry: as, a *marrying* man.

măr'-rў-mŭffe, *s.* [Etym. doubtful.] A coarse common cloth.

Mars, *s.* [Lat., from an older and poetical form *Mavors.*]

1. *Roman Myth.:* The god of war. His mother was Juno. He was often represented as a nude old man, with a shield, a helmet, and a pike. He was seated in a chariot drawn by two furious horses. The horse, the wolf, the magpie, the vulture among animals, and the dog-grass among plants, were sacred to him.

2. *Astron.:* One of the superior planets situated between the earth on the one side and the vast cluster of asteroids on the other. Its mean distance from the sun is 141 millions of miles, and at times it is only 35 millions of miles from the earth. It revolves round the sun a few minutes under 687 days, and rotates upon its axis in 24 hours, 37 minutes, 22·73 seconds. Its equatorial diameter is about 4,200 miles, its polar about seventy less. Its mass is about one-eighth that of the earth. When at its greatest distance from the earth its telescopic diameter is less than four seconds of arc, but when nearest this is increased to twenty-four seconds, hence the planet varies greatly in brightness. Mr. Dunkin mentions that in the northern hemisphere of Mars the spring lasts 191 Martial days, summer 181 days, autumn 149 days, and winter 147; in the southern hemisphere spring and summer taken together are seventy-six days shorter. Prof. Phillips, of Oxford, has shown that the great interchange of atmospheric humidity which must necessarily take place periodically between the two poles tends to produce violent hurricanes.

Viewed by the naked eye, Mars appears of a uniformly red and fiery tint; but looked at through a powerful telescope the ruddy colour is found to be confined to certain definite areas, which are therefore believed to be continents having "an ochrey tinge in the general soil, like what the red sandstone districts on the earth may possibly offer to the inhabitants of Mars, only more decided" (*Herschel: Astron.*, § 510). Contrasted with these red portions others, by a general law of optics, appear greenish, and are considered to be seas. Around the poles are "brilliant white spots," which have been conjectured, with some probability, to be snow and ice "as they disappear when they have been long exposed to the sun, and are greatest when just emerging from the long night of their polar winter. The snow-line then extends to about six degrees (reckoned on a meridian of the planet) from the pole" (*Ibid.*). Mr. Huggins's researches with the spectroscope confirm Sir John Herschel's view of the reason the planet has a ruddy tint. In 1877, Prof. Asaph Hall, of the Observatory at Washington, by the aid of the great Washington refracting telescope, discovered that Mars had two satellites. The nearest is believed to be from 23 to 25 miles in diameter, and revolves about 4,000 miles from the surface of the planet, in a period of 7 hours, 39 minutes. This is much less than the period of rotation of Mars itself, and constitutes a unique fact in the solar system, which has furnished forcible corroboration of Mr. G. H. Darwin's theory of the tides. The other satellite is believed to be about 18 miles in diameter, and revolves at about 12,500 miles from the surface, in 30 hours, 17 minutes.

* 3. *Chem.:* An old term for iron.

4. *Her.:* A name for the colour gules or red, on the coats of sovereign princes.

mar-sa'-la, *s.* [See def.] A wine of a sherry character, made at Marsala in Sicily.

mars-dĕn'-ĭ-a, *s.* [Named after William Marsden, Esq., F.R.S. (1756–1836), Secretary to the Admiralty, an Oriental scholar, and anthor of a history of Sumatra.]

Bot.: A genus of Asclepiadaceæ, tribe Stapeliæ. *Marsdenia tinctoria*, a native of the Himalayas and Burmah, yields a blue dye like indigo. *M. Roylei*, a Himalayan species, affords a fibre of which fishing nets and strong ropes are made. The unripe fruit is powdered and given as a cooling medicine. *M. tenacissima* furnishes Rajmahal fibre (q.v.). The plant grows in India and the Eastern Peninsula.

Marseillais (as **Mar-sa-yā'**; fem. **Marseillaise**, as **Mar-sa-yāz'**), *a. & s.* [Fr.]

A. *As adj.:* Belonging to or pertaining to Marseilles.

B. *As substantive:*

1. A native or inhabitant of Marseilles.

2. (*Of the form* Marseillaise): The same as MARSEILLAISE HYMN (q.v.).

Marseillaise hymn, *s.* A song written by Rouget de Lisle, an officer of artillery in the garrison of Strasbourg in 1792. It received its title from having been sung by a party of the Marseillaise Club as they entered Paris on the invitation of Madame Roland; the song, though less sanguinary in sentiment than most of the songs of the Revolution, was employed as accompaniment to many of the horrible deeds of that, and of later periods, and by association become dangerous enough to be included among the songs prohibited to be sung in France under the Bourbons and the Bonapartes. The tune to which it is set by the author of the words, contains progressions so unusual in popular songs, that it is difficult to account for its general adoption.

marsh, * mersche, *s.* [A.S. *mersc* = a marsh, for *merisc* = full of meres or pools, from *mere* = a mere, a pool; Low Ger. *marsch;* Low Lat. *mariscus.*] A tract of low land occasionally or usually covered with water; a fen, a bog, a swamp, a morass. [MARISH.]

"Your low meadows and *marsh*-lands you need not lay up till April, except the spring be very wet, and your *marshes* very poachy."—*Mortimer: Husbandry.*

marsh-beetle, *s.*

Bot.: *Typha latifolia*, called also Marsh-pestle.

marsh-bred, *a.* Bred or produced in marshes.

marsh-centaury, *s.*

Bot.: The Least Gentian, *Cicindelia filiformis.*

marsh-cinquefoil, *s.*

Bot.: *Potentilla Comarum*, formerly *Comarum palustre*, a British rosaceous plant with five to seven leaflets, and dark purplish-brown flowers.

marsh-crocodile, *s.*

Zool.: *Crocodilus palustris*, found in the Ganges and the Indus, and at Malabar, Madras, and in Ceylon. Its snout is covered with numerous small irregular prominences (whence it is sometimes called *C. bombifrons*), and the space between the eyes is deeply concave. It is worshipped by some religionists, and near Kárachi are some hot springs swarming with these saurians, which know the fakirs who feed them.

marsh-elder, *s.*

Bot.: The Guelder-rose, *Viburnum Opulus.*

marsh-flower, *s.*

Bot.: The genus Limnanthemum.

marsh-gas, *s.*

Chem.: $CH_4 = \frac{CH_3}{H}$, methane. Light carburetted hydrogen, hydride of methyl, a hydrocarbon gas very abundant in nature. It is evolved from stagnant water, and great quantities are given off in coal-pits where it is known as the fire-damp of the miners. It is one of the usual products of the destructive distillation of organic matters. It may be formed in large quantities by the destructive distillation of a mixtnre of alkaline acetate with a hydrated alkali. Of all known compounds it is the richest in hydrogen, and, with the exception of the latter, is the lightest known gas (sp. gr. ·5576, air = 1). It is colourless, without taste or smell, and is neutral to test paper. In water and alcohol it is sparingly soluble. It is the type of a numerous class of compounds.

marsh-fish, *s.*

Ichthy.: [MUDFISH].

marsh-harrier, *s.*

Ornith.: *Circus æruginosus*, a handsome raptorial bird, about twenty-four inches in length. It frequents marshy places, and always builds near water. Small snakes, frogs, wounded birds, eggs, and nestlings unable to fly, form the main part of the food of this bird. The species has a wide geographical range in the Old World; it is common in Cambridgeshire, in Scotland, Ireland, and parts of Wales. [HARRIER.]

marsh-hen, mud-hen, *s.*

Ornith.: *Rallus virginianus*, the Virginia Rail.

"Jupiter . . . hustled about to prepare some *marsh-hens* for supper."—*Poe: The Gold Bug.*

marsh-land, *s.* Marshy, swampy land; a marsh.

marsh-mallow, *s.*

1. *Bot.:* The genus Althæa, and specially *Althæa officinalis.* It is a softly pubescent plant, with axillary cymes of large rosy leaves A native of Europe and Asia in marshes near the sea. A decoction of the roots and other parts yields a tasteless, colourless, mucilage. Used as a demulcent for children, and in cases of irritation.

2. *Comm.:* A popular pasty confection made from the marsh-mallow.

marsh-marigold, *s.*

Bot.: The genus Caltha (q.v.), and specially *Caltha palustris.*

"Bright gowan, and *marsh-marigold*, farewell."
Wordsworth: Farewell.

marsh-miasma, *s.* Miasma generated in marshes, the normal situation from which it emanates. [MIASMA.]

marsh-nut, *s.*

Bot.: The Marking nut, *Semecarpus Anacardium.* Called also Malacca-beau.

marsh-pennywort, *s.*

Bot.: The genus Hydrocotyle (q.v.).

marsh-ringlet, *s.*

Entom.: A butterfly, *Cœnonympha Davus*, one of the Nymphalidæ. It is tawny with black spots on the underside of the wings. It is found in June and July on moors and mosses in Scotland and in the west of Ireland.

marsh-rosemary, *s.*

Bot.: An American name for *Statice Limonium.*

marsh-samphire, *s.*

Bot.: A name for the genus Salicornia (q.v.). [SALTWORT.]

marsh-shrew, *s.*

Zool.: *Sorex palustris*, a small rodent of North America, ranging as far north as Hudson Bay territory. The dentition is the same as that of Crossopus, to which it has been referred by some writers.

marsh-tit, *s.*

Ornith.: *Parus palustris*, common round London.

marsh-trefoil, *s.*

Bot.: *Menyanthes trifoliata.* [MENYANTHES.]

marsh-twayblade, *s.*

Bot.: An orchid, *Malaxis paludosa.*

mar'-shal, * mares-chal, * mar-i-schal, * mar-schal, * mar-shall, *s.* [O. Fr. *mareschal* (Fr. *maréchal*), from O. H. Ger. *maraschalh* (M. H. Ger. *marshale;* Ger. *marschall*) = an attendant upon a horse, a groom, a farrier, from O. H. Ger. *marah* = a war-horse, and *scalc* (A.S. *scealc;* Ger. & Dut. *schalk*) = a servant.]

* 1. An official who had charge of horses; a groom.

* 2. An official who regulated combats in the lists.

"Unask'd the royal grant; no *marshal* by,
As knightly rites require, nor judge to try."
Dryden: Palamon & Arcite, ii. 359.

Bot.: *Oxycoccus palustris.*

marsh'-ў, *a.* [Eng. *marsh; -y.*]

1. Having the nature of a marsh, bog, or swamp; boggy, fenny, swampy.

"No natural cause she found, from brooks or bogs
Or *marshy* lowlands to produce the fogs."
Dryden: Ovid; Metamorphoses i.

2. Produced or growing in marshes: as, *marshy* weeds.

mar-sĭl'-ē-a, *s.* [Named by Linnæus after Count F. L. Marsigli, fonuder of the Academy of Scieuces at Bologna.]

Bot.: Pepperworts or Rhizocarps, the typical genus of the order Marsileaceæ (q.v.). It consists of plants growing in mud, which have a creeping rhizome, filiform leaf-stalks, supporting a compound four-leaved blade; capsules stalked, dehiscing when ripe, with macrospores and microspores, the former male the latter female. Found in the South of Europe, in Africa, India, Australia, Brazil, &c. *Marsilea quadrifolia* is an Indian waterplant common in the Punjaub and elsewhere. It is said to be eaten as a potherb by the natives.

mar-sĭl-ĕ-ā'-çĕ-æ, *s. pl.* [Mod. Lat. *marsile(a);* Lat. fem. pl. adj. suff. *-aceæ.*]

Bot.: An order of Aerogens, alliance Lycopodales. It consists of aquatic plants with the root-stalk or stem creeping, the leaves filiform or bearing four obovate leaflets with circinate vernation. Fructification composed of coriaceous oblong or globose capsules coutaining two or more cells, the whole formed of a metamorphosed leaf. Within are parietal placentas, to which are affixed many membranous sacs enclosing macrospores and microspores. Found in temperate aud tropical regions. According to Sir Joseph Hooker, the known genera are two, species forty. Marsilea, the typical genus (q.v.), is widely distributed. [PILULARIA.]

mar-sĭl'-lў, *s.* [From the name of the inventor.] (See the compound.)

marsilly-carriage, *s.* A naval gun-carriage having no fore trucks, the front transom resting immediately on the ship's deck.

mar-sĭp-ô-brăn'-chĭ-ī, *s. pl.* [Mod. Lat., from Gr. *μάρσιπος* (*marsipos*) = a pouch, and *βράγχια* (*brangchia*), pl. of *βράγχιον* (*brangchion*) = a fin, a gill.]

Ichthy.: Purse-gills; an order of fishes, constituting Cuvier's Cyclostomata, Müller's Cyclostomi.

mar-sū'-pĭ-al, *a. & s.* [Lat. *marsupi(um);* Eng. adj. suff. *-al.*]

A. *As adj.:* Pertaining to a bag or pouch; having a bag or pouch; belonging to the Marsupialia (q.v.).

B. *As subst.:* An individual belonging to the Marsupialia (q.v.).

marsupial-bones, *s. pl.*

Compar. Anat.: Two small bones springing from the brim of the pelvis, and formed by the ossification of the internal tendon of the external oblique abdominal muscles. They support the marsupial pouch in the Marsupialia.

marsupial-sacs, *s. pl.*

Zool.: Pouch-like sacs occurring in connection with the generative apparatus in some Acalephæ, Crustacea, aud Lamellibranchiate Molluscs. (*Owen.*)

mar-sū-pĭ-ā'-lĭ-a, mar-sū-pĭ-ā'-ta, *s.pl.* [Lat. *marsupi(um)* (q.v.); neut. pl. adj. suff. *-alia, -ata.*]

1. *Zoology:*

(1) *Of both forms, chiefly the first):* Marsupial or Pouched Animals. Mammals having a marsupium or pouch. Under the designation Marsupiata, they were considered by Cuvier to be a sub-division of his order Carnassiers (Carnivora), although their teeth were of various types, and many were vegetable feeders. Some have an analogy to the Insectivora, others to the Carnivora, and others to the Rodentia, from all which they differ in possessing a marsupium or pouch. [MARSUPIUM.] They are now generally termed Marsupialia, and elevated into a sub-class, called by Prof. Huxley and others, Didelphia (q.v.). The young are born of a small size and imperfect in condition, but are transferred to the marsupium, where they become attached to a long nipple which supplies them with milk. There is evidently in this arrangement a first faint approach to the oviparous one which characterizes birds. The majority of the species inhabit Australia and its adjacent islands, though the Didelphidæ (Opossums) are American.

Viewing the Marsupialia as an order, Prof. Owen, in 1839, divided them into five tribes: Sarcophaga, Entomophaga, Carpophaga, Poephaga, and Rhizophaga. Subsequently he divided them by their dentition into the Diprodontia and the Polyprodontia. Dallas and others separated them into the Phytophagous, or Plant-eating, and the Rapacious Marsupialia, the latter including the carnivorous and the insectivorous families. Prof. Martin Duncan, regarding the Marsupalia as an order, divides it into two sub-orders, the Marsupiata (q.v.) and the Monotremata.

(2) (*Of the form* Marsupiata):

(*a*) The name given by Cuvier to the Marsupialia, now Didelphia.

(*b*) According to Prof. Martin Duncan and others, a sub-order of the order Marsupialia [1.] He includes under it the families Macropodidæ, Phascolomyidæ, Phalangistidæ, Peramelidæ, Dasyuridæ, aud Didelphidæ.

2. *Palæont.:* The oldest known mammalian species, *Microlestes antiquus,* is believed to have been Marsupial. It is from the Upper Trias. Others occur in the Keuper of Wurtemburg, the Rhætic rocks, &c. It is believed that during the whole Secondary period all the mammals existing were Marsupial, though analogy would lead one to expect that the Mouotremata will yet be fouud.

mar-sū-pĭ-ā'-lĭ-an, *a.* [Eng. *marsupial; -ian.*] The same as MARSUPIAL (q.v.).

mar-sū'-pĭ-an, *a.* [Lat. *marsupi(um);* Eng adj. suff. *-an.*,] The same as MARSUPIAL (q.v.).

mar-sū-pĭ-ā'-ta, *s. pl.* [Lat. *marsupi(um);* neut. pl. adj. suff. *-ata.*] [MARSUPIALIA.]

mar-sū'-pĭ-ate, *a. & s.* [Lat. *marsupi(um);* Eng. suff. *-ate.*] The same as MARSUPIAL (q.v.).

mar-sū-pĭ-ô-crĭ-nī'-tēş, *s.* [Lat. *marsupium* = a bag, a pouch; Gr. *κρίνον* (*krinon*) = a lily, and suff. *-ites.*]

Palæont.: A genus of Crinoidea, the arms of which are in two rows. They are of Silurian age.

† **mar'-sụ-pīte,** *s.* [MARSUPITES.]

Palæont.: Any species of Marsupites (q.v.).

mar-sụ-pī'-tēş, *s.* [Lat. *marsup(ium);* suff. *-ites.*]

Palæont.: Tortoise-encrinite, the typical genus of the family Marsupitidæ. It is of Cretaceous age.

mar-sụ-pĭt'-ĭ-dæ, *s. pl.* [Mod. Lat. *marsupit(es);* Lat. fem. pl. adj. suff. *-idæ.*]

Palæont.: A family of Crinoidea.

mar-sū'-pĭ-ŭm, *s.* [Lat. *marsupium* = a pouch, from Gr. *μαρσίπιον* (*marsipion*), *μαρσύπιον* (*marsupion*) = a little pouch; dimin. of *μάρσιπος, μάρσυπος* (*marsipos, marsupos*) = a bag or pouch.]

Compar. Anat. & Physiol.: A pouch containing teats for giving milk to the imperfectly developed young of the marsupial animals of the sub-class Didelphia.

mar-sўp-ĭ-ăn'-thŭs, *s.* [Gr. *μάρσιπος* (*marsipos*) = a purse, and *ἄνθος* (*anthos*) = a blossom, a flower.]

Bot.: A genus of Labiatæ, family Hyptidæ (q.v.). *Marsypianthus hyptoides* is employed in Brazil for medicating baths.

mart (1), **mairt,** *s.* [A contraction from *Martinmas* (q.v.).] A fatted cow, or whatever animal is slaughtered at Martinmas for winter provision. (*Scotch.*)

"On they came out to gather *marts* for the garrison."
—*Scott: Old Mortality,* ch. xxvii.

mart (2), *s.* [A contract. of *market* (q.v.).]

1. A place of public sale or traffic; a market; a market-place.

"If any born at Ephesus
Be seen at Syracusan *marts* and fairs,
He dies." *Shakesp.: Comedy of Errors,* i. 1.

2. Purchase and sale; bargain.

"I play a merchant's part,
And venture madly on a desp'rate *mart.*"
Shakesp.: Taming of the Shrew, ii.

3. A place of disposal; a market.

¶ *Letters of mart:* Letters of marque. [MARQUE.]

* **Mart** (3), *s.* [Lat. *Mars* (genit. *Martis*) = the god of war.]

1. Mars, the god of war.

2. War, warfare, battle, contest.

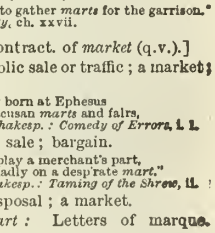
* **mart,** *v.t. & i.* [MART (2), *s.*]

A. *Trans.:* To traffic in; to buy or sell.

"To sell and *mart* your offices for gold."
Shakesp.: Julius Cæsar, iv. 3.

B. *Intrans.:* To deal, to traffic, to trade.

"A saucy stranger in
his court to *mart,*
As in a stew."
Shakesp.: Cymbeline, i. 6.



MARTAGON-LILY.

mar'-ta-gŏn, *s.* [Fr. & Sp.; Ital. *martagone.*]

Bot.: A kind of lily, *Lilium Martagon.* The stems are two or three feet high; the leaves are petioled, obovate, lanceolate, whorled, the

upper ones linear; the flowers erect, racemose, drooping, pale purple or white, with dark raised papillæ and red-brown anthers. Native of continental Europe, naturalized in Britain. The bulbs are eaten by the Cossacks.

martagon-lily, *s.* [MARTAGON.]

marte, *s.* [MART (2), *s.*]

* **mar'-tĕl,** *v.t.* [Fr. *marteler*, from *martel*; Lat. *martelus, marculus* = a little hammer, dimin. of *marcus* = a hammer; Ital. *martello.*] To strike, to hammer, to beat.

"Her dreadfull weapon she to him addrest,
Which on his helmet *martelled* so hard."
Spenser: F. Q., III. vii. 42.

* **mar'-tĕl,** *s.* [Fr.] [MARTEL, *v.*] A hammer.

* **martel-de-fer,** *s.* A hammer and pick conjoined, used by horse soldiers in the Middle Ages to break and destroy armour, and generally hung at the saddle-bow. They were sometimes furnished with hooks to hold them at the saddle-bow, and were perforated to receive a cord, which could be twisted round the hand or wrist, so that the weapon might not be beaten out when the soldier was engaged in fighting. They were sometimes of considerable weight.

MARTELS-DE-FER.
(*From the Goodrich Court Collection.*)
1, 1 Time of Edward IV.; 2. Edward VI.; 3. James I.

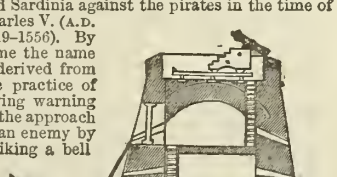
mar'-tĕ-line, *s.* [Fr.] A small stone-hammer used by sculptors and marble-workers. It is pointed at one end and square or diashaped at the other.

marteline-chisel, *s.* A sculptor's chisel, driven by a mallet or hammer, and used by artists or workers in marble.

mar-tĕl'-lō, *s.* [For etym. see compound.] A martello-tower.

martello-tower, *s.*

Fort.: A circular, isolated tower of masonry, erected on the coast of a country as a protection against invaders. The name was originally given to towers erected on the coasts of Sicily and Sardinia against the pirates in the time of Charles V. (A.D. 1519–1556). By some the name is derived from the practice of giving warning of the approach of an enemy by striking a bell with a hammer; by others from Mortella Bay, Corsica, where a tower of this description was taken by an English naval force in 1794, after a prolonged resistance. The tower is usually about 40 feet in height, having two stories, and a shell-proof roof with a 4½-foot parapet. The walls are 5½ feet thick; the lower story is for stores, magazine, and retreat; the second is a casemate with embrasures; the roof is armed *en barbette* with a traversing gun, under a bomb-proof. There are martello-towers on the coasts of the south of England, Ireland, and Jersey, within range of each other. The entrances are at a considerable height above the ground, and the tower has a ditch and glacis. They are now of little value as coast defences.



MARTELLO-TOWER.

mar'-tĕn (1), *s.* [MARTIN.]

mar'-tĕn (2), * **mar-tern,** * **mar-ter,** *s.* [Fr. *martre*; cf. Ital. *martora*; Sp. *marta*, from Low Lat. * *marturis*, from M. H. Ger. & Ger. *marder*; cogn. with A.S. *meardh* = a marten.]

Zool.: The popular English name for any individual of Cuvier's sub-genus Mustela (q.v.), or of Nilsson's Martes. They are limited to the northern portion of both hemispheres, ranging southwards as far as 35° W. in America; one species, the Indian Marten, occurs in Java. The species are very similar in their habits, arboreal, and, as a rule, carnivorous, though less so than the Weasels (q.v.). According to Rolleston (*Journ. Anat. & Phys.*, ii. 47), the Common European Marten "was functionally the 'cat' of the ancients." But it is as fur-yielding animals that the Martens are most important, and vast numbers are taken every year to supply the wants of civilisation. The finest fur comes from the highest latitudes, principally from North America and Siberia. The American "Pekan" (*Mustela pennanti*) is the largest species. *M. zibellini*, the European Sable, is the most valuable species. There are several other species, such as the Pine Martin, the Beech Martin, &c. [MARTES, MUSTELA, SABLE.]

"The generic name of the *martens*, in modern zoological works oscillates between Martes and Mustela."
—*Prof. Flower*, in *Encyc. Brit.*, xv. 576.

Prepared themselves for glorious enterprise
By *martial* sports." *Wordsworth: Laodamia.*

† 5. Pertaining to or resembling the planet Mars; under the influence of the planet Mars.

"The nature of the fixed stars are . . . esteemed *martial* or jovial according to the colours wherehy they answer these planets."—*Browne: Vulgar Errours*, bk. vi., ch. xiv.

* 6. Having the properties of iron, called by old chemists Mars.

"Why should the Chalybes or Bilboa boast
Their harden'd iron; when our mines produce
As perfect *martial* ore?" *Philips: Cider*, i.

* **B.** *As subst.:* A soldier, a warrior, a martialist.

"Like sturdy *martials.*"
Fuller: David's Sinne, s. 36.

martial-law, *s.* An arbitrary kind of law, built upon no settled principles, and having no immediate constitutional or legislative sanction, but proceeding directly from the military power, and founded only upon paramount necessity. When proclaimed in any district it includes within its dominion all the inhabitants, and extends to matters of civil as well as of criminal jurisdiction. It is proclaimed only in time of war, insurrection, rebellion, or other like emergency.

* **mar'-tiạl-ĭşm (ti as sh),** *s.* [Eng. *martial*; *-ism.*] The quality or state of being martial or warlike; bravery; martial exercise.

* **mar'-tiạl-ĭst,** * **mar'-tiạl-līst (ti as sh),** *s.* [Eng. *martial*; *-ist.*] A warrior, a fighter, a soldier.

* **mar'-tiạl-īze (ti as sh),** *v.t.* [Eng. *martial*; *-ize.*] To render martial.

"[I] trained him up
In all perfections of a *martialist.*"
Beaum. & Fl.: Laws of Candy, v. 1.

mar'-tiạl-lў (ti as sh), *adv.* [Eng. *martial*; *-ly.*] In a martial manner.

"Whilst eyther king thus *martially*
Defends, and did offend."
Warner: Albions England, bk. iv., ch. xxi.

* **mar'-tiạl-nĕss (ti as sh),** *s.* [Eng. *martial*; *-ness.*] The quality or state of being martial; martialism.

mar'-tĭn (1), *s.* [Fr., a proper name applied to various birds and animals; thus, *martin-pêcheur* = a kingfisher; *oiseau de S. Martin* = the ring-tail or hen-harm. (*Cotgrave.*).]

Ornith.: *Hirundo urbica* (Linn.), *Chelidon urbica* of later ornithologists, the Common or House Martin. Like its congener, the Swallow, which it closely resembles, it builds a mud-nest under the eaves of houses and barns, but it differs from the Swallow in having a conspicuous white band across the lower back. The Sand Martin (*H. riparia*) is pale brown above and white below. It hollows out galleries in the banks, where it nests and breeds; and is the smallest of the three British Hirundines. The Sand Martin and the House Martin are both birds of passage, arriving in spring and departing towards the end of the summer. *Cypselus apus*, the Swift (q.v.), is sometimes called the Black Martin. The Purple Martin of America is *Hirundo* (or *Progne*) *purpurea.* The plumage of the male is almost wholly steel-blue; the female is duller in colour above, brownish-gray beneath. The Fairy Martin of Australia is *Hirundo Ariel.*

mar'-tĭn (2), *s.* [Etym. doubtful.] A grinding-tool consisting of a brass plate with a flat stone facing. An opening through the plate and lining allows sand to pass through and insinuate itself between the martin and the stone which is being ground; a runner.

* **mar'-tĭn** (3), *s.* [Flem. = an ape.] An ape.

"Who knoweth not that apes men *martins* call?"
A Whip for an Ape, or Martin Displaced. (1589.)

Mar'-tĭn (4), *s.* [A proper name.] (See the compound).

Martin's-shells, *s. pl.*

Ordn.: Cast-iron spherical shells, lined with loam and cow-hair and filled with molten iron. Used as incendiary shells.

* **mar'-tĭn-ĕt** (1), *s.* [Fr. = a dimin. of *martin.*] [MARTIN (1).] The bird called the Martin (q.v.)

"If they should alight upon the ground, they could by no means raise themselves any more, as we see those birds which have but short feet, as the swift and *martinet*, with difficulty do."—*Kay: On the Creation*, pt. i.

mar'-tĭn-ĕt (2), *s.* [After General Martinet, a very strict officer, whom Voltaire describes as the regulator of the French infantry under Louis XIV.]

Mil.: A strict disciplinarian; an officer who exacts a rigid adherence to the details of discipline, or to firm and fixed methods.

"Our Colonel's self—whom men did call
The veriest *martinet.*"
Barham: Ingoldsby Legends; Dead Drummer.

mar'-tĭn-ĕt (3), **mart'-nĕt,** *s.* [Fr.]

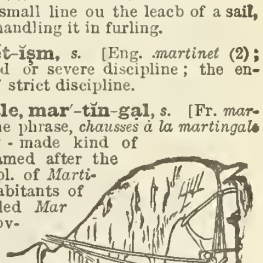
Naut.: A small line on the leach of a sail, to assist in handling it in furling.

* **mar'-tĭn-ĕt-ĭşm,** *s.* [Eng. *martinet* (2); *-ism.*] Rigid or severe discipline; the enforcement of strict discipline.

mar'-tĭn-gāle, mar'-tĭn-gạl, *s.* [Fr. *martingale*, in the phrase, *chausses à la martingale* = an oddly-made kind of breeches, named after the *Martigaux* (pl. of *Martigal*), the inhabitants of a place called *Martigues*, in Provence; Sp. *martingal*; Ital. *martingala* = an old kind of hose.]

1. (See extract.)

"The *martingale*, invented by Evangelista, an eminent horseman of Milan, is a long strap, or thong of leather, the one end of which is fastened to the girth, between the fore legs, and the other to the bit, or, which is the better way, should have a thin mouth-piece of its own."—*Berenger: History of Art of Horsemanship*, ch. x.



MARTINGALE.

2. *Nautical:*

(1) A lower stay for the jib-boom or flying jib-boom. The martingale of the former passes from the end of the jib-boom to the dolphin-striker, and is set up by setting taut the back-ropes of the latter. The flying jib-boom martingale passes from the end of the spar, is rove through the end of the dolphin-striker, and is set up in the head of the ship.

(2) A perpendicular spar under the bowsprit end, for guying down the headstays of a ship.

(3) *Sport.:* A gambling term signifying the doubling of stakes again and again, until the player wins. (*Thackeray: Newcomes*, xxviii.)

martingale-stays or **guys**, *s. pl.*

Naut.: Ropes or small chains stretched to the jib-boom end for staying it down.

Mar-tī'-nĭ, *s.* (See the compound.)

¶ *Martini-Henry Rifle:*

Mil.: The infantry fire-arm with which the English army has been armed since 1872. It is a combined weapon, the barrel being rifled on Henry's polygroove system, and the breech action being that invented by Martini. It is a hammerless rifle which is locked by the closing of the breech block, which drops downward by the action of a lever that rests against the trigger-guard when the breech is closed. The action of opening the breech discharges the empty cartridge, which is partly formed of thin sheet brass, with a solid base-cup containing the detonating material, which also tends to prevent the escape of the powder-gas. It has a very flat trajectory, a range of 1,200 yards for aimed fire, can discharge 25 unaimed shots per minute, has good penetration, owing to its long bullet being slightly hardened with antimony, and rarely gets out of order.

Mar-tĭn-ique' (**que** as **k**), *s.* [See def.]

Geog.: One of the Windward Islands; it belongs to the French.

Martinique-frog, *s.*

Zoot.: *Hylodes martinicensis.* In this species the metamorphosis takes places within the egg. When the young burst forth they are tiny frogs, with a tail, which is soon absorbed.

Mar'-tĭn-ĭsts, *s. pl.* [For etym. see def.]

Church Hist.: A Russian sect which rose at Moscow under Catherine II., taking their name from Martin, a Frenchman, who introduced into Russia the doctrines of the Mystics. (*Shipley.*)

Mar'-tĭn-mas, * **mar-tin-masse**, * **mar-til-mas**, * **mar-ty-messe**, *s.* [Compounded of the proper name *Martin*, and Eng. *mass.*] The feast of St. Martin, the 11th of November.

"Families laid in their stock of salt provision, then called *Martinmas* beef."—*Macaulay: Hist. Eng.*, ch. iii.

mar'-tĭns-īte, *s.* [Named after Martins of Halle; suff. *-ite* (*Min.*); Ger. *martinsit.*]

Mineralogy:

1. A variety of salt (q.v.) containing 9·02 per cent. of sulphate of magnesia. Found at Stassfurth, Prussia.

2. The same as KIESERITE (q.v.).

* **mar-tire**, * **mar-tere**, *s.* [MARTYR, *s.*]

1. A martyr.

2. Martyrdom. (*Romaunt of the Rose.*)

* **mar-tire**, *v.t.* & *i.* [MARTYR, *v.*]

mar'-tīte, *s.* [Said to be named after the planet Mars, whose sign is the sign of iron, but more probably after Martius the traveller, who brought it first from Brazil; Ger. *martit.*]

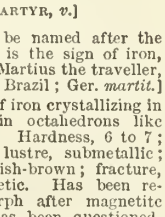
Min.: A sesquioxide of iron crystallizing in the isometric system, in octahedrons like magnetite; also massive. Hardness, 6 to 7; sp. gr. 4·809 to 4·832; lustre, submetallic; streak, reddish- or purplish-brown; fracture, conchoidal. Non-magnetic. Has been regarded as a pseudomorph after magnetite (q.v.), but this view has been questioned, owing to the discovery of very extensive beds and masses of this mineral which present no evidence of pseudomorphic action. Dana inclines to the former view.

mar'-tle-mas, *s.* [MARTINMAS.]

mart'-lĕt *s.* [A corrupt. of *martinet* (1).]

* 1. *Ord. Lang.:* A martin.

"The fool multitude that... like the *martlet*, Builds in the weather on the outward wall."
Shakesp.: Merchant of Venice, ii. 9.



MARTLET.

2. *Her.:* A fanciful bird shaped like a martin or swallow, but represented with short tufts of feathers in the place of legs. It is the difference or distiuction of a fourth son.

mart'-nĕt, *s.* [MARTINET, 3.]

mar-tỹl'-a-mĭne, *s.* [First element doubtful; Eng. (*xyl*)*yl*, and *amine.*] [XENYLAMINE.]

mar-tỹn'-ĭ-a, *s.* [Named after John Martyn, F.R.S., professor of botany at Cambridge; he died in 1768.]

Bot.: A genus of Pedaliaceæ. It consists chiefly of Mexican plants, having as fruit capsules terminating in two hooks. *Martynia proboscidea*, growing in Italy, adheres to the clothes of travellers by its hooked spines. *M. fragrans* is occasionally seen in gardens. The fruit of *M. diandra* is sold in India as an antidote to scorpion stings.

mar'-tỹr, * **mar-tere**, * **mar-tir**, * **mar-tire**, *s.* [A.S. *martyr*, from Lat. *martyr*; Gr. *μάρτυρ*, *μάρτυς* (*martur*, *martus*) = a witness, lit. = one who remembers, from the same root as Eng. *memory* (q.v.).]

I. One who suffers death for the sake of Christ and his religion; one who by his death bears witness to the truth; one who gives up his life rather than renounce his religion.

"In those days wherein Antipas was my faithful *martyr*, who was slain among you."—*Rev.* ii. 13.

2. One who suffers death or persecution in defence of any cause.

"For these humble *martyrs* of passive obedience and hereditary right nobody has a word to say."—*Macaulay: Hist. Eng.*, ch. xi.

¶ The Church recognises three kinds of martyrs: (1) in will and deed; (2) in will, though not in deed; (3) in deed, though not in will. It is noteworthy that the three days immediately following the great festival of Christmas commemorate St. Stephen, St. John the Divine, and the Holy Innocents respectively. The first suffered willingly for the faith; the second was willing to suffer, but, according to tradition, was miraculously delivered; the third suffered, though too young to be willing so to do. Many martyrs find a place in the English Calendar; but, with the exception of those above mentioned, and the Apostles, none has popular lessons. The proper colour for Feasts of Martyrs in the Roman Church is red.

mar'-tỹr, * **mar-tri**, *v.t.* & *i.* [MARTYR, *s.*]

A. *Transitive:*

1. To put to death for adherence to the truth or one's religion; to make a martyr of.

2. To murder, to destroy.

"Here his abode the *martyr'd* Phocion claims With Agis, not the least of Spartan names."
Pope: Temple of Fame, 174.

* 3. To torment, to harass, to afflict, to persecute, to torture.

"So doest thou now to her of whom I tell, The lovely Amoret, whose gentle hart Thou *martyrest* with sorow and with smart."
Spenser: F. Q., IV. iv. 2.

* **B.** *Intrans.:* To suffer martyrdom.

mar'-tỹr-dŏm, * **mar-tir-dam**, * **mar-tir-dom**, * **mar-tire-dome**, *s.* [A.S. *martyrdóm*, from *martyr* = a martyr.]

1. The death of a martyr; the state of being a martyr; the voluntary suffering of death or persecution for the truth or one's faith.

"And crowne with *martiredome* his sacred head."
Spenser: F. Q., III. iii. 39.

* 2. A representation or picture of the death of a martyr.

"The *martyrdom* of St. Agnus by Domenichino."—*Sir W. Jones: Essay on the Imitative Arts.*

* 3. A church erected over the spot where a martyr has suffered. [MARTYRY.]

* **mar-tỹr-ī-zā'-tion**, *s.* [Eng. *martyriz(e)*; *-ation.*] The act of martyrizing or martyring; the state of suffering martyrdom.

* **mar'-tỹr-īze**, *v.t.* [Eng. *martyr*; *-ize.*] To sacrifice as a martyr; to martyr; to make a martyr of. (*Spenser: Colin Clout.*)

* **mar'-tỹr-lỹ**, *adv.* [Eng. *martyr*; *-ly.*] Pertaining or relating to martyrs or martyrdom; martyr-like.

"Piety, Sanctity, and *Martyrly* Constancy."—*Gauden: Tears of the Church*, p. 15.

* **mar'-tỹr-ŏ-lŏ̆ge**, *s.* [MARTYROLOGY. Fr. *martyrologe*; Ital. & Sp. *martirologio.*] A register or list of martyrs.

"Two other kings as much as our *martyrologe* may sted."
Drayton: Poly-Olbion, s. 24.

mar-tỹr-ŏ-lŏ̆g'-ĭc, **mar-tỹr-ŏ-lŏ̆g'-ĭc-al**, *a.* [Eng. *martyrology(y)*; *-ic*, *-ical.*] Of or pertaining to martyrology; registering or registered in a list of martyrs.

mar-tỹr-ŏl'-ŏ-ġist, *s.* [Eng. *martyrolog(y)*; *-ist*; Fr. *martyrologiste.*] One versed in martyrology; a writer or compiler of a martyrology.

mar-tỹr-ŏl'-ŏ-ġy, *s.* [Gr. *μάρτυρ* (*martur*), gen. *μάρτυρος* (*marturos*) = a witness, a martyr, and *λόγος* (*logos*) = a discourse, a treatise.]

Ecclesiol. & Church Hist.: A list of martyrs and other saints, with brief notices of their life and death, together with the mysteries of religion, such as the Incarnation, the Trinity, &c., commemorated on each day of the year. It is simply a calendar, amplified by short notices of the subject of each feast. In the religious orders of the Roman Church it is read at Prime. It was formerly, and in some orders is still, read in the monastic chapter, and not in choir.

"He who had a genius for art might illuminate a *martyrology*."—*Macaulay: Hist. Eng.*, ch. i.

* **mar'-tỹr-shĭp**, *s.* [Eng. *martyr*; *-ship.*] The quality or state of being a martyr; martyrdom.

4. *Fort.:* A cover of gabions or earth to protect workmen in constructing a battery, or a screen for a battery.

5. *Music & Theat.:* (See extract).

"A species of dramatic entertainment in which originally the performers were *masks* of peculiar forms suggestive of the allegorical characters assumed. In many instances the *masque* had no definite design or plot, but depended for its success upon the occasion for which it was written, the wit of the poet who furnished the words, the skill of the musician who supplied the music, and the ingenuity of the machinist and scene painter by whom the stage effects were produced. The early *masques* were simply acted pageants, but by degrees the genius of such writers as Fletcher and Ben Jonson furnished the poetical groundwork of many *masques* acted at Court by the children of His Majesty's Chapel Royal and St. Paul's Cathedral. The most beautiful work of this class is the *Comus* of Milton, acted at Ludlow in 1634, and although produced at a time when the taste for this class of entertainment had fallen off, it has always been held to be the most perfect specimen of a *masque*." (*Stainer & Barrett.*)

mā'-sŏn-rў, *s.* [Fr. *maçonnerie*, from *maçonner* = to do masons' work.]

1. The art or occupation of a mason; the art of so arranging stones or brick as to produce a regular construction. The masonry of the ancient Egyptians was remarkable for the large size of the stones employed, sometimes as much as thirty feet in length. They were laid without mortar. The Cyclopean or earlier masonry of the Greeks, some remains of which exist in the walls of Mycenæ and Tiryns, was formed of large and irregularly shaped masses of stone, the interstices being filled with smaller stones. In a few of the earlier English buildings, considered by some to be Saxon, the quoins, the door, and window jambs, and occasionally some other parts, were formed of stones alternately laid flat and set up endwise; the latter were usually much longer than the others. This is termed "long and short" work.

"Stones and mortar, and all the instruments of *masonry*."—*Hume: On the Understanding*, § 11.

2. The work executed by a mason.

"The lighthouse lifts its massive *masonry*,
A pillar of fire by night, of cloud by day."
Longfellow: Lighthouse.

3. The craft, mysteries, or principles of Freemasonry (q.v.).

ma-soô'-la, mas-soô'-la, ma-sû'-lah, *s.* [Native name.]

Naut.: A boat of the Coromandel coast, adapted to be beached on the surf-beaten shore. The planks are sewed together with coir, over wads of the same material which press upon the seams. They are 30 to 35 feet long, 10 to 11 feet beam, 7 to 8 feet deep, and are rowed by twelve men, oars double-banked, and a steersman with au oar at the stern.

măs'-ō-pĭn, *s.* [Etym. doubtful.]

Chem.: $C_{12}H_{18}O_2$. A resinous body, obtained from a tree called Dschilte, growing in Mexico. It is a snow-white pulverulent substance without taste or smell, insoluble in water, but soluble in alcohol and ether, from which it crystallizes in white silky needles. It melts at 155°, and solidifies on cooling to a glassy, brittle, yellow substance.

măs'-ō-rīte, *s.* [Eng. *masor(a); -ite.*] One of the writers of the Masora; one who adheres to the traditional readings of the Hebrew Scriptures.

B. *Trans.:* To put in disguise; to disguise.

masqu'-ẽr-ād-ẽr (qu as k), *s.* [Eng. *masquerad(e); -er.*] One who wears a mask; one who takes part in a masquerade; one who wears a disguise.

"The dreadful *masquerader*, thus equipt,
Out sallies." *Young: Night Thoughts*, v. 860.

măss (1), *masse (1), *s.* [Fr. *masse*, from Lat. *massa* = a mass, prob. from Gr. μᾶζα (*maza*) = a barley-cake, from μάσσω (*massō*) = to knead.]

I. *Ordinary Language:*

1. A body of matter, collected, concreted, or formed into one lump; a lump. (Applied to any solid body.)

"One common *mass* composed the mould of man."
Dryden: Sigismonda & Guiscardo, 502.

* 2. A collective body or aggregation of fluid matter.

"A deepe *masse* of continuall sea is slower eturred to rage."—*Savile: Tucitus; Agricola*, p. 188.

3. A heap; a great quantity or amount.

"Thy sumptuous buildings and thy wife's attire
Have cost a *mass* of public treasury."
Shakesp.: 2 Henry VI., i. 3.

*4. Bulk, size, magnitude.

"This army of such *mass* and charge,
Led by a delicate and tender prince."
Shakesp.: Hamlet, iv. 4.

5. The body of things considered collectively; the general; the main body or part: as, the *mass* of the people.

II. *Technically:*

1. *Physics:* The quantity of matter which a body contains. This is not necessarily the same as its volume, but is precisely proportioned to its weight, the assumption being made that weight arises from a greater quantity of matter being compressed into a limited space. Two bodies are said to have equal masses if when placed in opposite scales *in vacuo* they exactly balance each other. The mass of the unit of volume in any body of equal density throughout is the measure of this density. If *m* equal the mass of a body, *v* its volume, and *d* is density, then $m = vd$. The British unit of mass is the standard pound avoirdupois. [Avoirdupois.]

2. *Bot.* (*Pl.*): Collections of anything in unusual quantity, as the pollen masses in Orchidaceæ and Asclepiadaceæ.

¶ (1) *Measures of mass:* A grain, an ounce, a pound, a ton.

(2) *The masses:* The great or main body of the people; especially the great body of the working classes; the populace.

"His exertions in the cause of *the masses*."—*Hannay Singleton Fontenoy*, bk. i., ch. v.

mass-meeting, *s.* A large or general meeting called for some specific purpose. Mass-meetings were first talked of in the political campaign of 1840, when Harrison was elected President of the United States. The expression has since become naturalized in England.

măss (2), *masse (2), *messe, *s.* [A.S. *mæsse* = (1) the mass, (2) a church-festival, from Low Lat. *missa* = (1) a dismissal, (2) a mass; generally explained by supposing that the allusion is to the words *ite, missa est* = go, the congregation is dismissed, from *missus*, pa. par. of *mitto* = to send, to dismiss; Fr. *messe;* Ital. *missa;* Sp. *misa;* Dut. *mis, missa;* Ger. & Dan. *messe;* Sw. & Icel. *messa.*]

1. *Roman Theol. & Ritual:* "The perpetual sacrifice of the new covenant, in which the body and blood of Jesus Christ are really and truly offered to God under the species of bread and wine." (*Goschler.*) According to the *Catechism of the Council of Trent*, the Sacrifice of the Mass was instituted by Our Lord at his last supper (Luke xxii. 19); it must be offered to God alone; was signified in Malachi i. 11; is the same sacrifice with that of the Cross; there is one priest of both, for the celebrant uses not his own words, but those of Jesus Christ; it is a sacrifice of praise and propitiation, and available for the living and the dead (pt. ii., ch. iv.). There is an obligation on all Christians of the Roman Obedience to hear mass on all Sundays and holydays of obligation.

"Buried . . . with gorgeous obsequies,
And *mass*, and rolling music, like a queen."
Tennyson: Lancelot & Elaine, 1,326.

2. *Music:* A setting of certain portions of the mass to music; the portions of the mass usually set to music—namely, the *Kyrie*, the *Gloria*, the *Credo*, the *Sanctus*, and the *Agnus Dei*. An *Offertory* and *Benedictus* are sometimes added to these numbers. Masses are designated musically after the key in which they commence, as Beethoven in D; and liturgically, according to the character and solemnity of the accompanying ceremonial.

¶ 1. *Capitular Mass:* The High Mass on Sundays or holydays of obligation in collegiate churches.

2. *Conventual Mass:* The mass which the rectors of cathedral and collegiate churches are bound to have celebrated every day solemnly and with music after tierce. It must be applied for benefactors.

3. *High Mass:* [High-mass].

4. *Low Mass:* [Low-mass].

5. *Manual Mass:* A mass said for the intention of a person who gives an alms.

6. *Mass of the Præsanctified:* [Præsanctified].

7. *Midnight Mass:* The last of the three masses said on Christmas eve.

8. *Missa Cantata:* A mass sung, but without deacon and sub-deacon. It is not accompanied with the ceremonies proper to High Mass (q.v.), though in some places the use of incense is permitted.

9. *Missa Catechumenorum:* Mass for Catechumens. At first, the name was applied to the prayers and ceremonies of mass as far as the offertory, when the catechumens took their departure; afterwards it came to signify a special service, to which catechumens and penitents, and even Jews and pagans were admitted. (*Goschler.*) [Discipline of the Secret.]

10. *Missa Fidelium:* Mass of the Faithful. A name given to the more solemn parts of the mass, from which in the early Church catechumens were excluded.

11. *Missa Sicca:* Dry mass. This is not strictly speaking a mass, for there is neither consecration nor communion. It is now disused, except as a means of familiarizing persons about to be ordained with the ceremonies of High Mass.

12. *Parochial Mass:* The mass said on Sundays and holydays of obligation by a parish priest or the priest in charge of a quasi-parish [Mission], for the special benefit of those whose pastor he is. For this mass he can take no stipend (q.v.).

13. *Private Mass:* A mass said by a priest for his own devotion, and not to satisfy any obligation. There must be at least one server. Solitary masses are strictly forbidden.

14. *Public Mass:* A mass to which the faithful of both sexes are admitted. Such masses are prohibited in monasteries.

15. *To hear mass:* To be present at mass; to assist at the celebration of mass.

"They rose, *heard mass*, broke fast, and rode away."
Tennyson: Lancelot & Elaine, 414.

16. *Votive Mass:* A mass which does not correspond to the office of the day, but is said according to the choice (*votum*) of the celebrant. On Sundays, feasts of double rank, and a few days specially excepted, votive masses cannot be said.

mass-bell, *s.* The bell rung during a mass; a sanctus-bell.

"[He] with holy water sprinkled
All the ship; the *mass-bells* tinkled."
Longfellow: Musician's Tale, xi.

***mass-book,** *s.* A missal or Roman Catholic service-book.

mass-house, *s.* A contemptuous name for a Roman Catholic place of worship.

***mass-priest, *masse-priest,** *s.* Originally a priest whose functions were confined to saying mass, either in a religious house or in a chantry for the repose of the soul of a benefactor. As a rule, these clerics knew little theology, and hence the name came to have an opprobrious meaning as in the example.

"The witlessly-malicious Prosopopey . . . becomes wel the mouth of a scurrile *masse-priest*, and is worthy nothing but a scorne."—*Bp. Hall: Honour of Married Clergie*, bk. ii., § 7.

măss, *v.t.* [Mass (1), *s.*]

1. To gather or collect in a mass or masses; to assemble in crowds.

* 2. To strengthen, as a building, for the purposes of fortification. (*Hayward.*)

Hebrew Literature: The Massorah is a marginal directory, indicating on almost every line in the margin of the MS. bibles how the letters, words, forms, and phrases are to be written, according to the most ancient rules laid down by those who compiled, preserved, and transmitted the canon and the Old Testament scriptures. Every spurious letter or redundant word, every variation in the vowel points, accents, or in repetition of a phrase, and every peculiarity of construction over which the copyist is likely to blunder, and which have been the great source of the various readings, are most carefully noted; and those who are engaged in multiplying the codices are warned against the passages in question that here there is a peculiar phenomenon which is not to be made conformable to the ordinary reading. The Massorah also gives the various readings contained in standard MSS. of the Bible—viz., the Codex Hillali, the Jericho Codex, the Muggah Codex, the Sinai Codex, &c. It was at first traditionally transmitted by the authorized and professional scribes, who afterwards committed it to writing. The first edition of it in the Rabbinic Bible of Jacob ben Chayim (Venice, 1524–5) only gives a portion of this critical corpus. The entire mass of the Massoretic Rubrics has been edited and published by Dr. Ginsburg, in three vols., imperial folio.

mas'-tĕr-pĭēçe, *s.* [Eng. *master,* and *piece.*]

1. A performance superior to anything of the same kind, or to anything done by the same person; anything done with extraordinary skill and art.

"At an earlier period they had studied the *masterpieces* of ancient genius."—*Macaulay: Hist. Eng.,* ch. iii.

*2. Chief excellence or talent.

mas'-tĕr-shĭp, *mas-ter-shyppe, *s.* [Eng. *master*; *-ship.*]

1. The position, place, or office of a master.

"The kinds of this seignoury, Seneca makes two: the one, power or command; the other, propriety or *mastership.*"—*Raleigh: Hist. World,* bk. i., ch. ix., § 1.

2. The position, place, or office of teacher. [MASTER, *s.* 1 (3).]

*3. Dominion, rule, power, superiority, mastery, pre-eminence.

"Where noble youths for *mastership* should strive."
Dryden: Ovid; Metamorphoses i.

*4. Superior skill, art, or knowledge.

"When the sea was calm, all boats alike
Showed *mastership* in floating."
Shakesp.: Coriolanus, iv. 1.

*5. The chief work, the masterpiece.

"Two youths of royal blood, renown'd in fight,
The *mastership* of heav'n in face and mind."
Dryden: Palamon & Arcite, ii. 318.

*6. A title of respect: used ironically.

"How now, signior Launce? what news with your *mastership*?"—*Shakesp.: Two Gentlemen of Verona,* iii. 1.

mas'-tĕr-wŏrt, *s.* [Eng. *master,* and *wort.*]

Bot.: The umbelliferous genus or sub-genus Imperatoria. Common or Great Masterwort is *Imperatoria* or (according to Sir Joseph Hooker) *Peucedanum Ostruthium.* Imperatoria being made a section of Peucedanum. It is two or three feet high, with few leaflets, and large many-rayed umbels. It is a native of the north of America and of Europe. Called also by Hooker and Arnott by the book-name of Broad-leaved Hog's Fennel.

¶ English Masterwort is the genus Ægopodium.

masterwort-oil, *s.*

Chem.: A volatile oil, obtained from the root of masterwort. It appears to be a mixture of several hydrates of a hydrocarbon isomeric with oil of turpentine. It is transparent and aromatic, and boils at from 170° to 220°.

mas'-tĕr-ў, *mais-trie, *mais-try, *mæis-trie, *s.* [O. Fr. *maistrie, meistrie,* from *maistre* = a master (q.v.).]

1. Dominion, rule; power or right of governing; the position or state of a master.

"To meaner front was ne'er assign'd
Such *mastery* o'er the common mind."
Scott: Lord of the Isles, iv. 22.

2. Superiority, pre-eminence.

"If a man strive for *masteries,* yet is he not crowned except he strive lawfully."—2 *Timothy* ii. 5.

3. Victory in war.

"It is not the voice of them that shout for *mastery* . . . I hear."—*Exodus* xxxii. 18.

*4. The act of mastering.

"The learning and *mastery* of a tongue being unpleasant in itself, should not be cumbered with other difficulties."—*Locke: On Education.*

*5. Pre-eminent skill, art, or dexterity; masterly skill or power.

"O, had I now your manner, *maistry,* might . . .
How I would draw."
Ben Jonson: Poet to the Painter.

*6. Success attained by superior skill, art, or dexterity; a triumph.

*7. A contest for superiority.

*8. The philosopher's stone.

***mast'-fûl,** *a.* [Eng. *mast* (2), *s.*; *-ful*(*l*).] Abounding in mast, or the fruit of oak, beech, or other forest trees.

"Thus the *mastful* chesnut mates the skies."
Dryden: Virgil; Georgic ii. 20.

măs'-tĭc, măs'-tĭch, măs'-tĭck, *mas-tache, *mas-tiche, *s.* & *a.* [Fr. *mastic,* from Lat. *mastiche*; Gr. μαστίχη (*mastichē*) = the gum of the tree Schinos, from μαστάζω (*mastazō*), from μασάομαι (*masaomai*) = to chew; μάστᾰξ (*mastax*) = the mouth; Port. *mastique*; Dut. *mastik*; Ger. *mastix.*]

A. *As substantive:*

I. *Ordinary Language:*

1. The same as II. 1 (2).

2. A kind of mortar or cement used for plastering walls. It consists of finely-ground oolitic limestone, mixed with sand and litharge, and used with a considerable portion of linseed oil. It sets hard in a few days, and is much used in works where great expedition is required.

II. *Technically:*

1. *Botany:*

(1) (*Of all the forms*): [MASTIC-TREE].

¶ Barbary Mastic is *Pistacia atlantica,* Mastic of Chios, *P. Lentiscus,* North Indian, *Bursera gummifera,* and Peruvian Mastic, *Schinus molle.*

(2) (*Of the form* mastich, mastick): *Thymus Mastichina.*

(3) (*Of the form* mastic): *Majorana crassifolia.*

2. *Chem.:* The resin of *Pistacia Lentiscus,* occurring in small rounded translucent grains or tears, which soften when masticated, giving out a slightly bitter, aromatic taste. It is soluble in rectified spirit and oil of turpentine, and is used in fumigations and in the manufacture of varnishes. Its sp. gr. = 1·074, and its composition, according to Schrötter, is $C_{20}H_{32}O_2$.

3. *Dentistry:* Mastic dissolved in chloroform or ether, is often used to stop decayed teeth.

4. *Pharm.* (*Chiefly of the forms* mastiche and mastick): Sometimes used as a masticatory on account of the agreeable odour it imparts to the breath.

***B.** *As adj.:* Gummy, adhesive or sticky like mastic.

"Gellia wore a velvet *mastick* patch."
Bp. Hall: Satires, bk. vi., sat. 1.

mastic-herb, mastich-herb, *s.*

Bot.: Thymus Mastichina.

mastic-tree, *s.*

Botany:

1. *Pistacia Lentiscus,* an anacard growing in the Levant, the north of Africa, and the south of Europe, especially in the Isle of Chios. [MASTIC, ¶.] It has evergreen paripinnate leaves, with winged petioles. It is about fifteen or twenty feet high. Transverse incisions are made, in dry weather, in August and September, in the bark of the tree, from which the mastic exudes in drops, which are suffered to run down to the ground, and when coucreted are collected for use.

2. *Pistacia atlantica,* growing in Barbary; it yields Barbary Mastic.

***măs'-tĭc-ą-ble,** *a.* [Lat. *mastico* = to masticate; Eng. *-able.*] Capable of being masticated; susceptible of mastication.

măs-tĭ-cā'-dŏr, *s.* [Sp. *mastigador,* from Lat. *mastico* = to chew.] A part of a bridle; a slavering-bit.

măs'-tĭ-cāte, *v.t.* [Lat. *masticatus,* pa. par. of *mastico* = to chew, properly = to chew mastic, from Lat. *mastiche* = mastic (q.v.); Ital. *masticare*; Sp. *masticar*; Port. *mastigar.*] To chew; to grind and crush with the teeth, so as to prepare for swallowing.

"Now I eat my meals with pain,
Averse to *masticate* the grain."
Cotton: Fable vi.

măs-tĭ-cā'-tion, *s.* [Fr., from Lat. *masticatio,* from *masticatus,* pa. par. of *mastico* = to masticate (q.v.); Sp. *masticacion*; Ital. *mastigazione.*]

Phys.: The trituration of the food and the mixing of it with the salivary secretion, preparing it for the further action of the stomach. Mastication is voluntary in the adult, except when the will is in abeyance; in infants and the lower animals it becomes instinctive. It is performed by the action of the lips, teeth, and mouth. This action is mechanical, whilst the further digestive process in the stomach is chemical. Mastication is succeeded by deglutition, or swallowing, by which the aliment is conveyed into the pharynx, and from there to the stomach.

măs'-tĭ-cā-tŏr, *s.* [Eng. *masticat(e)*; *-or.*]

1. One who or that which masticates; specif., a small machine to cut up meat for aged persons, or those who have lost their teeth or the power of chewing.

2. A machine which kneads the raw caoutchouc to render it homogeneous.

măs'-tĭ-cā-tŏr-ў, *a.* & *s.* [Fr. *masticatoire.*]

A. *As adj.:* Chewing; adapted for the office or duty of chewing.

* **B.** *As subst.:* A medicine to be chewed only, not swallowed.

"Salivation and *masticatories* evacuate considerably."—*Floyer: On Humours.*

măs'-tĭch, *s.* [Mastic.]

măs'-tĭ-çĭn, *s.* [Eng., &c. *mastic*; suff. *-in.*]

Chem.: That portion of mastic insoluble in alcohol. It is a soft white resin, but by prolonged heating becomes transparent, yellowish, and friable, and is then soluble in alcohol. Its composition, according to Johnston, is $C_{40}H_{31}O_2$.

* **măs'-tĭck,** *s.* [Mastic.]

* **măs'-tĭck,** *a.* [See def.] Perhaps = masticating, but more probably a misreading or misprint for *mastiff.*

"When rank Thersites opes his *mastick* jaws."
Shakesp.: Troilus & Cressida, i. 3.

măs'-tĭ-cŏt, *s.* [Massicot.]

măs'-tĭff, * **mas-tif,** * **mas-tis,** * **mas-tyf,** * **mes-tif,** * **mes-tyf,** * **mas-tive** (pl. **măs'-tĭffs,** † **măs'-tĭveş),** *s.* [O. Fr. *mestif* = mongrel, *mastin* (Fr. *mâtin*) = a mastiff, properly a house-dog, from Low Lat. * *mastinus,* * *masnatinus,* from *masnata, masnada* = a household, from Lat. *mansio* = a mansion; Ital. *mastino*; Port. *mastim*; Sp. *mastin.*]

Zool.: A variety of dog of an old English breed, probably peculiar to the British Isles. It is the *Dogue de forte race* of Buffon, the *Canis molossus* of Linnæus, *C. mastivus* of Ray, and *C. villaticus* or *catenarius* of Dr. Caius. The head resembles that of the bull-dog, but with the ears depeudent. The upper lip falls over the lower jaw. The end of the tail is turned up, and the fifth toe of the hind foot is frequently developed. The nostrils are separated by a deep furrow. The bark is deep-toned, and the aspect of the animal grave and noble. It is taller than the bull-dog, but the chest is not deep, and the head is large in proportion to the general form. The mastiff is faithful and affectionate, and makes an excellent watch-dog.

"The next is the *mastiff* or ban dog, a species of great size and strength, and a very loud barker. Manwood (*Forest Law*) says, it derives its name from Mase tbe thefe, being supposed to frighten away robbers by its tremendous voice."—*Pennant: Brit. Zool.*; *The Mastiff.*

¶ *Cuban mastiff:*

Zool.: A variety of mastiff, intermediate in size between the English variety and the bull-dog. It is extremely savage, and was used in the days of slavery for tracking runaway negroes. It is now used as a watch-dog, and by the Spaniards for bull-fighting.

mastiff-bats, *s. pl.*

Zool.: The cheiropterous sub-family Molossinæ (q.v.). The popular name is derived from a faint resemblance which they bear to mastiffs in the conformation of the head.

măs-tĭ-gā'-dŏr, *s.* [Masticador.]

măs-tĭg-a-mœ'-ba, *s.* [Gr. *μάστιξ* (*mastix*), genit. *μάστιγος* (*mastigos*) = a whip, and Eng., &c. *amœba* (q.v.).]

Zool.: A genus of Naked Lobose Rhizopods. *Mastigamœba aspersa* is an intermediate form between the Rhizopoda and the Flagellate Infusoria. It is about 1 mm. long, tapering at the ends, with many pseudopods, and a general investment of minute bodies. There is a flagellum projecting in front from an ovate corpuscle enclosing a nuclear body.

măs-tĭ-gŏph'-ŏr-a, *s.* [Gr. *μαστιγοφόρος* (*mastigophoros*) = carrying a whip, from *μάστιξ* (*mastix*), genit. *μάστιγος* (*mastigos*) = a whip, and *φορός* (*phoros*) = bearing, from *φέρω* (*pherō*) = to bear, to carry.]

Bot.: The typical genus of the family Mastigophoridæ (q.v.).

măs-tĭ-gŏ-phŏr'-ĭ-dæ, *s. pl.* [Mod. Lat. *mastigophor(a)*; Lat. fem. pl. adj. suff. *-idæ.*]

Bot.: A family of Jungermanniaceæ, tribe Jungermanneæ.

* **măs-tĭ-gŏph'-ŏr-oŭs,** *a.* [Mastigophora.] Carrying a wand, scourge, or whip.

măs'-tĭg-ō-pŏd, *s.* [Gr. *μάστιξ* (*mastix*), genit. *μάστιγος* (*mastigos*) = a whip, and *πούς* (*pous*), genit. *ποδός* (*podos*) = a foot.]

Zool.: (See extract).

"It will be convenient to distinguish tbose Protozoa . . . which are provided with cilia or flagella as *mastigopods.*"—*Huxley: Anat. Invert. Animals,* p. 76.

măs'-tĭg-ure, *s.* [Mastiourus.] Any individual of the genus Mastigurus (q.v.).

"The Egyptian *mastigure* is a native of Northern Africa."—*Wood: Illus. Nat. Hist.,* ii. 90.

măs-tĭg-ür'-ŭs, *s.* [Gr. *μάστιξ* (*mastix*), genit. *μάστιγος* (*mastigos*) = a whip, and *οὐρά* (*oura*) = a tail.]

Zool.: Fleming's name for Cuvier's lacertine genus Uromastix (q.v.).

mast'-ĭng, *pr. par., a., & s.* [Mast, *v.*]

A. & **B.** *As pr. par. & particip. adj.:* (See the verb).

C. *As subst.:* The act or operation of furnishing with masts.

masting-house, *s.* [Mast-house.]

masting-shears, *s.* A contrivance consisting of two spars and one or more guys, used for stepping or removing masts ou board vessels. [Shears.]

măs-tī'-tĭs, *s.* [Gr. *μαστός* (*mastos*) = the breast; suff. *-itis.*]

Pathol.: Inflammation of the breasts of women; it commonly terminates in suppuration.

mast'-lĕss (1), *a.* [Eng. *mast* (1), s.; *-less.*] Having no masts; unfurnished with masts.

"Tbere is every reason to believe that . . . she is not superior to our *mastless* vessels."—*Brit. Quarterly Review,* lvii. 117.

* **mast'-lĕss** (2), *a.* [Eng. *mast* (2), s.; *-less.*] Bearing or producing no mast.

"A crown of *mastless* oak adorn'd her head."
Dryden: Palamon & Arcite, iii. 208.

* **mast'-lin,** *s.* [Maselin.]

măs'-tō-dŏn, *s.* [Gr. *μαστός* (*mastos*) = a teat, a nipple, and *ὀδούς* (*odous*), genit. *ὀδόντος* (*odontos*) = a tooth.]

Palæont.: An extinct genus of Proboscideans, closely allied to the true Elephants (q.v.). The crowns of the molar teeth have nipple-shaped tubercles placed in pairs, and

SKELETON OF MASTODON GIGANTEUS.

from the number of these projections, Dr. Falconer divided the genus iuto groups: (1) Trilophodon, and (2) Tetralophodon (q.v.). Generally speaking, the two upper incisors formed long curved tusks, as in the Elephants, but in some cases there were two lower incisors as well.

The genus ranged in time from the middle of the Miocene period to the end of the Pliocene in the Old World, when they became extinct. In America several species—especially that which, from the abundance of its remains, is the best known, *Mastodon ohioticus, americanus,* or *giganteus*—survived to a late Pleistocene period.

To exemplify their range in space, Prof. Flower (*Encyc. Brit.* (ed. 9th), xv. 623) gives the following list.

"Trilophodont series: *M. angustidens, borsoni, pentelici, pyrenaicus, tapiroides* (or *turicensis*), and *virgatidens,* from Europe; *M. falconeri* and *pandionis,* from India; *M. ohioticus, obscurus,* and *productus,* from North America; and *M. andium* and *humboldtii,* from South America.

"Tetralophodont series: *M. arvernensis, dissimilis,* and *longirostris,* from Europe; *M. latidens, sivalensis,* and *perimensis,* from India; and *M. mirificus,* from North America. Remains of *M. arvernensis* and *M. borsoni* have been found in the crags of Norfolk and Suffolk."

A fragment of a tusk, presenting the characteristic structure only known at present in elephants and mastodons, was found in a drift-deposit, east of Moreton Bay, Queensland, and was described by Prof. Owen in *Proc. Roy. Soc.,* March 30, 1882.

măs-tō-dŏn-sâu'-rŭs, *s.* [Eng., &c. *mastodon,* and Gr. *σαῦρος* (*sauros*) = a lizard.]

Palæont.: A genus of Labyrinthodonta founded by Prof. Jaeger on cranial remains from the Lower Keuper of Wurtemberg. The name is misleading, as the animal had no affinity with the Saurians, and is now better described as *Labyrinthodon Jaegeri.* Casts of the remains are in the British Museum of Natural History at South Kensington.

măs-tō-dŏn'-tĭc, *a.* [Eng. *mastodon*; *t* connective, and suff. *-ic.*] Pertaining to or resembling a mastodon.

măs-tō-dўn'-ĭ-a, *s.* [Gr. *μαστός* (*mastos*) = the breast of a woman, and *ὀδύνη* (*odunē*) = pain.]

Pathol.: Irritable breast, a neuralgia of the intercostal nerves, or of the anterior supra-clavicular nerves going to the mammary glands.

măs'-tŏid, *a.* [Gr. *μαστός* (*mastos*) = the breast, and *εἶδος* (*eidos*) = appearance.] Pertaining to or resembling the breast; teat-like.

mastoid-artery, *s.*

Anat.: A branch of the occipital artery, entering the skull through the mastoid foramen, and ramifying in the dura mater.

mastoid-cells, *s. pl.*

Anat.: Irregular cavities in the substance of the mastoid process of the temporal bone. They communicate freely with one another, and are lined by a thin mucous membrane continuous with that of the tympanum.

mastoid-foramen, *s.*

Anat.: The passage in the mastoid portion of the temporal bone, by which the mastoid artery enters the skull.

mastoid-muscle, *s.* [Sterno mastoid muscle.]

mastoid-process, *s.*

Anat.: A nipple-shaped projection behind the aperture in the ear, in the mastoid portion of the temporal bone. On the inner side there is a deep groove for the attachment of the digastric muscle, and internally there is a groove for the occipital artery.

măs-tŏid'-ĕ-al, *a.* [Eng. *mastoid*; *-eal.*]

Anat.: Situated in or pertaining to the mastoid process.

măs-tŏid-ŏ-, *pref.* [Mastoid.]

Anat.: Of or belonging to anything mastoid.

mastoido-humeral, *a.*

Anat.: Connected both with the humeral and with the mastoid process. There is a *mastoido-humeral* muscle.

măs-tŏl'-ŏ-ğў, *s.* [Gr. *μαστός* (*mastos*) = the breast, and *λόγος* (*logos*) = a discourse, a treatise.] A treatise or history of auimals which suckle their young.

* **măs'-trĕss,** *s.* [Mistress.]

măs-tŭr-bā'-tion, * **măs-tu-prā'-tion,** *s.* [Fr. *masturbation, mastupration,* from Lat. *masturbatus,* pa. par. of *masturbo* = to practise onanism, prob. from *manus* = the hand, and *stuprum* = defilement; Sp. *masturbacion*; Ital. *masturbazione, mastuprazione.*] Onanism; self-defilement.

mast'-wood, *s.* [Eng. *mast,* and *wood.*] (See the compound.)

¶ *Yellow mastwood:*

Bot.: *Xanthoxylon* (*Tobinia*) *coriacea.*

mast'-wŏrt, *s.* [Eng. *mast,* and *wort.*]

Bot.: The name given by Lindley to the order Corylaceæ.

* **mast'-ў,** *a.* [Eng. *mast* (2), s.; *-y.*] Full of or abounding with mast or acorns, &c.

* **mas-ty,** * **mas-tyf,** *s.* [Mastiff.]

ma-sû'-la, *s.* [Masoola.]

măt (1), * **matte** (1), * **natte,** *s.* [A.S. *meatta;* from Lat. *matta;* Low Lat. *natta* = a mat; cogn. with Dut. *mat;* Ger. *matte;* Sw. *matta;* Dan. *matte;* Ital. *matta;* Sp. *mata;* Fr. *natte.*]

I. *Ordinary Language:*

1. A rug of straw, rushes, husks, coir, junk, hemp; a tufted fabric of these materials or of wool; a skin with the hair or wool on; a set of slats, &c. Mats are for cleaning shoes at a door; keeping the feet from a cold floor, as in carriages or halls, and elsewhere.

"The women and children in the west of Cornwall make *mats* of a small and fine kind of bents there growing, which serve to cover floors and walls."—*Carew: Survey of Cornwall.*

2. A kind of coarse fabric used in the packing of furniture or goods, in the stowage of corn, and in covering up plants against frost, &c. [Bass-mat.]

3. A small piece of oil-cloth, fabric, or worsted work, to place beneath a hot dish or wet jug, to preserve the polish of a table; a dinner-mat.

* 4. A mattress.

5. Anything growing thickly together, or closely interwoven, so as more or less to resemble a mat in appearance, form, or texture: as, a *mat* of hair.

II. *Technically:*

1. *Naut.:* A wad of woven or thrummed junk, used to secure standing rigging from the friction of yards and ropes.

2. *Photog.:* An ornamental plate or passe-partout laid over a photograph, and forming an oval or other symmetrical border to the picture, as well as keeping it from abrasion by the glass.

mat-grass, *s.* [Mat-weed.]

mat-weed, mat-grass, *s.*

Botany:

1. Nardus, a genus of grasses, the only species of which is *Nardus stricta,* which grows abundantly on moors and heaths in short tufts which are so coarse and rigid that cattle will not eat it. [Nardus.]

2. The graminaceous genus Psamma (q.v.).

¶ Hooded mat-weed is *Lygeum Spartium;* Sea mat-weed, *Psamma arenaria;* and Small mat-weed, *Nardus stricta.*

măt (2), **matt, matte** (2), *s.* [Ger. *matt* = dull, dim; applied to metals.]

Metall.: An alloy of metals in a crude form, in the process of reducing.

măt, *v.t.* & *i.* [Mat, *s.*]

A. *Transitive:*

1. To cover or overlay with mats or matting.

"Keep the doors and windows of your conservatories well *matted* and guarded from the piercing air."—*Evelyn: Kalendar.*

2. To twist or twine together; to interweave like a mat; to entangle: generally in the pa. par., as *matted* hair.

"The fibres are *matted* as wool is in a hat."—*Grew: Cosmo. Sacra,* bk. i., ch. lv.

B. *Intrans.:* To become matted; to grow thickly and closely together; to become interwoven like a mat.

* **măt'-ą-chĭn,** *s.* [Mattachin.]

măt'-ą-chō, *s.* [Mataco.]

măt'-ą-cō, măt'-ą-chō, măt'-ĭ-cō, *s.* [Native names.]

Zool.: Dasypus Aspar (Desmarest), *D. tricinctus* (Linn.), the Bolita, or Ball Armadillo, so-called from its faculty of assuming a spherical form. It is about eighteen inches long, of which the tail is two and a half, and the head three. Between the two bucklers are three movable bands, whence the animal is sometimes called the Three-banded Armadillo Habitat, Brazil, Paraguay, and Buenos Ayres, but it is nowhere very common.

măt'-ą-dŏr, măt'-ą-dōre, *s.* [Sp. *matador,* from *matar,* Lat. *mācto* = to kill, to sacrifice; *mactator* = one who kills or sacrifices.]

1. *Ord. Lang.:* One who kills: specif. in Spanish bull-fights the man appointed to administer the fatal stroke to the bull, when excited to fury by the attacks of the picadores and banderilleros. He is armed with a sword and a small stick (*muleta*), to which a piece of scarlet silk is attached. The animal is killed by plunging the sword into it near the left shoulder-blade, and if the stroke is skilfully and properly given, death is instantaneous.

MATADOR.

"In costly sheen and gaudy cloak array'd,
But all afoot, the light-limb'd *Matadore*
Stands in the centre, eager to invade
The lord of lowing herds."
Byron: Childe Harold, iv. 74.

2. *Cards:* One of the three principal cards in the games of ombre and quadrille, which are always two black aces and the deuce of spades and clubs, and the seven of hearts and diamonds. These are called murdering cards because they take or kill all other.

"Now move to war her sable *matadores*
In show like leaders of the swarthy Moors."
Pope: Rape of the Lock, iii. 47.

* **măt-æ-ŏl'-ō-ğy,** *s.* [Mateology.]

* **măt-æ-ō-těch'-nĭe,** *s.* [Mateotechny.]

* **măt'-ą-fūnd,** *s.* [Sp. *matar* = to kill, and Lat. *funda* = a sling.] A kind of sling.

"That murderous sling
The *matafund.*" *Southey: Joan of Arc,* bk. viii.

ma-tą-ma'-tą, *s.* [Native name.]

Zool.: Chelys fimbriata, a river tortoise living in the stagnant pools near the Orinoco and Amazon. It lives on fish and small waterbirds. Its peculiar barbules, from their close resemblance to worms serve to attract fish. The head is depressed, wide, and triangular; the nostrils prolonged into a kind of proboscis, the gape wide, and the jaws rounded. The buckler is flat and bumpy.

măţch (1), * **macche** (1), * **mache** (1), *s.* [O. Fr. *mesche, meiche* = a wick of a candle, a match, from Low Lat. * *myxa, myxus* = a wick of a candle, from Gr. *μύξα* (*muxa*) = the nozzle of a lamp; Fr. *mèche;* Sp. & Port. *mecha;* Ital. *miccia.*]

1. *Ord. Lang.:* Anything which readily catches fire, either from a spark or by friction, and is used for conveying, communicating, or retaining fire; specifically, a splint or strip of combustible material, usually wood, one end of which is dipped in a composition that ignites by friction. There are numerous varieties of matches, adapted for different uses, as fusees, vestas, vesuvians, &c.

"Nor will it [the smoke of snlphur] easily light a candle, until that spirit be spent, and the flame approacheth the *match.*"—*Browne: Vulgar Errours,* bk. vi., ch. xii.

2. *Ord. & Mining:* A slow-match consists of loosely-twisted hempen cord dipped in a solution of saltpetre and lime-water. It burns at the rate of one yard in three hours. A quick-match is cotton coated with a composition of mealed-powder, gum, and water. When not confined it burns at the rate of one yard in thirteen seconds. Another quick-match is made of cotton-wick boiled in saltpetre and water. Alcohol and mealed powder are added to the warm solution, and the wick left to steep for twenty-four hours. The match is then dried.

"We took a piece of *match,* such as soldiers use, of the thickness of a man's little finger, or somewhat thicker."—*Boyle: Works,* i. 29.

¶ *To prime a match:* To prepare the match so as to be easily ignitible by putting on the end of it some wet bruised powder, made into a sort of paste.

match-box, *s.* A box for holding matches.

match-cloth, *s.* A kind of coarse woollen cloth.

match-coat, *s.* A large loose coat made of match cloth.

* **match-cord,** *s.* A line or cord prepared as a match.

* **match-tub,** *s.*

Old Ord.: A tub with a cover perforated with holes, in which lighted slow matches were hung, fire downwards, and in which there was water to extinguish any sparks that might fall from the matches.

"Concerning the *materials* of seditions."—*Bacon: Essays: Of Seditions.*

¶ 1. *Raw material:* Material in its natural state, or unmanufactured.

2. *Strength of materials:* The power by which any substance, as a rod, beam, chain, rope, &c., resists any effort to destroy the cohesion of its parts. There are four distinct strains to which every hard body may be exposed, and which are—first, a body may be pulled or torn asunder by a stretching force, applied in the direction of its fibres, as in the case of ropes, stretchers, king-posts, tie-beams, &c.; secondly, it may be broken across by a transverse strain, or by a force acting either perpendicularly or obliquely to its length, as in the case of levers, joists, &c.; thirdly, it may be crushed by a force acting in the direction of its length, as in the case of pillars, posts, and truss-beams; fourthly, it may be twisted or wrenched by a force acting in a circular direction, as in the case of an axle of a wheel.

***mą-tẽr'-ĭ-ąl,** *v.t.* [Material, *a.*] To make material; to materialize.

"I believe that the whole frame of a beast doth perish, and is left in the same state after death as before it was *materialed* unto life."—*Browne: Religio Medici*, § 37.

mą-tẽr'-ĭ-ąl-ĭsm, *s.* [Eng. *material; -ism.*]

I. *Ordinary Language:*

* 1. Matter; material bodies collectively.

2. In the same sense as II.

3. The tendency to devote care and time to the material nature, and its interests and wants, to the neglect of the spiritual nature.

II. *Hist. & Philos.:* The system of philosophy which regards Mind as a function of matter; the mechanical theory of the Universe. The first traces of materialism as a system are to be found in the atomistic philosophy of Leucippus and Democritus, which sought to comprehend all phenomena as products of matter and motion alone. Next in order comes the Epicurean School; but Epicurus differed from Democritus in ascribing to the atoms a certain power of individual or arbitrary self-determination (Cic., *de Nat. Deor.*, i. 24, 25). From this time a supernatural element may be said to have found a place in every philosophical system till the seventeenth century, since which time materialism has again come to the front. Gassendi (1592–1655) sought to combine Epicureanism with Christian theology; but F. A. Lange (*Gesch. des Materialismus*, p. 118) does not scruple to call him "the renewer in modern times of systematic materialism." In England, Hobbes (1588–1679) accepted materialism as the foundation of his theory (*Lewes: Hist. Phil.*, ii. 234), and was followed by Hartley (1704–1757), and still later by Priestley (1733–1804), who, like Gassendi, sought to combine materialism with Christianity. In France the *System of Nature* of Holbach (1723–1789) was the greatest production of materialist philosophy in the eighteenth century. In Germany, in the present day materialism has many champions, men distinguished for physical—and especially biological—research standing in the foremost ranks. Moleschott, combating Liebig, comes to the conclusion: "No matter without force; no force without matter" (*Der Kreislauf des Lebens*, p. 362). Vogt followed with *Bilder aus dem Thierleben*. Rudolph Wagner, an opponent of materialism, proposed at the Göttingen Congress of Physiologists to discuss the question of a "special soul substance." The challenge was accepted, but no discussion took place, and the *Deutsches Museum* (Nov. 16, 1854, p. 755) states "that among five hundred persons present, not one single voice was raised in favour of the spiritualistic philosophy." Wagner appealed to a wider public in his *Glauben und Wissen*, to which Vogt replied in a pamphlet, distinguished rather by sarcasm than argument: *Köhlerglaube und Wissenschaft*. To this succeeded Büchner's *Kraft und Stoff*, which, according to Lewes (*Hist. Phil.*, ii. 752) was "for a time the best-abused book in Europe. The chief opponents of the outburst of materialism in Germany were Wagner, Lotze, and Fichte.

"Atheism may be termed *Materialism* in its naked, and not its transcendental sense. *Materialism* in its transcendental sense may indeed be imagined to be Universal Existence without beginning or end; but then this form of *Materialism* is in reality Pantheism."—*History of Pantheism*, ii. 276.

mą-tēr′-ĭ-ąl-ĭst, *s.* & *a.* [Eng. *material; -ist.*]

A. *As substantive:*

1. One who holds the principles of any system of materialism.

"The 'free-thinking' antagonist of free-thinking *materialists*."—*Fraser: Berkeley*, p. 100.

2. One whose care is for his material rather than his mental or moral interest.

B. *As adj.:* Pertaining to materialism; materialistic.

"The *materialist* view is quite as imperfect as the spiritualist view."—*G. H. Lewes: Hist. Phil.* (1880), ii. 753.

mą-tēr-ĭ-ąl-ĭst′-ĭc, mą-tēr-ĭ-ąl-ĭst′-ĭc-ąl, *a.* [Eng. *materialist; -ic, -ical.*] Relating to or partaking of the nature of materialism.

"We object to the decidedly sensational and almost *materialistic* texture of the work."—*Brit. Quarterly Review*, vol. lvii. (1873), p. 391.

mą-tēr-ĭ-ăl′-ĭ-tў, *s.* [Fr. *matérialité*, as if from a Lat. *materialitas;* Ital. *materialità;* Sp. *materialidad.*]

1. The quality or state of being material, or consisting of matter; material existence; corporeity.

"Nor had compacted earth, nor rock, nor stone,
Nor gross *materiality* been known."
Byrom: An Epistle to a Gentleman in the Temple.

† 2. The quality of being material or important; importance, moment, weight: as, the *materiality* of evidence.

mą-tēr′-ĭ-ąl-īze, *v.t.* [Eng. *material; -ize.*]

1. To reduce or bring to a state of matter or material existence; to invest with matter or corporeity; to make material.

"By this means [the invention of letters] we *materialize* our ideas, and make them as lasting as the ink and paper, their vehicles."—*Guardian*, No. 172.

2. To consider or explain by the laws or rules which are appropriate or peculiar to matter.

3. To cause to assume a character appropriate to material things; to occupy with material instead of moral or religious interests.

mą-tēr′-ĭ-ąl-īz-ĭng, *a.* [Eng. *materializ(e); -ing.*] Directed or tending towards materialism.

mą-tēr′-ĭ-ąl-lў, *adv.* [Eng. *material; -ly.*]

1. In a material manner or state; in the state of matter.

2. In substance, not in form only; essentially.

3. In a material or important manner or degree; essentially, importantly.

"All this concerneth the customs of the Irish very *materially:* as well to reform those which are evil, as to confirm and continue those which are good."—*Spenser: State of Ireland.*

mą-tēr′-ĭ-al-nĕss, *s.* [Eng. *material; -ness.*] The quality or state of being material; materiality, importance.

* **mą-tēr-ĭ-ār′-ĭ-an,** *s.* [Lat. *materiarius* = pertaining to matter; *materia* = matter.] A materialist.

* **mą-tēr′-ĭ-āte,** *a.* & *s.* [Lat. *materiatus*, pa. par. of *materio* = to construct of matter, from *materia* = matter.]

A. *As adj.:* Constructed or composed of matter.

"The most ponderous and *materiate* amongst metalles."—*Bacon: Nat. Hist.*, § 326.

B. *As subst.:* A substance or thing composed of matter; a material substance.

* **mą-tēr′-ĭ-ā-tĕd,** *a.* [Lat. *materiatus.*] The same as MATERIATE (q.v.).

* **mą-tēr-ĭ-ā′-tion,** *s.* [Lat. *materiatio*, from *materiatus*, pa. par. of *materio* = to construct of materials.] The act or process of forming matter.

"Creation is the production of all things out of nothing; a formation not only of matter but of form, and a *materiation* even of matter itself."—*Browne: Vulgar Errour* bk. vi., ch. i.

mą-tē′-rĭ-ĕl, *s.* [Fr.] [MATERIAL.] That which, in a complex system, constitutes the materials or instruments employed, as distinguished from the *personnel*, or men employed; thus the baggage, arms, provisions, &c., of an army are its *matériel*, as distinguished from the men, who constitute the *personnel*; so also the buildings, libraries, apparatus, &c., of a college, as distinguished from the professors and officers.

* **mą-tēr′-ĭ-oŭs,** *a.* [Lat. *materi(a);* Eng. adj. suff. *-ous.*] The same as MATERIAL, *a.* (q.v.).

mą-tēr′-nąl, * **mą-tēr′-nąll,** *a.* [Fr. *maternel*, from Low Lat. *maternalis*, from Lat. *maternus* = motherly, from *mater* = a mother; Sp. & Port. *maternal;* Ital. *maternale.*] Of or pertaining to a mother; becoming or befitting a mother; motherly.

"[She] long his loss with tears *maternal* mourned."
Hoole: Orlando Furioso, i.

mą-tēr′-nąl-lў, *adv.* [Eng. *maternal; -ly.*] In a maternal or motherly manner; like a mother.

mą-tēr′-nĭ-tў, *s.* [Fr. *maternité*, from Lat. *maternitatem*, acc. of *maternitas*, from *maternus* = maternal; Ital. *maternità;* Sp. *maternidad.*] The quality, state, condition, or relation of a mother.

"Her charity was the cause of her *maternity*."—*Parthenæ Sacræ* (1633), p. 47.

maternity-hospital, *s.* A lying-in hospital.

māte′-shĭp, *s.* [Eng. *mate* (I); *-ship.*] Companionship.

"I sat among them equally
In fellowship and *mateship*, as a child."
E. B. Browning: Aurora Leigh, vii.

măt′-fĕl-ŏn, *s.* [Wel. *madfelen.*]

Bot.: A plant, *Centaurea nigra*; knapweed.

* **math,** * **mathe,** *s.* [A.S. *mæth, máth*, from *máwan* = to mow.] A mowing; a crop gathered by mowing. (Chiefly in composition, as after*math.*)

"The first mowing thereof for the king's use, is wont to be sooner than the common *mathe*."—*Bp. Hall: Hard Texts; Amos* vii.

Măth′-ą-rĭns, *s. pl.* [See def.]

Church Hist.: An order of friars, founded by St. John of Matha in the thirteenth century for the redemption of Christian captives. [TRINITARIAN, II.]

măth-ĕ-măt′-ĭc-ąl, † **măth-ĕ-măt′-ĭc,** *a.* & *s.* [Fr. *mathématique*, from Lat. *mathematicus;* Gr. μαθηματικός (*mathēmatikos*) = belonging to the sciences, mathematical, from μάθημα (*mathēma*), genit. μαθήματος (*mathēmatos*) = that which is learnt, a lesson, science; μανθάνω (*manthanō*) = to learn; Ital. & Sp. *matematico.*]

A. *As adjective:*

1. Of or pertaining to mathematics.

"Solving problems *mathematic*."
Byron: Granta.

2. According to the rules or principles of mathematics; theoretically precise or accurate.

"Every single argument should be managed as a *mathematical* demonstration."—*Locke: Human Understanding*, § 7.

3. A term employed to denote the school of philosophy more generally known as the Pythagorean (q.v.), from the fact that its method was purely deductive, and its tendency towards the consideration of abstractions as the only true materials of science.

"Hence the name not unfrequently given to that School of the *Mathematical*."—*G. H. Lewes: Hist. Philos.* (1880), i. 28.

¶ Mosheim applies the name "mathematical philosophy" to that of Gassendi and his successors, as distinguished from the metaphysical philosophy of Descartes. The name is unhappily chosen; for, while the method of mathematics is deductive, all who use the inductive method are claimed as cultivators of the mathematical philosophy. (*Mosheim: Church Hist.* (ed. Reid), pp. 735, 736, 813.)

* **B.** *As subst.:* A mathematician.

măth-ĕ-măt′-ĭc-ąl-lў, *adv.* [Eng. *mathematical; -ly.*] In a mathematical manner; according to the rules or principles of mathematical science; with mathematical certainty.

"The correctness of the solution is as *mathematically* certain, as the truth of any property of the triangle."—*Stewart: Of the Human Mind*, vol. ii., ch. ii., § 3.

măth-ĕ-mą-tĭ′-cian, *s.* [Fr. *mathématicien*, from Lat. *mathematicus;* Gr. μαθηματικός (*mathēmatikos*) = mathematic (q.v.).] One who is versed or skilled in mathematical science.

"*Mathematicians*, among the Romans, were, for some time, specially meant of astrologers, or star prophets."—*Grew: Cosmo. Sacra*, p. 327.

măth-ĕ-măt′-ĭcs, * **măth′-ĕ-măt′-ĭcks,** *s.* [In Ger. *mathematik;* Fr. *mathématique;* Ital. *matematica;* Lat. *mathesis* = (1) learning, (2) mathematics; Gr. μάθησις (*mathēsis*) = learning, science; μαθεῖν (*mathein*) = to learn, 2nd aor. inf. of μανθάνω (*manthanō*) = to learn.] The science which treats of all kinds of quantity which can be numbered or measured. It is divided into Pure, Abstract, or Speculative, and Mixed, Concrete, or Practical. Pure mathematics investigates the properties of abstract numbers and magnitudes. Mixed or Practical mathematics applies the knowledge thus acquired to practical matters. Pure mathematics is divided into Arithmetic, or the Science of Numbers, and Geometry, or the science which measures figured extension.

"I have mentioned *mathematicks* as a way to settle in the mind an habit of reasoning closely and in train."—*Locke: Human Understanding*, § 7.

¶ The names of sciences, such as *mathematics, physics, mechanics, optics, metaphysics*, &c., though in appearance plural, are treated as singular nouns. Some, indeed, are found in Mid. English in a singular form, as *mathematike* (*Chaucer*), *mechanic* (*Gower*), &c., and we still retain a large number of such names in a singular form, as *arithmetic, logic, rhetoric, music*, &c. The plural form was probably adopted to indicate the complex nature of the ideas expressed.

* **măth′-ĕr,** *s.* [MADDER.]

* **mā′-thēs,** *s.* [Corrupted from Lat. *anthemis* (q.v.).]

Bot.: A kind of wood-chamomile. (*Ainsworth.*)

* **mą-thē′-sĭs,** * **mą-the-sy,** *s.* [Gr., from μαθεῖν (*mathein*), 2nd aor. inf. of μανθάνω (*manthanō*) = to learn, to understand.] Learning or science in general; especially mathematical science.

"After he set vp a great scole at Cauntorbury of al maner of scyences, as rhetorick, logyck, phylosophy, *mathesy*, astrologi, geometrye, arithmeticke, and musicke."—*Bale: English Votaries*, pt. i.

*** mat-hook,** *s.* [Mattock.]

măt'-ĭ-çĭn, *s.* [Eng., &c. *matic(o)*; suff. *-in* (*Chem.*).]

Chem.: A yellowish-brown substance, extracted from the matico (*Piper angustifolium*). It is soluble in water and alcohol, insoluble in ether. It has a disagreeable odour, and extremely bitter taste. Its aqueous solution yields a yellow precipitate with potash and with ammonia.

măt'-ĭ-cō (1), *s.* [Mataco.]

ma-tî'-cō (2), *s.* [The Spanish name of *Piper angustifolium.*]

Botany:

1. An astringent plant, supposed to be *Artanthe elongata*; called also *Piper angustifolium.* It is applied in leaf or as fine powder to stop hæmorrhage from wounds or leech-bites; sometimes also an infusion is taken internally.

2. The name given in Peru to *Eupatorium glutinosum*, a plant of quite different qualities from those of No. 1.

3. *Walteria glomerata*, which furnishes a drug like that yielded by No. 1.

matico-leaves, *s. pl.*

Pharm.: The leaves of Matico (2), 1. They are from two to eight inches long.

matico-oil, *s.*

Chem.: An oil obtained from the leaves of *Piper angustifolium* by distillation in presence of water. It is heavier than water, pale-green in colour, has a strong odour, and persistent camphorous taste. It is soluble in ether, and forms a carmine-coloured liquid with oil of vitriol.

matico-stearoptene, *s.*

Chem.: A crystalline substance which separates from the volatile oil of matico, when it is cooled to a few degrees below 0°. It melts at 103°.

*** măt'-ĭn (1),** *a.* & *s.* [Fr. *matin* = (*a.*) belonging to the morning, (*s.*) morning, from Lat. *matutinus* = belonging to the morning, from *Matuta* = the goddess of Dawn and Morning: Ital. *mattino* = morning.]

A. *As adj.:* Pertaining to the morning; matutinal.

"The sixth, and of creation last, arose
With evening harps and *matin.*"
Milton: P. L., vii. 450.

B. *As substantive:*

I. *Ordinary Language:*

1. Morning, dawn.

"The glow-worm shews the *matin* to be near."
Shakesp.: Hamlet, i. 5.

2. A morning-song.

"And crop-full out of door he flings,
Ere the first cock his *matin* rings."
Milton: L'Allegro.

II. *Eccles.:* [Matins].

ma'-tĭn (2), *s.* [Fr.]

Zool.: Canis laniarius. A dog considered by the French to be the progenitor of all breeds that resemble, and yet cannot be classed with, the greyhound. It is rather a species in which are included a variety of dogs. The head is elongated, the forehead flat, the ears pendulous towards the tips; colour, yellowish fawn. It is commonly employed in France as a sheep-dog and watch-dog. (*Youatt.*)

măt'-ĭn-al, *a.* [Eng. *matin*; *-al.*]

* **1.** *Ord. Lang.:* Of or pertaining to the morning or matins; matutinal.

2. *Geol.:* An epithet distinguishing the third series of the Appalachian Palæozoic strata, and intended to express the morning period of the Palæozoic day. The New York titles of the Matinal strata are Trenton Limestone, and Hudson River Slate Group; the nearest British equivalents are the Llandeilo and Bala rocks of the Cambrian series. Maximum thickness 2,500 feet. The highest organisms hitherto found are some trilobites, cephalopods, and molluscs. (*Prof. H. D. Rogers: Geology of Pennsylvania.*)

ma'-tĭ-neē, *s.* [Fr., from *matin* = the morning.] An entertainment or reception given or held early in the day.

măt'-ĭns, † măt-tĭns, * mat-ynes, * mat-yns, *s. pl.* [Fr. *matines*, from Lat. *matutinæ* (*horæ*) = (the hours) of the morning; Port. *matinas*; Sp. *maitines.*]

I. *Literally & Eccles.:*

1. *Anglican:* The daily office of Morning Prayer. It is composed in part of the pre-Reformation offices of Matins and Lauds. [2.]

2. *Roman:* The first portion of the Divine Office [Office, ¶], with which Lauds are usually associated. On Sundays and double feasts matins have three nocturns; on simple feasts and week-days, one nocturn (q.v.). Easter and Pentecost have each only one nocturn, with three psalms. After private prayer versicles and responses are recited; the invitatory psalm follows. In the first nocturn are said three psalms on feast days, twelve when the office is of the Sunday, and three lessons from Scripture; the second and third nocturns have each three psalms, and the lessons are chosen from the patristic writings for the second, and from some commentary on the gospel of the day for the third nocturn. On feasts of Saints the lections of the second nocturn are usually biographical. Lauds consist of five psalms, the little chapter, a hymn, the canticle *Benedictus*, collect, and commemorations, if any.

† **II.** *Fig.:* A morning song.

"The merry larke her *mattins* sings aloft."
Spenser: Epithalamion.

*** mat-ire, * mat-ere,** *s.* [Matter, *s.*]

măt'-lŏck-ite, *s.* [Named after the place near which it was found, Matlock; suff. *-ite* (*Min.*).]

Min.: A tetragonal mineral occurring in crystals of a tabular habit. Cleavage, basal, imperfect. Hardness, 2·5 to 3; sp. gr. 7·21; lustre, adamantine; colour, yellowish; transparent. Compos.: chloride of lead, 55·5; oxide of lead, 44·5, corresponding with the formula, $PbCl+PbO$. Occurs with cromfordite at an old mine near Cromford, Derbyshire. The mineral is stated also to have occurred as a sublimation product after the eruption of Vesuvius in 1858.

*** măt'-răss,** *s.* [Fr. *matras* = an arrow, a javelin, a matrass, from Lat. *materis*, *mataris*, *matara* = a Celtic javeliu, a pike, so called from its long, straight, narrow neck.]

1. *Chem.:* A glass vessel with a long neck, a rounded body, and sometimes furnished with a tubulure. It is used for distilling and digesting.

2. *Hort.:* A similarly shaped glass vessel used to protect flowers from the sun, rain, &c.

"Protect from violent storms, and the too parching darts of the sun, your pennached tulips and ranunculuses, covering them with *matrasses.*"—*Evelyn: Kalendar.*

*** mat-ress,** *s.* [Mattress.]

mā-trĭ-arch'-al, *a.* [Formed from Lat. *mater* = a mother, on analogy of patriarchal (q.v.).] Reckoning kinship on the female side.

"Those earlier periods of civilization in which the *matriarchal* principle was still in force."—*Nature*, June 24, 1886, p. 186.

măt-rĭ-cär'-ĭ-a, *s.* [Lat. *matrix* (genit. *matricis*) = the womb; from its being formerly used in uterine complaints.]

Bot.: A genus of composites, sub-tribe Chrysanthemeæ. The heads are yellow, the ray, if any exist, white, the florets of the ray conspicuously ligulate, those of the disc tcrete, the achenes of both the ray and the disc angled, the epigynous disc large. From the Eastern Hemisphere; seventy are known. Two are European: *Matricaria Chamomilla* (Wild Chamomile), of the sub-genus Matricaria, and *M. inodora* (Corn Chamomile), of the sub-genus Pyrethrum. The first has aromatic bipinnatifid leaves and a five-ribbed fruit. It is the Wild Chamomile. It is found wild or a colonist in Britain, occurring also in continental Europe and Asia. On distillation it yields an essential oil, which is powerfully anti-spasmodic. The second was formerly called *Pyrethrum inodorum.* It is common. *M. Parthenium* (Feverfew) is a cultivated variety.

matricaria-camphor, *s.*

Chem.: $C_{10}H_{16}O$. A camphor isomeric with laurinol, obtained from the oil of feverfew (*Matricaria Parthenium*). It resembles laurinol in all but its optical properties.

*** mā'-trĭçe,** *s.* [Matrix.]

măt'-rĭ-çīd-al, *a.* [Eng. *matricid(e)*; *-al.*] Pertaining to matricide.

măt'-rĭ-çīde, *s.* [Fr. = mother-killing, from Lat. *matricida* = murderer of a mother; *mater* (genit. *matris*) = a mother, and *cædo* (in compos. *-cido*) = to kill; *matricidium* = the murder of one's mother; Ital. & Sp. *matricidio.*]

1. One who kills or murders his or her mother.

2. The killing or murder of a mother.

"Nature compensates the death of the father by the *matricide* and murder of the mother."—*Browne: Vulgar Errours*, bk. iii., ch. xvii.

măt'-rĭ-çīte, *s.* [Lat. *matrix* = the mother-stone of another mineral; suff. *-ite* (*Min.*).]

Min.: A mineral occurring in crystalline fibrous masses with concentric structure, including crystals of spodiosite (q.v.), at the Kran mines, Wermland, Sweden. Hardness, 3 to 4; sp. gr. 2·53; lustre, pearly; colour, gray; feel greasy. Compos.: silica, 33·99; magnesia, 37·96; lime, 5·64; alumina, 1·33; protoxide of iron, 1·82; protoxide of manganese, 0·47; soda, 0·98; water, 17·81.

*** mą-trĭc'-ų-la,** *s.* [Lat. = a register.] [Matriculate, *a.*] A register, a roll.

"His name occurs not in the *matricula*, only that of John Sherley, a Sussex man, and the son of a Gent. *matriculated* as a member of that hall, in 1582, aged 14."—*Wood: Athenæ Oxon.*, vol. i.

mą-trĭc'-ų-lāte, *v.t.* & *i.* [Matriculate, *a.*] Ital. *matricolare*; Sp. *matricular.*]

A. *Trans.:* To enter in a register; to register; to enrol; specif., to admit to membership of a body or society, and especially of a college or university, by enrolling the name in a register.

"That every scholar . . . shall have been *matriculated* twenty-four calendar months at least."—*Blackstone: Comment.*, § 1. (Introd.)

B. *Intrans.:* To be admitted to a membership of a college or university by passing an examination and having one's name eurolled in the register.

*** mą-trĭc'-ų-late,** *a.* & *s.* [Low Lat. *matriculatus*, pa. par. of *matriculo* = to enrol, to register; Lat. *matricula* = a register; dimin. of *matrix* = (1) a breeding animal, (2) a womb, (3) a public register.]

A. *As adj.:* Admitted or entered as member of a body or society, and especially of a college or university; matriculated.

"To be *matriculate*, with ladies of astate."
Skelton: Crowne of Laurell.

B. *As subst.:* One who is matriculated or enrolled as a member of a body or society, and especially of a college or university.

"Suffer me in the name of the *matriculates* of that famous university to ask them some plain questions."—*Arbuthnot.*

mą-trĭc-ų-lā'-tion, *s.* [Matriculate, *v.*] The act of matriculating; the state of being matriculated.

"A scholar absent from the university for five years, is struck out of the *matriculation* book; and upon his coming de novo to the university, ought to be again matriculated."—*Ayliffe: Parergon.*

măt-rĭ-mō'-nĭ-al, *a.* [Fr., from Lat. *matrimonialis*, from *matrimonium* = matrimony; Sp. & Port. *matrimonial*; Ital. *matrimoniale.*]

1. Of or pertaining to marriage or wedlock; connubial, nuptial, hymeneal.

"The main article in *matrimonial* alliances.'—*Paley: Moral Philosophy*, bk. iii., ch. viii.

* **2.** Derived from marriage.

"If he relied upon that title, he could he but a king at curtesy, and have rather a *matrimonial* than a regal power, the right remaining in his queen."—*Bacon: Henry VII.*

matrimonial-causes, *s. pl.*

Law: Suits for the redress of injuries respecting the rights of marriage. They were until recently a branch of the ecclesiastical jurisdiction, are now exclusively cognizable in the Court for Divorce and Matrimonial Causes under the statute 20 & 21 Victoria, c. 85.

matrimonial-crown, *s.*

Scots Law & Hist.: A grant by which the husband of the Scottish queen acquired the right to assume the title of king, to have his name stamped upon the coins, and to place his signature side by side with that of the queen upon all public documents.

† măt-rĭ-mō'-nĭ-al-lў, *adv.* [Eng. *matrimonial*; *-ly.*] In a matrimonial manner; according to the laws or customs of marriage; as a husband or wife.

"He is so *matrimonially* wedded unto his church, that he cannot quit the same, even on the score of going into a religious house."—*Ayliffe: Parergon.*

***măt-rĭ-mō'-nĭ-ŭs,** *a.* [Eng. *matrimony; -ous.*] Matrimonial.

"Foreseeing the miserable work that man's ignorance and pusillanimity would make in this *matrimonious* husiness."—*Milton: Tetrachordon.*

măt'-rĭ-mŏn-ў, * mat-rĭ-moine, * mat-rĭ-mon-ie, * mat-ry-mon-ye, *s.* [O. Fr. *matrimonie,* from Lat. *matrimonium,* from *mater* (genit. *matris*) = a mother; Sp., Port. & Ital *matrimonio.*]

I. *Ordinary Language:*

1. Marriage, wedlock; the married state; the union of man and wife for life.

"He that joyneth his virgyn in *matrymonye* doith wel."—*Wyclife: 1 Corinth.* vii.

* 2. A wife.

"Restore my *matrimony* undefiled."
Beaum. & Flet.: Little French Lawyer, iv. 6.

3. A game at cards.

* 4. A mixture of raisins and almonds, or any similar mixture.

II. *Roman Theology:* One of the seven sacraments of the Roman Church, necessary for the community, but not for the individual, just as the Sacrament of Orders is necessary for the Church at large, but not for each individual Christian. Matrimony is a contract raised to the dignity of a sacrament. As a contract it is "a lawful marital union between a man and a woman obliging them to lifelong participation iu each other's society;" as a sacrament, it "confers grace, sanctifying the legitimate union of a man and a woman." It was defined as a sacrament at the Council of Trent (sess. xxiv.), on Nov. 11, 1553. In the "Doctrina de Sacramento Matrimonii," prefixed to the Canons of that session, the indissolubility of matrimony is said to be foreshown in Gen. ii. 23, 24, and ratified by Christ (Matt. xix. 3–9). Reference is made to Eph. v. 31, 32; and it is asserted that "the holy fathers, Councils, and the universal tradition of the Church have always taught that matrimony is justly to be reckoned among the Sacraments of the New Law."

matrimony-vine, *s.*

Bot.: Lycium barbarum.

mā'-trĭx, * mā'-trĭçe, *s.* [Lat. *matrix,* from *mater* (genit. *matris*) = a mother; Fr. *matrice;* Ital. *matrice;* Sp. *matriz.*]

* 1. *Anat.:* The womb or uterus.

"That thou shalt set apart unto the Lord all that openeth the *matrix.*"—*Exodus* xiii. 12.

2. *Bot.:* A place where anything is generated or formed. (*Lindley.*)

3. *Casting:* A mould; the shape in which anything is formed.

4. *Coining, Type-founding, &c.:* A mould which gives form to an object driven into it or hardening therein, as—

(1) The intaglio or indented device for a coin, either engraved or produced from a hub on which the design has been produced in relief. The matrix is the mould into which a soft steel plug is driven, and which is to be used in making the die from which the coin is struck.

(2) The mould in a type-founding machine which gives the form to the letter on the end of the type. The letter is originally engraved on the end of a piece of steel, which is subsequently hardened, and is called a punch. The punch is used to impress the matrix.

(3) The plaster mould (in intaglio) obtained from a form of type, and used to obtain an impression (cameo) in type-metal, known as a stereotype (q.v.).

5. *Dyeing:* One of the five simple colours—black, white, red, blue, and yellow, combinations of which are used to form compound colours.

6. *Min., Petrol., & Geol.:* The portion of rock in which a mineral or a fossil is embedded.

7. *Mining:* The gangue or stony substance in which metalliferous ores are formed, associated, or imbedded.

8. *Odontology:* The formative material from which teeth are developed. [Tooth.]

9. *Math.:* Any rectangular arrangement of symbols: as

$$\begin{matrix} a^1 & b^1 & c^1 \\ a^2 & b^2 & c^2 \\ a^3 & b^3 & c^3. \end{matrix}$$

¶ *To be in the matrix:*

Min., Geol., &c.: To be still embedded, instead of having become detached. (*Lyell.*)

mā'-trŏn, * ma-trone, *s.* [Fr. *matrone,* from Lat. *matrona* = a matron, from *mater* (genit. *matris*) = a mother; Sp., Port., & Ital. *matrona.*]

1. A married woman; espec., an elderly married woman; a woman of sufficient years to be the mother of a family, whether actually so or not; a woman of staid manners; the female head of a family.

"For thee the soldier bleeds, the *matron* mourns."
Pope: Homer; Iliad vi. 412.

2. The female head or superintendent of an institution; a head nurse in a hospital.

¶ *Jury of matrons:*

Law: A jury of married women empannelled to inquire into the truth of a plea of pregnancy put forward in stay of execution by a woman sentenced to death for treason or murder; also a jury empannelled to try whether a widow who alleges herself to be pregnant by her late husband is with child, and to determine the time of conception and the expected date of delivery.

*** mā'-trŏn-age (age as ĭj),** *s.* [Eng. *matron; -age.*]

1. The quality or state of being a matron; matronhood.

2. Matrons collectively.

"His exemplary queen at the head of the *matronage* of this land."—*Burke: Regicide Peace,* let. i.

*** mā'-trŏn-al,** *a.* [Eng. *matron; -al.*] Of or pertaiuing to a matron; becoming or suitable to a matron or elderly lady, or married woman; grave, motherly.

"He had heard of the beauty and virtuous behaviour of the queen of Naples, the widow of Ferdinando the younger, being then of *matronal* years of seven and twenty."—*Bacon: Henry VII.,* p. 218.

*** mā'-trŏn-hood,** *s.* [Eng. *matron; -hood.*] The state or condition of a matron.

mā'-trŏn-īze, *v.t.* [Eng. *matron; -ize.*]

* 1. To render matronlike.

* 2. To act as a matron or mother to; to chaperon.

mā'-trŏn-līke, *a.* [Eng. *matron; -like.*] Having the manners, qualities, or appearance of a matron; matronly, grave, sedate.

mā'-trŏn-lў, * ma-trone-ly, *a. & adv.* [Eng. *matron; -ly.*]

A. *As adj.:* Like a matron; gravely; having the manners or appearance of a matron; elderly, sedate.

"The *matronly* wife plucked out all the brown hairs, and the younger the white."—*L'Estrange: Fables.*

B. *As adv.:* Like or becoming a matron;

"And toward them full *matronely* did pace."
Spenser: F. Q., I. x. 8.

† măt-rŏ-nўm'-ĭc, *s.* [A hybrid word, formed from Lat. *mater* = a mother, and Gr. ὄνομα (*onoma*) = a name.] A name derived from a mother or a maternal ancestor.

"If it be a clear sign of exclusively female kinship that children should take the mother's family name, it is, *a fortiori,* a note of it that they should be called by a *matronymic.*"—*J. F. Mc Lennan: Studies in Ancient Hist.,* p. 289.

*** ma-trŏss',** *s.* [Dut. *matroos;* Dan. & Sw. *matros;* Ger. *matrose* = a sailor.] (See extract.)

"*Matrosses,* in the train of artillery, are a sort of soldiers next in degree under the gunners, who assist about the guns in traversing, spunging, firing, and loading them; they carry firelocks, and march along with the store-waggons as a guard, and as assistants, in case a waggon should break."—*Bailey.*

mătt, matte (2), *s.* [Ger. *matt* = dull, dim.; said of metals.]

1. *Metall.:* A mass of imperfectly reduced metal, having impurities, mineral and metallic, as in the case of copper.

2. *Gilding:* The dead or unburnished surface of gold, when the gold-leaf is merely pressed upon the size and is not rubbed with the burnisher. The dead appearance of portions acts as a foil to the lustrous surface over which the burnisher has passed.

*** măt'-ta-chĭn, * măt'-a-chĭn,** *s.* [Sp. *matachin.*] A dance in which the performers fenced and thrust at each other with swords, as in real duelling, protecting themselves with their bucklers; a sword-dance.

¶ *To dance a mattachin:* To fight a duel.

"I'd dance a *matachin* with you, should make you sweat your best blood for't."—*Beaum. & Flet.: The Elder Brother,* v. 1.

măt'-ta-mŏre, *s.* [Fr. *matamore,* from Arab. *metmur* = a ditch, a cavern, a cave.] An underground repository for grain.

*** matte** (1), *s.* [Mat (1), *s.*]

matte (2), *s.* [Mat (2), *s.*]

măt'-ĕd, *pa. par. & a.* [Mat, *v.*]

A. *As pa. par.:* (See the verb).

B. *As adj.:* Intertwined or interwoven like a mat; growing thick and close together.

"His breast was bare, his *matted* hair
Was buried in the sand."
Longfellow: The Slave's Dream.

matted-glass, *s.*

Glass: A mode of ornamenting glass for windows, in which the surface is covered with a very fusible powder, either opaque, white, or tinted. This being removed in portions, the glass is fired and the composition fixed, giving a bright pattern on a dull ground. Substantially the same effect is produced by painting the pattern on the glass with an asphaltum varnish, and then etching the surface with hydrofluoric acid. By a similar process the glass bottles of the chemist have their labels ineffaceably inscribed.

măt'-tĕr, * mat-er, * mat-ere, * mat-tero, * mat-ter-le, *s.* [O. Fr. *matiere, matere* (Fr. *matière*), from Lat. *materia* = matter, materials, stuff; Sp., Port., & Ital. *materia.*]

I. *Ordinary Language:*

1. Body, substance; anything perceptible by one of the senses; that of which the whole of the universe is composed.

"*Matter* being a divisible substance, consisting always of separable, nay of actually separate and distinct parts, 'tis plain that unless it were essentially conscious, in which case every particle of *matter* must consist of innumerable, separate, and distinct consciousnesses, no system of it in any possible composition or division, can be any individual conscious being."—*Clarke: Letter to Mr. Dodwell.*

2. That of which anything is composed; materials.

3. The contents or essence of a writing, discourse, or speech; that which is said or written; the meaning, sense, or substance.

"A book where men may read strange *matters.*"
Shakesp.: Macbeth, i. 5.

4. That which is treated of; that of which one speaks, writes, or treats; the subject or materials of a writing, discourse, or speech.

"If they were emharrassed, it was only by the abundance of the *matter* from which they had to make their selection."—*Macaulay: Hist. Eng.,* ch. xxiii.

5. That which excites or arouses thought or emotion: as, This is a *matter* for gratitude or astonishment:

6. Substance, sense; not empty talk, verbosity, or frivolity.

"I beseech your grace, pardon me; I was born to speak all mirth and no *matter.*"—*Shakesp.: Much Ado About Nothing,* ii. 1.

7. A point in question; an affair, a business.

"I will debate this *matter* at more leisure."
Shakesp.: Comedy of Errors, iv. 1.

8. (*Pl.*) Affairs, events, the course of events.

"*Matters* succeeded so well with him, that everybody was in admiration to see how mighty rich he was grown."—*L'Estrange.*

9. A cause or subject of complaint.

"If the craftsmen have a *matter* against any man, the law is open: let them implead one another."—*Acts* xix. 38.

10. The cause, ground, or occasion of any event or state: as of a disturbance, an illness, a difficulty, a doubt, &c.

"Why, what's the *matter?*" *Bunyan: Apology.*

11. Import, consequence, moment, importance.

"If I had had time to have made new liveries, I would have bestowed the thousand I borrowed of you: but it is no *matter,* the poor show doth better."—*Shakesp.: 2 Henry IV.,* v. 5.

12. Thing in a general sense.

"For they speak not peace: but they devise deceitful *matters* against them that are quiet in the land."—*Psalm* xxxv. 20.

13. An indefinite amount, quantity, or portion.

"Away he goes to the market-town, a *matter* of five miles off, to enquire if any had seen his ass."—*L'Estrange: Fables.*

II. *Technically:*

1. *Logic & Metaph.:* The logical matter of a proposition is the terms of which it is composed, *i.e.,* the subject and the predicate, the copula being regarded as the form. This division of a proposition into matter and form has come down from the teaching of the Schoolmen, who regarded the elements of which any ens was composed as the matter,

and the disposition of those elements as the form, of that ens.

2. *Med.:* Purulent substance which has gathered in a larger or smaller abscess; pus.

"In an inflamed tubercle in the great angle of the left eye, the *matter* being suppurated, I opened it."—*Wiseman: Surgery.*

3. *Printing:*

(1) Manuscript or copy ready to set up in type.

(2) Type composed and ready to be used in printing. It is live, standing, or dead, according as it is ready for use, awaiting re-use, or ready for distribution.

4. *Phys.:* That which possesses the properties the existence of which is revealed to us by our senses; a substance. Its qualities are impenetrability, extension, divisibility, porosity, compressibility, elasticity, mobility, and inertia (all which see). It exists in at least three forms—the solid, the liquid, and the gaseous.

¶ (1) *Matter of record:* That which is recorded, or which may be proved by record.

(2) * *Upon the matter,* * *Upon the whole matter:* On or upon the whole; taking all things into consideration.

"In their superiors it quencheth jealousy and layeth their competitors asleep; so that *upon the matter,* in a great wit deformity is an advantage to rising."—*Bacon: Essays; Of Deformity.*

matter-of-course, *a.* Phlegmatic, indifferent, cool.

"I won't have that sort of *matter-of-course* acquiescence."—*Hughes: Tom Brown at Oxford,* ch. xxx.

matter-of-fact, *s. & a.*

A. *As subst.:* A reality, as distinguished from that which is fanciful, hypothetical or hyperbolical; a fact.

B. *As adjective:*

1. Treating of facts or realities; not fanciful or hyperbolical; commonplace, simple, plain, ordinary.

2. Adhering to facts or realities; not imaginative; prosaic.

măt'-tĕr, *v.i. & t.* [MATTER, *s.*]

A. *Intransitive:*

1. *Ord. Lang.:* To be of moment, consequence, or importance; to signify.

"To a man of virtue and honour, indeed, this *mattered* little."—*Macaulay: Hist. Eng.,* ch. xvii.

2. *Med.:* To form pus; to collect, as matter in an abscess.

"The herpes beneath *mattered,* and were dried up with common epuloticks."—*Wiseman: Surgery,* bk. i., ch. xvii.

* **B.** *Trans.:* To regard, to care for, to mind.

"He did not *matter* cold nor hunger."—*H. Brooke: Fool of Quality,* i. 91.

* **măt'-tĕr-fŭl,** *a.* [Eng. *matter; -ful(l).*] Full of matter; pregnant.

"What a sweet, unpretending, pretty-mannered, *matterful* creature."—*Lamb: To Wordsworth,* p. 97. (1815).

Măth'-ew (**ew** as **ū**), *s.* [Lat. *Matthæus;* Gr. Ματθαῖος (*Matthaios*), according to Gesenius, a contr. of Heb. מַתִּתְיָה (*Mattitheah*) = the gift of God, the name borne by the Maccabee patriot, Mattathias.]

Scrip. Biog.: An apostle of Jesus, almost certainly the same as Levi, the son of Alpheus. (Cf. Matt. ix. 9–13, Mark ii. 14–16, and Luke v. 27.) He was a "publican"—*i.e.,* a tax-gatherer—who sat at the receipt of custom at Capernaum on the shore of the Sea of Galilee. (*Ibid.*) Taxgatherers are rarely popular men; and, moreover, the money which Matthew raised was not for the Jewish, but for the Roman government, he was, therefore, regarded as outside the pale of society, and his companions, when he was called to the apostleship, were "publicans and sinners." After his call he figures in all the lists of apostles (Matt. x. 3; Mark iii. 18; Acts i. 13). Clement of Alexandria represents him as dying a natural death; much later tradition represents him as having been martyred.

¶ *The Gospel according to St. Matthew:*

New Test. Canon: The first of the four Gospels in arrangement, and long almost universally held to have been the first in point of publication, though it is more probable that Mark came first and Matthew only second in point of time. The author's name is nowhere given in it, but universal Christian tradition assigns it to Matthew the apostle, called Levi, and there is a fragment of internal evidence in the same direction. In connection with the call of Matthew the first gospel relates that "as Jesus sat at meat in the house, behold many publicans and sinners came and sat down with him and his disciples" (Matt. ix. 10). Why they presumed to come is not stated; but St. Luke explains that they came because they were invited. He says that "Levi [Matthew] made him a great feast in his own house; and there was a great company of publicans and of others that sat down with them" (Luke v. 29). If the author of the first gospel felt diffident about recording the hospitality of St. Matthew, the only reason can be that he was St. Matthew himself; the sole argument against this view is that St. Mark also withholds the information that invitation to the party was given (Mark ii. 15). The special object of the first gospel is to show that Jesus was the Messiah of ancient prophecy. The author continually quotes the Old Testament prophets, sometimes indicating that the events took place to fulfil the prophecy (i. 22, ii. 15, 23, &c.), at others simply that they fulfilled the prophecy (ii. 17). The book was addressed specially to the Jews. The ancient fathers believed that it was published at first in Aramaic, but, on the other hand, no quotation from the Aramæan book is extant, and the Greek has every appearance of an original work rather than a translation; of two kinds of quotations from the Old Testament, one is from the Septuagint Greek.

Eusebius fixes the date of its publication in the third year of Caligula, A.D. 41, but lived too late really to know; Irenæus is in favour of a later date, apparently A.D. 60. Rationalistic writers, who disbelieve in prophecy, place it after the destruction of Jerusalem.

In 1771 Williams attacked the authenticity of the first two chapters. He was followed by Stroth, Hess, Ammon, Schleiermacher, Norton, &c. They were defended by Fleming, Griesbach, Hug, Credner, Paulus, Kuinoel, Neander, &c. All the old manuscripts and versions contain them, and they are quoted by the fathers of the second and third centuries.

St. Matthew is the only evangelist who reports at length the Sermon on the Mount. He gives prominence to other discourses of Jesus. Like his fellow synoptists he gives details of the ministry of Jesus in Galilee, not speaking much of Jerusalem till the closing scenes drew nigh.

ma-tthī'-ō-la, ma-thī'-ō-la, *s.* [Named after P. A. Mathioli or Matthiolus an Italian physician (1500–1577).]

1. *Bot:* Stock; a genus of Cruciferæ, family Arabidæ. The sepals are erect, the lateral ones saccate at the base. The petals have long claws. Maundy-Thursday, † Maunday-Thursday, *s.* The Thursday in Passion-week, the day next before Good-Friday, when it was formerly the custom for the kings and queens of Eugland to wash the feet of as many poor men and women as they were years old, and afterwards give them meat and clothes. This ceremony is now obsolete, but on Maundy-Thursday the king's or queen's almoner distributes to as many poor men and women as the sovereign is years old certain coins called Maundy-money, consisting of a silver four-penny piece, a three-penny piece, a two-penny piece, and a penny piece. The name is derived from the anthem which was sung during the ceremony, and which began with the words *Mandatum novum* (John xiii. 34), the notion being that the washing of the feet was a fulfilling of this command.

"During the ceremony was sung the anthem, 'A new command I give to you, that ye love one another,' whence, as it began with the Latin word *mandatum*, the day was called *Maundy-Thursday*."—*Lingard: Hist. & Antiq. of the A. S. Church*, i. 99.

Mâur'-ĭst, *a.* & *s.* [From Lat. *Maurus*, the name of the favourite follower of St. Benedict.]

A. *As adj.:* Belonging to or characteristic of the Congregation described under B.

B. *As substantive:*

Eccles. & Church Hist. (*Pl.*): The members of the Congregation of St. Maur, to whom literature owes the stately tomes known as "Benedictine Editions." The Congregation had its origin in a reform of the Benedictines in the early part of the seventeenth century; it was supported by de Retz and afterwards by Richelieu, and in 1720 possessed in France six provinces, containing 180 abbeys and priories. Among the most celebrated of the Maurists are Mabillon, Martene, Montfaucon, the founder of the science of archæology, Ruinart, Lami, Le Nourri, and Martianay. Jansenism seems to have affected some of the convents, and, according to Badiche, a Masonic Lodge was established at Glanfeuil in 1755, over which the prior of the monastery in that place presided. The Congregation was suppressed in 1792.

mâu-rĭ'-ti-a (**ti as shĭ**), *s.* [Named after Prince Maurice of Nassau, who aided Piso in publishing his *Natural History of Brazil*.]

Chem.: $C_{19}H_{17}N_3$. A lower homologue of rosaniline, prepared by heating a mixture of commercial aniline and dry arsenic acid in a sealed tube to 170°. It forms light-brown crystals, soluble in ether, benzol, and alcohol; insoluble in water. Its salts, especially the acetate and hydrochloride, crystallize readily, forming beautiful crystals of a greenish hue and metallic lustre. Mauvaniline salts are soluble in hot or acidulated water, and dye silk and wool fine purple-red tints.

mauve (**au as ō**), *a.* & *s.* [Fr. = mallow, Lat. *malva*. So called from the resemblance to the colour of the flowers of the mallow.]

A. *As substantive:*

1. *Ord. Lang.:* The colour of the dye described under 2.

2. *Chem.:* Aniline purple, or Perkin's purple. The sulphate of the base mauveine occurring in commerce in crystalline masses, as a paste, and in solution. It is soluble in water, and dyes silk and wool a beautiful purple colour.

B. *As adj.:* Of a mauve colour.

mauve'-ĭne (**au as ō**), *s.* [Eng. *mauve*; *-ine*.]

Chem.: $C_{27}H_{24}N_4$. The base of mauve or aniline purple, and the earliest known aniline colour. When a cold solution of potassium bichromate is mixed with a cold, saturated solution of aniline sulphate, a precipitate of mauveine sulphate is gradually formed, and this, on being dissolved in boiling water and precipitated by an alkali, yields the free base mauveine. It is soluble in alcohol, with a beautiful violet colour. With acids it forms crystalline salts, possessing a cantharidine-green lustre.

mā'-vĭs, * **ma-vise,** *s.* [Mid. Eng. *mavis*, from O. Fr. *mauvis* = a throstle (*Cotgrave*). Supposed to be from Bret. *milvid*, *milfid* = a mavis. (*Skeat.*)]

Ornith.: *Turdus musicus*, the Song-thrush, or Throstle (q.v.) The name Mavis was formerly in general use in England, where it is becoming rare, though it is still met with in poetry. The word is in common use in Scotland.

"Crowes, popingayes, pyes, pekocks, and *mavies*."—*Ashmole: Theat. Chem. Brit.*, p. 115.

mavis-skate, May-skate, *s.*

Ichthy.: *Raia oxyrhyncus*, the largest of the British rays. Dr. George Johnston measured one 7 ft. 9 in. in length by 8 ft. 3 in. in breadth. (*Yarrell.*)

* **măx,** *s.* [Said to be for *maxime*, and meaning properly the best gin.] Gin. (*Slang.*)

"Treat
Boxers to *max* at the One Tun in Jermyn Street."
Barham: Ingoldsby Legends; Bagman's Dog.

măx-ĭl'-la (pl. **măx-ĭl'-læ**), *s.* [Lat. = the jaw-bone, the jaw, from *mala* = the cheek-bone, the jaw.]

Anatomy:

1. *Human* (*Pl.*): Two bones of the face: *maxilla superior*, the upper jaw, and *maxilla inferior*, the lower jaw or mandible. [JAW.] The term "maxilla" is specially applied to the superior maxillary bones, except the incisor part.

2. *Comparative:*

(1) In vertebrata, the bone corresponding to the superior maxilla in man.

(2) In Arthropoda, the one or two pairs of limbs next the mandibles that are modified as jaws. (*Huxley.*) In the Crustacea the maxillæ are in front of the somites forming the maxillipeds and behind that somite which has the mandibles. In the Arachnida there is a pair of maxillæ, each of which is provided with a jointed appendage. They are just behind the mandibles, as they are also in Insecta. They are the inferior pair of jaws, and are furnished with one or more pairs of maxillary palpi.

măx-ĭl-lăr'-ĭ-ą, *s.* [Lat. *maxillaris* = pertaining to the jaw; so named because the column and labellum of these plants somewhat resemble the maxillæ or jaws of some animal.]

Bot.: The typical genus of the family Maxillaridæ.

măx-ĭl-lăr'-ĭ-dæ, *s. pl.* [Lat. *maxillar(ia)*; Lat. fem. pl. adj. suff. *-idæ*.]

Bot.: A family of orchids, tribe Vandeæ.

măx-ĭl'-lar-ў, † **măx-ĭl'-lar,** *a.* & *s.* [Lat. *maxillaris* = belonging to the jaw; *maxilla* = the jaw.]

A. *As adjective:*

Anat.: Of or pertaining to the jaw.

"The greatest quantity of hard substances continued is towards the head; there is the skull, the teeth, and the *maxillary* bones."—*Bacon: Nat. Hist.*, § 747.

B. *As subst.:* The jaw-bone.

"It has a much less expanded union with the *maxillary* than in these animals."—*Trans. Amer. Philos. Society*, vol. xiii. (1873), p. 200.

maxillary-bone, *s.*

Anat.: The jaw-bone.

maxillary-sinus, *s.*

Anat.: A large cavity lying above the molar teeth and below the orbital palate, communicating with the middle meatus of the nose. Called also the antrum of Highmore.

măx-ĭl'-lĭ-form, *a.* [Lat. *maxilla* = a jaw-bone, and *forma* = form, shape.] Having the shape or form of a cheekbone.

măx-ĭl'-lĭ-pĕd, măx-ĭl'-lĭ-pēde, *s.* [Lat. *maxilla* = a jaw, and *pes* (genit. *pedis*) = a foot.]

Zool.: Foot-jaw. The limbs in the Crustacea and Myriopoda, which are converted into masticatory organs. There are three pairs in the lobster; in the Chilopoda there are only two pairs, of which the second is hooked, and perforated for the discharge of a poisonous fluid.

măx-ĭl-lō-, *pref.* [Lat. *maxill(a)* = a jaw, and *o* connective.] Pertaining to, or in any way connected with the maxillæ (q.v.).

maxillo-pharyngeal spaee, *s.*

¶ Several spiræas are also called May. Thus Italian May is *Spiræa Filipendula*.

* 4. The sports of May-day; May-games.

May-apple, *s.*

Botany:

1. The fruit of *Podophyllum peltatum*, a ranunculaceous plant, common in the eastern United States. It is a low herbaceous plant, with white flowers hidden under broad leaves. Its fruit is large, but unpalatable.

2. *Passiflora incarnata.* It has sweet scented flowers, variegated with purple. The fruit is of the size of an apple, but orange-coloured, with a sweetish, yellow pulp.

May-beetle, *s.* The same as MAY-BUG, 1. (*Halliwell.*)

May-bird, *s.*

Ornith.: A name sometimes given in Jamaica to the American Wood-thrush, *Turdus mustelinus* of Gmelin, *T. melodus* of Wilson [WOOD-THRUSH], which visits the island in the month of May.

May-blobs, *s.*

Bot.: A rural name for *Caltha palustris*, the Marsh marigold.

May-bloom, *s.* The bloom of the hawthorn. [MAY *s.*, 3.]

May-bug, *s.*

Entomology:

1. *Melolontha vulgaris*, the Common Cockchafer.

2. *Lachnosterna quercina*, an American lamellicorn beetle, very destructive to pasture-land. The larvæ feed on the roots of the grass to such an extent that the turf may be completely peeled off.

May-bush, *s.* The hawthorn.

May-chafer, *s.*

Entom.: The cockchafer, *Melolontha vulgaris*.

May-day, *s.* The first day of May, on which day rural festivities were, and to some extent still are, celebrated, and on which the May-queen was crowned.

"'Tis as much impossible
To scatter them, as 'tis to make them sleep
On *May-day* morning."
Shakesp.: Henry VIII., v. 3.

May-dew, *s.* The dew which falls in May. It is popularly credited with some remarkable qualities, as to have great virtue in bleaching linen, and in preserving the freshness and beauty of the face, if gathered early on May-day.

May-drink, *s.* A refreshing drink, well known in Germany and Belgium under the name of *Mai-wein*, or *Mai-trank*. It consists of white wine, in which aromatic herbs have been infused.

"In making the *May-drink*, the leaves of black-currants, balm, and peppermint are sometimes mixed in less proportions with the woodruffe. A handful of the mixture is amply sufficient for a quart of white Rhine wine, mixed to taste with white sugar and water."—*Notes & Queries*, 2nd ser., viii. 35.

May-duke, *s.* A corruption of Medoc. A variety of cherry introduced from Medoc, in the Gironde.

May-flower, *s.*

1. In England, the hawthorn.

2. In America, the trailing arbutus, *Epigæa repens*.

May-flies, *s. pl.*

Entom.: The neuropterous family Ephemeridæ, or the species *Ephemera vulgata*.

"He loves the *May-fly*, which is bred of the cod-worm or caddis."—*Walton: Angler.*

May-game, *s.* Games, sports, or diversions celebrated on May-day.

† **May-garland,** *s.* A garland of flowers carried from house to house by groups of children, in rural districts in England, on May-day.

"Two in every group carried between them, suspended from a stick, the *May-garland*, formed of two small transverse willow hoops, decorated with a profusion of primroses and other flowers, and fresh green foliage"—*Antiquary*, May, 1880.

* **May-lady,** *s.* The same as MAY-QUEEN (q.v.).

May-lily, *s.*

Bot.: The lily of the valley, *Convallaria majalis*.

* **May-lord,** *s.* A youth chosen to preside over the village sports on May-day (*Browne: Brit. Past.*, s. 5). Fletcher's account (see extract) is slightly different. The origin of the custom does not appear, but Hampson (*Medii Œvi Kal.*, i. 262) thinks that as "probably the rural festivities were superintended by the principal villager and his wife, the elective lord and lady of the May represented these persons."

"The shepherd boys, who with the muses dwell,
Met in the plain their *May-lords* new to choose
(For two they yearly choose), to order well
Their rural sports and year that next ensues."
Fletcher: Purple Island, i. 2.

May-morn, *s.*

1. *Lit.:* The morning of May-day.

* **2.** *Fig.:* Freshness, vigour.

"My lleere
Is in the very *May-morn* of his youth,
Ripe for exploits." *Shakesp.: Henry V.*, i. 2.

May-pole, *s.*

1. *Ord. Lang.:* A pole wreathed or adorned with garlands of flowers, round which the youths and maidens of the village danced on May-day.

2. *Bot.:* *Agave Americana.*

May-thorn, *s.*

Bot.: The hawthorn. So named, perhaps, to distinguish it from the blackthorn, which flowers nearly a month earlier.

May-queen, *s.* A young woman selected for her beauty to act as queen or directress of the games on May-day.

May-weed, * Maie-weed, *s.*

Botany:

1. *Anthemis Cotula*, called also *Maruta Cotula*. It flowers in May, and sheds its seeds before the corn is reaped, so as to become a troublesome weed, but with proper rotation of crops it can be dealt with.

"The *Maie-weed* doth burne, and the thistle doth freat." *Tusser.*

2. [MAYDEWEED].

¶ Stinking Mayweed is *Matricaria Chamomilla.*

May-wort, *s.*

Pathology:

1. *Human:* An infectious disease, called also rubeola, most frequently attacking children, although sometimes occuring in old age, as in the case of George III. and of Otho, exking of Greece, who died of this affection. The period of incubation is about eight days, when the rash appears, accompanied by catarrh, watery eyes, acrid watery discharge from the nose, sneezing, and often pain in the forehead, with, occasionally, bleeding at the nose. The bronchi are frequently affected, this forming the chief danger. The spots are small, red, papular, and crescent-shaped, commencing on the face and passing downwards, disappearing in the same order. The old-fashioned remedy is saffron-tea, but the chief necessity is to ward off any respiratory mischief, or to combat it when present. A form of measles known as rötheln, or German measles, is distinct from measles or from scarlatina, with which it has often been confounded. The eruption lasts longer, never less than four or five days, sometimes eight or ten, and differs slightly from that of measles or scarlatina. It is usually a very mild disease, requiring only an aperient saline, with liquid food, and keeping in bed for a few days.

"From whence they start up chosen vessels,
Made by contact, as men get *measles*."
Butler: Hudibras, I. 3.

2. *Of the Lower Mammalia:*

(1) *Of the Pig:* What is known as measles in pigs is really the effects of a cystic worm, *Cysticercus cellulosæ.* According to Professor Gamgee's Report to the Privy Council in 1865 at least 3 per cent., and probably 5 per cent., of the pigs in Ireland are thus affected. (*Blyth: Dict. Hygiene.*)

"The swine died of the *measles*, and the sheep of the rot."—*Ben Jonson: Discoveries.*

(2) *Of the Ox:* The presence of a cystic worm, which, when eaten by man, develops into *Tænia mediocanellata.*

3. *Hort.:* A popular name vaguely used for any diseases of trees characterized by the appearance of spots on the stem.

"Fruit-bearers are often infected with the *measles*, by being scorched with the sun."—*Mortimer: Husbandry.*

mēaş'-lȳ, *a.* [Eng. *measl(e); -y.*] Infected with the measles; measled.

"If a portion of *measly* pork be eaten by a man, then the scolex will develop itself into a tapeworm."—*Nicholson: Zoology* (1878), p. 220.

* **mea-son-due**, *s.* [A corruption of Fr. *maison de Dieu* = a house of God.] A monastery; a religious house or hospital. (39 *Eliz.*, c. 5.)

meas'-ŭr-a-ble-nĕss (meas as mĕzh), *s.* Eng. *measureable; -ness.*] The quality or state of being measurable or computable.

mĕaş'-ŭr-a-blў (s as zh), * **mes-ur-a-bly**, *adv.* [Eng. *measurab(le); -ly.*]

* 1. In a measurable manner or degree; moderately, not excessively; not to excess.

"Wine *measurably* drunk, and in season, bringeth gladness to the heart."—*Ecclus.* xxxi. 28.

2. So as to be measurable or computable.

mĕas'-ŭre, * **mĕş'-ŭre** (s as zh), *s.* [Fr. *mesure*, from Lat. *mensura* = measure, fem. sing. of *mensurus*, fut. part. of *metior* = to measure; Sp. *mesura;* Ital. *misura.*]

I. *Ordinary Language:*

* 1. The act of measuring.

2. The extent of anything in any one or more of the three dimeusions of length, breadth, and thickness; or in circumference, capacity, or other respect.

"And their windows, and their arches, and their palm-trees, were after the *measure* of the gate that looketh towards the sea."—*Ezekiel* xl. 22.

3. The several measurements necessary to be taken by a tradesman in order to make an article of dress: as, To take one's *measure* for a suit of clothes.

4. A standard of measurement; a definite unit of capacity or extent, fixed by law or custom, in terms of which the relative sizes and capacities of things are ascertained and expressed: as, a foot, a yard, a mile, are measures of length; a pint, a gallon, measures of capacity; a square foot, a measure of area, a cubic foot, a measure of volume, &c.

"That he himself was skilled in weights and *measures*, arithmetick and geometry, there is no reason to doubt."—*Arbuthnot: On Coins.*

5. The quantity measured by or contained in such standard of measurement.

"A *measure* of wheat for a penny, and three *measures* of barley for a penny."—*Revelation* vi. 6.

6. An estimate or estimation.

"He might take a *measure* of his own judgments, so curiously he had set this counterfeit."—*Shakesp.: All's Well That Ends Well*, iv. 3.

7. An instrument by which the extent or amount of capacity is measured or ascertained; a measuring-rod.

8. A rule or standard by which anything is measured, valued, or estimated.

"But unto every one of us is given grace according to the *measure* of the gift of Christ."—*Ephesians* iv. 7.

9. That which is measured out, allotted, or assigned.

* 10. Determined or allotted extent or length; limit.

"Lord, make me to know mine end, and the *measure* of my days."—*Psalm* xxxix. 4.

11. Moderation; just degree or amount. (Now only used in such phrases as within *measure*, beyond *measure*, &c.)

"There is *measure* in everything."—*Shakesp.: Much Ado About Nothing*, ii. 1.

12. Full or sufficient quantity.

"I'll never pause again,
Till either death hath closed these eyes of mine
Or fortune given me *measure* of revenge."
Shakesp.: 3 *Henry VI.*, ii. 3.

13. Degree, extent; indefinite amount or quantity.

"The rains were but preparatory in some *measure*."—*Burnet: Theory of the Earth.*

14. Means to an end; anything done as a preparatory step towards the end to which it is intended to lead; an act, a step, or proceeding designed for the accomplishment of an object: as, wise *measures*, prudent *measures*, &c.

15. A law, a statute, an act of Congress.

II. *Technically:*

1. *Geol.* (*Pl.*): A series of beds, strata; the word occurs chiefly in the term coal-*measures.*

2. *Joinery:* Single measure is square on both sides; double measure moulded on both sides; measure and a half moulded on one side, square on the other.

3. *Math.:* The measure of a quantity in its extent, or its value, in terms of some other quantity of the same kind, taken as a unit of measure.

4. *Mining:* A stratum or bed of coal.

5. *Music:*

(1) A general name for a slow and stately dance, supposed to be like the minuet. Reed says that—

"The *measures* were performed at court and at public entertainments of the societies of law and equity, at their balls on particular occasions. It was formerly not deemed inconsistent with propriety even for the gravest persons to join in them; and accordingly at the revels, which were celebrated at the Inns of Court, it has not been unusual for the first characters in the law to become performers in treading the *measures.*"

(2) Time, pace.

(3) Rhythm.

(4) The contents of a bar.

6. *Poetry:* The arrangement of the syllables in each line with respect to quantity or accent; rhythm, metre; as, iambic *measure*, hexameter *measure.*

7. *Print.:* The space in a composing-stick between the end and the slide; the length of a line, and so the width of a column or of a page of type.

¶ (1) *Lineal measure:* The measure of lines or distances; the staudard unit of lineal measure in America is the yard. Tho system is based upon the law of nature that the force of gravity is constant at the same point of the earth's surface, and consequently that the length of a pendulum which oscillates a certain number of times iu a given period is also constant. It has long been decreed by the English law that the $\frac{1}{3\,\,6\,0\,1\,7\,9}$ part of the length of a single seconds pendulum in a vacuum at the Tower of London shall be regarded as the standard English foot, and from this, by multiplication and division, the entire system of lineal measures is established. This standard yard, originating in England, has been adopted in the United States, and forms the basis of all our systems of measurement. Copies of the standard yard are preserved at several places in London, and are kept with similar care in Washington. The French system of measures is founded upon the length of an arc of the meridian. By a very minute survey of the length of an arc of the meridian from Dunkirk to Barcelona, the latitude of both places being determined by exact observation, the length of a quadrant of the meridiau was computed, and it has been decreed by French law that the ten-millionth part of this length shall be regarded as a standard French metre, and from this, by multiplication and division, the entire system of linear measures has been established.

(2) *Unit of measure:* A given quantity, used as a standard of comparison in measuring a quantity of the same kind. Every kind of quantity has its own unit of measure, and under different circumstances, the same kind of quantity may have different units of measure.

(3) *Line of measures:* The line of intersection of the primitive plane, with a plane passing through the axis of the primitive circle and the axis of the circle to be projected.

(4) *Measure of angles:* The right angle being taken as the angular unit, its subdivisions are degrees, minutes, and seconds. The right angle contains ninety degrees, the degree sixty minutes, and the minute sixty seconds. All smaller fractions are expressed decimally in

terms of the second. The French have proposed to divide the right angle into 100 equal parts, called grades, but the suggestion has not been extensively adopted.

(5) *Measure of a number or quantity:*

Math.: A number or quantity is said to be a *measure* of another when it is contained in it a certain number of times exactly.

(6) *Measure of magnification:* The measure of magnification, or magnifying power of any optical instrument, is the ratio of the magnitude of the image to the magnitude of the object, or, more precisely, the ratio of the apparent diameter of the image to that of the object. [MICROSCOPE, TELESCOPE.]

(7) *Measures of merchandise and artificers' work:* These vary according to custom and trade: the yard and its fractions for woven goods; the fathom for rope; the bushel, peck, and gallon for grain and roots; the gallon and its subdivisions for liquids.

(8) *Measure of a ratio:* Its logarithm, in any system of logarithms, or the exponent of the power to which the ratio is equal, the exponent of some given ratio being assumed as unity. [RATIO.]

(9) *Measure of surface:* The unit of measurement is the square yard. The units employed in land measure are the perch, rood, and acre (q.v.).

(10) *Measures of volume and capacity:* Solids are estimated in cubic yards, feet, and inches. 1728 cubic inches make a cubic foot, and 27 cubic feet make a cubic yard.

(11) *Measures of weight:* [WEIGHT].

¶ For measures of time and of space, of velocity and of mass, see these words, also the foregoing phrases and terms.

mĕas'-ūre (s as zh), *mes-ure, *mes-ur-en, *v.t.* & *i.* [Fr. *mesurer;* from Lat. *mensuro,* from *mensura* = a measure (q.v.); Sp. *mesurar;* Ital. *misurare.*]

A. *Transitive:*

1. To compute, determine, or ascertain the measurement, extent, quantity, dimensions, area, or capacity of by reference to a certain standard or rule: as, To *measure* distance, to *measure* the capacity of a cask, to *measure* the degree of heat or cold, to *measure* the height of a man, &c.

2. To serve as the measure of; to serve to express the measurement or dimensions of.

"An ell and three-quarters will not *measure* her from hip to hip."—*Shakesp.: Comedy of Errors,* iii. 2.

3. To estimate by reference to any standard; to judge of the value, extent, magnitude, or greatness of; to appreciate.

"What thought can *measure* thee, or tongue
Relate thee?" *Milton: P. L.,* vii. 603.

4. To take or set apart a certain portion of by measurement, with a certain standard or rule.

"He *measured* six measures of barley and laid it on her."—*Ruth* iii. 15.

5. To allot or distribute by measure; to deal out, to mete.

"With what measure you mete, it shall be *measured* to you again."—*Matthew* vii. 2.

6. To mark out in stated quantities; to apportion.

"What thou seest is that portion of eternity called time, *measured* out by the sun."—*Addison: Spectator,* No. 159

*7. To adjust, to proportion, to accommodate.

"All start at once: Oileus led the race;
The next Ulysses, *measuring* pace with pace."
Pope: Homer; Iliad xxxiii. 888.

*8. To keep within measure or bounds; to moderate, to restrain.

"The philosophre . . . him betecheth
The lore, howe that he shall *measure*
His bodie." *Gower: C. A.,* vii.

*9. To consider; to take into consideration or thought.

"He comes o'er us with our wilder days,
Not *measuring* what use we made of them."
Shakesp.: Henry V., i. 2.

*10. To pass over, to traverse, to travel.

"What seas they *measured,* and what fields they fought." *Pope: Homer; Iliad* xxiv. 14.

B. *Intransitive:*

1. To take a measure or measurements.

† 2. To result, or turn out on measurement: as, This will *measure* well.

3. To be in extent or quantity: as, The tree *measures* five feet in diameter.

¶ (1) *To measure one's length:* To fall, lie, or be thrown down.

(2) *To measure strength:* To determine superiority by contest; to engage in a contest.

"The factions which divided the Prince's camp had an opportunity of *measuring their strength.*"—*Macaulay: Hist. Eng.,* ch. ix.

(3) *To measure swords:* To fight with swords.

***mĕas'-ūre-ą-ble, (s as zh),** *a.* [MEASURABLE.]

mĕas'-ūred (s as zh), *mes-ured, *pa. par.* & *a.* [MEASURE, *a.*]

A. *As pa. par.:* (See the verb).

B. *As adjective:*

1. Computed, ascertained, determined, or set out by measurement or a rule.

"The rest, no portion left
That may disgrace his art, or disappoint
Large expectation, he disposes neat
At *measured* distances." *Cowper: Task,* iii. 24.

2. Deliberate and uniform; steady, slow, not hurried.

"And the *measured* tread of the grenadiers,
Marching down to their boats on the shore."
Longfellow: Landlord's Tale.

*3. Deliberately stated; certain, indubitable.

"A positive and *measured* truth."—*Bacon: Advancement of Learning,* bk. i.

4. Limited, moderated; kept within bounds or limits: as, He spoke in no *measured* terms.

5. Arranged rhythmically.

"Closing the sense within the *measured* time,
'Tis hard to fit the reason to the rhyme."
Dryden: Art of Poetry, ii.

† meas'-ūre-lĕss (meas as mĕzh), *a.* [Eng. *measure; -less.*] Having no measure; unlimited; immeasurable.

"*Measureless* meadows of sea-grass."
Longfellow: Miles Standish, iv.

† meas'-ūre-lĕss-nĕss (meas as mĕzh), *s.* [Eng. *measureless; -ness.*] The quality or state of being measureless.

"A corresponding *measurelessness* in vituperation."—*G. Eliot: Romola,* ch. xix.

mĕas'-ūre-mĕnt (s as zh), *s.* [Eng. *measure; -ment.*]

1. The act of measuring anything; mensuration.

"[The] length is not beyond the limits of very exact *measurement.*"—*Herschel: Astronomy* (1858), § 209.

2. The quantity, amount, or extent ascertained by measuring; area, size, capacity, content.

measurement-goods, *s. pl.* Light goods which are charged freight by the bulk of the packages, as distinguished from heavy goods, which are charged by the weight.

mĕas'-ūr-ĕr (s as zh), *s.* [Eng. *measur(e); -er.*]

1. One who or that which measures.

"The world's bright eye, Time's *measurer,* begun
Through watery Capricorn his course to run."
Howell: Letters, p. 7.

2. One whose occupation or duty is to measure goods in market.

3. One who measures up work on a building, &c., as a basis for the contractor's prices or estimate.

*4. An officer of the City of London who measured woollen cloths, coals, &c.; a meter (q.v.).

mĕas'-ūr-ĭng (s as zh), *mes-ur-ing, *pr. par., a., & s.* [MEASURE, *v.*]

A. *As pr. par.:* (See the verb).

B. *As adjective:*

1. Computing, ascertaining, or determining the measurement, capacity, extent, or amount.

2. Used or adapted for computing or ascertaining measurements.

"Behold a man with a *measuring* line in his hand."—*Zechariah* ii. 1.

***measuring-cast,** *s.* A cast or stroke in a game which cannot be distinguished from others without measurement.

"When lusty shepherds throw
The bar by turns, and none the rest out-go
So far, but that the rest are *measuring-casts.*"
Waller. (*Todd.*)

measuring-chain, *s.* [SURVEYOR'S-CHAIN.]

measuring-faucet, *s.* A faucet which measures the amount of passing liquid.

measuring-funnel, *s.* One having graduations to indicate quantity at different degrees of fulness.

measuring-instrument, *s.* An instrument or apparatus for measuring.

measuring-machine, *s.* An instrument for ascertaining length, or "end measurement," with great exactness.

measuring-pump, *s.* A pump in which the piston operates in a chamber of known capacity, a train of wheels and dial registering the pulsations of the piston.

measuring-rod, measuring-line, measuring-bar, *s.* A rod, line, or bar, used for the purpose of measuring bases, &c., in practical trigonometry. To guard against the expansion of the measuring-rod by heat and its contraction by cold, it is made of two bars, one of brass and the other of iron, united by a cross-piece at the middle, and at either end by projecting tongues. As brass expands by heat more than iron in the proportion of five to three, the projecting tongues are so constituted that the whole length of one is to that of the part outside the bars as five is to three. The metals then so work against each other that, at all temperatures, the distance between the projecting tongues remains the same. (*Airy: Popular Astron.* (ed. 6th), pp. 48, 49.)

measuring-tape, *s.* A tape divided into inches and fractions, and coiled around an axis in a box; retracted by a spring or winding handle.

measuring-wheel, *s.* A wheel for measuring the circumference of a carriage-wheel, in order to find the length of tire required. A circumferentor. The small wheel has a known circumferential measurement, and is divided into inches and fractions. The result is told in numbers of revolutions and fraction of a revolution expressed in inches.

mēat, *meate, *mete, *s.* [A.S. *mete;* cogn. with Dut. *met;* Icel. *mato;* Dan. *mad;* Sw. *mat;* Goth. *mats;* O.H.Ger. *maz.*]

1. Originally food of all kinds; food in general; anything fit for eating, or eaten by men or animals for nourishment. Horse-*meat* is still used locally for *fodder,* and green-*meat* is a term often applied to edible vegetables, such as lettuces, cresses, &c. (*Matt.* xxiv. 45.)

2. Limited now chiefly to animal food; the flesh of animals used as food.

"A treucher of *meat* half raw and half burned."—*Macaulay: Hist. Eng.,* ch. xvi.

3. The edible portion of anything: as, the *meat* of an egg.

¶ (1) *Meat and drink:* Life; perfect enjoyment. (*Shakesp.: As You Like It,* v. 1.)

(2) *To sit at meat:* To sit or recline at a table at meals.

meat-biscuit, *s.* A portable, concentrated preparation of meat, pounded, dried, mixed with meal, and baked.

meat-chamber, *s.* An apartment recently introduced between decks in the ocean steamships, with a huge tank in the middle, capable of holding thirty or forty tons of ice for the purpose of transporting fresh meat to Europe. It is a gigantic refrigerator.

meat-chopper, *s.* A machine for mincing meat for sausages or for stewing.

meat-crusher, *s.* A pair of rollers for rendering steak tender, one roller having circumferential and the other longitudinal corrugations.

meat-cutter, *s.* A machine for mincing flesh; a sausage-machine.

meat-fly, *s.*

Entom.: A name vaguely applied to various flies of the genus Musca, as *Musca carnaria, M. vomitoria,* &c., that deposit their eggs on meat, which larvæ they devour. The analogous name of Flesh-flies is often applied to the dipterous family Muscidæ.

meat-hammer, *s.* A maul with a notched or ridged face, to pound meat and make it more tender.

meat-hook, *s.* A hook in a larder or on a butcher's stall, on which to hang joints of meat.

meat-knife, *s.* A knife the haft of whose blade passes through the handle, which consists of two pieces known as scales, and secured by rivets.

meat-offering, *s.*

Judaism: Heb. מִנְחָה (*minkhah*) = (1) a gift; (2) tribute; (3) an unbloody sacrifice

offered to God, the word meat being used not as in the English phrase butcher's meat, but with a meaning not far from the opposite one. A meat-offering might be of fine flour with oil poured on it and frankincense put upon it; or of fine flour unleavened and mingled with oil baked in an oven, in a pan; or, thirdly, firstfruits of dried corn with oil and frankincense. In all meat-offerings there was salt, but never leaven. A memorial portion of every meat-offering, including all the frankincense, was consumed by fire to Jehovah, the rest was eaten by the priests and every male descendant of Aaron (Lev. ii. 1–16; vi. 14–18).

meat-safe, *s.* A safe with perforated zinc or wire gauze front in which to keep meat.

meat-salesman, *s.* One who acts as an agent for breeders of cattle, receiving the carcasses, and selling them retail to the butcher

meat-saw, *s.* A saw resembling a tenon-saw, but with a steel or iron back.

meat-screen, *s.* A metallic screen placed behind roasting meat to reflect the heat of the fire.

meat-spit, *s.* A spit for holding a roasting joint while turning in front of the fire.

meat-tub, *s.* A tub for holding pickled meat.

* **mēat,** *v.t.* [Meat, *s.*] To supply with meat or food; to feed.

"Haste then and *meat* your men."
Chapman: Homer; Iliad xix. 196.

* **mēat'-ĕd, * met-ed,** *a.* [Eng. *meat; -ed.*] Fed, foddered.

"Strong oxen and horses, wel shod and wel clad,
Wel *meated* and used." *Tusser: Husbandry.*

* **meathe,** *s.* [Mead (1), *s.*]

mēat'-ĭ-nĕss, *s.* [Eng. *meaty; -ness.*] The quality or state of being meaty.

"I felt as though I were pervaded by *meatiness* for many hours."—*A. Trollope: Australia*, i. 57.

* **mēat'-lĕss,** *a.* [Eng. *meat; -less.*] Destitute of meat.

"Growling over his uneuvled virtue as a cur growls over a *meatless* boue."—*Lewes: Hist. of Philos.*, i. 194.

mē-ā'-tŭs, *s.* [Lat. = a passage, going, motion, or course, from *meo* = to go, to pass.]

Anat.: An opening or canal, as the *meatus auditorius*, extending from the concha to the tympauum; in its lining membrane are found the ceruminous glands, secreting the wax of the ear. The meatuses of the nose are passages between the spongy boues and the nasal fossæ, and in rushing through them, the air deposits its odour on the mucous membrane.

meatus-knife, *s.* A small knife with a triangular concealed blade in a long thin shaft; used in operations in the meatus auditorius, such as obliterating structures, opening pustules, scarifying, removing polypi, &c.

mēat'-ў, *a.* [Eng. *meat; -y.*] Abounding in meat; resembling meat; fleshy, but not fat.

meaw, meawl, *v.i.* [Mew, Mewl.]

† **mēa'-zęl,** *s.* [Measle, Mesel.]

* **mēa'-zle,** *v.i.* [Mizzle.]

† **me-bles,** *s. pl.* [Fr. *meubles.*] Movable goods.

Mĕc'-cą, *s.* [Arab.]

Geog.: The sacred city of the Muhammadans.

Mecca-balsam, *s.*

Bot.: *Balsamodendron Opobalsamum.*

mĕ-chăn'-ĭc, * **mĕ-chăn'-ĭck,** * **me-chan-icke,** * **me-chan-ike,** *a.* & *s.* [O. Fr. *mechanique, mecanique* (Fr. *mécanique*), from Lat. *mechanica*, from Gr. μηχανικὴ [τέχνη] (*mēchanikē* [*technē*]) = (the science of) mechanics; μηχανή (*mēchanē*) = a machine; Sp. & Port. *mecanico*; Ital. *meccanico.*]

* **A.** *As adjective:*

1. *Lit.:* Of or pertaining to mechanics; mechanical.

"Sometimes he ply'd the strong *mechanic* tool."
Thomson: Castle of Indolence, ii. 12.

2. *Fig.:* Vulgar, common, bare.

"And worthy shameful check it were, to stand
On more *mechanic* complement."
Shakesp.: Antony & Cleopatra, iv. 4.

B. *As subst.:* One who is employed or skilled in the construction of materials, as wood, metal, &c., into any kind of structure or machine; one who is skilled in the use of tools or instruments; an artizan; a handicraftsman; one who follows a mechanical trade for his living; a skilled workman; an artificer. The term is used somewhat loosely, but is always understood as excluding agricultural labourers, or such as work with the pick, shovel, spade, or similar tools.

"Some plain *mechanic*, who, without pretence
To birth or wit, nor gives nor takes offence."
Cowper: Retirement, 449.

mechanics'-institute, *s.* An institution for providing instruction and recreation to mechanics and artizans, by means of reading-rooms, libraries, lectures, classes, &c.

mĕ-chăn'-ĭ-cal, *a.* & *s.* [Mechanic.]

A. *As adjective:*

I. *Literally:*

1. Pertaining to, depending upon, or in accordance with the principles or laws of mechanics.

"We have also divers *mechanical* arts, which you have not."—*Bacon: New Atlantis*, p. 28.

2. Acting by or resulting from weight or momentum: as, *mechanical* pressure.

3. Pertaining to those changes in bodies in which they form compounds, without losing their identity in the compound substance, as opposed to chemical: as, a *mechanical* mixture.

II. *Figuratively:*

1. Resembling a machine: as—

(1) Acting without thought, consideration, or independence of judgment. (Said of persons: as, a *mechanical* follower of a party.)

(2) Done without thought, intention, or deliberate design, but by mere force of habit: as, a *mechanical* action or movement.

(3) Characterized by unthinking obedience or subserviency to external rule or guidance; not marked by individuality or freedom of thought.

"How far you may be pleased with the versification and mere *mechanical* parts of this attempt, I do not pretend to inquire."—*Goldsmith: Deserted Village.* (*To Sir J. Reynolds.*)

(4) Not designed or intended; happening in the ordinary course of things.

"The indirect influence which *mechanical* causes often exercise."—*Herschel: Astronomy* (1858), § 237.

* **2.** Employed as a mechanic; following the trade or occupation of a mechanic.

"Is this a holiday? What I know you not,
Being *mechanical*, you ought not walk,
Upon a labouring day."
Shakesp.: Julius Cæsar, i. 1.

* **3.** Of mean or low occupation; vulgar, common, base, rude, mean.

"Hang him, *mechanical* salt-butter rogue! I will stare him out of his wits; I will awe him with my cudgel."—*Shakesp.: Merry Wives of Windsor*, ii. 2.

* **B.** *As subst.:* A mechanic.

"A crew of patches, rude *mechanicals*,
That work for bread upon Athenian stalls."
Shakesp.: Midsummer Night's Dream, iii. 2.

¶ (1) *Mechanical solution of a problem:* Solution by any means not strictly geometrical, as by means of a ruler and compasses or other instrument.

(2) *Mechanical theory of cleavage:*

Geol.: The theory that many beds have undergone compression in a direction perpendicular to the planes of cleavage, and a corresponding expansion in the direction of the dip of the cleavage. This hypothesis was brought forward by Mr. D. Sharpe, F.G.S., in 1847, following out the observations published by Prof. Philips in 1843. In 1853 Mr. Sorby proved the theory to be largely applicable to the slaty rocks of North Wales and Devonshire.

(3) *Mechanical theory of heat:*

Phys.: The same as Dynamical-theory (q.v.).

(4) *Rocks of mechanical origin:*

Geol.: Rocks composed of mud, sand, or pebbles, laid down by the action of running water, also the accumulations of stones, scoriæ, &c., thrown out by a volcano, and arranged by the action of gravity, as distinguished from crystalline rocks, which are of chemical origin. (*Lyell.*)

mechanical-bronchitis, *s.*

Pathol.: Bronchitis produced by the inhalation of particles of matter, which irritate the tubes of the air sacs.

mechanical-broom, *s.* A sweeping machine, usually propelled by horses, and having revolving brooms actuated by the supporting wheels, and delivering the dust and mud into the box of the waggon or into the gutter.

mechanical-curve, *s.* The same as Transcendental-curve (q.v.).

mechanical-dysmenorrhœa, *s.*

Pathol.: Obstruction to the menstrual discharge.

mechanical-lamp, *s.* Another name for Carcel's clock-work lamp, in which the oil is pumped from a lower reservoir to the wick-tube by means of clock-work, so as to furnish a supply exceeding that consumed by the wick, the surplus flowing back outside of the burner. The object is to afford equal and ample supply of oil to the flame.

mechanical-philosophy, *s.*

Hist. & Philos.: The name given to any theory which seeks to account for the phenomena of the universe by the movements of elementary bodies. The best example of mechanical-philosophy, either in ancient or modern times, is the Atomism of Leucippus, of Democritus, and of Epicurus.

mechanical-pigeon, *s.* A flying object forming a substitute for a pigeon in shooting-matches.

mechanical-powers, *s. pl.* Contrivances by which a great weight may be sustained, or a great resistance overcome, by a small force. They are the wedge, the inclined plane, the screw, the lever, the wheel and axle, and the pulley.

mechanical-telegraph, *s.* Another name for the automatic telegraph, in which a message represented by a series or succession of dots is passed beneath a key or stylus, so as to make and break the circuit by mechanically passing through.

mechanical-stoker, *s.* A mechanical attachment to a steam boiler furnace for the automatic supply of fuel, either as powder or in pieces broken to a regular size. It usually consists of a hopper containing the fuel, at the bottom of which are rollers which force the coal on to the grate.

mechanical-theory, *s.* [Mechanical-philosophy.]

* **mĕ-chăn'-ĭ-cal-īze,** *v.t.* [Eng. *mechanical; -ize.*] To render mechanical or mean; to debase.

mĕ-chăn'-ĭ-cal-lў, *adv.* [Eng. *mechanical; -ly.*]

1. In a mechanical manner; by means of a machine or mechanism; according to the laws of mechanism.

"The chick with all its parts is not a *mechanically* contrived engine."—*Boyle: Works*, iii. 68.

2. By physical force or power.

3. In a manner resembling a machine; without thought, care, or independent judgment; by the mere force of habit.

"Guards, *mechanically* formed in ranks."
Cowper: Table Talk, 136.

4. Without losing its identity; opposed to chemically.

"They contain silica, alumina, potash, soda, and mica mixed *mechanically* together."—*Tyndall: Fragments of Science*, (ed. 3rd), p. 411.

* **mĕ-chăn'-ĭ-cal-nĕss,** *s.* [Eng. *mechanical; -ness.*] The quality or state of being mechanical.

mĕch-ą-nī'-cian, *s.* [Fr. *mécanicien*, from Lat. *mechanicus* = mechanic (q.v.).] One who is skilled or versed in mechanics.

"If it were presumed that none but geometers and *mechanicians* should employ themselves about writing any part of that history."—*Boyle: Works*, ii. 473.

mĕ-chăn-ĭ-cō-, *pref.* [Lat. *mechanicus* = mechanic (q.v.).] Pertaining to or connected with mechanics or mechanism.

mechanico-chemical, *a.* Of, pertaining, or relating to both chemistry and mechanics. Used specially of such sciences as electricity and magnetism, some of the phenomena of which require for their explanation the laws of chemistry and of mechanics.

mechanico-corpuscular, *a.* An epithet applied to the Atomic theory, because the atoms were supposed to contain within themselves the elements of motion.

"To . . . confound the enemies of the *mechanico-corpuscular* philosophy."—*Westminster Review*, Jan., 1853, p. 182.

mĕ-chăn'-ĭcs, mĕ-chăn'-ĭcks, *s.* [Mechanic.]

* **1.** The science of machinery.

2. That branch of practical science which considers the laws of equilibrium and the motion of solid bodies; the forces by which bodies, whether animate or inanimate, may be made to act upon one another; and the means by which these forces may be increased so as to overcome those which are more powerful. The term mechanics was originally confined to the doctrine of equilibrium. It is now, however, extended to the motion and equilibrium of all bodies, whether solid, fluid, or aëriform. That branch of mechanics which investigates the relations between forces in equilibrium is termed Statics; and that which investigates the effects of forces not in equilibrium, but producing motion, is termed Dynamics. The complete arrangement of mechanics is now made to embrace, besides, the pressure and tension of cords, the equilibrated polygon, the catenary curve, suspension bridges, the equilibrium of arches and the stability of their piers, the construction of oblique arches, the equilibrium of domes and vaults with revetments, the strength of materials, whether they be of wood or iron, dynamics (or the science of moving bodies), with hydrostatics, pneumatics, and hydraulics.

"I here understand the word *mechanicks* in a larger sense for those disciplines that consist of the applications of the pure mathematicks to produce or modify motion to inferior bodies."—*Boyle: Works*, iii. 435.

¶ (1) *Animal mechanics:* The department of science which applies the principles of mechanics to the framework and other parts of the human body, and of the bodies of the inferior animals.

(2) *Practical mechanics:* The application of the principles of mechanics to practical purposes, as the construction of machines, buildings, &c.

(3) *Rational mechanics:* That branch of mechanics which treats of the theory of motion.

mĕch′-a-nĭsm, *s.* [Fr. *mécanisme*, from *mécanique* = mechanic (q.v.).]

I. *Ordinary Language:*

1. Action according to mechanical laws; mechanical action.

"After the chyle has passed through the lungs, nature continues her usual *mechanism*, to convert it into animal substances."—*Arbuthnot: On Aliments.*

2. The arrangement of the parts of a machine, engine, or other instrument, intended to apply power to a useful purpose; the parts collectively of a machine; the arrangement and relation of the parts in a machine; mechanical construction and arrangement; machinery.

"Many authors have spoken of the wonderful *mechanism* of speech."—*Stewart: The Human Mind*, vol. ii., ch. ii., § 2.

II. *Music:*

1. That part of an instrument which forms the connection between the player and the sound-producing portion.

2. The physical power of performance, as distinguished from the intellect or taste which directs it.

mĕch′-a-nĭst, *s.* [Gr. μηχανή (*mēchanē*) = a machine; Eng. suff. *-ist.*]

* 1. *Ord. Lang.:* A mechanic, a mechanician; one skilled in the construction or use of machinery.

"What titles will he keep? will he remain
Musician, gardener, builder, *mechanist*?"
Wordsworth: Excursion, bk. vii.

2. *Philos.:* One of a school of philosophers who ascribed all the changes in the universe to the effect of purely mechanical forces.

***mĕch′-a-nīze,** *v.t.* [Fr. *mécaniser.*] To subject to contrivance, art, or skill; to form by contrivance or design; to form mechanically.

"The human frame a *mechanized* automaton."—*Shelley.* (*Annandale.*)

***mĕ-chăn′-ō-graph,** *s.* [Gr. μηχανή (*mēchanē*) = a machine, and γράφω (*graphō*) = to write, to draw.] One of a set of multiplied copies of an original, executed by means of a machine.

***mĕ-chăn-ō-grăph′-ĭc,** *a.* [Eng. *mechanograph*; *-ic.*]

1. Treating of or dealing with mechanics.

2. Pertaining to or executed by mechanography.

***mĕch-an-ŏg′-ra-phĭst,** *s.* [Eng. *mechanograph*; *-ist.*] One who by mechanical means produces multiplied copies of any work of art, writing, &c.

***mĕch-an-ŏg′-ra-phy,** *s.* [Eng. *mechanograph*; *-y.*] The art of multiplying copies of a work of art, a writing, &c., by mechanical means.

***mĕch′-an-ŭr-gy,** *s.* [Gr. μηχανή (*mechanē*) = a machine, and ἔργον (*ergon*) = work.] That branch of mechanics which treats of moving machines.

Mĕ-chĭt′-a-rĭst, *a.* & *s.* [For etym. see def. B.]

A. *As adj.:* Belonging to or characteristic of the Armenian religious congregation described under B.

"Printed at the *Mechitarist* presses of Vienna and Venice."—*Addis & Arnold: Cath. Dict.*, p. 568.

B. *As substantive:*

Church Hist.: A congregation founded at the close of the seventeenth century by an Armenian, named Mechitar, for the purpose of instructing and improving the condition of his countrymen. He was ordained in 1699, and went to Constantinople to put his plans into execution. Meeting with opposition there, he founded a religious house at Modon in the Morea, and when war broke out between Turkey and the Venetian Republic in 1715, the latter power granted him the island of San Lazzaro, in the lagoon between the Lido and Venice, where he founded the Armenian convent which is such an object of interest to travellers. The Mechitarists are devoted to literary work, principally the perfecting of Armenian, and the translation into that language of the principal productions of European literature.

mêche, *s.* [Fr.]

Surg.: A bunch or pledget of charpie, cotton, or raw silk, for keeping open an ulcer or wound. Applied by an instrument known as a porte-mèche.

Mĕch′-lĭn, *s.* & *a.* [From Mechlin or Malines in Belgium.]

A. *As subst.:* A light Belgian lace with an hexagonal mesh; made of three flax threads, twisted and plaited to a perpendicular line, the pattern being worked in the net, and the plait-thread surrounding the flowers.

B. *As adj.:* The term applied to the variety of lace described in A.

mĕ-chlō′-ĭc, *a.* [Eng. *me(conin)*; *chlo(rine)*, and suff. *-ic.*] (See the compound.)

mechloic-acid, *s.*

Chem.: A crystalline acid produced by the action of chlorine on meconin. It crystallizes in fine prismatic needles; sparingly soluble in cold, but easily soluble in boiling water.

mĕ-ġĭst′-ŏps, *s.* [Gr. μέγιστος (*megistos*) = very great, and ὄψ (*ops*) = the countenance.]

Zool.: A genus of Crocodilidæ from Africa, erected by Gray. Jaws oblong, slender, and rather flat; nose not swollen; cervical and dorsal plates united; hind feet webbed. *Mecistops Bennettii* is Bennett's Gavial, *M. cataphractus*, the False Gavial. By many naturalists they are considered as varieties.

mĕ-ġĭs-tūr′-a, mĕ-ġĭs-tūr′-a, *s.* [Gr. μέγιστος (*megistos*) = very great, and οὐρά (*oura*) = a tail.]

Ornith.: Long-tailed Tit. It was raised to generic distinction, as *Mecistura vagans*, by Dr. Leach in 1816, without, however, specifying his reasons. He has been followed by Brehm and Bonaparte. (*Yarrell.*) [Parus, Tit.]

Mĕ-chō′-a-căn, *s.* [See def.] The name of a maritime state in Mexico, whence the root was originally brought.

Mechoacan-root, *s.*

Bot. & Pharm.: The root of *Batatas Jalapa*, once erroneously supposed to be the true jalap, which it to a certain extent resembles in its purgative properties.

Mĕc′-kel, *s.* [See def.] John Frederick Meckel, a celebrated German anatomist (1724–74). He was the author of many scientific works, and, in 1749, published an account of the ganglion which bears his name.

Meckel's-cartilage, *s.*

Anat.: The cartilage of the first or mandibular arch. It occupies the deeper part of the arch from a very early period, and remains visible in the human fœtus up to the sixth or seventh month. Its proximal portion is converted into the malleus of mammals and the quadrate bone of reptiles and birds. (*Quain.*)

Meckel's-ganglion, *s.*

Anat.: The larger of the cranial ganglia. It is triangular in shape, reddish in colour, and is situated in the spheno-maxillary fossa, near the spheno-palatine foramen, whence it is sometimes called the sphcno-palatine ganglion. The sub-maxillary ganglion was also discovered by Meckel.

mĕ-cŏm′-ĕ-tĕr, *s.* [Gr. μῆκος (*mēkos*) = length, and μέτρον (*metron*) = a measure.]

Surg.: A graduated instrument used at the Hospice de Maternité in Paris, to measure new-born infants.

mĕc-ō-năm′-ĭc, *a.* [Eng. *mecon(ic acid)*; *am(monia)*, and suff. *-ic.*] (See the compound.)

meconamic-acid, *s.*

Chem.: $C_7H_3(NH_2)O_6 = C^4(NH_2) \left\langle \begin{matrix} COHO \\ COHO. \\ COHO \end{matrix} \right.$

An amide of meconic acid formed by the action of ammonia on ethyl meconic acid. It has not been obtained in the crystalline form, and its formula is somewhat doubtful.

mĕc′-ō-nāte, *s.* [Eng. *mecon(ic)*; suff. *-ate.*]

Chem.: A salt of meconic acid.

mĕ-cŏn′-ĭc, *a.* [Eng., &c. *mecon(ium)*; suff. *-ic.*] Contained in or derived from meconium (q.v.).

meconic-acid, *s.*

Chem.: $C_7H_4O_7$. One of the constituents of opium discovered by Sertürner in 1805. It is prepared from the alcoholic extract of opium by precipitating with baric chloride and decomposing the baric meconate with sulphuric acid. It crystallizes in colourless, mica-like plates or prisms, containing three molecules of water, with difficulty soluble in cold water and ether, but more readily in hot water and alcohol. When heated to 200°, it gives off carbonic anhydride, and is converted into comenic acid, $C_6H_4O_5$. Its aqueous solution is coloured deep-red by ferric chloride. Meconic acid is dibasic, and forms two classes of salts. When calcic meconate is dissolved in warm nitric acid, and the solution cooled, brilliant plates of the monobasic salt $(C_7H_3O_7)_2Ca, 2H_2O$ are produced. Di-ammonic meconate, $C_4HO\begin{matrix}(CO(NH_4)O)_2, \\ COHO\end{matrix}$ crystallizes in slender needles.

Di-ethyl meconic acid, $C_4HO\begin{matrix}(CO(C_2H_5)O)_2, \\ COHO\end{matrix}$ is obtained from the mother liquor from which the former acid has separated. It forms flattened colourless prisms, melting about 110°, and dissolving easily in water and alcohol. The acid is monobasic, and forms, with ammonia, a crystalline salt of a yellow colour.
